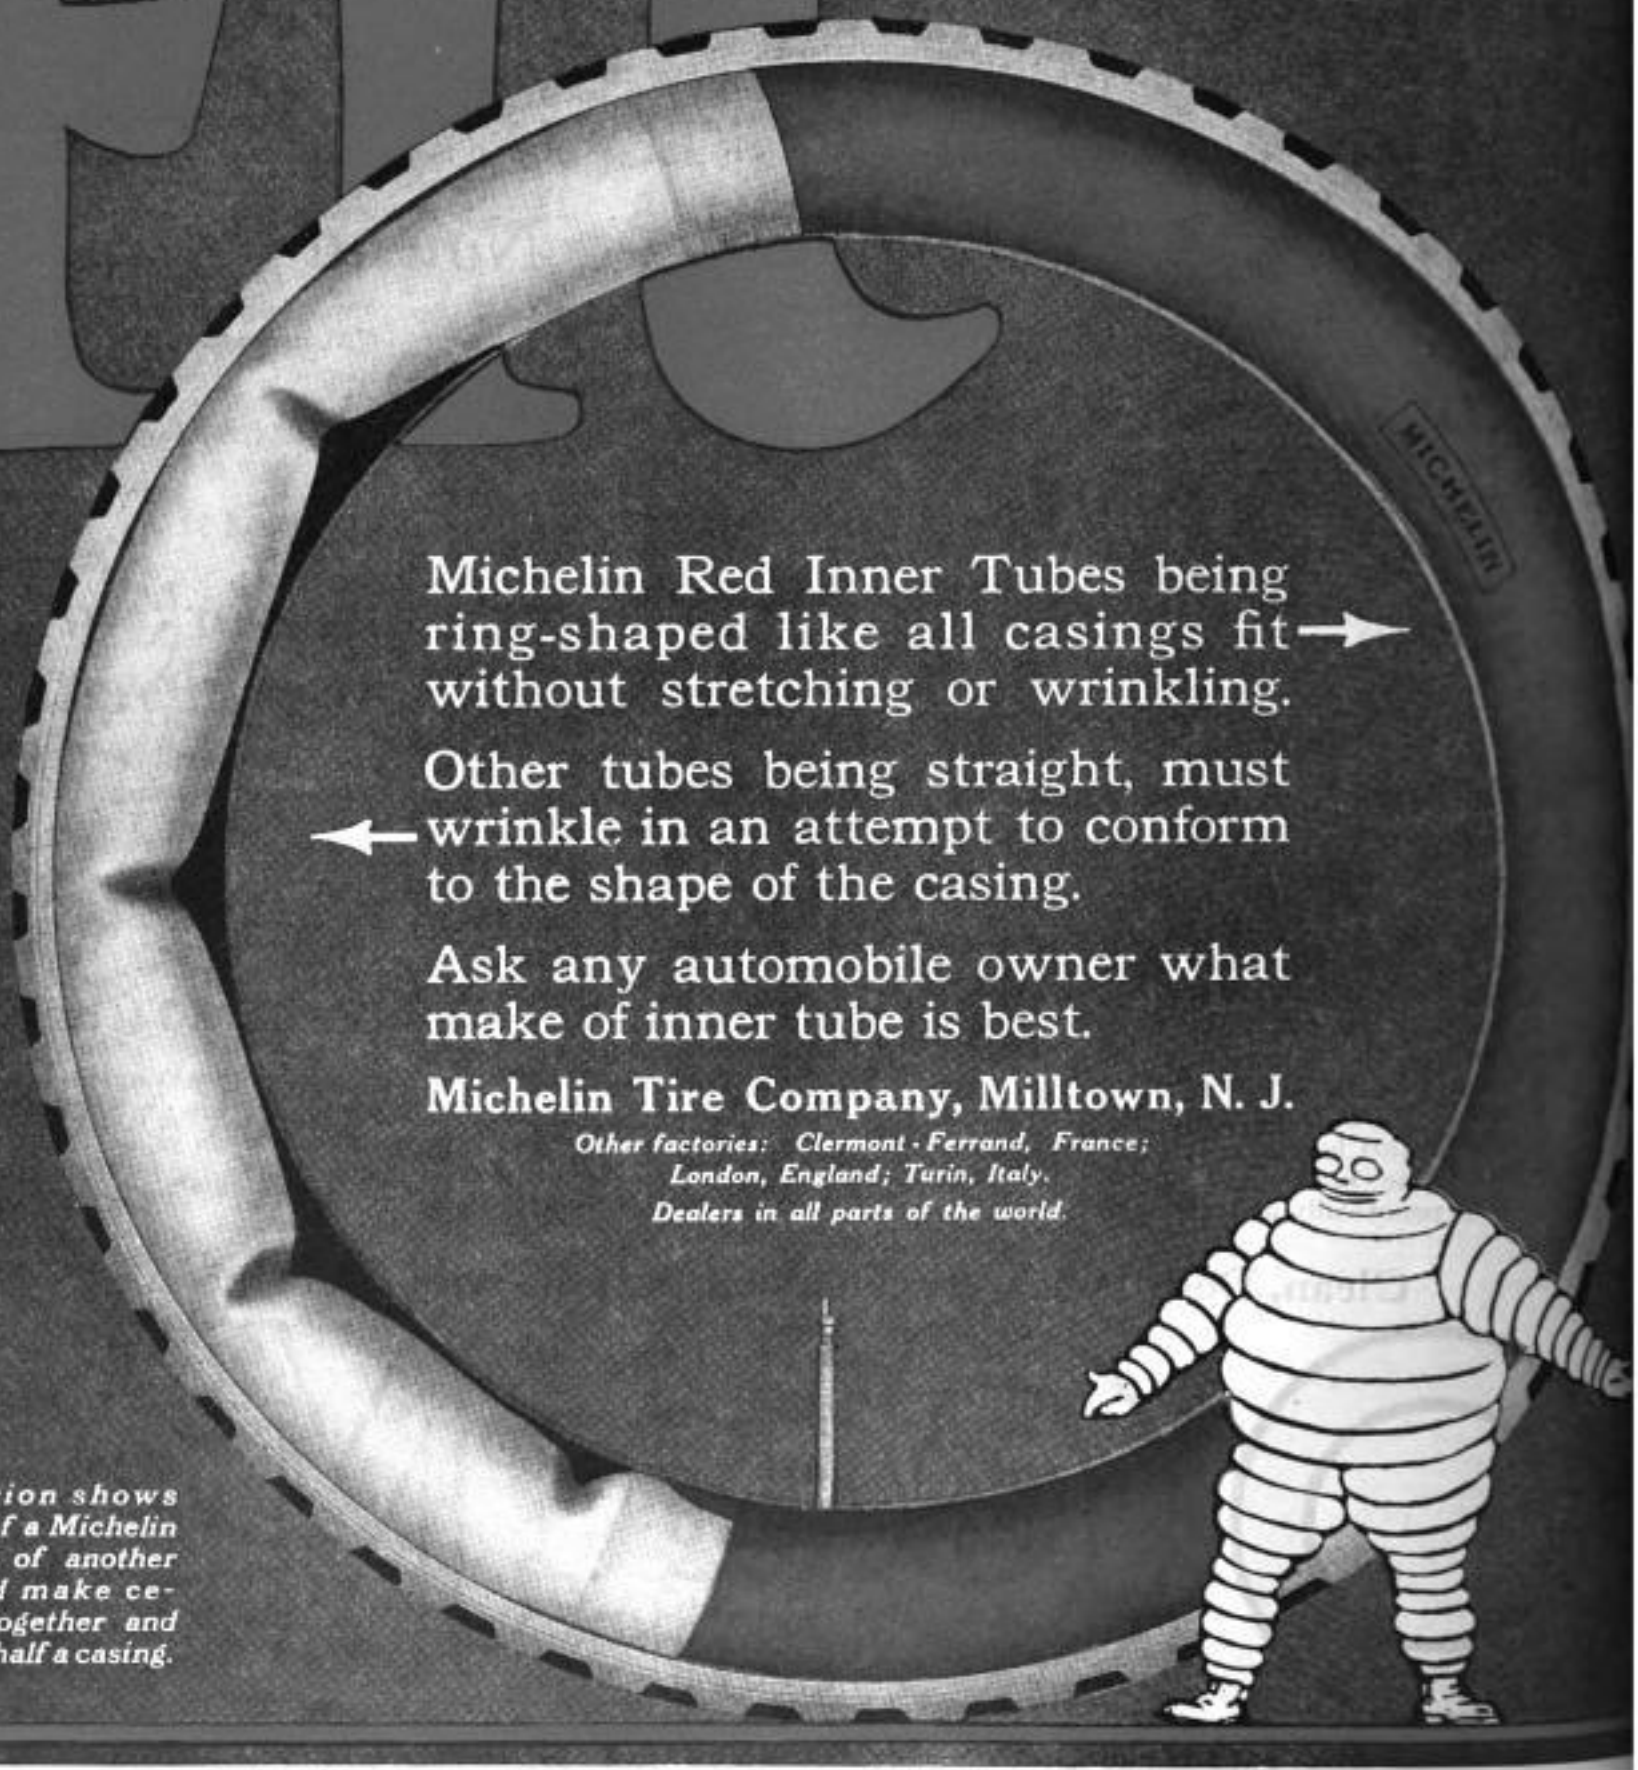
With the O-Cedar Polish Mop you do these three things at one time: you dust, you clean and you polish. You save getting down on your hands and knees. You save back-breaking stooping and bending. You have cleaner, brighter and prettier floors. You banish the dust problem and danger. You save time, work and money.

Sold on Trial

Every O-Cedar Mop is sold with this distinct understanding: If you are not delighted with the results it gives and the time, work and money it saves, your money will be refunded without a question. Practically every grocery, hardware, housefurnishing and department store in the country sells and guarantees O-Cedar Polish Mops and O-Cedar Polish.

Note the Ease and Convenience of shing, Cleaning and Renewing

to learn. No taking apart, no tugging and putting together. When your O-Cedar Polish Mop becomes dirty and filled with dust, simply wash it in boiling water. Add soap or borax to cut the dirt. Several changes of water if the mop is very dirty. Or boil it if you prefer. Then let it become almost dry. Pour 3 or 4 ounces of O-Cedar Polish in a pan and let the mop stand in it over night. The next morning your O-Cedar Mop is practically as good as new.



Clean, Dust, Polish, Brighten and Beautify with One Operation

"Now a word about the present-day enforcement of the game laws here in Ohio. The situation is absolutely reversed from that which I faced when the constructive program of game stocking was begun. There is not a protective association of sportsmen in the state outside of the large cities which is not mainly composed of farmers. At least there are few in which the farmers are not heavily represented. And they are the men who are in position to see that the game laws are enforced. And make no mistake about it, that is precisely what they do, everywhere. They are now the staunchest supporters of law enforcement, whereas they were once the most difficult element with which the game warden had to deal. And this change has come about because the farmer has been made to understand that an abundance of splendid game birds on his farm is a substantial asset—one on which he can realize cash money in the way of selling shooting privileges or, better yet, can turn to good account as a means of food supply for his own table.

"Infractions of the game laws have been reduced to so low a minimum in this state that it is no exaggeration to say that would-be offenders are no longer afraid of the local game wardens but rather of their own neighbors. So far as being a restraining influence felt by those who would like to do illicit shooting is concerned, every decent citizen is now in effect a game warden. His moral force counts about as much as if he carried a warden's star under his coat."

Distribution of Birds

"For several years we have been buying and distributing both English pheasants and their eggs in large numbers—with the result that several counties in the state have now—according to the most careful estimates which we are able to make—about thirty-five thousand English pheasants within their borders. I believe this is true of Miami, Clark and Montgomery counties, and several other counties would not fall far behind this figure if a pheasant census could be taken. The citizens of these counties, particularly the farmers, are proud of their birds. They realize that these beautiful and delicious wild birds are worth a whole lot—first, as exterminators of insects; second, as an attraction to hunters who are cheerful spenders for the privilege of enjoying such rich sport; and third, as a luxury which they and their sons and hired men can enjoy. There are few things which make farm life more attractive to boys and young men than an abundance of wild game within easy reach. Those who doubt this statement need only ask a few young men who take part in the pheasant shooting in Ohio, Pennsylvania, New York or any other well-stocked state. This attraction counts with them far more than they are willing to admit as a rule. It helps to hold them to country life.

"Please let me emphasize the fact that pheasants and pheasant eggs are not distributed in this state on a political basis. No one needs a political pull to get as many birds for liberation or as many eggs for setting as any other person is allowed to have. Birds and eggs distributed as petty political handouts seldom get into the right hands or really contribute to stocking the state. Distribution for production is the only kind that counts.

"In Ohio we have gone into the task of stocking the state with English pheasants on the basis that we do not intend to have an egg or a bird wasted. To this end I have twelve picked wardens, each having supervision of a district of several counties, who are carefully taught the handling of pheasants. They are the faculty of our state normal school in the science of pheasant breeding.

"These district wardens are the men who do the actual work of raising the birds on the game farm—and last season seven thousand ringnecks were raised on our two game farms. Very nearly 85 per cent of the pheasant eggs handled on the farm were hatched and the young raised to maturity—which I am told by experts is a record of which any pheasant farm might be proud. From the setting of the eggs to the liberating of a bunch of birds on a farm, these men are drilled in every art and device that promises to contribute to the success of the undertaking.

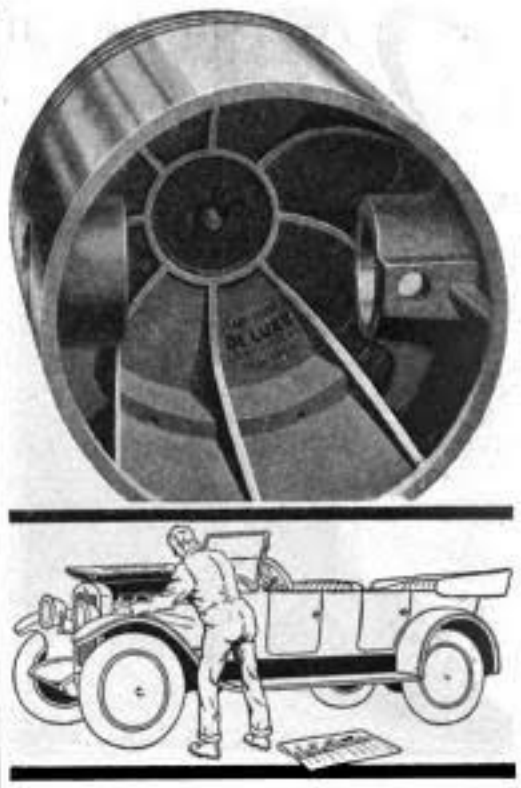
"Twice a year we hold what I would call a normal school or a short course for the benefit of the salaried wardens of the state. As there are more than fifty of these men, not all of them are able to attend the class sessions. But they get the benefit of the instruction indirectly through those who do attend. It is difficult to tell how intensely interested all the men are who take this instruction. If I were to find a man who is not interested I would know that he was not suited for the position which he holds. But I do not recall that a single warden on the staff has thus far failed to show a genuine and spontaneous interest in learning the trade of pheasant raising.

"Of course this is mighty important because the local game warden is naturally regarded by the farmers as an instructor in liberating birds and in setting allotments of pheasant eggs for hatching and in the difficult task of caring for the young until they are large enough to look out for themselves.

"The work of distributing pheasants and eggs is no small job in this state, for we have eighty-eight counties and last year about two hundred birds were liberated in each county and about eight hundred eggs to the county were allotted and distributed throughout the farming sections. Both the birds and the eggs are allotted in advance of the actual distribution and are given out on applications from farmers.

"Every county in Ohio has what is called a game refuge, which is a tract of land on which no shooting is allowed and which offers a natural and attractive cover for the birds. These areas of refuge are under lease, so far as shooting privileges are concerned, at an extremely small expense. The overflow of birds from these protected spots is much more than ample to furnish prime hunting for all who take out licenses.

"In this connection it should be explained that our open season on pheasants is eleven days and each hunter is allowed to kill three old cocks each day. Suppose a hunter bags his full quota—as many of them do—this gives him thirty-three pheasant cocks, weighing about three pounds each, for a license fee of one dollar. I have yet to find a sportsman who did not cheerfully admit that this is as liberal an allowance as any hunter could have the nerve to ask for!"



Public Shooting Grounds

"Already we have sixty thousand acres of game-refuge territory in the state. But this is only a starter. Last year the Legislature passed a law, which has been signed by the governor, authorizing the purchase of public shooting grounds. This is a most important step. It puts us in position to acquire about fifty thousand acres of the wildest land in Ohio, which is ideal for stocking with deer, wild turkeys, pheasants and any other wild game birds. The proper legislative committee has already inspected lands of this character in Scioto and Adams counties. The state of Pennsylvania has set the pace in the matter of public shooting grounds and has not only demonstrated what they will do to build up the game supply of a commonwealth in the shortest time possible but also the extent to which these grounds stimulate the interest of hunters.

"In the center of every public shooting ground is a game refuge, which is fenced and within which shooting is never allowed. For example, the ideal size of a public shooting ground is perhaps twenty-two thousand acres. The game refuge in the center of this would be about three thousand acres in extent. Pennsylvania has three big public shooting grounds, the largest of which contains about twenty thousand acres.

"Ohio has acquired a large acreage of marsh ground along the south shore of Lake Erie. Here we are going to sow quantities of wild rice. The effectiveness of this practice in providing wild ducks with an ample supply of their favorite food has been well proven by the big gun clubs and hunting clubs of the country.

"Many persons will be inclined to ask: 'Why do we need public shooting grounds?' The answer is because the farmers of the country, to a steadily increasing extent, are posting their lands and thereby putting up a legal barrier against all hunters excepting themselves and those to whom they may give or sell hunting privileges. The villages, towns and cities of every state are full of men who look forward each year to the coming of the hunting season. Without public shooting grounds only the well-to-do hunters of the towns and cities will be able to indulge their liking for this sport."

Have it repaired
now

Now is the time to have your car put in condition for the coming months. Your garage man is able to give careful attention to your car when his shop is not rushed—he can do better work—and your car will be all ready for the road, in A-1 condition, when you want it.

While your car is being gone over have the repair man

put in
DELUXE
lightweight cast iron
PISTONS

But insist on the genuine!
They'll rejuvenate your car.

DELUXE PISTONS eliminate vibration—make your motor run quiet; smooth—add power—save gas and oil. They are strong, yet they weigh about one half as much as ordinary factory cast iron pistons.

The PATENTED rib construction reinforces the piston and saves weight, also carries off heat from the piston head, making the motor run cool. Minimum expansion allows DELUXE pistons to be fitted close, ending oil pumping and piston slap.

Read what these owners say about DELUXE pistons

Dodge Owner—*getting 23¾ miles to the gallon.*

Ford Owner—*25 miles per gallon—engine runs as smooth as any good six.*

Hudson Owner—*finest piece of work I ever had done on my car.*

Studebaker Owner—*runs with less vibration, delivering greater power.*

Truck Owner—*so efficient—we had our entire fleet fitted with DELUXE pistons.*

Thousands of other letters on file.

DELUXE pistons will do the same for your car. Made for over 1400 makes of automobiles, trucks, tractors, motorcycles, airplane and marine engines. Your repair man can get

DELUXE
LIGHT WEIGHT CAST IRON PISTON
The Successful Light Weight Piston

in 24 hours or less. Write us today, giving name and year of your car. We will tell you what DELUXE pistons will do for you.

This is the number of the plated, ball-tip loose-pin McKinney Butt.

A helpful book
if you are planning a garage

THIS book will help you settle the most important detail of your garage—the kind of doors you need. It illustrates swinging doors, sliding-folding doors and around-the-corner doors. From it you will be able to select just the type needed for the garage you are building.

With each type of door illustrated there are simple working drawings for its erection and hanging, and for each door there is shown the special box of McKinney Hardware—a box which contains every article of hardware necessary for the hanging and operation of the door.

Packed complete in a box, these McKinney Garage Sets save time in securing garage door hardware and do away with additional trips for forgotten articles. They insure well-hung, easily operated and weather-tight doors. And the hardware, being McKinney standard throughout, assures years of perfect door service.

If you are planning a home, "Suggestions for the Home Builder," another McKinney publication, will be of special interest and will help you care for the many little details unfortunately so often overlooked.

Both these books will be sent at your request, postpaid, and of course free of cost and obligation.

Garage hardware, door hangers and track, door bolts and latches, shelf brackets, window and screen hardware, steel door mats and wrought specialties.

THE PRICE OF PEARLS

(Continued from Page 13)

"You've got a little string of beads here we want to see," quoth Billy in response to Godfrey's look.

"Miss Lucretia Perrimain's pearls," added Alicia with biting dignity and aloofness.

"Yes, yes—a very nice little string of beads," said Mr. Godfrey, rather ignoring Alicia. "One of the prettiest that has been in my hands for some time. Largely collected by that great connoisseur, Mr. Halstead, I understand. If you will excuse me ——"

A worn leather box, faded vermilion, faintly tooled in gold, appeared. Mr. Godfrey opened it and lifted carefully with the tips of the fingers—Beauty, Magic, Romance!

Even Billy Dancy caught his breath at the sight; and Jean and Alicia exclaimed aloud. Frail loveliness, the shimmer of first dawn, the heart of white flowers, the iridescence of sea foam tossed in sunlight, memories of just-born rainbows—it was all in these small matched spheres, perfect spheres, perfectly matched and perfectly graduated.

"Some beads!" said Billy Dancy.

"Some beads!" repeated Mr. Godfrey with a reverent twinkle.

Alicia had been mistaken about the clasp. It was not a cluster of canary diamonds, but four of them, cut square and set in a square, charming, naïve in their golden luster. They gave a note of old-time sophistication to the pearls.

"Put them on, Jean," said Billy manfully.

Mr. Godfrey rose, and slowly, with measured, ritualistic step, approached Jean and clasped the pearls in place. If they had been beautiful before, now they became superb, matchless. No woman ever has in her lifetime more than one ornament that is supremely, individually her own, intrinsically a part of her beauty, and not a mere decoration for it. These pearls were Jean's, absolutely, without question. Her fair delicacy, her evanescent color, was theirs and theirs was hers. Looking at her Billy Dancy's heart melted in a painful, choking tenderness. To think that she, so rare, so lovely, was his own.

"They were made for you," said Mrs. Perrimain in maternal ecstasy.

Mr. Perrimain said nothing. Pearls are not edible. But he looked at Jean attentively and seemed to enjoy what he saw.

"They were made for you," offered Alicia, repeating her mother's words. But she did not look at Jean. She looked at Billy.

"I may say," twinkled Mr. Godfrey with honest admiration, "I have never before seen a wearer and a jewel so well suited."

There was a silence. Jean looked down at the pearls and touched them caressingly, her rosy finger tips living pearls against the gems. It was plain that she longed for them as only beauty itself can desire beauty that matches and complements and belongs. But she would not say so. The motion of her fingers revealed it.

"How much do they cost?" asked Billy abruptly. He couldn't bear much more of watching Jean, so utterly adorable, with the things against that lovely throat of hers—wanting them. Suppose they should be sixty or seventy thousand! Suppose they should be a hundred thousand! He realized as never before how ignorant he was of the relative values of luxuries like these.

"Those pearls," mused Mr. Godfrey, "are a most remarkable bargain. A perfectly matched and graduated string, in such wonderful condition, isn't to be come across in a blue moon. They're unfindable. They're not on the market at any price. Only when some collector is forced to sell or an estate is to be closed—and then rarely, very rarely—do we get anything like this. This string is as good as anything I've ever held in my hands." His tone implied that he had held many, and of the best. Billy's faint hopes grew fainter.

"But"—and now Mr. Godfrey twinkled magnificently and directly at Billy—"Miss Lucretia Perrimain requested her executors, in case the pearls were bought by any member of her family, however remote, to permit the sale at exactly the original cost. She had kept a detailed and accurate record of it, I am happy to say. The result is astounding. Astounding! Even if you could find another such string of pearls on the market to-day it would cost four, probably five times as much as the amount named by Miss Lucretia Perrimain's generous provision."

Billy licked his lips furtively. The dry, hot. Would this bird never come to the point and name a figure! It was torture to have him go prosing on while Jean, the angel, sat there loving the pearls with her touching fingers.

"What is that amount?" he asked, perceiving a slackening in the flow of Godfrey's eloquence.

"Thirty-eight thousand dollars."

Billy Dancy's heart turned a somersault of relief and hilarity. Oh, boy! Oh, boy! Where was Alicia now! Where—? With histrionic intent he allowed his shoulders to slump, his mouth to droop, as if completely floored, flattened with disappointment.

"Oh!" cried Jean impulsively. "That's far too much!"

"Of course it is," echoed Mrs. Perrimain with infinite longing and regret.

"Humph—yes," grunted Mr. Perrimain.

"I thought so," said Alicia with triumph. "I felt that we ought not to ask Mr. Godfrey to bother to show them to us." She indicated Billy as the culprit, the guilty wretch who had instigated the whole blunder.

"It seems a great deal," admitted Mr. Godfrey wickedly, leading her on.

"It is, of course," twinkled Mr. Godfrey with sympathy and understanding, "though they are really a superb investment. If you wished to dispose of them at any time I could easily get you for a hundred thousand—perhaps a hundred and twenty-five thousand. Or I would take them as security and advance you more than their present cost price."

"This fellow is good," thought Billy.

"If you are not satisfied with the solution," continued Mr. Godfrey, "I would take them to anyone you name here or in New York."

"It isn't a question of value or sale," remarked Alicia. "We are not in trade, Mr. Godfrey."

Mr. Godfrey's twinkle conveyed to Alicia perfectly. "Ah, but I am not Miss Perrimain," he answered.

Billy could have kissed his host for that gentle slam. But Mrs. Perrimain was gathering up her wraps, Mr. Perrimain was reaching for his stick, Alicia was making little premonitory movements of departure.

"It's been delightful to see you," said Mrs. Perrimain bravely.

Alicia grasped the opportunity for one more dig to Billy.

"Yes—it's been delightful to see you and they're quite wonderful. I realize that it was useless for us to come," her brother-in-law insisted. We thank you, Mr. Godfrey, for your kindness and patience."

Slowly, reluctantly, Jean's hands crept up to unclasp the pearls. Then Billy stepped into the center of the room.

"Don't take them off, Jean," he said. "Of course we're going to take them. I wouldn't think of trying Mr. Godfrey's kindness and patience for nothing."

It was delicious to see how Alicia's loss his plunge left Alicia. She had no word to say. Billy felt a low desire to wiggle his fingers at her and stick out his tongue and say "Yah!"

But another surprise for them came from Jean. "No, Billy, no," she cried. "I won't think of it. It's far more than I told you ——" It was evident that she was deeply in earnest, that her refusal was real.

"I know, dear," said Billy, "but I thought they'd cost a lot more."

"It's too much to spend for an ornament," said Jean clearly. "Perhaps, perhaps, when we're better established, but not now. Just because they belong to me and I want them—I won't accept it. It wouldn't be right—it wouldn't be fair to you."

The Perrimain family in the background were registering well-bred disapproval of this outburst of emotion before strangers. Alicia could not resist commenting. Here was a chance to redeem her spite to Billy.

"Of course, Jean darling, if you think that Billy can't afford them you ought to let him do it."

Here is a new kind of Vacuum Sweeper advertisement. It gives definite facts and figures, which explain the remarkable cleaning efficiency of the Hamilton Beach. Compare these specifications before deciding on any other.

Buy your cleaner as you do your car

On Specifications and Performance

At last, super-suction has been added to the beating brush; so that the advantages of both these good types of cleaners are now merged in one amazing machine with multiplied cleaning power. It easily gives most value for the money. Read these detailed laboratory specifications, then have your dealer demonstrate on your own fine rugs. On request, we send FREE folder, with name of nearest dealer. Ask any questions! Absolutely no obligation.

MOTOR The Motor is self-ventilated, operating perfectly on 100 to 120 Volt A. C. or D. C. current.

One-fifth H. P. Speed 7,900 to 8,100 R. P. M.

Maximum current consumption, 2.2 amperes.

Maximum wattage, 200 to 225.

Bearings are of Non-Gran bronze, one inch long, self-aligning type, grooved and wick-threaded along entire length to insure constant lubrication.

Armature shaft is oversize, providing extra large bearing surfaces to minimize wear.

Commutator is 36 bar, with pure mica, representing utmost fineness of manufacture and quality construction.

Carbon brushes are easily replaceable.

Cord is armored at motor case with a V shield and wire guard. No breakage is possible.

BRUSH Speed, 2,000 R. P. M.

Single row of bristles; only one-half as many contacts with carpet as brushes with two rows.

Four easy adjustments compensate for brush wear.

Hinged wire-guard absolutely prevents carpet from sealing nozzle and reducing efficiency.

NOZZLE Interior of nozzle is scientifically stream-lined to reduce eddy currents and provide for greatest velocity.

Four-wheel compensating carriage insures easy running.

Instantaneous finger-tip nozzle adjustment gives three positions of nozzle, one for every type and thickness of carpet and rug; no screw drivers or tools of any kind required. The little black lever does it!

All-over height is 7¾ inches, making it one of the lowest cleaners on the market, handy for operating under very low furniture.

Bumper cord is spring-secured and effectively prevents the marring of furniture.

FAN Extra strong and perfectly balanced, with blade curvature scientifically determined for maximum efficiency.

Air displacement, 219 cubic feet per minute.

Air velocity, 71.4 feet per second, or nearly a mile a minute.

Vacuum, 12.75 inches "U" tube water-lift at 110 volts.

Fan shaft shield absolutely prevents accumulation of hair or string on shaft.

Belt is direct-connected; no idlers or long cross-overs. We guarantee it.

BAG The bag is of heavy khaki and guaranteed. Throat-flap at intake point prevents dust from falling back into fan and dropping on carpet.

Jiffy bag connection—a turn of the wrist and it's off. Simple spring clip secures other end of bag through which dirt is emptied.

Tension pad of felt absolutely seals this end under clip against any leaking or sifting of even minutest particles.

HANDLE The handle has a convenient curve to eliminate awkward and tiresome position when used.

Switch in handle for starting and stopping is at finger tips.

Length of cord outside of handle, 18½ feet.

All dealers are glad to show you the famous three-point demonstration and to name convenient terms, on request

Note how the air sweeps the surface, besides cleaning through the rug

(Continued from Page 110)

"Please don't interfere, Alicia. Billy can afford them or he wouldn't have said he'd buy them. It's not that. It's just that it seems too much—he's given me so many things."

"Perhaps," said Mr. Godfrey tactfully, "you and Mrs. Dancy would like to talk it over for a few minutes in my inner office."

Within and alone, Jean rushed into the instant shelter of her husband's arms.

"Don't—don't buy them, darling!" she begged. "It's such a lot of money. It isn't right. I don't care—really!"

She wanted to say to him, "Don't let Alicia goad you into this piece of extravagance." But she would not so belittle him.

"Now see here," answered Billy, holding her close, "you know—you know that I wouldn't buy you anything we couldn't afford. I was so relieved and glad when he said thirty-eight thousand ——"

"Billy," said Jean, "will you give me—your word of honor—that to pay for these pearls won't embarrass you? That it won't hurt the business—that you won't have to give up doing anything personally you want to do? It is such a lot of money."

For a mere flicker of an instant Billy Dancy thought of telling his wife everything, the exact situation. But that flicker vanished.

Why burden that little fluffy head with a lot of dry details that she wouldn't understand, and from which she might draw entirely the wrong conclusion?

"Jean, darling, I give you my word that I've got that much money—and more—not doing a thing—simply lying idle in the bank—and I don't need it in the business or for myself. It would give me the greatest joy and happiness to buy these pearls for you. If you could see how you look with them on! And there'll never be such another chance to get anything so good at such a price! Now—did I ever tell you a lie?"

"Oh, I should say not! How can you ask such a thing?"

They appeared before the waiting Perrimains and Mr. Godfrey, smiling and content.

"We're all set," announced Billy cheerfully. "Mr. Godfrey and I will now have a few words in private. And then Jean will have the pearls."

"Oh, I'm so glad, so gratified!" cried Mrs. Perrimain. "You have no idea, Billy, how thankful I am that they're to stay in the family."

Mr. Perrimain also made sounds of joy. Only Alicia remained aloof and silent, and by that Billy measured the keenness of her disappointment. But he did not pay very much attention to Alicia. Her spite, her malice seemed smaller, less important. It was Jean and her loveliness, Jean and her delight that were uppermost in his mind, and the warm happiness of giving her something precious and beautiful.

His few little words in private with Mr. Godfrey were exceedingly satisfactory.

"Don't forget," said the agent, "if at any time you should want to dispose of them I'll arrange it for you very greatly to your advantage. Or if you should need to raise money quickly—pearls are very negotiable."

"I hope I won't have to sell them or raise money on them," said Billy, laughing. "But I appreciate your information."

Five minutes later Jean held the faded vermilion case in her hands.

"Don't you want to wear them?" asked Billy.

But she shook her head and slipped the case into her velvet purse, tucked the purse under her elbow and held the top of it tight.

In the elevator she slipped the hand that was not engaged with the purse into Billy's. He squeezed it happily.

"Won't you come and have dinner with us?" urged Mrs. Perrimain.

"Got some fine wild duck from North Carolina," said Mr. Perrimain.

"Not to-night, thank you," said Billy, and swept Jean away.

Dine there when he didn't have to? Not much! His last view of the Perrimains showed him Alicia's rigid back, an exclamation point of thwarted fell intent.

"What price pearls, Alicia?" he wanted to call after her.

II

SUCCESS is a sweet and heady liquor. There had been many drafts of it in Billy Dancy's life—his promotions before old Gertner's death; his succession afterward; his enlargement of his factory; his consolidation and weeding out of [illegible] ployes; his increasing circle of [illegible] young men like himself, who put him clubs and urged him to sports; and [illegible] est of all, and most decisive, perh[illegible] invasion of the city's elect and his m[illegible] to Jean Perrimain.

Like most rising young men w[illegible] world to conquer and big plans [illegible] through, he had not wanted to ma[illegible] would have indignantly denied that [illegible] ment had you asked him now. But [illegible] theless it was true. He had had no [illegible] longings for domesticity, nor was [illegible] type of egoist who feels that the w[illegible] tion of himself is a duty to the r[illegible] enjoyed having his scant leisure fre[illegible] with no claim on it save those h[illegible] to admit. But—he saw Jean P[illegible] selling flowers at a charity bazaa[illegible] click-click went the little electric [illegible] first love, and all his aversion to [illegible] vanished on the instant.

He bought her flowers, he was lit[illegible] to her, and he laid siege to her wit[illegible] plete unawareness of the social [illegible] would have to bridge to win her. [illegible] it turned out to be such a gulf, th[illegible] Jean met him halfway across [illegible] questionably and as surely as he [illegible] to her.

And for men like Billy Dan[illegible] gulfs do not exist. Having seen [illegible] loved her he courted her ardo[illegible] nestly; and married her. He w[illegible] done so if she had been a be[illegible] found in his marriage a height of [illegible] that few men attain. Now, at [illegible] there a reason for his work a[illegible] ambition—Jean.

Though he had never thou[illegible] social place as an asset to himse[illegible] was seeking her—indeed it w[illegible] drawback, and he had to en[illegible] distasteful things on account o[illegible] he had won her it became i[illegible] mixed and mingled with the w[illegible] another attribute that proved [illegible] derful she was. Strangely wov[illegible] the warp and woof of his dear [illegible] her was pride—pride that she [illegible] creature a little above others [illegible] own. Pride that, coming fr[illegible] whom common acclaim placed [illegible] she should be his beneficiary [illegible] could, even so, give to her mu[illegible] had not. Her trust in him, h[illegible] tioning love subtly flattered [illegible] while he knew it was his inf[illegible] precious possession. And so he k[illegible] first treated her not like a com[illegible] equal but as an adored, shielde[illegible] did not know it, did Billy, but [illegible] complete pattern of the dom[illegible] whose autocratic superiority to [illegible] of his species is never questio[illegible] own mind. Had he loved her le[illegible] have been unbearable.

Yet with his pride and his [illegible] dominance was so much though[illegible] ness, so much touching humi[illegible] could never understand the w[illegible] answering love for him—and w[illegible] ishness so sudden and utter[illegible] that his tyranny was uncon[illegible] even Jean, who was beginning [illegible] it dimly, would not so have w[illegible]

This purchase of pearls wa[illegible] to him. It was another open[illegible] material success, and another [illegible] that he could give to her w[illegible] motive for seeking material s[illegible] here again, with this double [illegible] came the third—this gift wou[illegible] him with Jean's family as he [illegible] determined some day to be est[illegible] a superior niche.

And as for Alicia—he had [illegible] tened her. She might be as s[illegible] Ethel Monticute, but he could [illegible] put armor on his vulnerable sp[illegible] at the Perrimains', with Jean [illegible] pearls, became distinctly possi[illegible]

"I believe you like them t[illegible] do," Jean accused him after s[illegible] occasions.

"No, I don't."

"No, you don't, because I [illegible] mad about them. I gloat [illegible] women envy me."

"Other women might envy [illegible] than the pearls—it's you wh[illegible] pearls so effective."

"Oh, of course—pearls are [illegible] less the right person wears the[illegible]

"Vanity's a terrible thing," [illegible] trophized the world at large. [illegible] comfort to me to think that [illegible] surance ran out, and I were to [illegible] couldn't get a cent from an[illegible]

a quick, vivid memory
Godfrey had said when
arls are negotiable."

Negotiable! A fine suggestive word. Here in his pocket he had property on which a sufficient sum might be raised to lift him out of all his present difficulties.

Only, of course, it wasn't feasible. He couldn't ask Jean for the pearls for any length of time. He utterly revolted against letting her know that he'd been obliged to raise money on any of her ornaments, especially this, her most loved and cherished. Women didn't understand these things. She'd think they were next door to the poorhouse and be terribly distressed.

No, he'd have to think of a better plan than that. But—it would be so easy—so exceedingly, beautifully easy—if he could only do it. If—he—could—only—do—it! A bunch of ready money, and no one knowing about it. By golly—what a chance!

Instinct, which is at all times stronger than reason, led him, when he got off the train, not toward the jeweler's but toward the Walnut Street office of Mr. Godfrey. He'd just get some idea of what might be done, in case ——

Mr. Godfrey, as twinkling as ever, seemed glad to see Billy, and offered a suggestion that was illuminating.

"You think you'll only need this money for a few days?" he asked.

"I can't be sure," said Billy. "If the silk market doesn't slump, but is tided over, I won't need it at all. Then I could return it at once. If it does slump and I go in and buy cones—our thread silk comes to us ready for use in one-pound cones, you understand—then I'll need it longer, for I'd have to repay it out of my profits, accruing from month to month. That's what puzzles me. I can't keep the pearls that long on a pretext of having them restrung. My wife would know it wasn't necessary."

"Why don't you tell your wife, frankly, all about it, Mr. Dancy?" asked Mr. Godfrey. "As I recall her—and I recall her very distinctly—she was endowed not only with far more than the average degree of beauty, but oddly enough, with brains also."

Billy brushed that away. "Of course she's clever," he granted. "But she knows nothing about business—and takes no interest in it. It's been my happiness to shield her and keep her away from everything that is part of the sordid grind of running a factory and making money. My wife—she's, she's exquisite—untouched."

He groped for words and could find none to convey what he wanted to say. But Mr. Godfrey seemed to understand. He did not urge his idea.

"And besides," Billy went on practically, "I don't want her people to get hold of it. Jean's a child about such things, and she might inadvertently let them know. And you know how it is with in-laws."

Yes, Mr. Godfrey knew. He tapped with his pencil on the top of the vermilion box and spoke wisely: "Then let me have the real pearls duplicated for you, Mr. Dancy. No one will know the difference. At least, it would take a great expert. And they are rare."

"But can they be duplicated?" The merits of the idea ranged themselves quickly before him.

"Oh, yes. I'd take them over to New York. There's a man there whose chief business is doing just this thing. He keeps a marvelous stock on hand. The duplicates will cost you seven hundred dollars. My time and my services will cost you two hundred. I will personally choose the pearls for the duplicate string. You will use the original clasp; it is unique and couldn't be changed. And then I will lend you"—he paused and thought—"I will lend you forty-five thousand on these, for six months, at the usual interest."

Forty-five thousand for six months, obtained in secret, and at no more than legal interest! Manna in the wilderness!

"Oh, but I won't need it for anything like six months," protested Billy.

Mr. Godfrey permitted himself a smile. "They all say that," he observed. "Now I suppose the need is haste, isn't it? I will go over to New York to-day—and tomorrow afternoon you can stop in and take the duplicate pearls home with you."

More and more was Billy's opinion of Mr. Godfrey rising.

"That would be bully!" he answered heartily.

By all means, the sooner Jean had the duplicate pearls the safer he'd feel.

So it was arranged, and he went on to his factory—stopping at the bank to leave Mr. Godfrey's promptly tendered check,

They have become as popular as straw hats

IN the smallest country towns, in our largest cities, you'll find Keds everywhere. Men and women, boys and girls—all rejoice in the real foot-free comfort of these cool and sturdy canvas shoes.

The success of Keds is due to many things—but especially to the craving for real foot comfort such as only Keds can give, and to the splendid quality of the famous Keds line.

As light and natural as barefoot, yet Keds give the foot perfect protection. And then Keds have a snap in their lines and finish which makes them popular even on the verandas of exclusive clubs.

Why it will pay you to insist on Keds

Back of every pair of Keds are the skill and experience of the oldest and largest rubber organization in the world—growers, manufacturers and distributors of rubber and its products.

Uppers of fine white or colored canvas—soles of tough, springy rubber from our own Sumatra plantations—Keds make you proud of their appearance as well as enthusiastic about their comfort and wear.

There are many different types of Keds—high and low, plain and athletic-trimmed—styles for outdoors, for home, for every kind of sport. You can get the kind you wish at your dealer's. If he hasn't them, he will get them for you.

But remember, Keds are made only by the United States Rubber Company. If the name Keds isn't on the shoes, they aren't real Keds.

United States Rubber Company

Keds

Trademark Reg. U. S. Pat. Off.

Keds were originated and are made only by the United States Rubber Company. The name Keds is on every pair. It is your guarantee of quality and value.

with the feeling of a man who thought he was stepping off a high cliff and found the drop was only a couple of inches. He'd gotten all excited and worried about nothing. The whole thing had been superlatively easy. Now he was heeled against trouble from any point.

It must be admitted that he had felt very distinct qualms about passing off the artificial pearls on Jean. But he counseled himself to be practical. The use to which he put their worth was legitimate, a good stroke of business, and the substitute was to be briefly temporary. He sent cheerfully for Beazley.

"Well, how's the slump coming?" he asked.

"Be here within the week," replied the old man. "I'm certain of it now. I'm buying just enough cones to keep us along from day to day, as you might say, and the thread salesmen are thicker'n a swarm of bees, fairly begging for orders, trying to stave the thing off. Oh, it's a landslide. Now, Mr. Dancy, I want to know just how much I can spend when it comes. I don't want to wait. Whoever gets there first will get the cream."

"You can have fifty thousand," said Billy. "That's all I can spare."

"We couldn't store any more'n what that'll buy. I don't want so many that the thread will deteriorate before we can use it, either. Just a whacking good lot to get right to work on, and clean up pretty."

"Shoot when you're ready," said Billy. "I've got the ammunition."

The day went on as usual. Nothing to distinguish it but an increased sense of a good deal consummated and smart strategy planned. No possible consequences of his devious ways loomed on Billy Dancy's soul until that night at dinner.

There in the peaceful fastness of his black-oak and hand-blocked-linen dining room—enjoying an excellent meal, with Jean opposite him in a golden slip of a dress that turned her into a fairy creature—the bomb was thrown.

"Did you leave my pearls at Baltwell's to-day?" asked Jean casually enough.

For a sickening second Billy was prone in a shell hole. He emerged slowly. And he told Jean the first lie he had ever told her.

"Yes," he said firmly and clearly, "and they'll have 'em ready for me to-morrow night, and I'll bring 'em out."

"Oh, you needn't bother," she answered. "I'm going in and I'll stop for them."

Food became suddenly nauseous, and the room turned upside down.

Why in the humph-humph, he kept asking himself, had he said that! Why didn't he tell her that he was too rushed this morning and would take 'em to-morrow? One question at Baltwell's and she'd know the pearls weren't there! He cursed himself and his lack of forethought in preparing a good alibi.

Presently his panic lessened. He would devise something to keep her out of town to-morrow or get hold of the pearls and telephone her by noon that he had them and she needn't bother to go down to Baltwell's. It mustn't be anything clumsy.

"That bird who said the descent into hell was easy remarked a pageful," he murmured to himself. "It's too darned easy so far as I'm concerned."

He thought of many things, but none of them would do. At last he decided to make no reference to the matter for that evening. He was greatly helped in this decision by the entrance of Kate and Louis Heathersley, who had jumped into their car after dinner and run down from Bryn Mawr because they were dying for a little quiet bridge.

And Kate wanted to tell Jean the newest recipe. It began: "Take a pound of apricots and a gallon of water."

In spite of the protective coloration provided by these guests Billy Dancy spent a thoroughly miserable evening. He was unused to subterfuge. He hated it. And he had walked into the bit of it so easily, so unwittingly!

In the morning just as he was leaving he gave a good personation of a man suddenly remembering something.

"By the way, dear—I just thought of it. You asked me last night if I'd taken the pearls to Baltwell's. I didn't go there after all. I took 'em to old Godfrey. I thought it wouldn't be a bad plan to have him look at them every once in a while. And he said he'd have them restrung."

"Oh, Billy—will they be done by this afternoon? I want to wear them to the Traills' reception." He could d slightest symptom of distrust ure.

"I think so. I'll have Miss K him up, and then telephone you right?"

It was apparently all right. on to his train with a little less than was usual. He resolved watch his step. And watch his then again, to watch his step.

But as it turned out, it seemed alarms had been groundless. Wh Jean met for dinner she was w pearls. He knew they were the and he did not dare look at closely. To the casual eye they w cal.

"You got 'em all right?" he "Oh, of course."

Oh, of course! What do wom the secret travail of their husba Dancy swore a mighty oath to toil that he would spare no labo tion, no effort till the real gems in his hands once more. And t pearls were his again—no te easy profits, no need for mone would ever cause him to repea man who had to raise funds t his wife's jewelry—he named and loathed the stigma. But s

Still, he was reasonably cheer assured by the happenings of t days. Almost to the minute, a exercised occult powers upon it in silk appeared, even as old predicted.

And into the fray went armed with Billy's fifty th bought, swiftly, sapiently. as he had said, the cream. W packing boxes of cones began the storage space, and as Billy bills, ridiculously small for they represented in materia flowed into him. Now—no thing to do was to work like swing the profits into a coup powerful figures.

With this in view he exhort men to supreme effort. "We we want them quick, and we gilt-edged," was the message. action—action!"

Make Your House Repair-Proof

Avoiding those incessant, costly repairs is merely a matter of using materials that will successfully resist the unceasing action of weather, water and wear—in roofing, plumbing, sheet metal work and hardware.

No matter how much you spend to paint, plate, dip or galvanize ordinary metals, they are *certain* to rust. Then follow repairs—and more repairs—and the still costlier replacements.

Use Copper and Brass in the first place and save all this trouble and expense.

Copper and Brass do not rust. They are in reality much cheaper than substitutes. You don't have to repair or replace anything made of the Everlasting Metals.

Copper and Brass save you many times their slightly higher original cost, for they provide enduring, expense-proof service, not for a few months but *for the whole life of the house.*

Copper and Brass are cheaper because you pay for them only ONCE

COPPER AND BRASS
RESEARCH ASSOCIATION
25 Broadway, New York

It Costs Only a Trifle
to keep the least expensive units in your house from becoming a costly nuisance—

Only 3½ mills more on the dollar for Brass to take the worry out of your plumbing.

Only ½ mill more on the dollar for Copper leaders, Copper gutters, Copper flashing and Copper valleys to avoid the constant repairing and replacing of metals that rust.

Only 7/10ths of a mill more on the dollar for enduring Copper, Brass or Bronze hardware that wears *forever* and not just for a few years.

Only 2 and 8/10ths cents more on the dollar for a Copper roof that spares you forever from leaks and water-soaked interiors, a roof that needs no paint, no patching, no repairs.

STEPHENS
Salient Six

It's a Great Car

Now 31 improvements at $655 less

Generations of Stephens men have devoted their lives to making travel economical, dependable, comfortable. Their ideals have shaped the building of the STEPHENS SALIENT SIX to the highest standard.

This single aim has created the Stephens motor—the farthest advance in overhead-valve perfection—and given it ability to deliver 18-20 miles a gallon from fuel that would choke most motors with carbon.

A motor of superlative smoothness and efficiency at 2 or 60 miles an hour! Its 57 H. P. has an abounding energy superior to your utmost need.

Stephens coach work expresses Stephens ideals in bodies—staunch, beautiful and individual in refinement. Full-alloy silica steel springs give you unparalleled buoyancy and luxury of motion.

One hundred million miles of enthusiasm! That is the tribute—amazing, convincing—coming this spring from thousands of owners.

Now Stephens adds 31 refinements and improvements, with an efficiency that has lowered the price $655.

You will never appreciate the extraordinary value of this truly great car until you sit behind the wheel.

And we'll see what we

Miss Koons spoke up with unexpected spirit. "You get a new stenographer, Mr. Dancy. I'm going out in the factory and try my hand with a machine. I guess if I can pound a typewriter I can knit silk stockings, and I've often watched the women out there. So you got one strike breaker right here."

"Bully for you!" said Billy. "I won't forget this, Miss Koons."

And so the fight began.

For the first few days it was a wild rush to secure new operatives, to reassure customers, to discourage further orders but to keep a string to them in case the strike was called off. Everything was in a state of flux, uncertain, shifting from hour to hour. A few strike breakers trickled in, poor unskilled workers, who not only had to be taught but also had to be constantly watched. Old Beazley marched out into the factory and took a machine beside Miss Koons. Billy himself was there intermittently during the day, teaching, helping, acting as foreman, mechanic, anything to get the work through. But progress was discouragingly slow. No more than a third of the machines were running, and these at far below their normal output.

Still Billy struggled on. By superhuman efforts he managed to get out a few of the smaller orders on time, but he had the depressing consciousness of the impending demoralization of the business he had built up so proudly, so painstakingly. To a man of constructive temperament and sanguine turn of thought there is nothing so keenly hurtful as wanton destruction of a useful industry that he has himself developed. So with Billy Dancy. He made his fight doggedly, untiringly, but with the finger of despair laid on his heart.

His whole self was so centered on the factory and its problems that he was oblivious of all else. He had grown thin to gauntness, strung tight with nerves. Jean, watching him, yearned over him. But he brushed away her solicitude, hardly saw her. She had become in this crisis almost shadowlike to him, not quite real. He submitted to her affection, but he found no solace, no rest in it. At last she ceased to urge it on him, only saw to his smallest ease and comfort with infinite care and waited for him to come back to her.

He only half heard her when one day she reminded him that they hadn't dined with her family for two months, and that tonight they really must go. "Because," she added, watching him closely, "Cousin Martin Halstead is to be there."

In his frame of mind Cousin Martin Halstead was a wraith, a wisp of nothing. Billy did not even remember having heard of him.

"I wish I didn't have to make you go, poor dear," Jean said worriedly. "You are so tired and worn and bedeviled with this strike. But mother and father would think it so odd if we didn't make a point of seeing Cousin Martin. He's such a traveler, and here so seldom. And he wants specially to see—us."

Even then Cousin Martin Halstead did not register on Billy's consciousness. "I'll be there on time," he said wearily. To eat dinner with his relations-in-law was just one more rotten chore to be chored.

The day was long and harassing, the worst he had yet endured. One of the working machines had been put out of commission by a careless learner. The woolen people were still sitting tight, caring nothing for the devastation of the sympathetic strike. Two of his local competitors, also hit by the strike, had been able to open up on half time, having by sheer chance got hold of a bunch of newly arrived immigrants who were skilled operatives. Some of his customers who had been sympathetic at first were getting restive. And though he was still able to meet his obligations he was down to the slimmest sort of shoestring.

"And I've got to watch old Perrimain lap green-turtle soup, I suppose, and tell about the best way to make French dressing!" he thought, as he got into his dinner clothes at the club. There was no dining at the Perrimains' without the proper raiment. He broke one of his studs, and smudged his only clean collar. It was a black world, not worth living in. He was crushed by the injustice and cruelty of it. If there was only one person who understood, who really cared! And if he was not oppressed by this ever-present consciousness of his own deceit, of his own trickery! In some occult way the pearls were the last bitter gibe of fortune.

Guaranteed by Westinghouse!

Any of the 1800 Westinghouse Battery Service Stations will directly fulfill the WESTINGHOUSE GUARANTEE regardless of place of issue; or will render WESTINGHOUSE ATTENTION for the battery you now have, no matter what make it is.

THE Westinghouse Battery Guarantee is based on this rock-founded principle: That any product permitted to bear the name of the great organization which has sponsored the air brake, automatic railway signals and other world-noted achievements in mechanical science *must make good*.

When you buy a Westinghouse Battery you buy "battery mileage," the measure of which is definitely expressed not only in minimum months of service, but in terms of absolute satisfaction.

To get the most from your radio set use "A" or "B"

"Save your feet"

Write for Free Book

Relief for tired and aching feet guaranteed

Get a pair of Jung's "Wonder" Arch Braces today whether your feet are "in bad shape" or not. They relieve tired and aching feet instantly. Help weak ankles. Overcome pain in the heel, instep or ball of the foot, as well as in the calf and knee. Such troubles as these, and callouses on the ball of the foot, cramped toes and enlarged joints are due to fallen arches and weakened conditions of the feet. Ask your doctor. Men and women everywhere are wearing them because

Jung's Arch Braces Assist Nature

They aid the interosseous muscles of the feet and *help them to regain their former strength*, instead of building a false, rigid support beneath the arch. They correct fallen arches and foot strain. Relieve tired and aching feet instantly. Prevent that "broken-down" feeling. Dance or walk for miles, stand for hours—you just don't get tired. They eliminate the extra strain due to the wearing of high-heeled and stylish shoes. Recommended by chiropodists, physicians, and over half a million satisfied users.

Write for Free Book—It Tells How

Their extremely light weight insures perfect foot comfort. No ungainly humps. No burdensome pads. No metal plates. Made of specially prepared "superlastik." Exact size for every foot. Price $1 per pair. Jung's "Miracle" Arch Braces (extra wide) $1.50 per pair. Your money back if not entirely satisfied. (Canadian prices: "Wonders" $1.50; "Miracles" $2.25.)

If your shoe dealer, surgical dealer, druggist or chiropodist can't supply you, order direct. Write for free booklet.

JUNG'S
The Original
ARCH BRACES

He got to the Perrimains' in the very nick of time, and not until they were at table did he become really aware of Cousin Martin Halstead, tall, with keen eyes, gray and lean and taciturn, with a drooping mustache, hair thin and high on his narrow forehead.

There was green turtle, even as Billy had anticipated, and Mr. Perrimain held forth in a long monologue as to whether or not it contained sufficient sherry. There were delicate little pâtés of shrimp and oyster and lobster for the fish course, a novelty urged on his guests by the epicurean autocrat at the head of the table. Then it was that Billy observed his newly met relative for the first time.

"You eat too much, Philip," said Cousin Martin calmly to his host, "and your food is too rich. You'll go off with uræmia if you're not careful."

Mr. Perrimain became apoplectic with indignation. "I have always maintained that eating is one of the fine arts," he snorted. "Too much neglected—too much neglected! You have your own hobby, Martin—why be sarcastic about other people's?"

"Yes, but my hobby isn't harmful to my health," said Halstead. "And I don't agree with you that eating is one of the fine arts. It's enjoyable, but somehow a little vulgar."

Mr. Perrimain swelled and puffed with anger.

Mrs. Perrimain looked agitated, and fluttered her hands distractedly. Billy felt dimly sorry for her, and stepped into the breach.

"What is your hobby?" he asked Cousin Martin without interest.

"Why, Billy, you know," put in Alicia with too, too sweet reproach. "Everyone knows."

"If I know I've forgotten," said Billy hardily.

"Why, Cousin Martin's a connoisseur in gems," offered Mrs. Perrimain. "He collects jewels—he has the most marvelous things! One of the reasons he's dining with us this evening is because he wanted so much to see Cousin Lucretia's pearls. Don't you remember I told you that he bought a good many of them for her? But he's never seen the completed strand."

"They're very fine, too, at this distance," said Cousin Martin, cocking his keen eye at Jean. "And they're highly becoming to Jean."

Billy Dancy's fork stopped halfway to his mouth, and then dropped to his plate. He could not lift it farther. What had he got into now? His imagination leaped ahead: Cousin Martin—what confoundedly sharp eyes the fellow had!—approaching Jean and saying, "And now let me look at the famous pearls." The Perrimain family sitting about in smiling complacency, waiting for eloquent compliments. Cousin Martin's start of surprise, his closer investigation—probably he had a microscope or something in his pocket—his puzzled "This is odd!" And his final verdict: "These pearls are false!"

Then cries, exclamations, Alicia's prompt suspicion of himself—Alicia would know what had happened, give her the least little hint—and at last, in his present state of weariness and disaster he'd be able to put up no defense, and the truth would come out.

Tableau of rage from Papa Perrimain, tears and reproaches from Mamma Perrimain, malicious gloating from Alicia, and—worst of all—distrust and grief from Jean. With himself in the star part as criminal in chief forever after. Humiliation on humiliation.

All this went through Billy Dancy's head like a swiftly run film. This was the last straw, the very, very last! He was caught. He looked around at them all with glazed, unseeing eyes.

Then as from a great distance he heard Jean speaking.

"But these aren't Cousin Lucretia's pearls," she said gayly, naturally. "I'll take Cousin Martin to see them to-morrow at Mr. Godfrey's, if he likes, but I'll have to confess these are nothing but imitation. There were so many burglaries out near us that I got frightened and had Mr. Godfrey find a duplicate for me. He has the real ones in his safe. But these are wonderful—they've fooled everyone so far." She looked across at Billy. "Haven't they, dear?" she asked.

What went on for the rest of the dinner, what he ate, what was said, Billy Dancy was never able afterward to remember.

It seemed to him that it was eterni of time before he and Jean were again.

They made the journey in silen when he asked her if she was cold, answered.

She kept her head turned awa him, her eyes lowered. He did n imagine what she was thinking.

But when they reached their miliar sitting room she faced him ately.

"I couldn't bear it!" she said, the words tears began to run cheeks, tears uncontrollable, "I couldn't bear it any longer! me out of everything—you won't thing! You act as if I was a painted creature who couldn't un who didn't want to help! It's It's not fair! I'm your wife—I so—I'm not a baby—or an idiot to be dressed up. You make me Nora."

Billy Dancy's reading had not the famous Ibsen drama. "No he asked stupidly. "Oh, Jea don't! If you knew how miser been!"

"What right have you to be all to yourself?" she demanded. be miserable with you. What you to keep me in the dark ab or try to? Of course you could you so I know almost every think—I can feel every little ch These wretched pearls—oh, I h a mistake to buy them! I kn Billy, Billy, you have me in y I know it. Put me in your mis confidence and your life too."

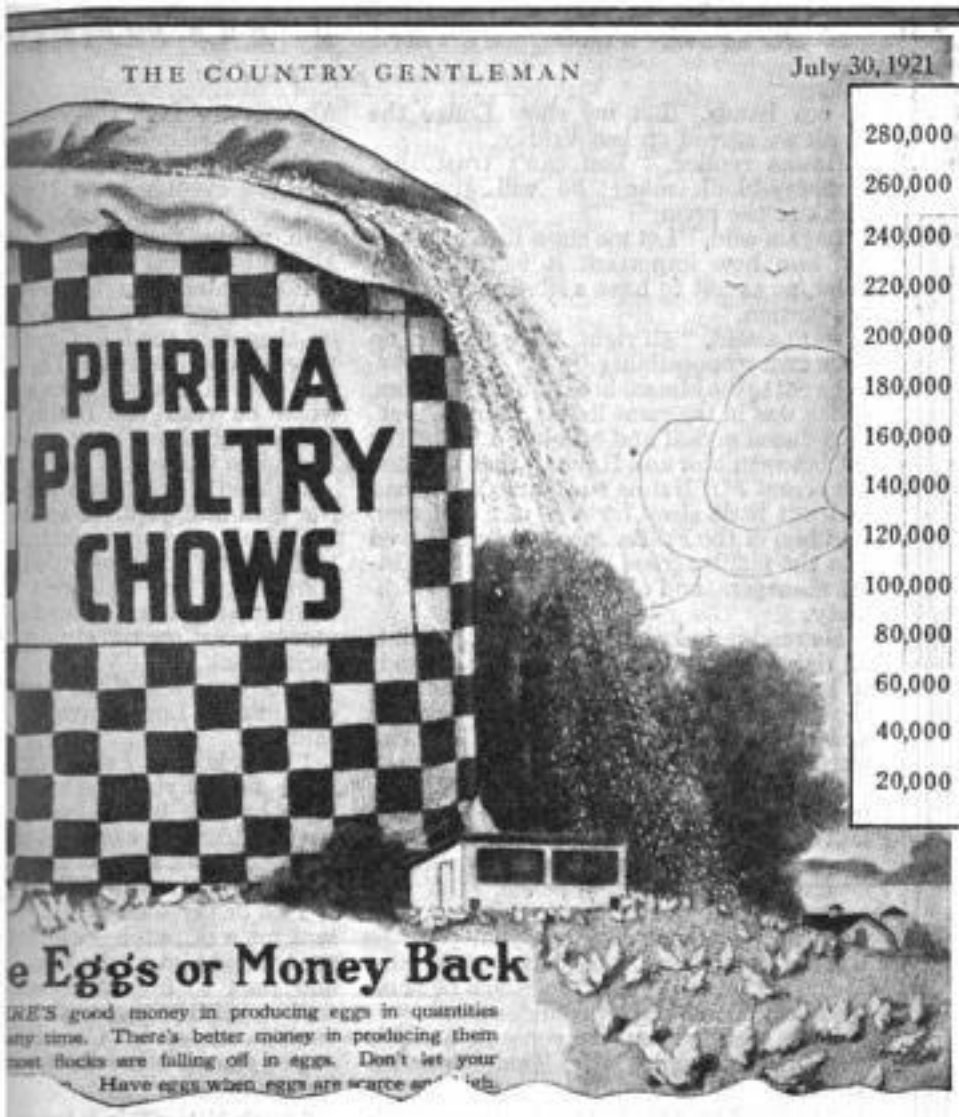
She was crying in his arms w sobs shaking her slim shoulde treat me like a toy to be playe piece of bric-a-brac to be ke taken care of. Don't—don't! to have you hold me so cheap You let your stenographer run machines; even she helps you We may be on the very verge you won't tell me—you wo You'd rather deceive me—w She struck her clenched hand pearls. "It was all vanity, them. Alicia worried you in know! And yet—I thought said so—that it was all rig night—oh—we had to go the But if you think that I'd let tin—or Alicia—or anyone—ha iate you when you're in such it would have served you trusting me enough to tell Billy, Billy—how could you you!"

"Jean—Jean!" He wante himself; his throat was tig darling—little fellow—I'm th I'm just an utter fool—but you'll only forgive me—yo everything—everything!"

When they were calmer ventured on a question: know they were false, Jean"

"Oh—you looked so gui felt, somehow, different. S Mr. Godfrey tell me. You you can stand up before a w

He held her more close glorious laughter—the first for months. The weight of load broke and slipped from free and strong. If Jean cared so much—why, he coul The strike—that would corn It would have to come out a make it.



Money? He'd get it so where, enough to tide over. could—if he felt this way morrow—oh, what he'd do!

MONARCH FOOD PRODUCTS

Salesmen Wanted

WITH the opening of our Eastern plant, we announce a change in sales policy. We have discontinued distributing the products of our factories through jobbers and will now sell direct to retail grocers at jobbing prices, with the assurance that the well-known high quality of the past will be maintained.

Desirable territory is open in New England and Atlantic Coast States in which we will place salesmen. It long has been our policy to make additions to our organization from the ranks of retail clerks. We want men under 35 years with records of success in grocery stores. To such we offer an opportunity to make a worth-while connection where you will enjoy a wide field of endeavor and a splendid prospect for development.

We require references from present employers. We want capable, ambitious, energetic men, and if you are looking for a future with great possibilities, come and see us. Only applications in person considered.

REID, MURDOCH & CO.

882 Third Ave. (Bush Terminal), Brooklyn, N. Y.

TO RETAIL MERCHANTS: Because of our organization, the cutting of overhead expenses, and the style of packing, MONARCH COFFEE has a price advantage to the retailer readily recognized by alert merchants. We believe the retail grocer to be the most economical and logical distributor of food products. Correspondence is invited from retail grocers in territories not now covered by our salesmen. Particular care is given to mail orders, assuring you good service, and we will be pleased to quote you prices. Our MONARCH COFFEE is never sold in bulk. We have only one price to all retail merchants, and that is the lowest market price. In territory east of Pittsburgh, address as above; west of Pittsburgh, address:

REID, MURDOCH & CO., Clark St. Bridge, Chicago, Ill. (Established 1853).

To South America

Record speed and luxury on new American ships

SWIFT new American ships have broken all speed records to South America. Rio de Janeiro is now only 11 days away. Having established a new speed record, these great ships are establishing a new record for popularity.

You will be entirely happy on these magnificent ocean liners. They are equipped with every modern comfort and convenience. Operated by the Munson Steamship Lines, they derive the benefits of this organization's 50 years of successful experience. Special tourist arrangements may be made for those who wish to visit the interior and return via the West coast.

on our hands. Let me show Lodge the plank we agreed on last Friday."

Hanna replied, "You can't trust that blankety-blank man; he will give the plank to the press."

I again said, "Let me show it to him and tell him how important it is to keep it quiet, so as not to have a silver bolt in the convention."

Hanna said, "All right, but you do it on your own responsibility."

I went to the Massachusetts headquarters, which was in the same hotel; found Lodge, introduced myself and told him I heard the tilt between him and Hanna; that he must not resent Mr. Hanna's attitude, as he had had but little sleep for a week; and then told him of the Friday meeting and showed him the plank agreed upon by the McKinley managers, and of our pledge of no publicity.

He read it and said: "Why, that plank is all right; the only change I would make is to knock out the words 'and unlimited' in the sentence 'We are opposed to the free and unlimited coinage of silver.' The two words are unnecessary."

I made the change and have the paper framed. The only words that have not faded out of the mimeograph copy are the words "gold" and "out suggestion of Lodge"—both written in pencil.

Lodge asked me for a copy.

I said, "I cannot give it to you."

He replied, "I want to show it especially to one man who is going to make a fight on the floor. I will keep it confidential."

I was weak enough to consent, and his stenographer copied it. This happened Monday morning about eleven o'clock. The evening papers of Tuesday, in St. Louis, printed a dispatch from Boston giving the contents of the plank I had handed Lodge. About six o'clock that evening I m Hanna in the hall.

He was very angry and said, "H seen the evening papers? I told y you could not trust him, and if thi ture publication causes a break McKinley ranks you are responsi

Fortunately but few saw the d as the papers did not put a display it; they were too full of local happe play up outside news. The only w side Mr. Hanna to make a prote when he read the Boston dispa Mr. M. H. De Young, owner of Francisco Chronicle.

He said California would not s the gold standard. I reminded California was more interested tective tariff on citrus fruits than i standard. The California paper the campaign that followed soft-p money question and strongly supp tariff plank.

Afterward one of the Boston ev ents told me Lodge gave him the said:

"That is what I stand for!"

He did not claim he wrote it, b later he was introduced at the Commencement exercises as the the gold plank and, as the papers "received a great ovation!"

Two or three days later Senat sent me a dispatch—which I hav me to send him a wire which he and read to his audiences tell writing of the gold plank Fri twelfth. He said, "Give me as m as you can, as other Eastern men ing authorship."

At four o'clock that afternoon Charlie Frear breezed in. He was now the go-getter, the apostle of pep, rejuvenated by his hard business trip to Chicago.

"Listen here, Larry," he said, "I want you to do something for me. This happens to be my birthday ——"

"Manny happy returns of ——"

"Yes—thanks. Been away—just in. Here's the big news—I'm giving a birthday party up at my house to-night."

"Is that so? Have ye seen th' wife?"

"No—not yet. I invited a big bunch of people by wire from Chicago, and coming home on the train I hit on my big play. Some party I'm giving, Larry. The last word in parties round here for quite a spell, I fancy. I'm going to make such a fool of prohibition that mummies will laugh. And about my big idea—your part of it ——"

"What d'ye mean, now?"

"Big secret—won't tell anybody, not even you. But here's what I want you to do. Sam Wilsey's attending to the catering, and there'll be a bunch of waiters from the hotel. I want you to come along with them—and bring your white coat."

"Me, d'ye say? Look here, C. H., I'm too old f'r that kind of thing. Ye'll have to excuse me."

"Can't do it, Larry. It would ruin my whole scheme. Come on—you're not going to throw me down."

"Well," Larry said. He was staring at Charlie Frear, but it was Anne's unhappy face that he saw. "I'll come, C. H.," he agreed.

"That's the ticket. Be at the house at eight. The white coat, remember. See you later!"

He banged through the door and disappeared. Larry stood looking after him with puzzled eyes.

III

AT EIGHT o'clock that evening, leaving the trolley at the end of the line, Larry O'Neil set out to walk the brief remaining distance to Charlie Frear's house. Under his arm he carried a small bundle, the white coat demanded by the impetuous Charlie. He was in the district of the prosperous; great trees towered above him, neat hedges lined his path; on lawns still green despite the summer heat, sprinklers were playing. Through the dusk sounded the notes of a phonograph, the slam of a big screen door, the genial voice of a confirmed bromide demanding, "Hot enough for you to-day?"

Larry was a stranger in this neighborhood, but he knew the Frear house by sight—it was one of Reuton's show places—and he was shortly ascending its broad steps. He rang the bell and stood looking through the copper screen into a big cool hall.

A maid admitted him and as he lingered, somewhat at a loss, just inside the door Anne Frear ran down the stairs. He had never seen her looking so beautiful. She wore a gorgeous evening gown; the light shone alluringly on her blond hair and her white shoulders; she made altogether a picture that an Irishman could appreciate. Her eyes were smiling, but her face was rather pale.

"Hello," she cried. She came closer and spoke in a lower tone. "Oh, Larry ——"

"How are ye? Have ye had that talk with C. H.?" Larry asked.

"Larry—I couldn't. It would have spoiled his party. Besides—oh, I know how he'll take it from me. He'll be furious. He'll act as though it were my fault. He's not the same any more."

"But he's got to know."

"Yes, of course. But afterwards—or if he's not fit to listen then—in the morning. Oh, Larry, if I could only have stopped this party! But it was too late; he'd invited them all—and he wouldn't have stopped for me anyhow. But he's going to make things worse than ever. There won't be a chance for him after to-night."

"Why, what's he up to ——" Larry began.

He was interrupted by the arrival of C. H. himself. He was resplendent in evening clothes, and already somewhat redolent of the cup that cheers.

"Hello, Larry," he cried. "Anne, when those colored musicians get here put 'em in the library. And tell the girls to roll up those rugs in the living room and clear the

floor. Now, Larry, I'll show you where you come in. I've got one big surprise for you." He walked to a door at the right of the hall. "Come on, Larry—this is your room, right here."

Larry followed. He stood on the threshold of what was evidently the dining room. The table had been pushed back against one wall, and along the wall opposite the door Larry beheld that which caused him to blink and question his own eyes.

"Good Lord, C. H.!" he cried.

"Do you recognize it, Larry?" Charlie Frear cried triumphantly.

"It's me old bar!" gasped Larry.

"Part of it, Larry. The middle section. I persuaded Sam Wilsey to dig it up out of the cellar and rush it up here this afternoon. That was my big idea, Larry—the one I got on the train. What do you think of it? The Wilsey House bar doing business again. Who said prohibition? We'll show 'em, Larry—we'll show 'em!"

Silently Larry followed him into the room.

"I've had it all polished up for you," Frear went on. "Look—the brass rail's on! I worried about that rail—I always thought it was fastened to the floor, but I found out this afternoon it's part of the bar. Well, live and learn, what? Where's your coat, man? Put it on—put it on!"

Still without speaking Larry changed coats. If he was somewhat lacking in enthusiasm his host failed to notice it in his own bubbling excitement.

"Get back there, Larry old man!" he cried. "Look!" He pointed to a sideboard standing behind the bar just under a long mirror, and covered with a startling array of bottles. "There's your stock—and more here underneath. Everything you had at the Wilsey House, or I'm a liar. A point of pride with me—I'll break down and cry like a child if anybody gives us an order we can't fill. But I don't think it can be done. Hot water in those boilers—see? Glasses enough—don't you think?"

"I guess so," said Larry. He went behind the bar, grasped the edge of it with his two great hands, and stood staring at Charlie Frear. It was a solemn occasion, and Charlie felt it more deeply, perhaps, than the big fellow himself. For a moment the host paid the tribute of silence.

"Attaboy," he said presently, but in a quiet, gentle tone. "The old days, Larry—the good old days are here again. They took away your job, did they? Well, Charlie Frear is giving it back to you here and now. Mix 'em up, Larry. What'll you have? We'll take a little snifter together, just to celebrate."

"I don't touch it," Larry reminded him. "Ye know that."

"Oh, yes—I know you never used to. But now that it's prohibited—now that a lot of buttinskys tell you you can't have it—surely you won't refuse now?"

"I don't care f'r anything, C. H.," Larry said. "Thank ye just th' same. What's yours?"

"Oh, I'll wait—if you won't join me. Now, Larry—here's the plan ——"

Two small figures in pajamas came running into the room, shouting for Larry O'Neil. Anne followed.

"They wouldn't go to bed without seeing you," she explained. She looked at Larry across the bar—a long look.

Strange things happen as the world rolls on. Larry blushed.

Charlie Frear lifted Betty to a seat on the polished mahogany. Beside her he placed his little son, a handsome golden-haired child of seven.

"There you are!" he cried. "How's that? Some day you can tell your grandchildren that you once sat on Larry O'Neil's bar. Eh, Larry?"

"I dinnaw," said Larry uncomfortably. "Maybe by that time th' wurruld will have something else to talk of."

The children demanded ice cream, Larry and his white coat having suggested the idea. Their father was loud in his laughter. "No ice cream here," he announced. "This is no mollycoddle bar—it's the real thing."

Larry glanced back over his shoulder at the display of bottled goods. He looked at Anne, his eyes troubled.

"Ye'll be runnin' off to bed now, like good kids," he said, turning to the children. Loud protests rose to smite the air. "Do that, to please yer mother, an' to-morrow at th' tea room I'll give ye all th' ice cream ye can eat. I will so."

Anne lifted Betty down, then the boy. "Come now—you've seen Larry—you must go upstairs. Nurse is waiting." managed to get them out of the room

"Now here's the idea," Charlie said. "I'm going to knock this bunch with my layout. When everybody's I'll line 'em all up in the hall, give you signal, and throw the portals wide. their eyes won't pop, hey? You things ready and put on your best He went to the doorway, and "Just like the old days, Larry chortled. "Everything just as it was

He went out, closing the doors him.

Still dazed, almost unbelieving, stared about him. His old bar sadly out of place in this big, exquisitely furnished room. A breeze risen, and was stirring the lovely at the windows. On the quiet lawn crickets chirped. He glanced out through the dusk a shadowy scene, the calm environment of his eyes came slowly back to his bar many colored bottles that surround He sat down on a chair and put in his hands. The world was going

From time to time he heard the arriving guests, but it was more an hour before Charlie Frear's voice him, and the doors to the dining room thrown open. Larry stood behind with his best professional smile on He saw Charlie Frear poised in the doorway, and back of him group of the leading people of Ba of whom he knew well. They credulous at first, then burst into of delight and approval that ran glasses on the bar. The next man were crowding into the room, and once, flushed and thrilled and the

"Step up, everybody," Charlie shouting above the mêlée. "I have it—the old Wilsey House Larry on the job. Happy days are Are we downhearted?" "No roared. "Name your poison." "Whisper it to the bartender. If of you to ask for a drink we can Who said prohibition now?"

He did not have to repeat his another moment Larry's good was busy with an enormous shaker, and Charlie Frear's fame was under way. The old barten himself pouring drinks for men once been his constant patrons. an instant did he feel that Charlie was true and the old days were Wilsey bar had existed to delight but here, as at his soda fountain, wives. Gray-haired matrons years back grew bitter at the mi of Larry's name now stepped dered with the loudest. Nonchalant flappers tested the firewater nounced it the best they'd had

Larry gave himself no time to went smilingly on with his job come and he was resolved to see But he glanced now and then face of C. H. Frear, and there his own broad countenance a of acute distaste.

Shortly from a distant room first low moan of the jazz. Larry's patrons fled with loud light. For a time the barbaric jungle made hideous the sum then it ceased, and the bar with eager souls who brought beautiful new thirsts. Thus the the dance floor and the bar. went on, and Larry's arm began an old pain to shoot through

Charlie Frear was everywhere his guests. "Nonsense, you anything yet. Well, what Come on, it's time for another tried that gin of mine? It eyes after that synthetic poi on. This way to the bar, plea little service!"

At midnight the waiters from House sought to tempt the ca with mere food. The bar was ment deserted. Then came Charlie, dragging Walter S Henry Frost.

"What'll it be, gentlemen? anxious to serve you. Larry, Walter and me, and a glass mineral water for Mr. Frost."

"Have a good trip to Cl cliffe asked.

"You bet I did," Frear "You know, Parkinson up the buying much from us lately.

Certainly You Expect to "Get There" —But HOW SOON?

Are you willing to spend from ten to fifteen years in routine work, at routine pay—

—While you wait, with no assurance of success, to pick up from your every-day work the specialized knowledge that will land you in a high-salaried executive position?

Are you willing to see other men with no better start than you step into the jobs that pay upwards of $5,000 a year—

—While you plug away at the same little humdrum task—just because you neglected to devote those few spare hours a week to *specialized business training?*

* * *

"Some day"—so you've been promising yourself—"I'm going to get down to business. I'm really going to fit myself for that bigger job."

Why "some day"? Make it TODAY!

The coupon below will bring you complete information regarding the LaSalle Problem Method of home-study training, a remarkable plan that should lead directly to a substantial increase in your salary—within the next few months. It will bring you also your free copy of that inspiring book, "Ten Years' Promotion in One."

Give yourself a fair chance! Mark—Sign—Mail the coupon—NOW.

him—I got him six bottles of the finest rye whisky you ever tasted. I carried them into his office and lined them up on his desk, and I said: 'Well, how about it? Do we get your business now, or don't we?' He didn't give me a definite answer, but I guess I hooked him."

He finished off his highball with one gulp and went out. Frost and Sutcliffe looked at each other.

"Well," said Frost, "I guess Charlie can make good as a bootlegger if he should happen to lose his regular job."

Sutcliffe put down his glass and stared about the room. "I was rather sorry for him," he said. "But—I don't know. All this ——"

"Exactly," agreed old Henry Frost.

"I like a drink as well as the next man. And I suppose Charlie is just carrying all this home boozing to its logical conclusion. Still—I can't explain it—but his party won't seem so clever in the morning."

"He's a young fool," said Frost. "I've remarked on that before."

The jazz blared forth again, and the party took on new life. Larry's feet hurt more and more, the smile on his face faded and did not reappear. Mechanically he filled the orders of the revelers as they hurried in, flushed and wild eyed, from the dance floor. Now and again he reached inside his white coat and took out a huge gold watch. He was no longer young, and he thought longingly of bed.

At one o'clock Frear came in, at the head of a small group of men, among them Sutcliffe and one or two other directors of the Burkhardt Corporation. Charlie had drunk with everybody and he was pretty far gone. His eyes were glassy, his feet stumbled, and he grasped the bar to steady himself.

"'Lo, Larry. Here we are 'gin. What'll you have, boys? Tell the good ol' bartender what you'll have."

They murmured their orders, most of them; one or two slipped quietly from the room. Larry O'Neil did not move. For a long moment he stared into Charlie Frear's watery eyes.

He thought of Anne Frear and the children, and very slowly his head went up, a strange light came into his face, and he stood there like a judge or a bishop.

"Make mine the same, Larry," said Frear. "Little ol' highball."

Larry leaned across the bar and spoke slowly, impressively. "Listen here, C. H. Is it true now—d'ye want things just as they was in th' old days?"

"Why—why of course," said Frear. "Just like the old Wilsey bar."

"Ye want me to run things th' way I did there?"

"Certainly. What you talkin' 'bout?"

"All right, Charlie," Larry said. He caught and held Frear's wandering gaze. "Then I'm tellin' ye—ye've had enough!"

"What's that?"

"You heard me, I'm thinkin'. I say ye've had enough. Ye'll get no more from me!"

Charlie Frear had started back. His face became even redder than usual. "How dare you!" he cried. "You old fool! How dare you! In my own home!"

Larry's face clouded with anger. Not many men had called him names and got away with it. "Your home! That's good! If anny man had done to my home what you've done to yours this night I'd break him in two with me own hands. Your home! A home is a home, an' a bar is a bar, an' what it is ye're runnin' here I dinnaw. I do not."

"Get out!" shouted Frear.

"I'm gettin'," Larry answered, struggling with his street coat. "More thin thirty years I tended bar, a decent respectable man, an', by heaven, I'm ashamed of me work here to-night. Passin' th' stuff to young girls—what will me wife say to that? By th' Lord, I've shot a hole in me self-respect I doubt I can ever mend."

"Are you going?" Frear demanded.

"Hotfoot, me lad, hotfoot. An' I humbly beg yer pardon f'r tryin' to introduce into yer home wan of th' first rules of anny respectable bar. Good night."

In the hall he encountered Anne Frear. "Larry—what is it?" she cried. "I heard ——"

"I'm sorry, ma'am," said Larry gently. "F'r th' moment, me temper went. I'm terrible sorry—but I'm Irish an' I can't help it."

"What happened?"

"It was C. H. comin' to me f'r another drink. He's had plenty, an' I forgot meself an' told him so." He walked beside her to the door, past the living room where the jazz was screeching and mad couples danced. "Me nerves was a bit upset, ma'am. All this to-night—it don't seem right to me."

"Me either, Larry."

"I know that, ma'am."

Charlie Frear came suddenly behind them. "Say, what the devil you two talking 'bout? I want him to get out my house."

"Hush, Charlie!" Anne cried. But no one heard above the whine of the music.

"I'm goin', Charlie," Larry explained. "An' I'm sorry I lost me temper just now. I had no call to say what I did in front of yer friends, an' I admit it. But as f'r you, me lad, ye're dancin' on the brink of a volcano, an' ye'll know what I mean to-morrow at eleven o'clock."

"What's that?"

"Yer wife will tell ye. Good night."

He was pushing open the screen when he felt a hand on his arm. He looked down into Anne Frear's pale, tired face.

"Larry, will you do something for me?"

"Annything in th' wurruld, ma'am," he said.

"You tell Charlie—about the meeting to-morrow."

"But it's no business of mine," he protested.

"Look at him," said Anne Frear. "I can't tell him—he wouldn't listen. Not now. But if the news came from you ——"

"Wha's all this?" demanded the wabbly Charlie. "Want him to get out my house."

There was a small deserted reception room at the right of the big door. Larry suddenly seized Charlie Frear by the arm and propelled him inside. He slammed shut the door and faced the befuddled host of all the gayety.

"Open that door!" shouted Frear. "How dare you touch me! Open that door!"

He leaped forward, seeking to escape. Larry O'Neil seized him by the shoulders and shook him, hard.

"Listen to me!" he began. He considered briefly; any preliminaries, he knew, would be wasted, but a smashing statement of fact might surprise Frear into a moment of comprehension. "Listen to me, my lad. To-morrow mornin' at eleven o'clock they kick ye out of th' Burkhardt Corporation!"

Charlie Frear blinked. "What? What say?"

"I say ye're through out at th' plant. Everything's all set. They vote ye out in th' mornin'."

"That's a lie!" said Frear promptly.

"No, it's truth." Frear's attention was wandering; Larry shook him again. "You an' me used to be friends, Charlie, good friends, an' I'm tryin' to be yer friend now. Outside yer own family I'm th' best friend ye got in this house to-night. That bunch out there—they'll drink yer booze an' dance to yer music, but not wan is man enough to tell you what I'm tellin' you now—that they got th' cards all stacked again' ye, an' out ye go."

"But they can't do it," protested Frear.

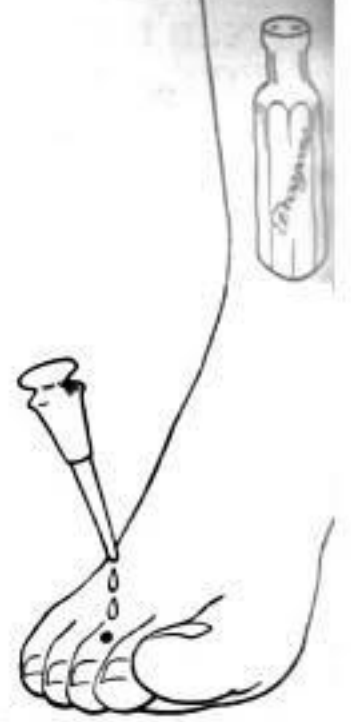
"You watch thim. Think, man, think. Have ye had no signs of it? They carry insurance on yer life, don't they? A hundred-thousand-dollar policy. Before ye went on this last trip ye left orders f'r th' premium to be paid."

"Yes—yes—I did."

"Was it paid, then?"

"No—I found out this afternoon. It's held over for the board meeting."

"An' why? I'll tell ye. Because th' whole town is laughin' at that policy. Because they say ye ain't worth a nickel to annybody.



"I'm goin' to tell ye wan or two things, me boy. In yer own mind ye're a business giant, a big man. In th' minds of everybody else in Reuton ye're nothin' but a big joke."

"See here ——"

"Let me finish, Charlie. You was a bright boy once. President before ye was thirty. An' then good times come along, an' they was bad times f'r you. Ye got started on th' wrong foot. Th' big drop followed, as it always does, an' thim that had been through it before took off their coats an' got busy. Come back to earnin'—that was th' big idea. Some cud an' some cudn't. You was one that cudn't. It's like some fellow said about ye—I forget

who, sure they're all discussin' ye. 'Charlie Frear,' he says—'poor old Charlie,' he says, 'he's wint so far down Easy Street he can't get back.'"

Larry paused. Frear said nothing, but stood staring at him wonderingly.

"Is it all news to ye, boy?" Larry went on. "Sure, it hadn't ought to be. Prosperity derailed ye an' now prohibition is finishin' up th' wreck. 'A victim of th' times,' somebody called ye. I mind me who that was—old Henry Frost. Henry won't renew thim notes in th' mornin' unless they throw ye out."

Frear brushed his hand across his eyes. "Oh, so that's it, is it?" he said. "I'm finished, then. Done for." He looked at Larry helplessly. "And it'll kill me in this town. I'll have to start all over somewhere else."

"Well, I've warned ye," Larry said gently. "Ye won't go into that meetin' to-morrow unsuspectin', which is th' way they want ye to come into it. Keep yer own counsel to-night. I always thought ye was a smart boy, Charlie. Maybe there's a way."

Frear shook his head. "I'm afraid not. But I appreciate what you've done."

"Forget it." Larry opened the door; the rush of hot smoky air, the insult of the jazz, struck them full in the face.

"Good night, Larry," said Frear.

"Good night, Charlie. An' I'm sorry if I was a bit rough with ye—in there whin ye asked f'r that drink."

"Oh, that. Good Lord, Larry, that was always a rule of the bar."

An hour later the last of the guests departed, mumbling incoherent phrases that seemed intended as approval for the evening's diversion. Charlie Frear stood in the hallway, facing his wife.

"Well, that's that," he said wearily. "Our last party in this town, Anne."

"Larry told you?"

"Yes—he told me a lot of things. What hurts me, Anne, is that not one of these people was kind enough to tip me off. But then—they think I'm endangering their dividends. They pretend to be friends, but they have no use for me really. They'll show me no mercy."

"What are you going to do, Charlie?"

"I don't know. Take my medicine, I suppose. I'd like to stay up a while and think—if I can. Is there any coffee left?"

"I'll see."

"I just had three cups. I'd like a few more—black."

She brought it to him in the library, kissed him and left him to his thoughts. Long, long thoughts they proved to be. Dawn was creeping across his garden when he finally went upstairs. He lay down on the couch in his dressing room, only partially undressed, and slept for two hours. The sun was shining brightly when he rose, took a cold shower, donned a gray flannel suit, and went downstairs again.

Fortunately they possessed a small screened veranda for the first meal of the day; so it was not necessary to face the wreckage in the dining room. Charlie was silent at breakfast, but it was not the sullen silence of his usual mornings after. His manner was detached, but kindly.

"I believe I'll walk down to the office," he said when they rose from the table. Anne accompanied him into the hall. As they passed the dining room he nodded. "I'll send an express man for that right away."

Anne said nothing. On the porch he turned and looked at her.

"I've been an awful fool, Anne," he said. "You had a lot of faith in me once. Have you an atom of it left?"

She looked anxiously into his eyes. Suddenly her anxiety faded, replaced by a happy smile. "All the faith in the world," she said. "And, Charlie—whatever happens this morning—it won't matter to me."

He kissed her. "Anne, you're a wonder. It won't matter so much to me either—now."

IV

ABOUT the long table in the directors' room the air was tense and expectant. Walter Sutcliffe, as chairman, sat at the table's head, and the president sat at his right hand. Charlie Frear was alert and smiling, but at moments when no one was watching him he studied the faces gathered about the board. They were stern and uncompromising. He also studied another face, that of old Henry Frost, who sat apart from the rest in a chair by the wall. Mr. Frost was not a director, but had been invited to the meeting owing to the notes he held. Years of dyspepsia and of banking made it rather difficult to discover any pleasant omen in that cast-iron countenance.

The preliminaries of the meeting were over, and the financial statement for the fiscal year had been read and approved. The latter showed that business was gaining a bit, but it also revealed the fact that there were no funds to meet the notes held by the Reuton Trust Company. These must be renewed.

Mason, the treasurer, stood up. He was a lean nervous man in whom most human feeling had long ago evaporated. He held a document in his hand.

"Gentlemen, I have here an insurance policy on the life of our president. It was taken out, you may recall, several years ago. The policy will lapse in three days, unless the annual premium of sixteen hundred odd-dollars is paid. I have been asked to consult the directors on this point ——"

"Mister Chairman!" Charlie Frear was on his feet, smiling about him. "Pardon me, Mason, but I want to make a motion. I move that this policy be permitted to lapse, and in three days torn up and thrown into a wastebasket."

"Second the motion," said a voice from the other end of the table promptly.

A vote was taken, and the proposition carried unanimously. Charlie Frear remained standing, still smiling, apparently unconcerned.

"I'd like to say a few words, if I may." The chairman nodded. "Some of you may be a bit surprised at my action in this matter. I took that action for the good of the company. I understand that this policy has become one of the town's pet jokes. And I'm not surprised. A hundred thousand dollars! Perhaps the man insured was worth that to you once, but for the past year or two his value has been steadily declining."

They stared at him, amazed. He continued to smile.

"I happen to know," he went on, "that you have met here to-day to vote your president out of office. And I know, too—no man knows better—how justified you will be in such an action. I'm afraid I can't quite explain what happened to this fellow." He stopped smiling and stood for a moment looking seriously at the table. "When you put him on the job five years ago you had great faith in him. And for a time he made good. Then the big boom came, and it ruined him as it ruined others. When it was over he was a lost soul. He was on the primrose path, traveling fast. Going on down Easy Street—on and on—too far gone ever to get back.

"For the past two years he has been the biggest bluff in town. Buzzing round like an insect in a bottle, making a great noise, getting nowhere. Off on trips most of the time. Had a suite reserved by the year in a New York hotel, and another in Chicago. I may tell you that he canceled both these reservations by wire this morning. But that is neither here nor there; the point is that when most of your employes took cuts in salary and redoubled their efforts to earn their money your president stayed on at the old figure and failed to earn a third of it. He made a great fuss, kicked up a lot of dust, but between us here, the only really big deals he's put over in months have been with bootleggers."

He paused. No one made a move or sought to interrupt.

"Your president," Charlie Frear continued, "has a contract with you at the absurd figure of thirty thousand a year. That contract has still eighteen months to run. Some of you may be worried about it. You needn't be." He took a paper from his pocket and tearing it twice across, tossed it into a wastebasket. "There it goes, gentlemen. You have my resignation and I congratulate you. The company is now in better shape than it has been for two years or more."

"Charlie," said Sutcliffe, "just a moment ——"

"Please"—Charlie's smile returned, and it was always a winning one—"I've not quite finished. Last night, gentlemen, I had a talk with an old friend of yours—a man you used to be fond of—a man you had great faith in—the Charlie Frear you put on this job five years ago. We talked until morning. And he told me how he'd made a horrible fool of himself of late, and how he'd just waked up to it. He said he had no intention of begging or pleading or bowing himself in the dust, but that more than anything in the world he wanted a

Shades of the Old Venetians

IN the time of the Doges Venice was the most colorful city of all Europe. Along the Grand Canal the balconies of beautiful homes were canopied with rich cloth, often gold embroidered.

Here sat the wealthy merchants and their friends, protected from the sun's rays, as they watched the gondolas ply lazily back and forth.

That was luxury. Yes, but even the old Venetians couldn't enjoy the comforts of a cool American porch screened from the sun with—

COOLMOR
Trade Mark
Self-Hanging, Wind-Safe Porch Shade

On stifling hot days COOLMOR Porch Shades will shut out the sunlight but let in plenty of light and air. They will transform your porch into a shady out-of-doors where you can eat, sleep and entertain.

The Venetian cloth canopy absorbed heat—Coolmor shades made of beautiful basswood throw it off. There are no porch shades like Coolmor—they are different. The exclusive wide and narrow slat weave is a patented feature. Coolmor is easily rolled. It is wind-safe and self-hanging. Write for full information and name of nearest dealer.

A COOLMOR Shade 6 ft. wide with a drop of 7 ft. 6 inches costs only . . . north of Alabama and east of Colorado. **$6.40**

In His First Two Months He Earned $273.05

"WATCH my smoke," said E. R. Hawley, a young chap who represents *The Saturday Evening Post, The Ladies' Home Journal* and *The Country Gentleman* in North Dakota. We did. In his very first two months of work he earned $273.05. In one full day (he worked from 8:30 A.M. to 4:00 P.M.) he netted $21.70. He himself gives the exact figures: Earnings, $25.45; less expenses, $3.75; net profit, $21.70. This seems to Hawley a pretty fair day's work.

You Need No Experience to Accept This Cash Offer

WE have an offer to make you. If you have experience in subscription salesmanship, you will recognize at once the opportunity for generous profit that it offers. But you don't need experience to be successful. Many a beginner has found that he could easily earn $10.00, $15.00, or $20.00 a week extra from the very start. We supply full instructions and free equipment. Give us a chance to tell you about our plan for *you*—by sending this coupon now.

DEPT D. 466 HANCOCK ST. LONG ISLAND CITY, N.Y.

crack at his old job. He swore he could make good, and I believe he was right. He promised me faithfully that he was done with the bluffing and noise. And as for the booze —— 'Well, it's like this,' he said: 'A bartender just told me I've had enough, and when a bartender tells you that, it's time to stop. Because you've had expert advice.'"

Some of the faces about the table were smiling now in a friendly way, and Charlie Frear looked about him with a new confidence.

"You're in the market for a president," he finished. "I offer you the old Charlie Frear. I offer Charlie Frear stripped of his nonsense and pretensions. No other man could possibly have his incentive to make good on the job. I offer him at the reasonable salary of ten thousand a year. Will you give him a trial? It's up to you."

He sat down. For a moment no one spoke.

"Well, gentlemen, if you ask my opinion," said Sutcliffe finally, "that was a man's-size speech. I don't know how the rest of you feel about it, but for my part I'd be mighty glad to have the old Charlie Frear back at the head of this company." Several of them nodded vigorously. "But of course there is the matter of our notes, held by the Reuton Trust. We are forced to ask for a renewal. Mr. Frost ——"

They all turned and looked at the banker, sitting immobile against the wall, his poker face without expression of any sort.

"Perhaps I may point out to Mr. Frost," Charlie Frear said, "that it would be difficult to persuade anyone else to take the position at the figure I've named. If this man gets away with his job the company will have effected a rather important saving in overhead."

Old Henry Frost put his hand into his pocket and took out a small bottle. He removed therefrom a couple of soda mints and inserted them between his thin lips. "I'll renew for three months," he announced. "Of course what you do is no business of mine, but I suggest you give him a contract for the same term. We'll see if he really means it."

"I mean it," said Charlie Frear promptly.

"Yes, Charlie, I guess you do," answered the old man, and came as near to smiling as his tortured stomach would permit.

Half an hour later Charlie Frear had Anne on the telephone.

"Anne—I just wanted you to know—everything's all right. I've got another chance."

"What? What is it? Charlie, I can't hear a word."

"I say, the directors are good scouts, Anne. Just like you. They've given me another chance. It's all settled."

"Oh, Charlie—really? That's wonderful! I couldn't hear you at first—they were making such a noise. The expressmen, I mean. They've just taken that—that thing in the dining room."

"Oh," said Charlie Frear. "Oh, have they? Say, I'm mighty glad that's out!"

▼

LATE in November, Bill Terriss came back to Reuton on another business trip. It was 9:30 in the evening before he found time to drop into the W[illard] Room. Larry greeted him w[ith] thusiasm.

"Well, if it ain't Mr. Terriss. S[ir] a stranger in these parts. An' business, sir?"

"Oh, it seems to be picking at th[e] let. How's trade with you?"

"Booming, sir. Just get in?"

"Been here since morning, but t[his] first chance I've had to shake h[ands] Larry, it's pretty chilly to-night. I'll have one of your toddies."

"I'm afraid ye got another thin[g] sir. What say to a hot chocol[ate] delicious."

"Oh, all right. But in heaven[s] none of that sickish whipped c[ream] top."

Larry took a cup and filled it. "[As] ye are, sir. 'Twill make a new m[an]"

"Yes, it will," answered Terriss [im]pressively.

"By the way, I was out at the [Ch]plant this afternoon and they t[old] Charlie Frear has seen a great [de]Working his head off at a reduc[ed] and as for the booze ——"

"As f'r th' booze," Larry [in]smilingly, "he's wan of me regu[lars] last night he come in here with Mrs. Frear ordered wan of me you know ——"

"I know," shuddered Terriss. "[I] one once."

"An' Charlie says, 'Make [it] same,' he says. An' he got [it] Mr. Terriss, sir—down to th' l[ast] drop. Now I ask ye—cud a c[hild] do that?"

"He could not," said Terriss. "I'm glad to hear it. I always li[ked] Frear. But I wonder what h[as] him."

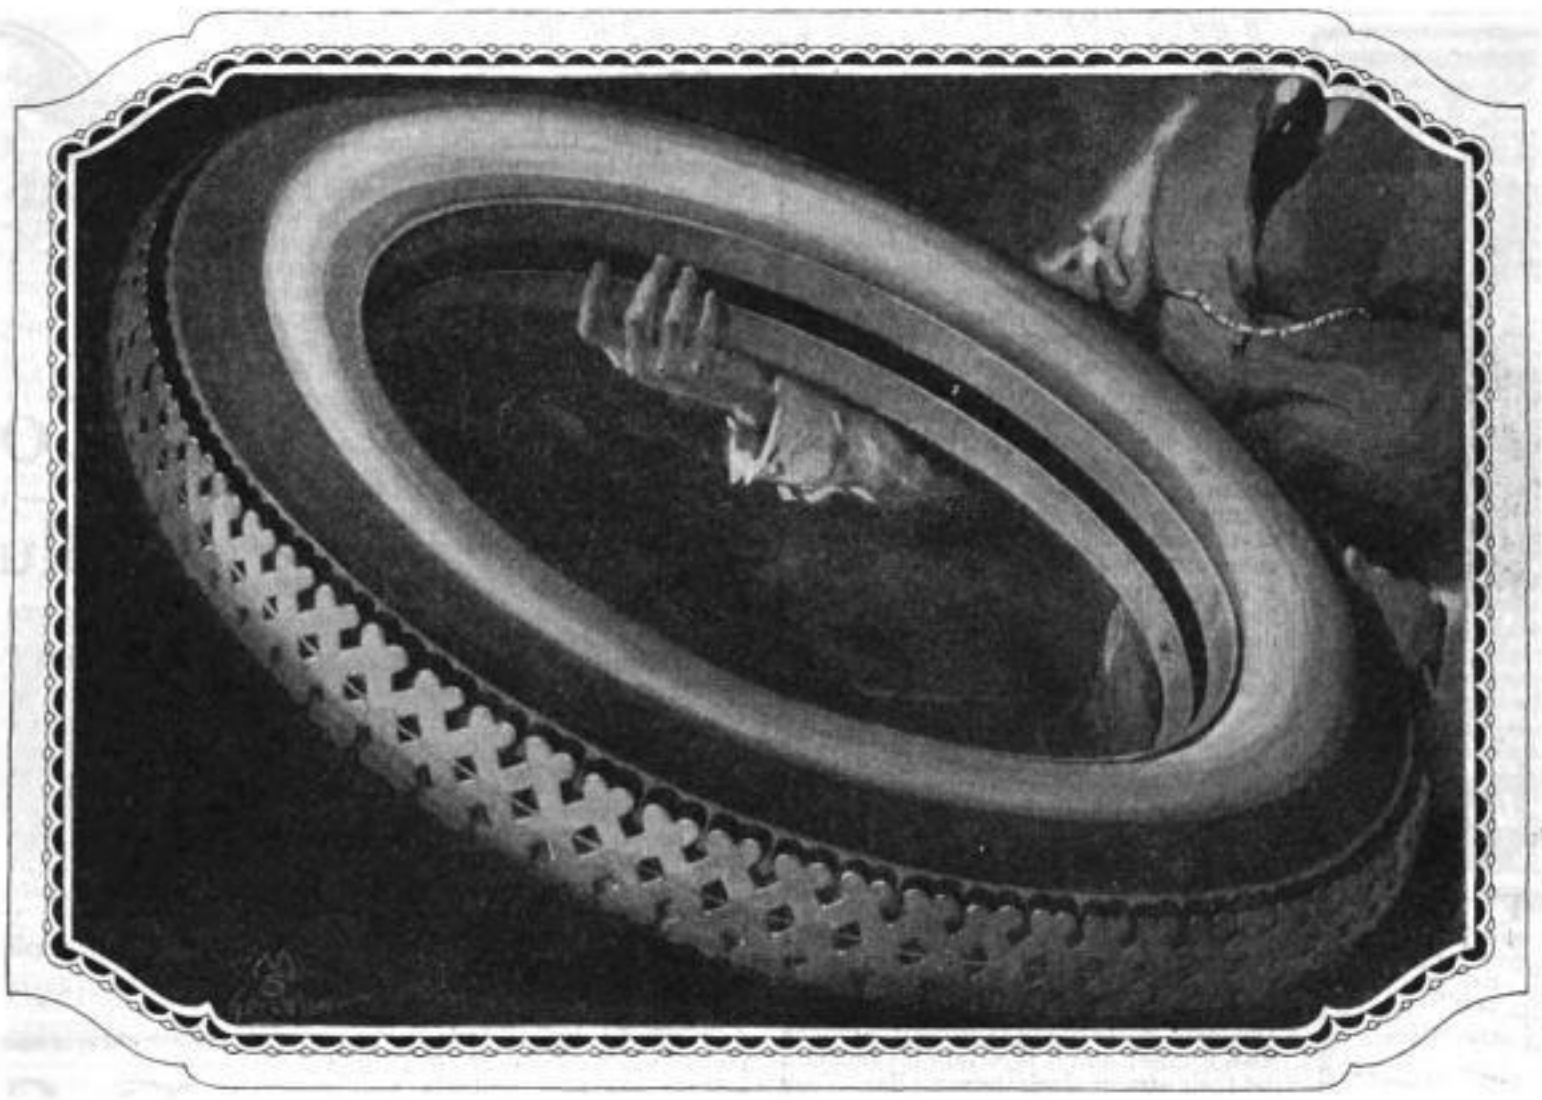
"I wonder," mused Larry. [He] the counter thoughtfully. "M[ay]me face gettin' long an' solemn. Is there a white ribbon sprig buttonhole? Is there a white ne[ck]me third chin?"

Terriss stared at him. "I [had] rumor," he admitted. "G[ood] Larry—you don't mean ——"

Larry laughed. "Well," he [will] take it up—f'r wan night only. quite a little talk on temperance or two that heard it thought it might have kept on in th' pro[per] Lord knows th' way things is plenty to do. However, I decid[ed] on me laurels."

Terriss threw back his head [and] "Well, I'm a Chinaman! L[arry] have certainly changed. The [old] side down."

"You've said it, sir," Larry [re]street door opened and a small neatly dressed woman entered. two tall, handsome young men cried Larry, "'tis Bridget an[d] th' kids. They been havin' a [day] th' movies."



The woman advanced [to] counter. Larry stood erect and hand—a proud gesture. "Mr. [Terriss] he said, "meet th' wife!"

A New Mileage Mark Has Been Set

THE Mohawk Rubber Company sincerely believes the Mohawk Flat Tread Cord Tire yields a higher average mileage than any other tire ever produced.

Our confidence in its superior "mileage ability" is based not on estimates, but on carefully compiled records of more than two years of experimental testing and actual service on thousands of cars in all parts of the world.

We neither ask nor expect any car owner to accept this statement without a personal test.

But we do believe the acknowledged position of this company, among the few real quality tire builders — a position gained and held by over nine years of fair dealing, honest tire building, and truthful, conservative advertising — gives sufficient weight to this mileage claim to justify every car owner in America in buying, trying, and comparing at least one Mohawk Flat Tread Cord on his own car.

You as a car owner have everything to gain and nothing to lose by making this personal test. For Mohawk Tires cost little, if any, more than you are asked to pay for ordinary tires.

Good dealers everywhere handle them.

THE INSIDE STORY OF THE A.E.F.

(Continued from Page 23)

German territory as would place an American division at Mayence and as assigns two French divisions to my Army of Occupation."

The Allied commander in chief acceded to this demand, and the American Army of Occupation preserved its entity. As a consequence we were deprived of half of our bridgehead, it being taken over by our friends despite strong protest against this particular action.

On its march to the German frontier the American Army occupied Luxemburg, and afterwards left two divisions there for the purpose of guarding the lines of communication of the army on the Rhine. This occupation proved a ticklish business, one of the most delicate problems that had come up for solution.

Intense rivalry existed between France and Belgium for possession of the little duchy. It had separated from Belgium in 1839, although Luxemburg deputies continued to sit in the Belgian Parliament for two years more; and in Northern Luxemburg popular sentiment undoubtedly favored annexation to Belgium. Opposed to this was a strong sentiment elsewhere for an alliance with France. Indeed this alliance appealed to the majority of the population, including the Liberals, the members of the economic-reform movement, and the Intellectuals.

As soon as the Allies had won the war Luxemburg became a hotbed of political intrigue. It was reported that the French sent five hundred officers into the Grand Duchy to create public sentiment for union with France; and it is certain the Belgians did their utmost along the same line. They planned a visit by King Albert to the duchy, he being immensely popular there. The annexationists encountered the opposition of the conservatives in Luxemburg, who wished to preserve the *status quo*, and also of the bourgeoisie, who were ambitious of overthrowing the ducal government and setting up a republic—but an independent republic, and not a dependency of a more powerful neighbor.

The Belgians wanted to send a regiment into Luxemburg. They wished for restoration of the duchy to them precisely as Alsace-Lorraine had been restored to France. They wanted Luxemburg, with or without a plebiscite. The Allied commander in chief deflected their move to place a regiment in the country.

The Army That Struck

France planned to get the duchy for herself. Luxemburg was in the zone of the American Army, where it was placed by Marshal Foch, but Foch selected the city of Luxemburg for his Great Headquarters, and sent a French regiment there as a guard for himself. He also designated a French officer as *commandant d'armes* and gave him authority over all postal traffic, circulation by rail and highways, and so on—all this in the American zone. Marshal Foch capped this with a proclamation to the people of Luxemburg.

On December twenty-third General Pershing informed the Allied commander in chief that he could not agree to the arrangements made for the occupation of Luxemburg. It was a neutral state, and the city of Luxemburg was in the American zone of occupation; yet a French *commandant d'armes* controlled postal traffic and circulation by rail and highways, and the French had called upon American troops to intervene in some local disturbances.

Pershing pointed out that the American Army had no business interfering in local political conflicts.

Speaking of local disturbances, the Luxemburg Army provided one that would have been a knockout in opera bouffe. They went on a strike. On the night of December nineteenth the whole gang paraded the streets, singing and shouting. This demonstration was in support of their demands for more pay, less German discipline, and one day off a week. Their leaders reported that the French commandant gave them permission to strike so long as they did not kill anyone.

It did seem unfortunate, coming on top of the entire absence of American troops in any part of Alsace-Lorraine, and at any of the celebrations in the regained provinces, that Marshal Foch should decide to send a French regiment to Luxemburg as his personal guard. General Pershing had given assurances that he would be happy to provide an American guard for Marshal Foch; and the fact that American troops were occupying the greater part of the duchy made very conspicuous the Allied commander in chief's action in introducing a French regiment as his guard in this region. The step in itself was not important, but as a move in French policy it carried much significance.

Pershing's Proclamation

On the entry of American troops into Luxemburg, General Pershing issued the following proclamation:

"To the people of Luxemburg—After four years of invasion Luxemburg is now happily liberated. Your freedom from German occupation was exacted of the invaders by the American and Allied armies as a condition of the present armistice. It now becomes necessary for American troops to pass through Luxemburg and to establish and maintain for a time their communications upon your territory.

"The American troops have come to Luxemburg as friends and will conduct themselves here strictly in accordance with international law. No hardship need be expected from their presence, which will not be extended beyond what is deemed strictly necessary. Your government and institutions will nowhere be interfered with. You will be undisturbed in the peaceful pursuit of your lives and occupations. Your persons and your property will be fully respected. It will be necessary for the American Army to utilize certain buildings, railroads, telegraph and telephone lines, and possibly other public works, for shelter, transportation or communication; but beyond that, whatever supplies may be required will be paid for at a just valuation.

"It is assumed that you will commit no aggressions upon the American Army and will not give any information, aid or comfort to its enemies. You are expected cheerfully to observe such rules as the American military commanders may find it necessary to make for the safety of their troops and your own protection."

The American Third Army continued its march toward the Rhine on December first, and two divisions of the Second Army were placed in Luxemburg to guard lines of communication. As I have said before, though lying in the American zone the city of Luxemburg was excluded by Marshal Foch from American control. And in a note dated December fourteenth the Allied commander in chief conferred upon General de Latour, the French *commandant d'armes* in the city of Luxemburg, control of all troops in the grand duchy so far as concerned a decree Foch had issued for the administration of the little country. This decree contained minute restrictions on the inhabitants; in view of their friendly attitude the Americans considered these restrictions wholly unnecessary and gratuitously provocative.

Moreover, this dual authority raised many complications, and threatened more. Foch's decree actually gave a French general control over American troops in administering affairs within a neutral state, a condition which could not be tolerated of course. Orders were issued to the American commanders to take no orders from General de Latour, and notification was sent to Marshal Foch that the American commander in chief did not recognize any necessity for his decree and could not accept it.

Pershing to Foch, on January 12, 1919:

"The President considers that it is both unnecessary and undesirable to publish any further decree to the people of Luxemburg. He agrees with me that the Army of the United States is threatened with no danger from Luxemburg. If, therefore, you should consider it indispensable to publish a further decree concerning Luxemburg, the President would deem it most advisable, in the interests of all concerned, that all American combat troops be withdrawn from the Grand Duchy.

"I trust that you will find it possible to postpone the publication of your proposed decree. But if you deem it indispensable to publish the proposed decree, I must request that you make such decisions as to

the troops to replace American units as will enable me to withdraw all American combat troops from the territory of the Grand Duchy of Luxemburg at the earliest possible date. . . . I infer . . . that you are of opinion that the withdrawal of American troops is likely to be misinterpreted. I can see no reason why such a result should occur—any more than in the case of the change of boundary which excluded all of Lorraine from the American zone in order to avoid difficulties resulting from the difference in points of view."

The Allied commander in chief then sought to secure acceptance of the principle of French control by so modifying details as to make it almost unrecognizable. This trick of sugar-coating the pill has been developed into a science in Europe, but inasmuch as they employ such methods a good deal, one who has had any experience readily recognizes the dose. Pershing stood firm; refused to accept the French arrangement in any form or under any guise.

Considerable correspondence resulted and several conferences were held. During a conversation on January twentieth the American commander in chief told Marshal Foch that Luxemburg was regarded by the American Government as an independent neutral state, possessing the right to administer its own people, and consequently the American Government could not acquiesce in the restrictions Foch had laid down.

Foch was much exercised over the possibility of the withdrawal of American troops from the grand duchy. This would be, in his opinion, a very serious step, because it would tend to spread the belief that the French authorities were carrying out in the Grand Duchy of Luxemburg activities in which the Americans declined to have any part.

Sittin' Pretty

General Pershing replied that this belief was one which a great many people held already.

A long discussion ensued, at the end of which the marshal announced he had abandoned the idea of publishing a new decree concerning circulation, postal traffic, and so on. And a few days later—on January twenty-fifth—he agreed to include the whole of Luxemburg in the American zone.

Meanwhile our Army of Occupation was sittin' pretty, as the doughboys say. It held the bridgehead of Coblenz, and its elements were scattered throughout a fair fat land, from a few miles beyond the Rhine back through Treves to Luxemburg and France. When it marched into Germany this army numbered close to 450,000 men, and it would have been impossible to find a force of similar size with finer discipline or imbued with a keener fighting spirit. They followed close on the heels of the retreating Germans; once or twice, units of the enemy were seen on the other side of a river or canal, legging it homeward in gladsome relief, the soldiers sporting flowers in their helmets and singing as they marched. The boys eyed them curiously and grinned.

In order to impress the Germans with their triumph, the French made triumphal entries into cities not held by their troops, but lying within the zones of their Allies. Shortly after the Americans got established in Coblenz, where the Third Army headquarters was located, a French unit came steaming up the Rhine, with ruffle of drums and blaring of many bugles. It was an inspiring sight; the French stage such spectacles admirably.

The Word That Never Came

They landed close to the Coblenzer-Hof, near Dickman's headquarters, and paraded through the principal streets of the city with band playing and flags flung to the breeze. Some of the population lined the streets to watch—chiefly the young, drawn by curiosity. It is to be hoped the impression was commensurate with the effort put forth to obtain it, for this sortie into the American zone sat illy on the average doughboy's stomach. He is not especially keen on parade stuff and he sized this up as a political maneuver. The French had a perfect right to impress the Germans with their defeat—but why did they horn into American territory to do it? Both in occupied Germany and back in France, where our divisions were departing for home as fast as they could obtain the transportation, the nationalities grew farther apart. The instant the removal of a common danger lessened the need of united action, the interests of each country dominated its attitude and the viewpoint of its people. It has always been that way.

For a while during the peace conference in Paris it looked as though the Germans might balk at the terms and refuse to sign. Few among the Allies—or among the Germans themselves, for that matter—realized then the utter helplessness to which the once mighty empire had been reduced. Preparations were made for a further advance into Germany to compel acceptance of the treaty. It was generally understood that the French were eager for a German refusal in order that their armies might occupy additional territory. From the time of the armistice the French had pressed for

more drastic conditions of peace than Great Britain, Italy and the United States were prepared to countenance, and if a deeper advance into the beaten country were made France might gain the precious Ruhr region and even establish the Rhine as her frontier.

All the armies were set to go—French, British, American and Belgian—and they momentarily expected the word. It never came, because the Germans knuckled under, but it is of interest to know that President Wilson was not prepared to let Marshal Foch decide this momentous question for American participation. On April twenty-fifth he told General Bliss that the American commander in chief should make no movement of any kind looking toward a further occupation of Germany unless instructions to that end were given him by the President in person, and not through Marshal Foch.

America's attitude toward French efforts to exploit its help was ably defined in a conversation between an American and a French officer. Speaking unofficially the American urged on the Frenchman that a mistake was being made in handling the Franco-American relations. In his opinion this mistake would bear heavily on France. The United States had nothing to ask of France; on the other hand, France had much to seek from America. If advantage were taken of American altruism and generosity the French might go far in winning help and sympathy from the United States. On the other hand, if the French did not take the Americans into their confidence, said the American—if they tried to fool the Americans, to use them and exploit them for political purposes—they would find people of another sort to deal with, people unsurpassed in shrewdness.

Our officer intimated that American resentment was bound to be stirred should Marshal Foch utilize his position as Allied commander in chief to play the game of French politicians.

The French officer answered that he would think this conversation over very carefully.

The return of the troops to the United States presented a difficult problem.

"The armistice suddenly and completely reversed the problem of the Services of Supply at the ports, and the [illegible] troops," reported General Pershing. "It became necessary immediately to [illegible] the machinery of the ports, to [illegible] large embarkation camps, and [illegible] an extensive service for embarking homeward-bound troops."

The principal ports of embarkation were Brest, St.-Nazaire and Bordeaux. To these were added Marseilles and Le Havre a little later in order to utilize the Italian and French liners. At Brest the camps had accommodation for 55,000 men, at St. Nazaire 44,000 and at Bordeaux 130,000. The winter of 1918–19 was very inclement and consequently the construction of the embarkation camps was rendered extremely difficult; and it happened that [illegible] ships had to be handled at Brest where the least shelter was available. In order to take care of the flow of arriving troops an embarkation center was established in the Mans area capable of accommodating 230,000 men. From there the troops could easily be fed to Brest and St.-Nazaire for shipping became available.

The divisions went home more rapidly than those familiar with the situation had thought possible. It seemed an interminable wait to impatient doughboys, but the return of 2,000,000 men within [illegible] stands as a remarkably creditable performance.

President Wilson had decided that at least one regiment with the Army of occupation in Germany; as fast as [illegible] could be moved the divisions of the [illegible] were transported home. The last [illegible] to reach France was the last [illegible] home—the First Division, which [illegible] leased August fifteenth.

General Pershing returned [illegible] lead these veterans of his [illegible] nobody who saw that parade [illegible] get the thrill of it. New York [illegible] thunderous welcome. We [illegible] mendous fuss over him and the [illegible] That is always our way—and [illegible] about our business.

Possibly this short history [illegible] in Europe will induce a [illegible] attitude toward war in all [illegible] hope so. That was my intent.

Editor's Note—This is the last of [illegible] cles by Mr. Pattullo.

f it is, there is an easy, fascinating t this training without losing a day your present occupation. You can get it right at home through the International Correspondence Schools.

Jesse G. Vincent was earning barely a living wage when he enrolled with the I. C. S. Today he is one of the Vice-Presidents of the Packard Motor Car Company.

Six months from the day Frank E. Fehlman enrolled for the I. C. S. Advertising Course he started an agency of his own. Today he is Vice-President of Lord & Thomas and President of the New York Advertising Club as well.

J. G. Kingsbury, President and Treasurer of the Grant Manufacturing Co., is a former I. C. S. student. So are Overton Fulton, Secretary and Treasurer of the Alabama Fuel & Iron Co., and J. F. Richman, Production Manager for the Cole Motor Company.

Robert E. Ramsay, former editor of Advertising and Selling, and now Vice-President of the J. F. Newcomb Company, of New York, is another man who says that the I. C. S. laid the foundation for his success. So does A. B. Hall, of Boston, who won the Associated Advertising Clubs cup for the best sales letter campaign.

Frank A. Bayer rose from assistant shipping clerk to Traffic Manager of the National Paper Can Company; Clarence W. Collins became Freight and Passenger Agent with the Southern Pacific Railroad, and George A. Grieble, of The Grieble Co., erected more than $6,000,000 worth of buildings in Cleveland in 1920.

Aubrey B. Carter secured a Civil Service appointment within six months after he started to study with the I. C. S. and is now Secretary to the Comptroller of the United States Currency.

THE success of the International Correspondence Schools in Business Training, as well as in technical subjects, has been due not only to the personal, problem-solving method of instruction of which they were the originators, but also to the high business and professional character of the men behind the courses.

Among the more than 300 men who have contributed their experience and advice to the preparation of I. C. S. courses are:—

J. Lee Nicholson, C.P.A., First President of the National Association of Cost Accountants; Edgar P. Trask, Assistant Naval Architect, The William Cramp & Sons Shipbuilding Co.; Charles J. Nasmyth, F.A.A., C.P.A.; Dr. Owen L. Shinn, Professor of Chemistry, University of Pennsylvania; Stanley Rhoades, Telephone and Telegraph Engineer, New York Central Railroad; J. H. King, Research Engineer, Babcock & Wilcox Company, New York; Bradley Stoughton, Mining Engineer and formerly Secretary of the American Institute of Mining Engineers; S. G. Whitehead, Special Traffic Agent of the American Express Company; A. Hamilton Church, the well-known industrial engineer; Edward P. Moxey, Jr., A.M., C.P.A., Professor of Accounting at the University of Pennsylvania; and Dr. Clarence Stratton, Director of English, Cleveland Public Schools.

Whatever the course, if it is an I. C. S. course, you can be sure it represents the best thought of men who are leaders in that particular field and is drawn from their *practical* experience.

It is the business of the International Correspondence Schools to help men to get ahead in business—to earn more money—to have happy, prosperous homes—to know the joy of succeeding. They are ready to help you—no matter where you live—no matter what your circumstances or your needs. All you need is the will to do and the decision to make the start.

Here is the familiar I. C. S. coupon. It takes but a moment to mark the work of your choice, tear out and mail. There's no obligation and not a penny of cost, yet that one single act may be the means of changing your whole life. Today—not "Tomorrow"—is the day to take your first definite step toward Success.

All in the day's work

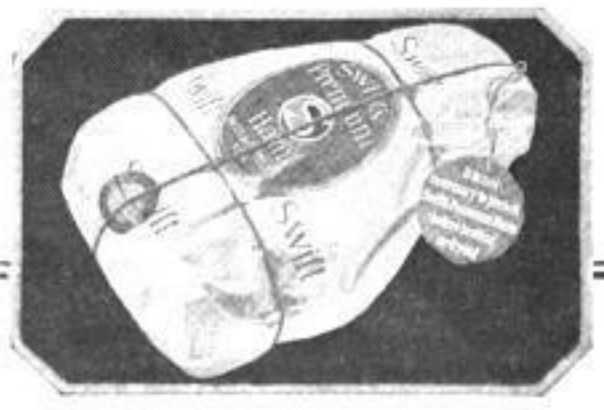
OREGON was having a bad spell of weather—rain, snow, high water, winds.

Railroad service was brought to a standstill. Telephone and telegraph wires were down. Highways and roads were blocked. Many towns were isolated. Meat foods were needed.

A Swift salesman, on his rounds, got caught in a slide on the Columbia River Highway. He was compelled to abandon his machine. But he did not sit down and wait for clear weather.

He made his way back to Portland in a small boat, loaded another boat with 20,000 pounds of Swift's products, and delivered them to his customers all along the Columbia River, where snow lay from three to five feet deep.

He thought nothing of it. It was all in the day's work. Any Swift man would have done the same. That is what Swift Service means to all of our salesmen. The duty of serving his customers was a serious responsibility that he had to meet.



We feel that Swift's meats—"Premium" Ham, "Premium" Bacon, and also Brookfield Butter and Eggs—must be delivered, whether or no, to your dealers all over the country who depend on us to keep them supplied with meat.

In our packing plants, traffic departments, branch houses; in the office, among traveling salesmen; from one end of the organization to the other, there is this same responsibility of service, this same matter-of-fact, taken-for-granted faithfulness to a trust and a responsibility to find a way out of any difficulties which may seem to prevent the daily service to our customers.

Swift & Company, U.S.A.

Founded 1868

A nation-wide organization owned by more than 45,000 shareholders

ıe sturdiest and fastest Stock Car I have ever driven to date"

Howdy Wilcox

On Thursday, March 9, 1922, I drove a strictly stock Haynes 75 Speedster over the Indianapolis Motor Speedway course, at Indianapolis, Indiana, for a distance of TWENTY-FIVE (25) MILES. *I attained speeds ranging from seventy-four (74) to eighty (80) miles an hour. The speeds were clocked officially by the Indianapolis Motor Speedway electric timing machine. In my opinion, the Haynes-built 75 six-cylinder engine is a remarkable stock motor. It has the necessary speed, stamina and get-away to meet the requirements of the most exacting motorist, and at topmost speed it showed a decided lack of motor vibration. It is the sturdiest and fastest stock sport car I have ever driven to date.*

(Signed) "HOWDY" WILCOX

car, world's speed
er of the Indian-
reedway 500-mile
ance.

75 *miles an hour if you want it with your* HAYNES 75 SPEEDSTER

TAKEN right out of stock, driven over country roads to Indianapolis, put through this rigid test under official methods on the famous Indianapolis Motor Speedway, the Haynes 75 Speedster, driven by Howard Wilcox, made this remarkable record.

This test proved not only the stamina of the powerful new Haynes-built 75 motor, but the unsurpassed value of Haynes engineering and construction principles. It showed beyond a doubt the worth of the twenty-eight years' automobile-building experience of the Haynes organization. It is convincing proof to every present and future owner of a new, improved Haynes 75 Speedster that he has a car which possesses all the reserve power, strength and dependability he can ask.

It shows to the owner of any model of Haynes car the underlying principles of its construction, for all Haynes cars are designed and built by the same men in the same big Haynes plant at Kokomo. Each Haynes is more than 95% Haynes-built.

The Haynes 75 Speedster is just the type of lithe-looking, low, rakish, speedy car that appeals to the sport lover. Individual steps, two extra wheels, snappy fittings, individual fenders—in every detail it is a thoroughbred. Your reservation should be made at once. Your nearest Haynes dealer will show you this car.

r, improved Haynes 75 two-passenger Speedster is equipped with the Haynes-built six-cylinder the same as that used by Howard Wilcox during the official test at the Indianapolis Motor ay. Individual steps and individual fenders and the two extra wire wheels are standard equip- Wind deflectors, rear vision mirrors, windshield cleaners, exterior side cowl lights, and search- ne head lamps are also furnished at no additional cost. The official test by Howard Wilcox was made to prove that the Haynes 75 stock Speedster is capable of attaining a speed of seventy-five miles an hour. Motorists as a rule do not employ the maximum speed, but it is a great satisfaction to know that the car you drive has the necessary power in case it is needed. In ordinary driving the Haynes 75 Speedster uses only about forty per cent. of its maximum speed, which means longer life at ordinary driving ranges.

hey *keep* you looking our best

Would You Write to Egypt for McBedwin Finish?

From Egypt—from Scotland—from the Argentine—from China and Japan—from everywhere, young men are writing to us, "How can I have that handsome McBedwin Finish that you advertise?" Willingly, in far-off lands, these men wait weeks while their Adler Collegian Clothes travel across miles of space, just so they may have McBedwin Finish.

You can get McBedwin Finish in your home town from the Adler Collegian clothier. You need not wait at all.

You'll like this perfected way of finishing the inside of a coat. (See above.) No lining to discolor or wear out. Different from the clothes your friends are wearing—newer—more dressy. More beautiful than full silk lined. Considered the handsomest finish ever put inside a gentleman's clothing. Yet it costs you nothing extra.

Adler Collegian Clothes are made of all wool to give long wear. Silk-sewn seams to hold the fine style. Double-shrunk to prevent puckers. Made for critical men. Priced to suit the average income. Tell the clerk you've come to see Adler Collegian Clothes. See what good clothes your money can buy these days.

...e Language of the Angels

By TRISTRAM TUPPER

ILLUSTRATED BY
C. D. WILLIAMS

He Had Not Turned Around. He Continued to Droop Over His Desk Very Like a Vulture That Had Dropped Down Into a Swivel Chair

...s atop the foundling home—fourth floor, front. Not ...ure-of-speech heaven. No humbugging. The real ...ure-blue walls and ceiling; cloudlike substance to walk upon with ... golden trimmings—real eighteen-carat gold; angels; everything. ...udgett, who in the beginning was not a Godlike person. But ...ed. He the heaven atop the foundling home created—Thomas A. ...ou, with fine intuition and rare insight, are likely to guess. Yes, attempt to pry beyond terrestrial things into the unknown. Prying, ! There never lived a more secretive person. Yet he hated all lid not share, and determined to know the unknowable. Mudgett, iscovering the language of the angels.

...iment atop the foundling home—concealed and zealously guarded ... Bax and a favored few—took upon itself somewhat the character ...tic failure, the Tower of Babel—as thrilling, as dizzy, and no ... if this were not true there would be no story; or more deplorable ...no love story.

...ne, a dilapidated four-story brick building, was directly across the ...tant uncompleted edifice that some day, the Lord willing, will be ...ne. Mudgett was its head and shoulders. Also, to put it generously, ... Though he looked like a vulture he sang the song of the sparrows: ...." By those who knew him well enough to talk behind his back he ...gett. And this described him—even more exactly in view of a ... Mudgett was quite young. He was less than seven-and-thirty ...apped on the walls of his head, took possession of his brain, became

...urmured inaudibly to himself on that night. "Well now, I say,

...is taking form.

...nove, old Mudgett crouched over his secondhand desk like a huge ...adows of his office—first-floor front of the old brick building. His ...tween his bony fists. He was motionless. A single shaded desk ...own upon the King James version of the Bible, illumined the First Corinthians. But Mudgett was staring with unseeing eyes ...holes. Beads of sweat appeared on the thin bridge of his nose. ...mastered him. And no wonder!

... was no parallel to the thing he was contemplating, nothing even ...nless one went back to the seventh century before Christ, when, as Herodotus tells, Psammetichus decided the relative antiquity of the Egyptians and Phrygians by the babbling of newborn babies. Unique, wholly unique, and, he told himself, beyond conception in magnitude.

He, Thomas A. Mudgett, with all the tools at hand, would solve the enigma that had baffled the ages. Prodigious! He would discover the origin of language!

That wasn't all. But start there. Aristotle had bent his mighty brow to this problem, philologists and philosophers since time immemorial—Aristotle to Spencer. And what had they discovered? Nothing. Merely that the Aryan dialects are closely connected—Slavonic with German, German with Celtic, Celtic with Latin, Latin with Greek, Greek with Sanskrit. But what had been back of the four or five hundred roots of Sanskrit? Mudgett hadn't the slightest idea; knew nothing about any of them. But, he told himself, way back millions of years ago man had not just stepped forth from the ooze and slime of things, rid himself of his tadpole tail and said, "Good morning. Fine day. Wonderful view." Of course not. Well then, what had he said? How had language originated? The philologists and philosophers since time immemorial had been theorists. They had failed. But he, Thomas A. Mudgett, was an intensely practical man. Where they had failed he would succeed.

Old Mudgett put the thing to himself in the simplest possible way. Language was evolved from grunts, interjections and imitations of natural sounds. From these words were formed. Of course. Everyone knew that. But what were these original, fundamental grunts, interjections and words? Ah! That was the thing he, Thomas A. Mudgett, would discover.

And how? It was quite simple. Simple and prodigious. Mudgett was a practical man.

He reached into a pigeonhole and drew forth a used envelope—to save pad paper—and wrote deliberately: "Bar out the entire world."

That was the first thing he would do. Quite simple.

"Bar out the entire world. Isolate six or seven newborn babies in one room. Never let them hear a human voice. Await results."

Mudgett mopped the sweat from his eyes. "Well now, I say, what will happen? That's the question. Won't they eventually find some way of communicating with each other? Boys and girls. Say now, won't they? At first, mere grunts and interjections.

Digitized by Google

Then words. A language. Their own language. The natural language. The original language! I say now. But farther than that ——"

Old Mudgett dared not go farther. Not aloud. Not on paper. The walls of this dingy old building, this shadowy office with its dark alcove and drab discolored paper might have ears. Secretive old Mudgett! Yet he could not stop that prying mind of his from reaching out into the unknowable and seeing a vaster significance in this, his master idea. He, Thomas A. Mudgett, would go farther, much farther than merely solving the problem that had baffled all the ages. Remember, Mudgett was a practical man.

So to have any conception of the prodigious thing that was taking shape in his long bony head one must first clearly understand certain fundamental truths. The first of these is: Babies come from heaven.

If you believe this you believe it; if you don't you don't. But it is undeniable that nowhere on earth is this particular truth so palpable as in a foundling home. Alas, in the outer world the fact is sometimes forgotten, overlooked or even doubted. In a foundling home, never.

And the reason is this: Babies that come to a foundling home never have fathers. Conceivable that this may happen in the outer world, but not often. In the home not a single baby had ever had a father. Not one. And even more significant: The babies that came to the foundling home never had mothers.

The conclusion is self-apparent.

Mudgett was a bachelor, miserly and mean. He fumed, fussed and gnashed his teeth; he paced his dingy office with its worn carpet and dark alcove where he hung his frayed Prince Albert coat; he pulled the lobe of his left ear with his right hand until his ear was curiously elongated; he haunted the secondhand stores and auction rooms for fixtures and furnishings—cribs; perambulators; little wicker chairs; he bought baby bottles with flaws in them, at wholesale; bought the cheapest cotton stuff instead of fine linen; hovered like a vulture over the public markets; bargained, bullied, beat down; overworked every employe of the home; got scullions from Ellis Island, paid them fairly nothing; brought pretty nurses from Jersey and Pennsylvania towns and rewarded them with a song for performing endless labor; he laughed and wept, smiled and sobbed, prayed and whimpered, cursed, sang hymns and jazz in the pursuit of donations. But Mudgett never denied an infant its birthright, never denied that babies come from heaven; and never refused to take one into the home.

"Why, I say now, that's what the home is for." It wasn't a state institution, nor was it maintained by the city or county. The dilapidated old four-story brick building belonged to Thomas A. Mudgett. Quasi public, or quasi private to a limited degree; but nevertheless it was Mudgett's—belonged to him and the foundlings. And—as Mudgett sometimes put it to himself without opening his tight-closed lips—the state, county and city be damned. "I say now, it belongs to me and the foundlings. Do what we please with it. Everybody else be damned, unless ——" And here he would rub his long bony hands together. "That is to say, unless one desires to make a donation." Then, in that case, old Mudgett would open his mouth devoutly and praise God from whom all blessings flow.

To-night—and this is the manner in which his master idea had come to him—Mudgett had been reading the Bible, a thing he did now and again, chiefly in public, but sometimes in private for the purpose of getting new arguments to use against prospective donors. As has been said, Mudgett was an intensely practical man. He was searching feverishly. Work had stopped across the street on the uncompleted new foundling home. To put it mildly—lack of funds. Again and again in his most tear-provoking voice he had depicted the inadequacies of the old brick building. His periods had been marked by prayers. Nevertheless all the arguments known to him—and that included all there were—had grown stale. They no longer moved the ossified consciences and petrified hearts of his listeners, who were few enough, the Lord knows!

Then it was he had turned the page and his shrewd eyes had fallen upon the first line of the thirteenth chapter of First Corinthians:

> Though I speak with the tongues of men and of angels ——

"I say now, I've spoken with the tongue of men, but what is the tongue of angels? What," inquired Mudgett of his intensely practical self, "is the language of the angels?"

Unfortunately, he read no farther. His cavernous mind was working. He passed through the first seizure of his master idea. He, Thomas A. Mudgett, would not stop there. The discovery of the origin of language would bring him renown, no doubt; but more important, if he could speak to prospective donors in the language of angels money would pour in. He rubbed his hands together, pulled the lobe of his elongated ear, cracked his knuckles. "Irresistible! Money will pour in!"

The Head Matron of the Foundling Home, She Was as Intensely Efficient as Old Mudgett Was Intensely Practical

He set himself to do some close reasoning, said to his innermost self:

> Babies come from heaven;
> Only the angels dwell in heaven;
> Therefore babies are angels.

Pretty shrewd. But it may be said that Mudgett's mind paused not for self-congratulation; merely took the conclusion of this syllogism and used it as the minor premise of a second and even more important syllogism. His mind worked as follows:

Babies are angels. This has been proved. Very well then, no one can gainsay that angels speak the language of angels. Axiomatical. And the conclusion is undeniable. He wrote it down on the used envelope—still saving pad paper. Like this:

> Angels speak the language of angels;
> Babies are angels;
> Therefore babies speak the language of angels.

"I say now ——"

Mudgett glanced cautiously over his shoulder to make certain that he was alone with his flaming idea. He stared into the gloom, then rose up like a shadowy vulture and crept to the door. Opening it a crack he craned his long neck and listened.

Down the narrow winding stairway from the second floor and along the ill-lighted corridor came curious noises, faint yet audible—a distant chorus of yaps and howls. He closed the door softly and hung there, pulling the lobe of his left ear. Hadn't he just proved that babies speak the language of angels? Something was wrong. Did heaven sound like that—those eternal howls? Did it? If he should speak to prospective donors in the language of babies! Say now ——

He tried to banish the thought. Yet it persisted. His mind visualized the thing—vividly it pictured him standing before an assemblage of prospective patrons speaking to them in the first syllables that come forth from an infant's lips: "Goo."

Old Mudgett made the noise aloud. After all, it wasn't an unpleasant sound. "Goo-goo," pronounced he solemnly. "I say now, not half bad."

"But," queried the intensely practical side of his mind, "what does it mean?"

Even Mudgett's imagination co... He hadn't the slightest idea what "... meant. Not the slightest. Yet throu... years women visitors had leaned ove... enthralled while the diminutive ... these cribs murmured "Goo."

"I say now, maybe it has some mean... would try it out on someone.

Mudgett pushed the button at the ... desk. As always he pushed it with ... force, as if tremendous will power and ... effort were necessary to move the ... the matron's room. Old Mudgett ... electricity quite its due. No mistakin...

Whenever he pushed the button ... appeared. Sometimes Mudgett pon... phenomenon. e origin of language." He broke off
ided, "Have you read Aristotle or

"Well now, they failed. The great philologists and philosophers of all times have failed. I, Thomas A. Mudgett, will succeed."

"In what? Succeed in what, Mr. Mudgett?"

He glared at her. "But I've just explained; succeed in discovering the origin—the manner in which language started, the grunts, interjections, imitative sounds, the words from which language has been evolved. Don't you see? Don't you see, Miss Bax?" he implored.

"I—yes, I think I see."

"Well now, of course you see. Shall we decide upon the number seven? Seven babies. Do you suppose, do you think for a minute that seven babies alone together for two years would be mute? A mute baby! Think of it. Preposterous!"

Miss Bax almost sighed with the delightful thought of a mute baby.

Mudgett was pacing the floor now with long uneven strides. "Grunts, interjections, imitations, words. Words! They will speak to each other in the language"—he stopped abruptly and peered at the little matron through the dimness—"in the language of ——" Her gray eyes were upon him, level, serene, unemotional. He cleared his throat. "In the original language, whatever that is," he substituted for the thing in his mind.

"But, Mr. Mudgett ——"

"No misgivings," commanded Mudgett. "Do you, Miss Bax, or do you not wish to assist me in solving the greatest of all enigmas, the Sphinxian riddle that has eluded all mankind?"

"If you desire me to," replied the lovely little person by the door. "But have you thought of the cost?"

"Money ——"

Old Mudgett strode about his office, sank down at his desk, placed his gaunt shaggy head between clenched fists. When he raised his head to tell her that he thought he could arrange even the financing of heaven he felt a keen, unquieting disappointment. His office was vacant save for himself and his master idea. The efficient little matron had silently departed.

II

MUDGETT on the following morning donned his sanctimonious Prince Albert and disappeared into the Subway. At Wall Street he came to the surface, where the March breeze was blowing the spring lambs gently down the grade toward Broad Street. What a day! Full of wind. Mudgett, with coat tails flapping, entered a Broad Street office building and without consulting the register took an elevator to the tenth floor, where he made his way along labyrinthian halls and came to a standstill inside a double glass door. He asked for the head of the firm.

The wizened office boy looked at Mudgett. "He isn't in, but I'll see."

Mudgett sat with hands clasped. Job was a fidgety person compared with old Mudgett on a still hunt for donations.

Presently the wizened person returned. "He'll see you."

They proceeded slowly through a room where an animated young man was hanging up numerals on a large blackboard. Men lounged on a bench. Tickers ticked. They passed into a short silent hallway and the wizened person opened a ground-glass door, revealing a mauve carpet and mahogany office furniture—spacious, silent. At the far end, facing the door, sat a man whose face had the fullness and color of the sun behind a film of gray clouds. A stenographer, book in hand, vanished through another door. The man at the desk continued to scratch his signature to a pile of letters. The scratching of the pen was the only sound. Mudgett stood with hands still clasped, head slightly bowed, attempting to read the letters upside down. Presently the penman glanced up and scowled at the vulturelike figure hovering over his desk.

"Have a seat. Money?"

"Money," echoed Mudgett. He continued to stand.

"Haven't a cent." The penman continued to write. "Not—a—sou—marquee." With a flourish he completed the last signature and placed the pen across the tusks of a small ivory elephant. Leaning back in his chair he took one squint at old Mudgett. "Forget that pose, Tom. You give me the creeps. You look like an effigy of all the distress of the world. Sit down."

Mudgett did so. Each regarded the other in silence. Then both grinned. Concerning that silent gaze of the two men, ending in a grin, a volume might be written. Some of its meaning, however, can be conveyed in a sentence: Just thirty-seven years ago, at the age of one week, both had started life on an even footing—in the same foundling home. Later they had blacked boots together.

"Not a sou marquee," said the head of the brokerage firm.

Mudgett said nothing, but continued to gaze at the broker in an inescapable way.

The man with the face of a beclouded sun scowled and tapped the glass-topped desk with his finger tips. His fingers were stout and spatulate.

"Say," he suddenly barked, thrusting his head venomously forward, "do you know what month this is? Do you?"

"March," replied Mudgett quietly.

"March. Has that any particular significance to you?"

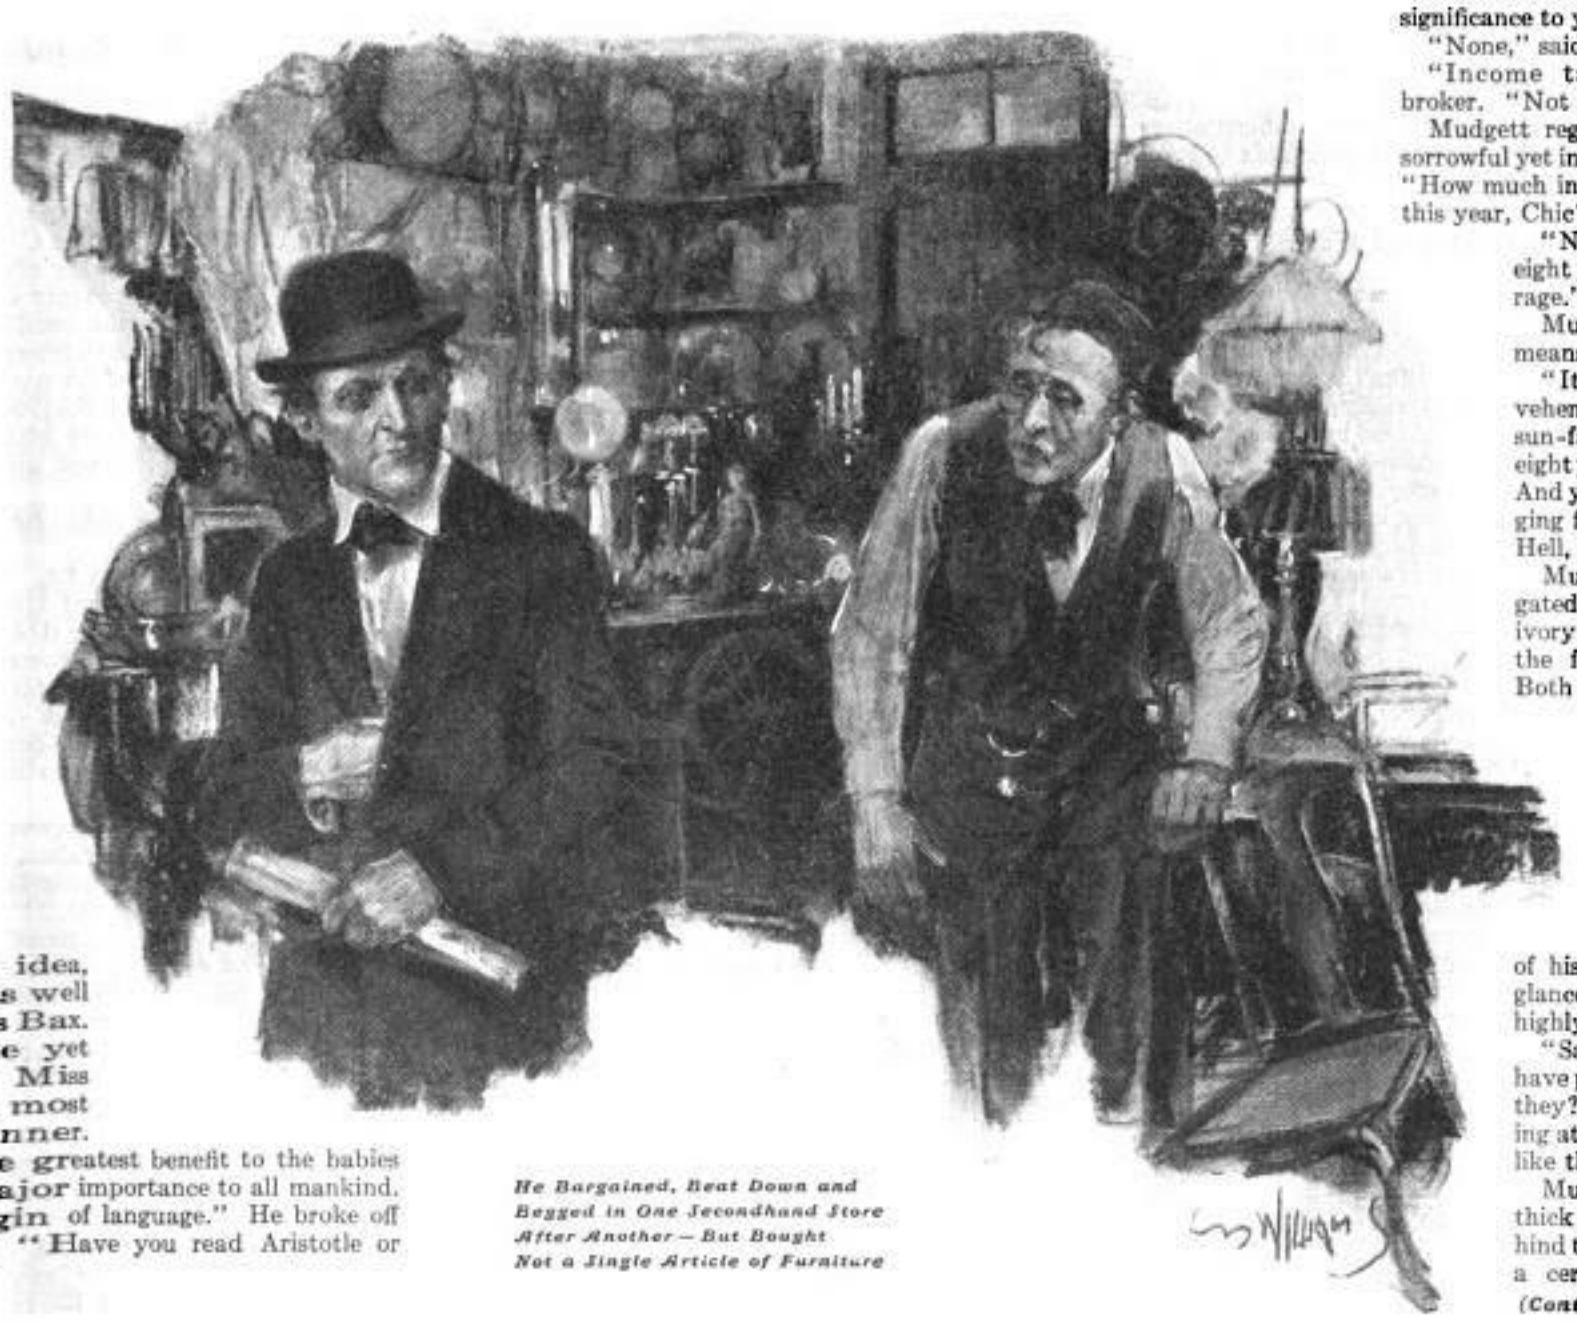
"None," said Mudgett.

"Income tax!" shouted the broker. "Not a cent!"

Mudgett regarded him with his sorrowful yet intensely practical eye. "How much income tax do you pay this year, Chic?"

"Nearly half. Forty-eight per cent. It's an outrage."

Mudgett gasped. "That means your income is ——"



"It means I'm broke!" vehemently declared the sun-faced man. "Forty-eight per cent! Pauperized. And you come around begging for money! Charity? Hell, Tom."

Mudgett pulled his elongated ear, glanced at the ivory inkstand and up at the face of the broker. Both became silent. Evidently something was passing through both minds—something way back in the years—in the days of nickel shines. Chic absently thumbed the pages of his desk calendar, and glanced at his not too highly polished finger nails.

"Say, Tom, the kids have plenty to eat, haven't they? They're not starving at the home? Nothing like that?"

Mudgett glanced at the thick neck of the man behind the desk and revolved a certain matter in his

THE TROUBLES OF THE HOUS

By Kenneth L. Roberts

DECORATIONS BY GUERNSEY MOORE

AS ONE faces the various front doors of the Capitol at Washington, the House of Representatives occupies the left-hand end of the building, the Senate occupies the right-hand end of the building, and the Supreme Court holds down the center.

At first thought this would seem to be a poorly balanced arrangement, as there are four hundred and thirty-five members in the House of Representatives, ninety-six members in the Senate, and only nine members in the Supreme Court. On second thought, however, one realizes that the weight of the brains of the Supreme Court is equal to the square of the Capitol's hypotenuse plus the cubic contents of the dome, and that the Supreme Court is therefore properly located. The two ends, moreover, are balanced by the fact that what the Senate lacks in numbers it makes up in lung power and dead weight; while the large population of the House is partially nullified by the almost complete vacuums that exist in the heads of some of its members.

One reaches the House of Representatives by entering the left-hand end of the Capitol and squeezing into an elevator with a number of worthy people from Ispheming, Mich., Woodchuck Hills, Vt., or Walla Walla, Wash., who have come all the way to Washington for the special purpose of seeing the Government engaged in a little heavy governing. The sight of a real live congressman in the elevator with them causes their breath to come in short, quick pants of excitement. One gets the impression that if they were to see a Supreme Court justice or a cabinet member they would require the services of pulmotors to keep them from passing completely away.

Gray Congressmen at Work

THE elevator spills out its freight on the third floor, and the worthy people from Ispheming and Woodchuck Hills and Walla Walla find themselves confronting a number of swinging doors, something like the swinging doors which formerly closed the so-called family entrances of that celebrated American institution, the saloon. Each swinging door is guarded by a venerable gentleman who is plunged in gloomy meditation, probably over the thought that so many nice-looking people not only take the trouble to pass through these doors each day but even appear to find something interesting in the proceedings which they witness.

Inside the swinging doors are the galleries, partly filled with puzzled observers. The first impression that the House makes on one of these observers is one of grayness, of flatness, of colorlessness, of dreariness, of uninterestingness. The curving sweep of seats in the big hall is dark gray; the light that comes down from the large glass roof is a gray light; the congressmen, half submerged among the empty seats, seem to be clothed in gray—though occasionally a congressman wears a blue or a brown suit. But just as all cats look gray at night, so do all congressmen look gray on the floor of the House. Not only do they look gray but they act gray. Some of them sit with their feet on the backs of the chairs in front of them, some of them read newspapers, some of them allow toothpicks to dangle nonchalantly from their lips, some of them doze. When they talk they emit a gray line of talk for the most part.

The second impression that one receives is that of general bewilderment and unrest. Why aren't there more congressmen in sight? Why do they move around all the time? Why don't they sit still? What are they talking about? Do they know what they are talking about? Does anybody know what they are talking about?

There appear to be signs of intelligence on the floor of the House. Stenographers hasten busily from member to member as they come to life and rise to their feet to emit a few remarks. The life of a congressional stenographer can scarcely be a happy one, for a large proportion of the remarks that he is obliged to inscribe in his notebooks are about as important and intelligible as Chinese cubist poetry in the original. Let us listen for a moment.

One of the gray-looking gentlemen on the floor of the House is standing on his feet droning along drearily on some subject such as the relation of time and temperature to the killing of potatoes and potato mosaic virus. Up then gets another gray-looking gentleman and rudely interrupts the gentleman speaking.

"I demand the regular order," says he mysteriously.

He makes his demand of a gentleman who is sitting behind the high mahogany throne from which all the aisles of the House of Representatives radiate.

This gentleman moves uncomfortably on his throne and says wearily, "The regular order is demanded. Is there any objection?"

There is a pause, and then another gray-looking man staggers wearily to his feet and says, "Well, I object."

Two or three men then talk unintelligibly for a moment, after which another gray-looking man walks down the aisle with a determined frown on his face and says, "Mister Speaker, I move to strike out the last word."

At this an elderly gray man with a small tramplike gray beard gets briskly to his feet and declares firmly, "There is no last word."

He is ignored, however, by the man in the aisle, who elevates his chin defiantly and declares, "Mister Speaker, the fear of the Lord is the beginning of wisdom."

This, however, gets nowhere with the man with the tramplike gray beard.

"Mister Speaker," says he, "I make the point of order that the gentleman is not discussing either the amendment or the paragraph under consideration."

The gentleman on the high mahogany throne clasps his brow wearily with his hand and gazes at the ceiling with a pained air. "If the gentleman from Illinois presses his point of order," says he, "of course the Chair must sustain it."

The gentleman from Illinois declares simply, "I make the point of order."

The gentleman on the throne stifles a yawn. "The Chair sustains the point of order," says he. "The gentleman from Arizona will proceed in order."

The gentleman from Arizona mumbles a few words which are unintelligible to everyone in the gallery because of the fact that the other members of the House shuffle their feet, rustle newspapers, whisper among themselves, walk in and out and around, and clear their throats industriously.

When he has finished he says plaintively to the man on the throne, "Mister Speaker, I ask unanimous consent to revise and extend my remarks."

Thereupon another man gets up and says, "Mister Speaker, I ask unanimous consent to extend my remarks on the subject of the fauna of Cranberry Creek."

The man on the throne cro and says, "Is-there-objection hears-none."

It is evident that everyone on the House wishes to go to sleep. This not to be. Up gets a cross-looking man and wakes the throne holder by hateful manner, "Mister Speaker, strike out the figures $1,100,000, and thereof $1,100,005."

Thereupon the man on the th that the clerk will read the amend gray-looking clerk who sits in the throne reads, in a flat voice, "P strike-out-$1,100,000-and-insert-$1,100,005."

Then the cross-looking gray man starts pointed remarks, but is interrupted by from Illinois with the tramplike gray beard.

"Mister Speaker," says he, "I make the that the gentleman is not discussing the am

Rule by Committee

ost popular recreations in the House of ves is introducing bills. Congressmen inless amusement all day long. Sometimes write their own bills, but more often their ir stenographers or their friends write bills are written the congressmen take floor of the House and drop them in a y are printed, so that they look far more icial than they really are. Only a few were more than thirty-three thousand the House of Representatives during . Such bills include almost everything making rum. They remove the charge he military record of Ozro Flittermouse, Clairvoya D. Ectoplasm, authorize the o grant two condemned brass cannon to ille, provide for the survey of Goober Creek and their tributaries in Georgia, ing on vessels using wharfage facilities Columbia, enable the Secretary of Agri- experiments and determine the prac- ng paper out of cornstalks, grant an to all persons who have lost the use of bootleg liquor in the interests of pront, provide for the broadcasting of ss by radio, pay Jonas McNutt for the clare the selling, exchanging or giving away of any pistol, bowie knife, dirk or dirk knife, blackjack, dagger, sword cane, slung shot, brass or other metal knuckle in the District of Columbia a misdemeanor, authorize an act extending an act entitled an act amending an act entitled an act to establish a navy yard somewhere in North Dakota, and what not.

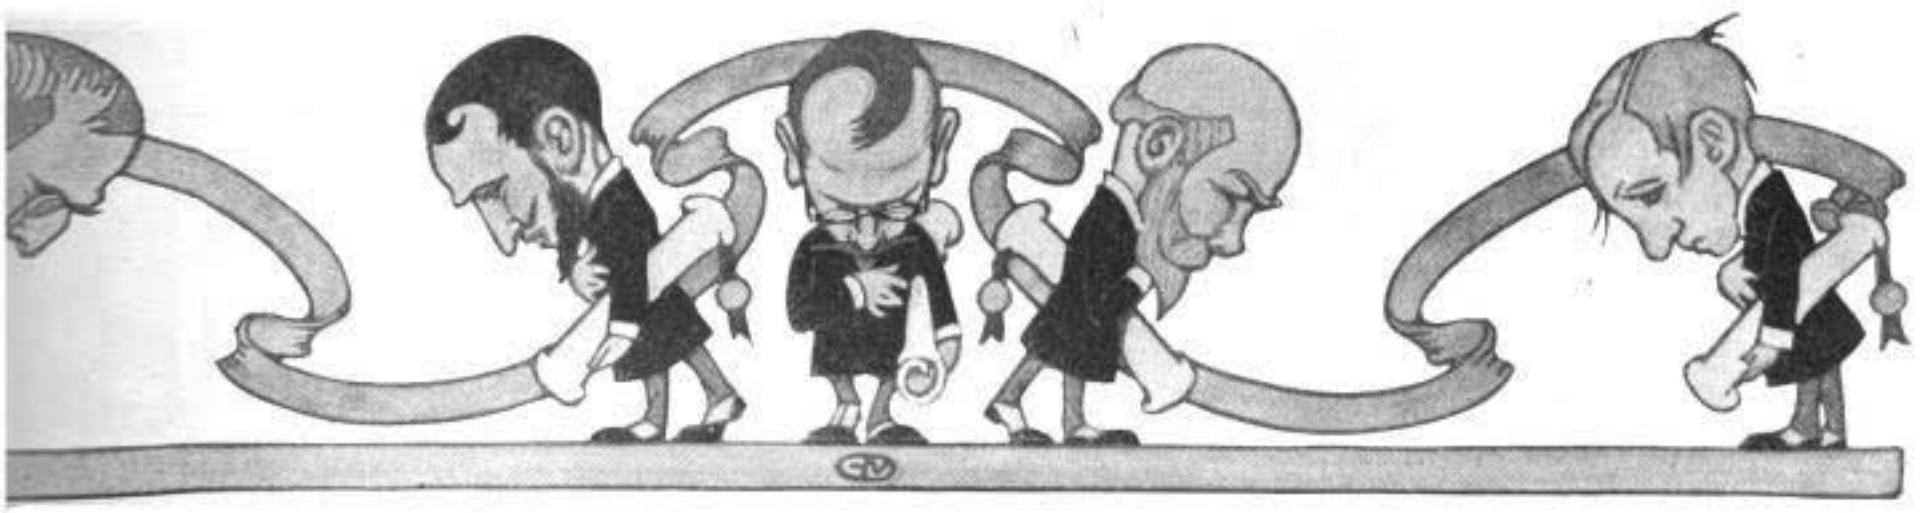
Though the average bill is meaningless, worthless and practically dead before it starts, it must be acted on by the House in some way. As can readily be understood, even by those who view politics as some great detestable disease, the House as a whole couldn't pass judgment on thirty-three thousand bills. If it devoted only ten minutes to each bill it would have to sit continuously for almost four years in order to dispose of them. Consequently all bills are dealt out to different committees, which either throw them in the wastebasket and forget them or doctor them up and bring them out on the floor of the House, where they are disposed of with neatness and celerity.

The seven or twenty-one or thirty-five members of a committee know a good deal about the bills which they bring out on the floor of the House, and the four hundred other members don't know much of anything about them. So the four hundred ignorant ones usually and of necessity accept the recommendations of the few informed ones, which would be a fine thing if the informed ones were always right. Unfortunately they are frequently wrong, owing to the fact that they are sometimes made up of or headed by small-bore politicians with unerring instincts for doing the wrong thing. That is one of the unfortunate features of the committee system. But the House makes just as much speed when it is wrong as when it is right.

The House prides itself on its celerity. It has so much business to transact and so little time in which to transact it that it cannot afford to listen to animated windbags of the sort that are permitted to wheeze and blow without restraint on the floor of the Senate. There are plenty of animated windbags on the floor of the House; but when they wish to become windy they must hie them to the cloakrooms or to the pages of the Congressional Record or to their homes—or secure an election to the Senate. One of the most flannel-mouthed of orators in the Senate was once a representative. He may rant and rave for hours nowadays without let or hindrance; but when he used to try it in the House he was given the coarse and unmistakable congressional razz to such an extent that he was seldom able to struggle to the surface.

There is a mistaken idea that a young and earnest congressman can at almost any moment rise to his feet on the floor of the House, pass the fingers of his left hand dramatically through his flowing locks, thrust his right hand between the first and second buttons of his coat in a Daniel Websterish manner, and deliver an impassioned two-hour speech on Woman, Lovely Woman, or The Passing of the Little Red Schoolhouse, or something similar. Such, however, is not the case. A young and earnest congressman hasn't a chance in the world to get away with any such stuff. If he is a persistent cuss he might have a chance to offer an amendment to an appropriation bill or something equally thrilling, and to speak for five minutes in explanation of his amendment. He must, however, adhere rigidly to the subject under discussion; and if he doesn't the gray-appearing and blank-looking gentleman from Illinois, Mr. James R. Mann, or the dusty-appearing and apologetic-looking gentleman from Tennessee, Mr. Finis J. Garrett—depending on whether the young and earnest congressman is a Democrat or a Republican—will probably rise to his feet and unemotionally make the point of order that the gentleman isn't discussing the amendment. Thereupon the gentleman will either discuss the amendment or take a back seat. If limited to five minutes the silveriest-tongued boy orator in the world would find some difficulty in getting steamed up to a point where he could make any soul-stirring remarks on an amendment to an appropriation bill. That is why debate in the House of Representatives is usually about as exciting as casual business conversations between the waiter and the cook of an all-night lunch wagon.

Much has been said in the past few years concerning the general nit-wittedness of the House of Representatives. The truth of the matter seems to be that the House has as many able men as it has ever had within the memory of even the oldest and sourest members of the Them-Was-The-Happy-Days Club. It is pretty generally conceded that at least sixty congressmen out of the total House membership of four hundred and thirty-five are very able men—that, in short, the House of Representatives is a truly representative body. The three hundred and seventy-five other members are pleasant, good-natured, kind-hearted, likable, half-baked individuals with a panting, overwhelming, all-pervading longing to hang on to their jobs.



One of the odd features of the House of Representatives is that almost any one of the four hundred and thirty-five members will admit that there aren't more than sixty able representatives—though some think there are as many as one hundred—and that a distinct odor of Stilton clings around the rest. Each one, however, figures himself as one of the sixty; never as one of the three hundred and seventy-five.

The Wrong Fellow

ONE congressman in a contemplative mood recently remarked that Congress was largely made up of men with one-track and one-idea minds. Once they have absorbed an idea there is no way to rid them of it except by blasting it out of their heads. That, he remarked, was the reason that so many congressmen, if questioned, would unquestionably state that Rex Beach is a summer resort, that Yom Kippur is a sort of herring and that Easter Sunday is Billy Sunday's sister. He also added gloomily that a Massachusetts congressman asked a fellow congressman to attend and speak at a Longfellow celebration to be held near that poet's former home. The fellow congressman balked. "What do they want to hold a celebration over that guy for?" he asked. "Nobody ever heard of him until he married Alice Roosevelt." For the benefit of the boobs that sent this boob to Congress it should be explained that the only Longfellow he knew anything about was the able and distinguished gentleman from Ohio, Nick Longworth.

It is when one stands in front of the boobs in Congress and begins to cast a contemplative eye beyond them to the reasons that give them their power, that one bursts into a light perspiration over such distant matters as unrestricted immigration. The boobs are there, nobody questions that—least of all the congressmen. There are congressmen sitting on the floor of the House whose knowledge of the multitude of House rules is so small that

When Finn Meets Finniga

By VICTOR SHAWE

ILLUSTRATED BY TONY SARG

Saarenpaa's Great Right Hand Closed Round the Wrestler's Back-Thrust Ankle

PAUL BUNYAN, to quote from a classic of the logging camps, was a lad who could drive more miles and pull more stunts in more new styles than any other peavey prince before or then or ever since. Paul it was, as all good loggers know, who dug the Columbia in order to drain an inland sea that lay between the Cascades and the Rockies so he could get out a drive of logs he had contracted to supply for Noah's ark. And Paul it was who scooped out the basins of the Great Lakes so there would be drinking holes handy for Babe, his big blue ox, while he was logging off the Mississippi Valley to get timbers for the building of the Spanish Armada.

Now the old-timers are saying Paul staged the deep-water contest that was the undoing of the big Finn, Toivo Saarenpaa. In this instance the old-timers aren't holding strictly to the truth, because Paul took his outfit over to Russia just before the revolution and hasn't been heard from since the last time Trotzky was assassinated. As a matter of fact, Uncle Andy McPherson did most of the plotting against the big Finn.

Uncle Andy is an independent lumberman whose mill is located on Yaquina Bay, out on the Oregon coast. Toivo Saarenpaa, huge, blond, blue-eyed, slow of speech but swift of action, bosses a company outfit that operates along the Yaquina River above the bay. Without doubt there are good woodsmen to be found in other camps. Equally without doubt the best loggers in the world are to be found on the Pacific Coast—this by their own admission. And Saarenpaa enjoyed the reputation of bossing the wildest gang of roughnecks west of the Cascades and of himself being the hardest boiled of them all.

Uncle Andy did not appreciate the big Finn's qualities of leadership. Many a time and oft, slouching in an easychair in the lobby of the trim little hotel he had built for his own convenience down on the bay, he had spent hours at a time trying to evolve a plan for humbling Saarenpaa. One day while thus engaged a little man in uniform drifted in and asked for a job. Uncle Andy shook his head regretfully. Out of respect for the uniform he would have liked to offer the fellow a place, but what could such a runt do in the woods? Then something familiar about the man's twinkling eyes and high arched, aggressive little nose drew closer attention.

"Well, for the love of Mike!" the lumberman exclaimed, extending a welcoming paw. "It's Finnigan! Sit down, my boy, and tell me what's what. By the uniform I know you helped chase the Kaiser into Holland."

"I did," the little man admitted, grinning. "With a spud. When I enlisted I told 'em what a helluva fighting logger I was ——"

Uncle Andy interrupted with a chuckle of amusement.

"Did they believe you—about that fighting business?"

Finnigan's habitual grin grew more pronounced than usual.

"I might have gotten by but for the intelligence test," he confided. "After I had monkeyed with that for an hour or two they put me to peeling spuds and washing dishes. Later I was transferred to the Spruce Division, and there I've been ever since, peeling spuds and washing dishes."

Uncle Andy chuckled again.

"Served you right for trying to call yourself a logger," he observed.

Before the war Finnigan had been rated as one of the best camp cooks on the coast, and to have been put to work as a kitchen mechanic—or flunky, as such men are called in the camps—was the greatest indignity he could have suffered. Uncle Andy continued to chuckle abstractedly. He had begun to wonder what sort of job he could find for the little man.

"And you didn't even get a chance to learn anything new," he commented conversationally.

"Sure I did," Finnigan replied. "I learned what a whole congressional investigating committee couldn't discover. A second loot who knew where I kept my bottle cached, told me. He said all of sixty-four board feet of spruce was required in the building of an average plane, and he said the Spruce Division had spent about one hundred and sixty-four million dollars getting ready to cut that sixty-four feet that was needed."

Later McPherson gave those figures the consideration they deserved. In fact, later he repeated them to Saarenpaa and told how much he could have saved the Government if he had been permitted to get out what spruce might have been needed. Saarenpaa's comment regarding his ability to do that little thing was, as it were, the final straw that choked Uncle Andy's goat, and resulted in the deep-water battle the old-time loggers are now attributing to Paul Bunyan's brain work.

At the time Finnigan so glibly recited the figures Uncle Andy was too busy trying to decide what sort of job to [illegible] little man [illegible] immediately port of the [illegible] tion.

"Finnigan," he said after due thought, "[illegible] good to waste in a kitchen. I'll tell you what I'll [illegible] rustle a partner and I'll put you to work in the [illegible] felling timber."

Finnigan appreciated the compliment of [illegible] offer, but time and experience had taught him [illegible] He was a cook, and a good one. A job in the [illegible] another matter. He knew even the poorest of the [illegible] would scorn him as a partner. Nevertheless, [illegible] would be reflecting on Uncle Andy's judgment [illegible]

"I've been cooking for so long I'm spoiled for [illegible] job," he said cheerfully. "But if I don't find [illegible] in my line up the river I'll be back in a day or [illegible] rustle a buddy to work with me."

Then he hiked up the river to Saarenpaa's [illegible]

The big Finn did not know Finnigan, as did [illegible] bosses along that coast, and he had but scant [illegible] the uniform Finnigan wore. With practiced [illegible] appraised the little man's narrow shoulders [illegible] hands, white from long immersion in dishwater [illegible] permitted himself a smile. He liked his job [illegible] paa did.

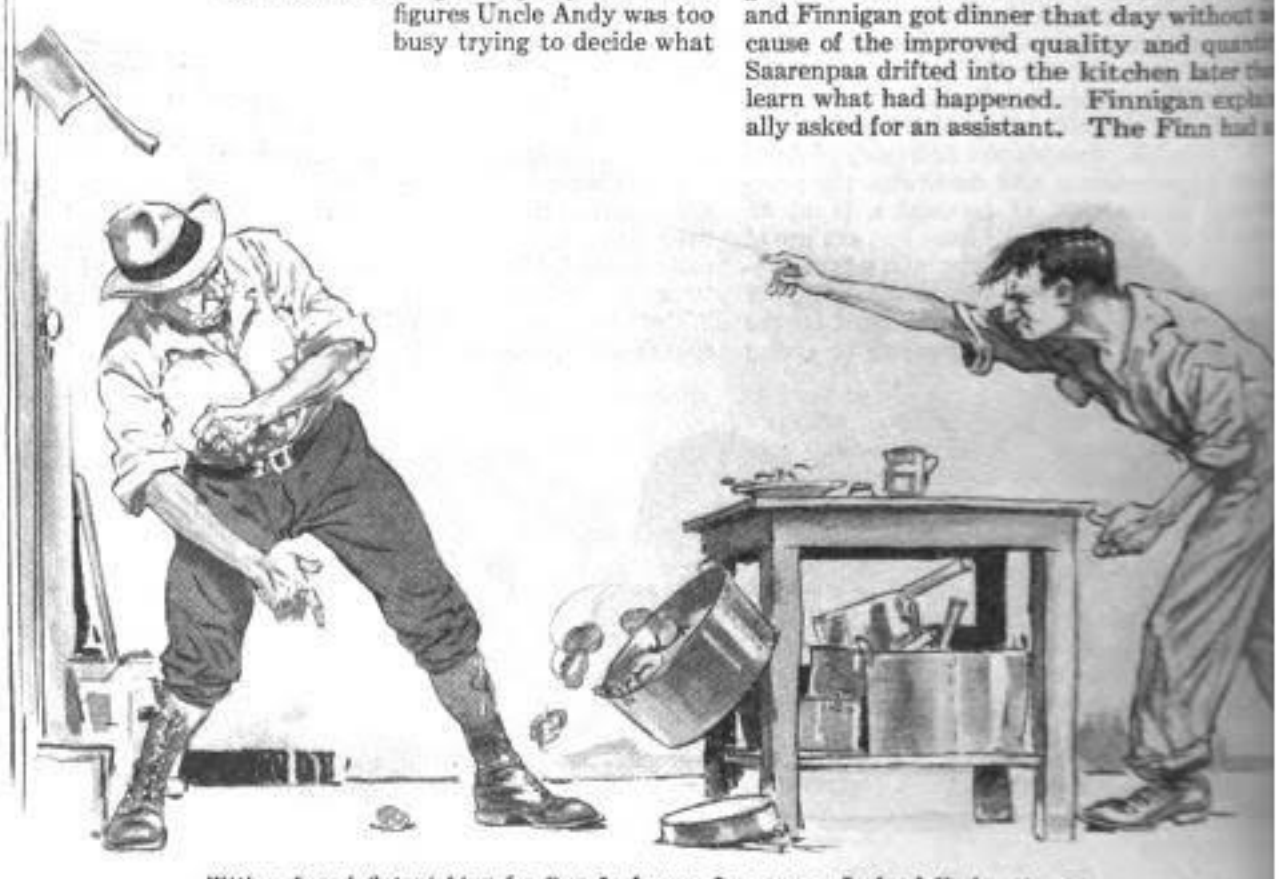
"The cook has two flunkies helping him," he [illegible] you can chase them out of camp you can have [illegible]

Finnigan did not hesitate. By instinct he found [illegible] to the kitchen. More times than one he had to [illegible] long enough to remove, by strictly legitimate [illegible] cook he happened to be helping. Inside the [illegible] glanced first, from force of habit, at the shelf [illegible] range, where he knew he would find a battered [illegible] clock. Beside the alarm clock stood an empty [illegible] He took a flask from his hip and placed it on the [illegible] of the clock.

"A cup half full," he said to the cook, [illegible] before each meal."

The cook reached thirstily for the flask, and [illegible] repressed a grin. This was going to be easier [illegible] hoped. Then he went to the meat block and [illegible] heaviest cleaver and the wickedest-looking [illegible]

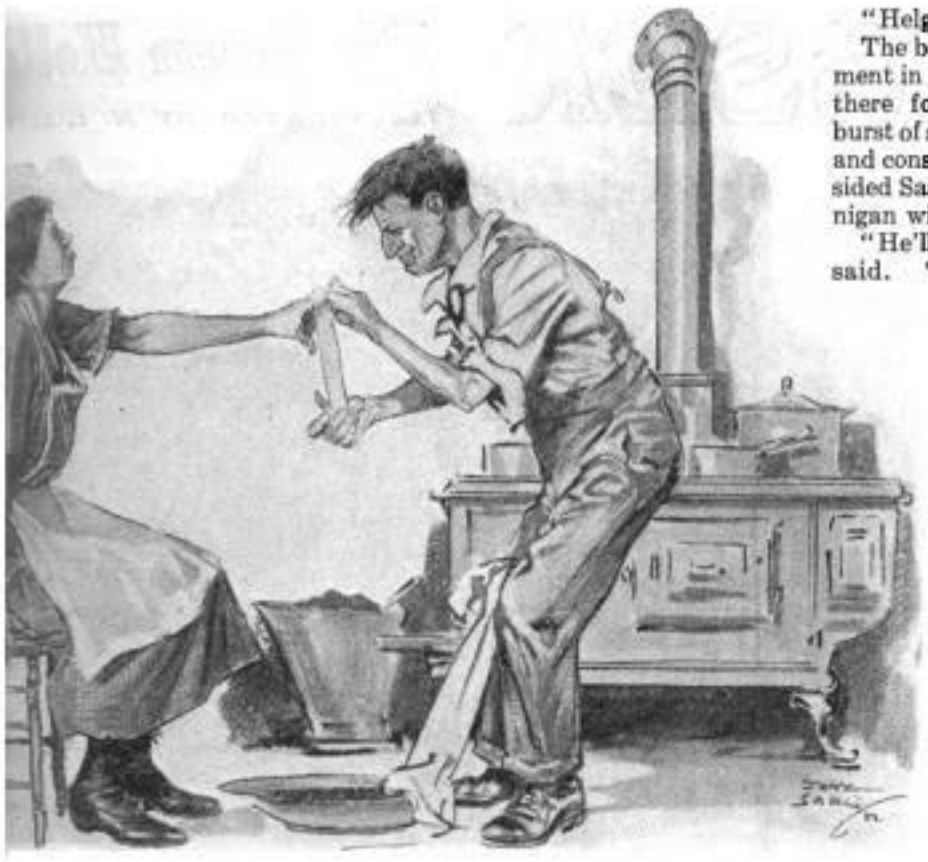
"I'm just back from the trenches," he [illegible] astonished flunkies. "I crave more blood [illegible] beat it before I go into action."



He moved softly toward them, flourishing [illegible] one familiar with his weapon, and hefting the [illegible] unconscious skill.

As the noise of the retreating flunkies [illegible] distance the cook reached for the flask again [illegible]

"You're back from which trenches?" he [illegible] languid interest.



"The potato trenches," Finnigan answered [illegible] "How many bullies do I peel for in this camp [illegible]

The expected happened next pay day. "Helga Ehlo," she answered.

The big boss made some comment in their own language, and there followed a machine-gun burst of strange-sounding vowels and consonants. When this subsided Saarenpaa introduced Finnigan with a jerk of his thumb.

"He'll show you around," he said. "And if he gets fresh bust him right on the nose." Then he emitted a huge chuckle, recalling the incident of the cleaver. "And you," he continued, addressing Finnigan, "move over to the bunk house and let this lady have your room." There was a room adjoining the kitchen Finnigan and the preceding cook had occupied together. "I'll have a bed and springs and mattress sent over for you," Saarenpaa added for the lady's benefit.

The lady nodded, and looked at the clock.

"It's time to start supper," she said. "How many do I cook for?"

Saarenpaa didn't bother to answer. With his thumb he indicated Finnigan as a sufficient source of information, then left the room. Whereupon the lady removed her hat and coat, and from one of her suitcases took a capacious, well-starched bungalow apron. In a manner merely matter-of-fact she began to unfasten her skirt. Finnigan gazed at her for one horrified moment before he started to bolt.

"Here, you!" she yelled. "Don't you see the clock? Get busy with them spuds."

Finnigan returned to the sink and with nervous haste began paring potatoes. But he was eminently human—and weak. After a moment's suspense he peeked furtively over his shoulder. Relief mingled with regret when he found she had stopped with the skirt and waist, and was putting on the apron.

A few moments later Saarenpaa reappeared. Under one arm he lugged a bed and springs. Under the other he carried a mattress. When these were disposed of he stood for a moment in the kitchen door, appraising the lady's proportions with appreciative eyes.

"Miss Ehlo," he said, not flippantly but with honest approval, "you're some woman. How tall are you?"

"I'm six feet five," she told him coldly. "And I weigh two hundred and sixty pounds."

"Some woman," Saarenpaa repeated. "The best I've ever seen."

"And I suppose you think you are some man," she commented, resenting his very personal remarks.

"I am," he told her without meaning to boast. "The best in these parts."

He continued to gaze at her with respectful approval. Eugenics was a word not in his vocabulary, but he was thinking that when he married her their babies would be some babies. With the telepathic instinct possessed by so many women of her race her mind registered his thought. Her big round eyes flashed indignantly.

"You get t'hell out of here," she ordered.

Saarenpaa didn't understand why she felt like that, but he wasn't in the habit of arguing. Besides, he didn't want to get her sore at him right at the start.

"You are the boss in the kitchen," he told her. "I'm on my way."

For a time after he had gone she stood staring at the closed door.

"In about three weeks he'll be asking me to marry him," she said finally, speaking more to herself than to Finnigan. "The first one I married was like him, and the next one was something like him, and I won't marry another Finn if I never get another man."

Unexpectedly she sank into a chair and, putting her arms on a table, hid her face and began to weep. Finnigan edged over and by way of experiment began patting her ponderous, quivering shoulder.

"There, little girl, don't cry," he coaxed, not knowing he was quoting poetry. "If that big stiff begins bothering you I'll slap him over and put the boots to him. And he knows I'm the lad that can do it." The mirth wrinkles around Finnigan's eyes deepened as he talked, and he winked at the old clock on its shelf above the stove. "Do you see the crack in the door over there?" he continued. "That's where I tried to split him open with a cleaver when I had a run-in with him the other day. I missed his head"—this with infinite regret—"but the door shows where the cleaver landed."

"What did he do to you then?" The lady was human enough to want to hear the end of the story.

THE OUTGUESSER

By Sam Hellm

ILLUSTRATED BY M. L. BLUME

Heenan Was Surprised by the Ease With Which Sattherwaite Established Himself on Friendly Terms With the Members of the Blue Sox

BRAINS?" scoffed Heenan, manager of the Blue Sox. "What good would all the brains in the world do against a slugger like Stacey?"

Randall, who had been graduated from Harvard into the ownership of the team, by way of a fortuitous marriage, laughed shortly.

"If he was pitched to properly he wouldn't make fifty hits a year."

"Where do you get that stuff?" Heenan tossed his half-chewed cigar over the railing with a movement of impatience.

"There isn't a pitcher in the league that he hasn't murdered, including Dan Mathews. Brains? He hasn't enough brains to pass up a pitch-out, but he can stick his bat out and bust one over the fence."

"That signifies nothing," shrugged the young owner. "In a kingdom of blind men a one-eyed man is king."

"What's that?"

"You know what I mean. Stacey's brains are at least as good as those of the men who pitch to him. If I had the time," pursued Randall, "I could get together a team of players—fellows who under present standards couldn't qualify in a Class D outfit—and in six months I could run away from the best layout in the country."

"Think so?"

"I know so."

"What would you suggest," asked Heenan satirically; "that I release the whole bunch and hire a lot of rah-rah boys who are at the head of the class?"

"You might do worse. Talking about Mathews—what's the matter with him? Is he going to fliv on you this year? That game of his yesterday was awful. He didn't have a thing on the ball except the cover, and they nearly ripped that off for him.

"We'll be in mighty bad shape this year if he blows. I've been figuring him for about thirty-five games this season."

"He's got me worried too," admitted Heenan. "He looked punk down South, but I thought he'd come to. Walks around in a kind of dope. Never saw such a change in a guy. You'd never suspect he was the same fellow that ran a 35-6 gait last year. Says his arm's all right, but ——"

The Pitcher, Dazed With Surprise, Did Not Move at First

"Well, never mind," interrupted Randall. "We can even survive his failure. By the way, Mike, I'm sending a young fellow to see you. Name's Sattherwaite. Should be here before you start the trip home."

"Pitcher?"

"No."

"Outfielder?"

"No," returned the owner with a puzzling smile. "He's an outguesser."

"H'm. Brainy lad, eh?"

"Look him over and judge for yourself. I'm going West to-night. Write me about him."

Three days later, at morning practice, Heenan observed a stoop-shouldered youth wearing thick glasses shambling toward him across the diamond of the Tigers' park.

"The outguesser," muttered the manager.

"I am Ephraim Sattherwaite," announced the newcomer in faint, hesitating tones. "You are Mr. Heenan? I have a ——"

"Let's see it," snapped Heenan, snatching an envelope from the shaking hand.

The letter read:

This will introduce the young man, Sattherwaite, about whom I spoke to you recently. He hasn't a thing in the world for you except a pennant. He's signed for the season. Watch his complexes.

"Pitcher?" asked the manager.

"I? No."

"What do you do?"

"I'm a psychoanalyst."

"I don't care what your religion is," rasped Heenan. "Where do you play?"

Sattherwaite coughed nervously.

"I'm afraid there is some misunderstanding. While I know something of baseball, I do not —— Hasn't Mr. Randall ——"

"No, he hasn't. I thought he was sending me a player. What does he want me to do with you?"

"I'm a psychoanalyst ——"

"I know," [illegible] signedly. "What what do you do [illegible]

"Mr. Randall," explained with desperate assurance, "[illegible] to isolate and analyze comp[lexes]. I have made studies at all camps and ——"

The manager grunted angrily and moved [away] thought better of it. The strange young [man] tials from the boss. He motioned Ephraim to the dugout.

"Sit down and tell me all about it. What I'll bite."

"It's quite simple." Sattherwaite spoke steadiness. "I spent a week or more at the [training] psychoanalyzing the men. The data are [complete] except for your players."

"I don't follow you," said Heenan simply over again for the kindergarten class."

"I have been studying the mentalities believe I have a good conception of the [reactions] them, the impulses that motivate them—[in] idea of what each of them will do under [given] stances. Their subconscious reflexes, their [habits]

"I believe," interrupted the manager, "[you're] ning to make you. As I get it you've been [collecting] of goat-getters. Eh?"

"I don't ——"

"What I mean is you have been giving [them a] once-over and getting a line on them. [Take] Jones—you know Buck Jones, of the Vanguards reminded that he was in the workhouse [for] beating. Spring it on him and he'll get [all] wild. Is that the idea?"

Ephraim smiled tolerantly.

"Hardly as crude as that, but you are [on the right track] of the psychic garment."

Heenan threw up his hands in surrender.

"Perhaps," went on Sattherwaite, "I could [make it] clearer to you through practical demonstration."

The manager's air of relief was impressive.

"You said a mouthful there, boy. How [shall I go] to do it?"

"All I ask is that you permit me to [study your] players without telling them my mission."

Heenan laughed.

"That's good. What is it? All right. What [shall I tell] me to tell them?"

"You might say that I am a writer getting [data for] timate sketches. That will make for freedom

gone for good, isn't it?" he suggested

ose with a snarl.

"What's the Matter, Old Fellow?" Greeted the Psychoanalyst. "Why the Blues? You Know How it Is"

"What the ——"

Ephraim smiled. This was better.

"You've been doing some mighty rotten pitching lately. I could do better myself."

"Why the devil don't you?"

"I never have thought much of your work," resumed Sattherwaite. "I knew you would blow up in a pinch. You've been getting by largely on your momentum for a long time." Through the thick lenses the sharp eyes watched the other closely.

Mathews made a movement as if to strike. Ephraim backed out of reach.

"I'm sorry," he said in his most soothing tones. "I didn't mean what I said. You're a good pitcher, a wonderfully good pitcher, and I can't understand why you have fallen down so."

The anger in the southpaw's eyes died and he slumped back into the chair. The psychoanalyst knew the value of getting in on the rebound. The soil was all prepared for the planting.

"Now, Dan"—he placed an arm around the pitcher's sagged shoulders—"it's a girl, isn't it?"

"How do you know. What makes you think so?"

"That's simple enough. You're in good health, though your appetite is not what it should be; you are not troubled by finances. What else could be the matter with a handsome young man?"

"Yes," said Mathews slowly, "it's a girl, right enough. You're a smart fellow, Eph. Maybe you can help me. She's got me up in the air the worst way. One minute she seems crazy about me; the next time I call she acts as if she's getting ready to fire the servant girl for letting me in the house." He shook his head. "I don't know what to make of it."

"Merely the mental instability of young love, I should say."

"I don't know what it is, but she's got me jumping sideways. Sometimes I think I'd be better off if she'd just come right out and give me the air. It's this damn uncertainty that gets my goat. She's one swell kid, though. Here, take a look."

The snapshot he passed to Sattherwaite apparently had been taken on an outing of some sort. Ephraim's gaze fixed on laughing eyes and remained there.

"Some looker, eh?" broke in a voice some moments later that rasped into the occupied thought of the psychoanalyst.

"Eh? What?"

"Beauty, isn't she? Through with it?" Sattherwaite's hand with the picture had dropped absently to his side.

"Oh, yes; certainly. Very charming girl. Her eyes are blue, aren't they? I thought so. The face looked familiar for a time."

Ephraim returned to his test tubes. His job was to evolve a pennant for Randall, and straightening out Mathews was an important feature of the job.

"Listen, Dan," he said. "You can't go on like this. When we get back home you must force an issue: Yes or no. Don't you realize that you are ruining a wonderful career in baseball by useless worrying? How much do you think you are enhancing your chances with the young lady by being batted out of the box two or three times a week? No love is strong enough to condone failure for long. Do you follow me?"

"Yes, but ——"

"There are no buts. I believe I can help you, Dan. Right now I can't tell you how, but I think I can work out a plan that will solve your problem if you are willing to trust me in a delicate matter of this sort. Are you?"

"Yes, I am."

Mathews stretched out a hand.

"You were able to find out what was in my mind; maybe you can find out what's in hers. Is that your idea?"

"Something like that. Pitch good ball and leave the rest to me. I can already hear the wedding bells."

A half hour later Heenan overheard Eph and a rookie talking.

"That was a tragic experience," said Sattherwaite. "Do you dream of it? No? How about your waking hours? Does the subject obtrude, rather—that is to say, do your thoughts suddenly turn to it while you are thinking of something else?"

"Bunk!" muttered Heenan as he turned away without waiting to hear the answer. "What have dreams to do with that guy's glass arm?"

Strolling over to the cigar counter he encountered Roberts, the center fielder, nursing a grouch of sorts.

"Who is this bird Sattherwaite?"

"Him?" said Heenan. "He's a writer."

"I never heard of no writer by that name," growled the other, "and I know all the newspaper men on the circuit."

"What's eatin' you?" demanded the manager.

"Well, I don't think he's straight."

"No?"

"No, I don't. We played a little draw last night, and this guy takes a hand. He knows all the cards by their first names."

"Trimmed you, eh?"

"I'll say he did. Had us all down to the cloth in a couple of hours."

"What makes you think he's crooked? See anything?"

"No," was the hesitating response; "but when a fellow wins every pot he gets into, and drops every hand that is topped, without a call, there's something wrong."

"Not necessarily. He's an outguesser."

"A what?"

"Never mind."

The Barons of the Nimble Pac

By EDGAR WALLACE

ILLUSTRATED BY WILLIAM KEMP STARRETT

I Heard the Shot and Saw Jerry Double Up and Fall Over on His Face

IN THE old days—this is the steward talking—there were seven gangs working the North Atlantic. They favored the Red Funnels and the Blue Star mainly, but now and then they worked across in an American boat. But the Red Funnels and the Blue Star were the principal beats of the Barons of the Nimble Pack—that is what the old captain of the Mauronic used to call them. Of course there were, and still are, odd men who work between New York and Genoa, and there have been parties on the Canadian packets. But there is not much picking in dago ships, and Canada is dangerous. Why, an ordinary magistrate in Canada can send a man down for ten years and give him the whip! That makes the Canadian trip so unpopular.

When I first went to sea there were about five bunches: Harry Burke's gang, Dutch Frank's, Sandy Havers', Boy Swindon's and Jerry Macbean's—that's five, isn't it? And all the time there was Boston Smith. He was a gang by himself, and never had a partner. He laid for the rich and the silly; business men who thought they knew it all. You've met the kind. Know everything about their own business, but are not quite sure whether Tunis is the name of a German town or whether it is a new kind of chewing gum.

Boston worked into tables of five that needed another player to liven up the game.

"Six is a nice number for a poker game. Won't you play, Mr. Smith?"

"Why, surely; I was going to bed, but I don't mind playing for an hour."

Nobody ever caught him out. Once, when there was a little disagreement about his holding four aces against four pat kings, he insisted upon being searched and examined generally. They did it too; and apologized.

"Very well, gentlemen," says he, "now if you don't mind we will resume. I bear no malice, and I can imagine nothing more exasperating and liable to tear one's judgment to tatters than to be beaten on four kings. Steward, some new cards."

And the very first hand he dealt he gave fours to every player at the table, and a low straight flush to himself. It cost that crowd some money, and he certainly livened up the game. He may have been working with the barman—your hair would go up if I told you the number of ocean-going barmen who stand in with card sharpers. But if he was, the barman was certainly an artist.

The other crowds tried to get Boston into their game, but he allowed that they were too dishonest. It's a fact. Told them plain and straight one morning in the smoke room of the Mauronic.

It was Jerry Macbean's lot he was talking to—the toughest collection of wolves that ever traveled saloon. They would take a man's last cent, and then go back to his cabin and get the gold filling from his teeth. You never saw them playing in the smoke room. They always got their sucker down in some quiet place—in a cabin as likely as not.

Jerry looked ugly, but he said nothing. Boston Smith stood seventy-two inches in his stockings and was a pretty bad man when he was roused. I never saw him that way, but I've heard.

Two voyages after this row we shipped Boston Smith and the Macbean crowd in New York. We had a big passenger list, for it was early summer, and there were a lot of tony people on board. Colonel Vanbyn and Mrs. Cornebilt, and a regular regiment of moneyed folk. I was bedroom steward of 228 to 232 on C Deck, and it so happened that Boston Smith was, so to speak, in my charge.

I suppose you wonder why we didn't warn the passengers that there were card sharpers on board? Well, we did. We kept a notice posted permanently in the smoking room: "Passengers are cautioned," and so forth. You've seen it. A steward doesn't tell anything till the right—what's the word?—that's it—psychological moment; and somehow that never seems to come.

Boston was always very decent to stewards. He tipped well and he gave very little trouble, except that he was particular as to the way his clothes were brushed. I can say that I have handled every suit he wore, and I've never found a card or a false pocket or any of those contraptions that card men are supposed to have concealed about them. He was a gentleman to deal with, always polite and never asking questions or getting into familiar conversations. I must say that I like a gentleman to be a gentleman, and keep his place. It's there for him to keep, the same as it is for a servant.

The first three days of the voyage Boston Smith did nothing but loaf in his chair up on the boat deck and read novels that he'd borrowed from the ship's library. He used to read books by a writer called Meredith and by another called James. I could never make head or tail of them. I think that books which can't be understood by everybody are badly written. But that is neither here nor there.

On the fourth day I saw him go up the companionway in company with a fellow named Carter Moriaty. His father was Moriaty the New York banker—or it may have been Philadelphia. Anyway, he was dead. Carter M. they used to call him, a fat fellow of thirty who'd never done a day's work in his life, but knew it all.

"Carter M.," says I to myself, "your doom is sealed."

I had a chat with his steward next day, and the steward said that Carter had told his valet that he'd lost twenty thousand dollars.

"He's lucky," says I.

But he wasn't lucky. He lost over thirty thousand the next night. I didn't trouble to inquire after that—and I hadn't time, either, for that day Mrs. Frederick Colcott, who traveled in the royal suite, lost her diamond spray. It was a steal, there was no doubt about it. The jewel case had been broken open in the [illegible] by somebody who had [illegible] to get into the cabin [illegible] spray was gone.

It was my luck that [illegible] occurred in my section of [illegible] I was her steward, and I [illegible] duty late that night, [illegible] she went to bed—sick. [illegible] a bit of a cross sea running [illegible] the Mauronic would [illegible] was a ripple on the water.

So it was me for the [illegible] Where was I at twelve? [illegible] I doing at eleven? Did [illegible] strangers on C Deck? [illegible] the sort of questions [illegible] you. There was never [illegible] officer that ever went to [illegible] didn't believe he ought [illegible] been a lawyer, and the [illegible] all the cross-examinat[illegible]

Well, the ship was searched [illegible] end to end. There were [illegible] men who had a bad record [illegible] they were put under [illegible] cause the master at arms [illegible] lady's shawl and a pair [illegible] glasses that they had smuggled [illegible] they were cleaning decks. Stuff [illegible] by passengers, and overlooked by [illegible] steward. But there was no diamond [illegible] We didn't touch Cherbourg at all [illegible] but went straight into the Mersey. [illegible] that time Southampton wasn't [illegible] us. Only the South African and [illegible] Plate boats went there. As soon [illegible] got into the Mersey the police [illegible] aboard and the first thing they did [illegible] come down to Boston's cabin. [illegible] him now, sitting on a settee, a [illegible] ing fellow with brown, clean-shaven face [illegible] recall the look of astonishment he showed [illegible] bulls came in.

"Why, gentlemen!" he said as he took [illegible] out of his mouth and stood up. He was [illegible] for shore and there was a glove on [illegible] "This is a surprise. What can I do for [illegible]

"We want to search your baggage," [illegible] detective.

"Go right ahead," said Boston, sitting [illegible] again, watching them with a sort of [illegible] in his eye as he pulled at his cigar.

They took his trunk first, and right [illegible] the tray, under some handkerchiefs, [illegible] mond spray. Boston Smith just stared [illegible]

"Gee-whiz!" he said. "Now how [illegible] there?"

One of the splits laughed.

"You'll be able to explain," he said [illegible] at his pal.

"I certainly should like to," said [illegible] threw away his cigar. "You'll want [illegible] little walk, I guess," he said. "This thing [illegible] planted, and the man who planted it was the [illegible] sent you straight to this cabin."

The detective said nothing, but jerked his [illegible] Boston followed. I don't know what would have [illegible] if they had waited until the passengers were all [illegible] they landed him. They usually do this when [illegible] taking a prisoner off. But these police people [illegible] anxious to get him away from the ship, and [illegible] him down the gangway. I saw it all, because [illegible] them on deck to find out what was to be done [illegible] ton's luggage. It was an open gangway and [illegible] walking in front of the detective—the other [illegible] behind; I suppose, to see the captain and the [illegible] had lost the spray.

On the landing stage at the foot of the [illegible] Jerry Macbean. It was the first time I'd seen [illegible] came on board. I heard from his steward [illegible] voyage.

Boston didn't turn his head, but was walking [illegible]

"How's the trade in diamond sprays?" [illegible]

I didn't see Boston turn. I heard the shot [illegible] double up and fall over on his face, and then [illegible] ton say "Fine!"

That's all he said, and then the women began [illegible] and all kinds of policemen leaped at Boston [illegible] didn't make any struggle; he dropped his gun [illegible] fired and there was no need to act rough with [illegible] that they did—much.

assengers rather reminded me of a mission- tallish man with black hair and a black d. You may have seen the kind I mean; ery hair from end to skin. He wore a single black tortoise-shell rim—the only Amer- n wearing one, and he told me that he had vitzerland during the war. He had made a hat news cheered me up—and was going to Cleveland, where he belonged. You know how these conversations start: A sort of "Good morning—here's your coffee, sir—it's a fine morning," and then you get on to what happened on the last voyage and the people who were aboard.

Anyway, that's what he told me. He didn't speak much. He used to play chess against himself, sometimes in his cabin, sometimes on deck. I mentioned once about Boston Smith. He happened to ask me what was the usual tip nowadays, and I thought it was a good opportunity to get in a little propaganda work.

"Boston Smith?" says he very thoughtful. "I know that name. What sort of a person was he in appearance?"

"Taller than you, sir, with a sort of golden-brownish hair."

"Clean-shaven?"

"Yes, sir," I said.

"Then I have met him," said he, "in Switzerland. How curious that he should be a card sharper!"

I didn't see how he could have met Boston, considering that Boston had only served about seven out of his ten years, and I said so.

"You forget, steward," he said, "that it is the practice in England to remit a certain period—three months in every year, I think—for good conduct. Strangely enough," said he, "I have just been reading a book on the subject. Tell me some more about this man; I am interested."

Well, I told him all that I knew, which wasn't much. I suppose I ought to have mentioned that Jerry Macbean and Willie Hoffner were on board, and would be round him like bees round treacle if they got to know that he was traveling in bulk. However, I didn't. But like a fool I told the stewardess in my section all about his having a lot of money. And of course she told the deck steward, and I know for certain that he is a nose for every gang that travels.

The next two cabins to Mr. Danton—that was my rich passenger's name, though we used to call him Whiskers between ourselves—were occupied by a brother and a sister. They had a fine name, Tester-Stanhope, but they hadn't much more. I gathered that they were going out to a fruit farm which an uncle had bought for them, their parents having just died. And the uncle had given the boy and the girl a thousand pounds to start there, and paid their passage out. That was why they were traveling in good-class cabins. The stewardess told me a bit, and the boy told me a bit more. He was one of these cocksure lads that get my goat. He always knew the position of the ship, and he could tell you what time we'd go alongside, and he knew where the icebergs would be seen, and where we should strike fog, and heaven knows what. It was no good telling him anything. It was like writing information on the fly-leaf of the encyclopedia.

"It's a nice morning, sir, but I think we'll have rain."

"Rain with the wind due east—rubbish!" says he.

What was the good of telling him it was sou'west.

Or else you'd say, by way of making conversation: "There'll be a dance to-night in the saloon."

"I know," he'd say; "the purser told me yesterday."

His sister was as different as you can imagine. A shy girl, very grateful for anything you did for her, and always anxious to hear anything interesting. I'm not cracking up myself, but there are few people who know more about the North Atlantic than myself—bearing in mind that I am only a steward and not a ship's officer.

And she was as pretty as a picture. Soft and sweet, with a timid, helpless way that made you want to be running round after her all the time. For some reason these two and Mr. Danton chummed up together. They used to sit together on deck. I don't know why young Stanhope and Danton hit it off so well, unless it was that Danton was a good listener. On the Sindic, C Deck is level with the promenade deck, so that I saw a whole lot of what was happening. For the first three or four days they hung together, Danton teaching the girl—whose name was Eileen—the game of chess, and young Ralph Tester-Stanhope giving him advice. And then the kid wandered off and these two used to be alone. Personally, if I was a young girl I shouldn't have taken a lot of interest in a middle-aged man with black whiskers, but I could see that she had begun to lean on him. Not actually; she wasn't that kind of leaner. I fancy she was scared stiff at the prospect of being dependent on young Ralph, and just had to lean on somebody. I heard her and her brother one morning, talking in her cabin.

"But, Ralph," she was saying, "we won't be able to afford a motor car for years."

"You can buy 'em cheap in America," says he, "and I expect to make at least a thousand the first year. I've taken a horticultural course, Eileen—don't forget that. Anyhow, we can afford to have a real good time in New York for a week or two."

"But, Ralph," I could hear her gasp, "uncle said we must go straight through to British Columbia. It is terribly expensive living in New York. Mr. Danton told me so. And we shall want every penny."

"Oh, rats!" says Ralph. I'd have gladly paid a pound for the privilege of giving him a clip across his ear. "Uncle is old-fashioned."

He came out just about then, and I couldn't go into her cabin because she was crying.

That same day Jerry Macbean sent along his Shepherd. He was the tout who never played cards, but gathered in the golden baa lambs. He was a man named Michell, a very quiet middle-aged man who wore glasses and was supposed to be a tobacco broker from Kentucky or somewhere South.

WALL STREET TIPSTER

By Albert W. Atwood

DECORATIONS BY GUERNSEY MOORE

WHEN the world has Russia and Germany on its mind as well as crime waves, coal strikes and baseball, the subject of stock-market tips and tipsters may seem at first glance to be rather tame. But stock-market speculation is almost as much of a national sport at irregular but frequent intervals as baseball regularly becomes with each passing spring. And though tips and tipping do not constitute by any means all there is to Wall Street and the stock market, they symbolize and symptomize, as it were, the whole great drama of the market, whether viewed from the coldly economic or the more colorful human aspect.

Whenever the stock hysteria breaks out to a greater or less degree, as it always does and has for two hundred years, there is the same old impulsive action upon the part of the multitude, the same wild, eager thirst for tips, for inside information, for advice and leading. It may be described as gambling or contemptuously dismissed as a disease. It may be merely the fatal quest of humanity for the pot of gold at the end of the rainbow. But always and in but slightly varying disguise it takes the form of a search for tips on the winners.

A tip in itself is nothing but information or misinformation concerning a given stock. But back of it lies the whole elaborate and intricate machinery of Wall Street. It is a word that conjures up not only lambs, bulls and bears, but wolves as well. A tip is but a word or two, but behind it may be the romance of a continent's development, the wonder-working mentality of a constructive industrial genius or the most highly organized and finished chicanery and deception that unlimited resources and trained astuteness can command.

A small thing in itself, a tip may represent the frenzied state of mind of multitudes or the operation of silent, powerful pools and syndicates, of bankers and resourceful capitalists. It is a mongrel in origin, springing from the irrefutable argument of facts or the far from disinterested machinations of more or less professional market riggers and manipulators of every degree, ranging from haggard men with frayed trousers and dirty collars up to mysterious personalities who dominate or influence whole industries, great banks at the heart of the money power, and political parties.

The Thirst for Inside Information

NOW, there could be no greater mistake than to dismiss the subject of tips and tipsters as being either a cheap or a narrow one. Twenty years ago or even ten years ago the tipster was thought of as merely a lowdown pest who infested Wall Street. He was a man who sent out, for a few dollars a month, to gullible subscribers of low mentality or perhaps of the incorrigible gambling type, a hodgepodge of hectic guesses on the immediate future movement of stocks, atrociously printed or mimeographed, with many exclamation points, on a smeary sheet of very bad paper. This would be a fair sample of the contents:

"On every dip buy Steel at once for a five-point rise. I picked ten winners yesterday. Is this the service you need?"

The same or even more feverish and flamboyant advice was advertised in the Sunday editions of a few complaisant newspapers. The whole performance was so crude, exaggerated and fantastic that looking back upon the days when there were literally a hundred or more of these tipsters in New York City alone, it seems impossible that enough suckers were born every minute to support such a parasite industry. But, of course, the tipster guessed right sometimes—especially so since he often advised one-half of his clients to buy and the other half to sell.

Or if he had a little more capital and enterprise than the average, he owned more than one service or bureau, each apparently independent of the other, advising purchases through one and sales through the other.

In a few cases he combined tipping with an illicit brokerage business. As the result of a tremendous blast of advertising in the Sunday papers he would receive a bunch of buying orders Monday morning with which to open up the market, and would later raid it after the fashion of the bucketer.

Or more often he would work in with a market manipulator or pool, placing his clients in a particular stock for value received, not from them but from the pool manager. Indeed, a jury in a New York State court awarded a well-known tipster damages and costs for services rendered to an even better-known manipulator six years previously in efforts to boost a stock. The tipster testified before the jury that at least one thousand persons

relied implicitly upon his advice, and that twenty thousand were casual correspondents.

But for the most part the old style of tipster has gone. There are a few of them left with their market letters, but in the main they disappeared with the great war-bride boom of 1915 and 1916. So many new stocks with supposedly large assets were brought to the public attention at that time and ever since, that the old-style market prophet, who for a few dollars a month would predict an immediate bull movement in Steel or Union Pacific, found his occupation largely gone.

Like many other things, the business of supplying the speculative public with inside information has developed in recent years. It has extended and broadened; it has become vastly more subtle and less crude. To an ever-increasing extent the brokerage houses themselves supply their customer with information and advice—or with tips if one chooses to be cynical about it. Even the cheaper type of gamblers and speculators, the little fellows, the lambs, pay but slight attention nowadays to the smeary, screaming sheets of guttersnipe tipsters. The typical speculator of to-day goes to the brokerage house where he gets what he calls the best information, which in reality means the best tips. As long as this information makes good, as long as he wins, he stays by the house and thinks highly of its advice.

"You ought to get acquainted with Mr. Blank, the head of Blank & Co.," said a friend of mine who floats from office to office. "He has the real dope. Why"—in an awestruck whisper—"he is a director in two corporations. He isn't around the office very much, but I heard him say the other da... the earnings ... Corporat... very large. ... two hundred ... to go down ... to see him. I think he would see you, and you ... an article out of him."

A few months later when I asked my friend ... were going down in the office of Blank & Co. ... away from me in disgust and without a word of ... tion. I looked up the stock tables and found that ... hundred shares were worth about half their form...

When Doctors Disagree

rs have attempted to an increasing extent urs to play the market also by means of rometers, cycles, trends, tendencies and In other words, instead of seeking tips cks they have sought to follow the changes tions.

a vast improvement over the uncouth and et no one suppose that the secret has been the market. The most dignified bureau, te dealing in charts, barometers, trends t found the philosopher's stone or the pot rainbow. If it had, its proprietor would rice just as the old tipster would have s, and grow fabulously rich thereby.

Indeed the humor, or perhaps the tragedy, of almost every attempt to sell information on the market to speculators has been the fact that so many of the advisers sooner or later have taken their own advice and lost all they had made in the business of giving advice. Many a tipster or market forecaster, analyst, student or consultant would have grown rich had he not followed his own information. Men have built up a business of this sort running into the hundreds of thousands of dollars a year, only to go broke by trying to play the market themselves.

A speculator who made quite a little profit, but who felt that he did not have enough information to continue his operations, subscribed for four services, costing probably about a hundred dollars a year each. After reading their communications for several months he wrote to an acquaintance for advice:

"From time to time I have requested reports from Jones, Brown and Robinson on various stocks and bonds, and also from Smith, and to say that they are all at variance is putting it mildly. They differ as to the method of handling investment and speculative funds for profit, in their recommendations as to the desirability of purchases in certain classes of stocks, and of purchases of particular stocks within each class. And even as to prognosis based on likely happenings and historical precedent, it reminds one of a horse race.

"Jones is not enthusiastic about steels; Robinson favors the purchase of U. S. Steel. Brown disparages oils; while Jones has pointed out that in this depression oils, tobaccos and chain stores like Woolworth have done very well.

Brown wants to buy the nondividend-paying rails and industrials; Robinson favors the dividend payers at present. What to do? What to do? And Brown disparages margin purchases, even if the subscriber could dig up enough to pay in full should the bottom drop out. Jones thinks fairly well of the Philadelphia Company. Brown dislikes its oil holdings. None of the three like the Union Carbide and Carbon Corporation, because it saws wood and says nothing.

"Would you subscribe for either of these four services and drop Jones, Brown and Robinson, or would you follow Brown and Robinson to the letter, or would you continue to read Smith, and subscribe for the other three continuously as I have been doing and use individual judgment in margin purchases? If it were a question of bonds alone I would let Jones put me into his superservice. But this is a question of what stocks to buy and when to buy and when to sell them, all things considered—nondividend payers versus dividend payers, long pull versus the purchase of selected securities from time to time whether they are paying dividends or not, and when to get out from under, provided one knows whether the decline is a major or a minor one."

Now a moment's reflection, provided the one who does it has any common sense, will show that the stock market is not to be played successfully by any system or chart or mechanical feature. The stock market is the collective mind, and its fluctuations are dictated by the combined judgment of the country. An individual who attempts to harness it to a formula is precisely like a cork bobbing on the ocean. Indeed, the market is an ocean that no man

can control. Or to change the figure of speech, it is a barometer of the country's activities, and to find an instrument that will foretell the movements of a barometer is impossible.

It is all very well to study fundamental conditions and cycles and tendencies, but there is no exact repetition of business movements. There are many theories and hypotheses concerning the business cycle and its periodicity. But the fact remains that the depression of 1893 was very long and those of 1907 and 1914 very short. The secret of the business cycle is still to be discovered.

It is true, of course, that a very few persons do succeed in stock speculation. They are not only the exceedingly rare exceptions, but what is more important they have passed up through the science of speculation, if there is any, to the position of masters of the art. In other words, the qualities that make them successful are individualistic in the highest degree and in no sense mechanical.

Newspaper Counsel

NOW, it is a deeply significant fact that though nearly all speculators try to get tips or information from brokers and other acquaintances on the prospective movement of stocks, and though many thousands of them subscribe for all manner of services which in more or less disguised form indicate what market position to take, it is exceedingly rare for an individual speculator to subscribe for a service which gives mere statistical facts, and only facts, regarding individual stocks. Yet one cannot go into the office of any important banking, insurance, large investing or financial institution without finding the data furnished by such services in continuous use.

The speculator would do well to ponder the advice given by the reputable metropolitan newspapers to persons who seek information concerning stocks and bonds. The owners of these papers are always themselves great capitalists and usually in touch with the inner circles of finance. The financial editors and reporters have many varied sources of information and are familiar with the quickest methods of searching out facts. Yet these papers usually exercise the greatest care in confining their advice to strictly investment matters and frankly stating that they have no knowledge of market movements and can give no information on the subject. As the financial editor of one of these papers says:

"We confine our advice to investment matters, and from ten to fifteen thousand persons each year write in to us for guidance. We make no pretense of telling people how to get rich in the stock market. We do seek to analyze investments and to save our readers from some of the pitfalls of stock promotions."

The treasurer of an institution that holds in trust several hundred million dollars of bonds and stocks says that authorities who are asked for advice on such matters by individuals are put to a very unfair disadvantage. "The individual who asks for advice nearly always confuses and mixes investment and speculation. He ought to stick to one or the other in seeking advice. He ought to block out his position from the start and not force upon the adviser the necessity of pointing out the difference."

TRUST EMILY—A Farce Comedy

By MAY EDGINTON

ILLUSTRATED BY MAY WILSON PRESTON

V

ARTHUR NETHERBY reached cover about one o'clock in the morning. He crept into the old farmhouse which had been his father's—and was now undergoing extensive repair—through a scullery window that had been left open and made his way to a bedroom. He lay down amid damp and dust, and thought thankfully how good it was, and fell asleep. But when he awoke to a fair morning he quite missed the crackly cotton vision of Parks bringing to his bedside the morning tea.

He opened his door and roared, and a terrified person bundled out of the kitchen below and stampeded upstairs.

"Hey, master!" said the person, quite Orientally, when it saw Arthur.

It was the farm laborer whom, with a wife, Arthur had installed in the house as caretaker.

"I'm here, Stoker," said Arthur. "And I want breakfast, and plenty of it. And where is that old stuff of mine I left here that hasn't been unpacked yet? Because these pajamas and that raincoat are all I've brought. And there is something I am going to mention to you at once, Stoker," continued Arthur, when Stoker at last brought in a handful of ruins representing an old shooting coat, an old pair of riding breeches, and the battered body of a hat, "and that is—you got a wife here, eh?"

"Yes, sir," said Stoker.

"Well," said Arthur, "keep her out of my sight, that's all. If there's one thing I can't and won't stand, it's women."

Arthur passed a very pleasant morning mooching about the place in the old shooting coat and things, and his favorite pipe never left the right corner of his mouth. The world seemed quite calm; fields and hedges and ditches and woods separated him from danger; and he had no telephone. Furthermore, he recalled something about a flower show which presumably would occupy Lady Hunter's party most of the day. At noon even the workmen who were hammering at Arthur's house downed tools to go to this flower show; and all was purity and peace.

About four o'clock, also, a new gun arrived from London for Arthur, and with this entrancing acquisition he sat down in his late father's armchair—not only Arthur's father, but his grandfather, in his time, had sat in it—and with his pipe in the right corner of his mouth he prepared for an hour's really mellow enjoyment, for a new London gun represented to him the acme of most that was truly desirable upon earth. He had pushed the debacle of yesterday right into the back of his mind.

When Stoker came in from the kitchen with whisky and soda Arthur was sitting rapt in reverie, caressing this dream and this beauty. Stoker lumped the whisky decanter and siphon on the table, rousing him.

"What do you think of my new gun, Stoker?" said Arthur, gazing rapturously at the shining barrel, shinier to him than any siren, and glossier to him than any woman's hair.

Stoker's wife sidled in with the tumbler he had forgotten; she peered round her husband curiously, if timorously, at Arthur.

"'Er's a fine gun, master," said Stoker, "and costed a pretty penny, I dare say."

"Sixty quid," replied Arthur.

Stoker's wife gave such a gasp at the idea that Stoker became aware of her at his back, and putting his hands behind him he made fierce motions to shoo her off to the kitchen. She crept away cautiously with a parting look from the door at Arthur.

Arthur became faintly aware of her ere she disappeared. "Yes! Send her out!" he said stroking the gun. "Send her out! No women here!"

"Sixty quid," returned Stoker, "is enough for some folks to set up 'ouse on."

He continued to stand submissively by the table, not having enough brain power to move of his own volition.

"Don't talk about setting up house, Stoker!" said Arthur emphatically.

"No, sir," muttered Stoker. "I beg pardon, sir." He had been trying to assimilate Arthur's little idiosyncrasy all the morning, but so far had failed.

"Get!" said Arthur laconically. Then he called him back, for Mrs. Stoker had roused faint yet terrible memories. "Have you ever wondered why the devil women can't leave us alone?"

Stoker thought conscientiously. "No, sir," he replied.

"A good gun 'n' a good dog 'n' something in the stable," remarked Arthur—"that's life for me."

Stoker thought well over this. "Yes, sir," he replied.

"Get!" said Arthur laconically.

The front door of Arthur's farmhouse opened right on a dear little old red-paved courtyard, where, from within, rows of shining milk cans could be seen. The milk cans were winking and gleaming in the sunlight, and just as Stoker was turning towards this open door he saw an apparition that stopped him dead in his tracks. He saw a lady in a sophisticated little rag of a country frock walking through the sunlight and the red-paved courtyard towards the house.

Arthur, in his father's armchair, sat with his back to this open door, admiring his gun. He was all innocent of his doom. Stoker trod heavily on his hobnails into the breach, and met the enemy square in the courtyard.

"Is Mr. Netherby in?" said the apparition, smiling.

Stoker's vocabulary, though not large, was equal to replying in either the affirmative or the negative, and he was hesitating as to which to use, when, inside the parlor, they heard Arthur whistling to his gun. He whistled lovingly and light-heartedly a few bars of a popular melody. For the moment he was tragically free from care. Stoker saw the lady prick her ears.

"Don't You Think That Would be Rather Wonderful?" "More Than Wonderful," He Said. "Impossible"

"Yes'm," said he. "He's in. But he don't to see no ladies, 'm. There's my orders."

"Nonsense!" cried the lady. "I quite stand Mr. Netherby's reasons; but he'll

and stood gazing furtively from Arthur to Mrs. Drelincourt, who turned slowly from her proprietary survey of Arthur's demesne, and eyed him.

"Yes, sir?" muttered Stoker.

"Tea!" said Arthur.

"Yes, sir," muttered Stoker.

He went out as delicately as possible on his hobnails.

"Who is that funny person?" asked Mrs. Drelincourt.

"My odd-job man," Arthur replied.

"Oh," said Mrs. Drelincourt fastidiously, "of course that sort of thing's all right for a bachelor, but you'll have to alter things now, sha'n't you?"

"Dunno," said Arthur in a lost voice.

Mrs. Drelincourt put her head slowly on one side and smiled.

Had this attractive but mistaken woman only known it, it was that smile which settled Arthur; that significant, proprietary, mulish smile. It administered a kick—a mulish kick. "I would like to take this darn woman," said Arthur's brain, "and shut her up—and shut her up—and shut her up ——" Arthur's brain reeled. Then it went on. "—— and shut her up—and send—and send for someone to fetch her away."

Mrs. Drelincourt interrupted this pleasant course of thought. "What are you considering so deeply, Arthur?" cooed she.

"You," replied Arthur.

Mrs. Drelincourt rose from her seat like a mermaid from a wave; and Arthur laid his hand on the back of poor father's chair.

"Y-y-you spoke of altering things," said Arthur, and he found himself fascinated by the fell course towards which a reprehensible brain wave had hurled him. "Well, will you help me?"

"Oh, Arthur!" said Mrs. Drelincourt.

"Will you begin now?" Arthur pursued.

"Why, Arthur!" protested Mrs. Drelincourt radiantly.

"This very minute?" continued Arthur.

"Of course," said Mrs. Drelincourt radiantly, "I shall be delighted to help you. It is natural that I should help you. If there's anything in the world that I can do ——"

Arthur looked at her cautiously.

"Well," he said, the thoughts fairly leaping along his brain, "there are two rooms, opening into each other, upstairs, right along at the north end of the house. And I wonder if you would come and look at 'em right now, while we're waiting for tea, and tell me what sort of furniture I ought to have."

"Of course!" cried Mrs. Drelincourt. "I'm just delighted."

"The farther room," said Arthur steadily, "has a skylight only, and presents a difficult furnishing proposition."

As he so particularized a hazy understanding came to him of the artistic enjoyment of details which all really good murderers must feel when setting the scenes with unnecessary but commendable technic for their worst crimes.

"We'll look at that farther room first," said Mrs. Drelincourt very gladly and graciously. "I'm going to love this rambling old house; and especially that skylight room."

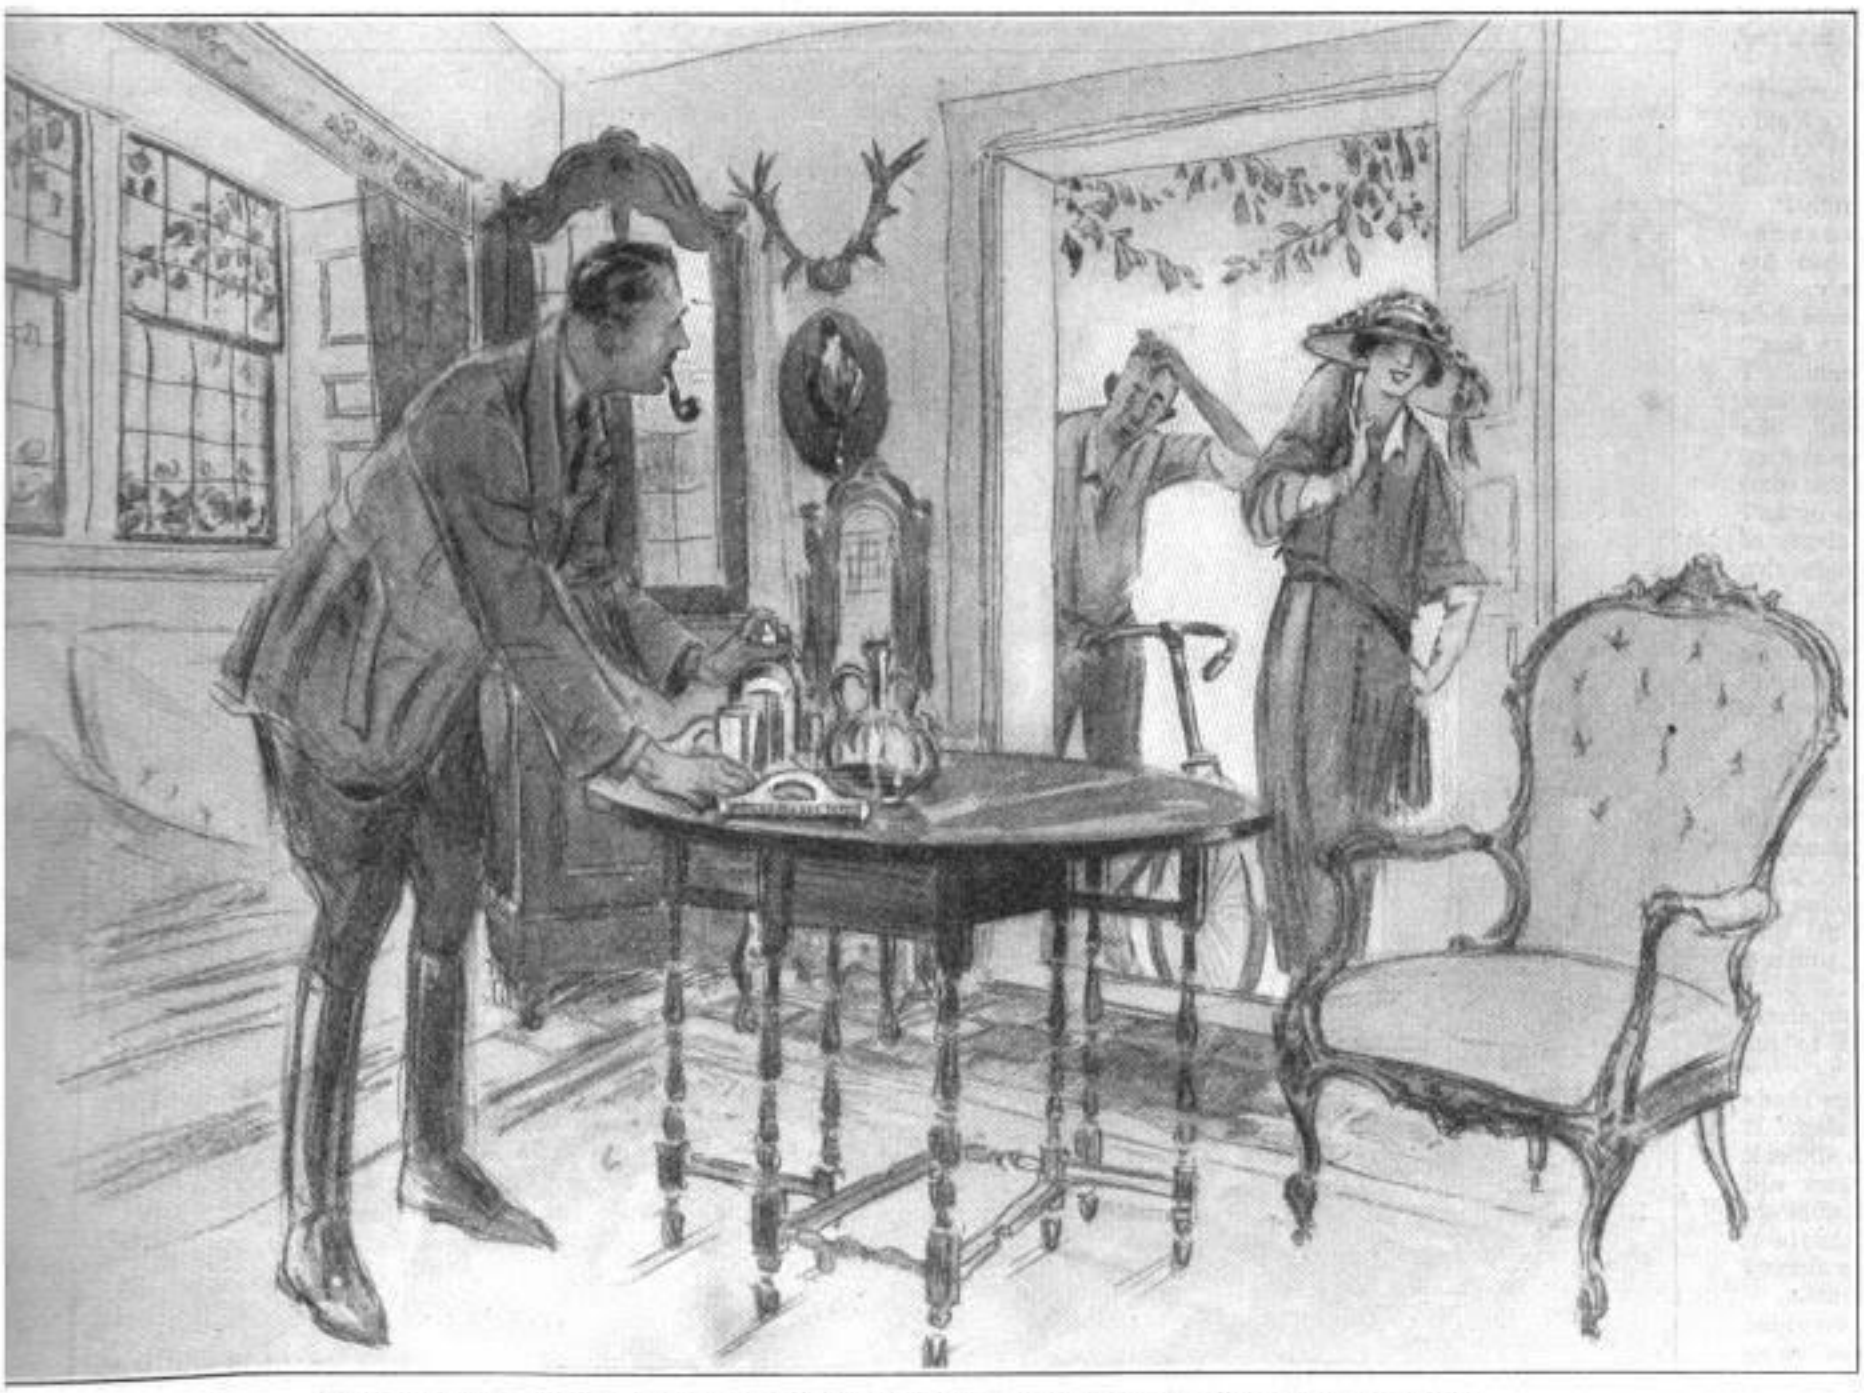
Arthur rejoined with that sardonic humor which is so featured by the best type of criminal, "If there's one place in this house you'll hate it will be that skylight room."

He ushered her towards the door that led to the stairs and kitchen part of the house.

She made eyes at him playfully. "I'll prove you wrong," said she.

Half a minute later Stoker entered with the cloth, and found the parlor empty. He tried the cloth cornerwise on the table and it wouldn't fit; and endways, and it wouldn't fit; and he stretched it, and it wouldn't fit; so he left it all anyhow, and turned towards the kitchen again.

"I dunno," he said, scratching his head—"I dunno how the durned thing goes."



In the doorway Arthur in an awful hurry brushed against him. He must have come down the stairs at breakneck speed. He passed Stoker, slammed the door upon himself, stood and thought terrifyingly for a brief while, and then leaped at the antique bell rope.

In came Stoker.

"The tay won't be long, sir," he argued mildly.

"Hang the tea!" said Arthur, walking about in a great state. "Come here!"

"Look here, Stoker," said Arthur rapidly, "I want you to do something for me of a partic'larly private nature.

"Ask Me In," Coaxed Mrs. Drelincourt. "Come In," Said Arthur Feverishly. "Come In, of Course!"

Digitized by Google

Er—outside you'll find a lady's bicycle. Can you ride a bicycle?" Stoker nodded. "Take it then and ride like blazes ——"

A sharp sound cut through Arthur's speech. It was the ring of a bicycle bell. Arthur started, sprang to the door and looked out.

"Good Lord!" he whispered.

"Hello!" called Gwennie girlishly. "Hel-lo. Coo-ee!" She appeared vividly on the threshold.

"Tea, Stoker!" said Arthur very loudly.

Stoker ran out on his hobnails to the kitchen, shaking his head desolately.

"Did I hear the word 'tea'?" insinuated Gwennie, very charmingly, from the door.

Arthur seemed to know his part automatically. It was wonderful how easily the lines already came to him.

"Well," said he, "I suppose you've come to tea."

Gwennie entered. She looked very fluffy.

"Of course I have," said she impertinently, coming up to Arthur. She put up her face. "Well, Arthur? Well?"

Arthur looked down at Gwennie's face.

"Well?" said he.

Gwennie seized his coat lapels. "Is that all?"

"What do you mean?" said Arthur rather feebly.

"Is Mrs. Drelincourt here?" said Gwennie.

"Certainly not!" replied Arthur firmly.

"Then whose is that bicycle out there?" said Gwennie.

It was wonderful how easily words came to Arthur.

"That bicycle," he answered without a qualm or a pause, "belongs to my odd-job man's wife."

"Really?" asked Gwennie, looking up at him with two eyes like little gimlets.

"Really," replied Arthur nonchalantly.

"Oh!" said Gwennie with a gusty sigh, still hanging to Arthur's coat lapels. "I was so angry when I saw it! I thought—you see, she said she had a headache and was going to lie down, but I didn't believe it; so I followed to offer her a powder, and she wasn't there. Steers said she'd gone out on her bicycle. So if she isn't here where can she be?"

"I wonder," said Arthur.

"A woman doesn't ride a bicycle for nothing," continued Gwennie.

"I wonder," repeated Arthur firmly.

It was awfully disappointing to hang on and on to Arthur's coat lapels; so Gwennie relinquished them and sank down fluffily on the sofa a few feet away.

"Oh, Arthur!" she sighed. "Hasn't that woman behaved disgracefully?"

"Disgracefully!" said Arthur firmly.

"She says she's engaged to you," said Gwennie. "I don't know how she dare!" She looked up at him. "Aren't you coming to sit by me? There's plenty of room—and such a lot to say, isn't there?" She gestured very prettily to the space beside her on the couch.

Arthur looked at the space.

"Is there?" he said cautiously.

"Oh, you needn't think you said it all last night," pouted Gwennie.

"Arthur, aren't you glad to see me?"

Arthur made up his mind. It was not difficult now—same old signpost, same old road. He had been there once already this afternoon.

"I am very glad to see you," he replied steadily. "As a matter of fact, you came in the nick of time"—he braced himself up a bit for the job—"to help me in a—a certain matter."

"Why, I'd love to!" purred Gwennie.

"Up in the attic on the south side," said Arthur, as brazen as brass, "I've found some old—er—tapestry, and whether to throw it away as moth-eaten rubbish I don't know, or whether to keep it I don't know. Now, just while we are waiting for tea, won't you come along with me ——"

"Up to the attic?" cried Gwennie, springing up. "Oh, I love the idea of—of solitude one gets in an attic!" She gave Arthur a mischievous look, very inviting.

"I'm not sure that you'll love this attic!" said Arthur, again impelled by sardonic humor.

Gwennie linked arms. "I will," she purred. "I'll love the attic—and you. Oh, you naughty boy to run away, Arthur! Oh, you naughty, naughty old thing!"

Arthur and Gwen sort of pushed and jostled each other out of the room.

VI

BARELY a moment or two after Arthur and Gwen had left the dear old sun-filled parlor Stoker swayed into it again, gripping a tray on which was piled the crockery for tea. He set the tray on the table and looked around in surprise, to find the room again empty. He crossed to the door at the back, looked into the courtyard, counted two bicycles on his fingers, shook his head and returned to his work, which was causing him some anxiety. He scratched his head.

"Well," he said, "I dunno. I dunno."

He disentangled the plates and the cups and saucers.

A moment later the clang of another bicycle bell disturbed him. He looked round resignedly. There was Angela on the threshold, gazing right through him haughtily.

"I beg pardon, mum," said Stoker, who had been well grounded in apologies to his betters.

"Is Mr. Netherby in?" asked Angela.

"Oh, yes'm," replied the simple Stoker.

"Has a—a lady called?" pursued Angela coldly.

"A lady, 'm?" said Stoker. He stopped and scratched his head, being very much helped thereby. "Well, 'm ——" he said, thinking painfully, for even he surmised some trouble about. He became quite cunning and cautious. "I dunno," he answered at last—"I dunno as I can say, 'm."

He shuffled his feet and scratched for help. It was a bad moment.

Angela entered. "Who are you?" said she disdainfully.

"Odd-job man, miss," said Stoker. "My wife and we does it all between us."

Angela was now standing on the hearthrug [illegible] the poor place. She looked all round, from the [illegible] prints and foxes' brushes and stuffed birds on the [illegible] the dear old carpet in the center of the [illegible]

"Oh, yes," said she. "Yes. Well, tell Mr. Ne[illegible] I am here, at once, please. I am Miss Harmon[illegible]

"Yes, miss," replied Stoker, happy to go.

Once more Stoker was nearly flung prostrate [illegible] leading to the stairs and kitchen by the sudden [illegible] of Arthur, who dashed in, carrying two keys.

"Stoker!" said he feverishly. "That job I want[illegible] now listen to me." Then he caught sight of Angela. Oh!" he moaned. "I mean—er—it's you!"

Angela stood in a pretty pose by the mantelpiece.

"Whom did you expect to see?" said she coquettishly rallying Arthur.

"Nobody—nobody," said Arthur feverishly. In response to her inviting smile he drew a little reluctantly.

"Was you going to give me an order, please?" said Stoker by the door.

Arthur turned round and gave him a curt nod. "Yes. Tea, Stoker. Tea! That's all!"

"Yes, sir!" faltered Stoker, going out in a bewilderment.

Angela advanced with both hands outstretched as they were really alone.

"Oh, Arthur!" she breathed.

"I suppose you're staying to tea?" said Arthur.

"Why, Arthur!" said Angela. "Of course it's a delight to pour out tea for you in your own house the first time."

"That's good of you," murmured Arthur, [illegible] against the couch so suddenly that he sat down. But he quickly rose again, armed to the teeth with [illegible]

"So Gwen's not here?" said Angela with a [illegible]

"Why should she be here?" responded Arthur.

"Well," said Angela, "she left the flower show [illegible] text of taking one of the vicarage children [illegible] when I followed to the vicarage just to see, [illegible] there. So I thought ——"

"That she'd come here?" said Arthur slowly.

"It would have been just like her!" cried Angela. "It would have been Gwen all over! You don't [illegible] deprecate will do. And [illegible] are two [illegible] in the [illegible] "Yes, that [illegible] "One [illegible] woman [illegible] other [illegible] married [illegible] "But Angela [illegible] look [illegible] course [illegible] those [illegible] the [illegible] that [illegible] tive! [illegible] you [illegible] have [illegible] to [illegible] We [illegible] to [illegible] have [illegible] First [illegible] didn't [illegible] like [illegible] ugly [illegible] good [illegible] said [illegible] "at [illegible] some [illegible] plan [illegible] that [illegible] devil [illegible] mar[illegible] good [illegible] Angela [illegible] at [illegible] fat [illegible] some [illegible] finish [illegible] er [illegible] the [illegible] that [illegible] tive! le seized her by the wrists and drew her ing room. "Gardy, eh?" He held the es. "Read that—read it aloud."

She obeyed. "'May I see you again for a moment before I go? I shall be in the legation for the rest of the evening.'"

Poor tormented Jimmy! Those few words had struck him as sufficiently innocent should his note by any chance go astray. He had found it impossible to write "Dear Mrs. Bradley." He had therefore omitted his signature as well, and so had damned his few lines past all explaining.

"Well," demanded the hawk, "who wrote it?"

She wet her dry lips.

"There is no signature."

"So I observe. Who wrote it?"

"I never saw the handwriting before."

"Possibly. But you know damned well who wrote it."

His harshness stung her into an attempt to face him.

"I don't know a thing about it. Where did it come from?"

"It came by a chit boy just now."

"And you opened it?"

"I did."

"A letter for me?"

"Certainly. I didn't want you disturbed."

The strange courage of the helpless came to her. "You seem to have changed your mind about disturbing me."

His fingers closed on the soft flesh of her arm.

"That's enough impertinence. I'll give you one more chance. Who wrote that letter?"

"Let go of my arm!" Her eyes were a stubborn blaze.

They did not melt the icy determination of the hawk. He was impervious to womanly scorn. It was her youth—her youth alone, before which his assurance faltered once more. It drove him to a more insidious method of attack.

"I'm sorry," he said. "I didn't mean to be so harsh with you. But I'm terribly—worried." In face and voice he managed to suggest a kind anxiety. "You see, you're very young, and I'm afraid you'll do something—some perfectly innocent thing—that will get you talked about. Now, about this letter: Of course you know who wrote it. Of course you have an explanation. But I must know what it is. Perhaps, not realizing, you've been a little indiscreet. Such things happen. Well, just tell me all about it, so that I can advise you what to do. That's what I'm for, my dear, to guard you and help you in every way possible. I was angry—I admit it—through anxiety for you. It's over, and we'll forget it. Now tell me about this letter. To begin with—who wrote it? You know, don't you?"

She examined his face for a long moment.

"I think I do," she said at last.

"Well, who was it, dear?"

"I think it was Lieutenant Lee."

He turned away from her so that she might not see the spasm of rage that distorted his face in spite of himself. "Yes," he said when he could control his voice. "Now tell me—when did he start to make love to you?"

Again she looked at him closely. His face was cold and hard, but it was always like that, and underneath his sternness she had found him kind.

"He—became interested in me that day in the temple. It was before he knew I was going to marry you. He had no idea until you came in. That's all there is to it."

"I see. Where had you met him before?"

"I had never met him before."

"Then he started making advances to you—never having seen you before—when you were alone in that temple?"

"Yes," she admitted. "But it wasn't at all the way it sounds. I can't tell you everything—it wouldn't be fair to him when he talked to me in confidence that way. I can tell you this much—Lieutenant Lee is fine and honorable in every way. He's done nothing anyone who knew everything would blame him for. Now please give me my letter, and I'll send word to him that I can't see him again."

"You say he's honorable, do you?"

"Yes, Gardy."

A little of the passion seething within the hawk crept into his voice.

"A young snake who comes into my house and makes love to my wife?"

"He didn't make love to your wife. It was before I was your wife—before he knew."

"He hasn't tried to make love to you since?"

Her eyelids quivered in spite of her. "No."

"You're certain?"

"Yes."

She was lying, of course, thought the hawk. The letter proved it.

Again he was forced to turn away from her lest she suspect the whirlwind that was shaking him.

"Sit down, my dear," he said as casually as he was able. "I want to think what's best to do."

"But, Gardy, there's nothing to do. Nothing has happened. Just let me write that I can't see him. That's all—don't you see?"

He had begun to pace the floor. Suddenly he whirled on her.

"Then you don't care for Lieutenant Lee?"

"Why—why," she stammered. "I'm married to you."

But he had his answer from her eyes. Again he took to pacing the floor. When she made an attempt to speak he motioned her into silence.

Back and forth, back and forth paced the hawk. He turned to her at last, smiling a queer cold smile—a relieved smile it was.

"Very well, my dear," he said. "You may write to Lieutenant Lee. Come and sit here at the desk."

She obeyed.

"Now write what I tell you. Just say 'I have received your note. Come here at once.' Don't sign it."

She had picked up a pen; now she dropped it.

"You're not going to bring him here? Oh, Gardy, you're not going to do that?"

"Yes; write as I tell you."

"But why? Why?"

"Never mind why. I'll explain later."

"Oh, please don't, I beg of you."

Digitized by Google

"Pick up that pen and write." A little of the hawk's inner deadliness came to the surface.

In spite of shaking fingers and tear-filled eyes she managed to obey him.

He struck the gong. "Address this envelope 'Lieutenant Lee, American Legation.'"

As she finished the address the Number One boy came through the doorway.

"I want the orderly, Ty Ming."

"Yes, Excellency."

The hawk picked up the note he had dictated, folded it and placed it in the addressed envelope. He returned the envelope to his wife before the orderly appeared.

"Mrs. Bradley has a note here for Lieutenant Lee. Will you deliver it, Tim?"

"Yis, sorr."

"You'll find the lieutenant in the legation somewhere. Deliver it to him personally and say it's a note from Mrs. Bradley. You understand?"

"Yis, sorr."

"Tim will take it for you, my dear. Just give it to him."

It was not until the orderly had gone that her confused thoughts took the form of questions.

"Lieutenant Lee would come here instantly if you ordered him to. Why did you have me write?"

The hawk sat down deliberately on the couch and gave her a look that chilled her to the heart.

"Well, I'll tell you," he said, smiling a sneering icy smile. "You've told me that this young snake who has you fascinated is perfectly honorable. Now of course I don't believe that. But I'm going to give him the benefit of the doubt. Before I—step on him I'm going to give him a chance to prove it."

"What do you mean?" she faltered. "Are you going to question him?"

"Well—hardly. I told you I was going to give him a chance to prove it."

"Prove it? How?"

"When your young friend comes I'll step in there in the window. You greet him in an ordinary way and ask him why he wrote you. I'll hear what he has to say."

The hawk had called Jimmy a snake, but at that moment his girl wife seemed like a small, defenseless, horror-stricken creature gazing into the closing jaws of a reptile.

"You mean—you mean—you'll eavesdrop?"

"I'll listen to a conversation between my wife and a perfectly honorable young man. If his conduct is above reproach it will do him no harm."

She gave a choking gasp and was lifted by wild emotion to her feet.

"You mustn't do that. You shan't! You shan't! Let me see him alone when he comes. I'll never see him again. He goes to-morrow morning. He asked to go—you remember?"

"You mean you asked for him. You said he had a girl in America. You deceived me—didn't you?"

She remained silent, clasping and unclasping her hands.

"Didn't you?"

She tried to choose some sort of words from the torrent of them raging through her mind. She found it impossible, and continued her silence and the wringing of her hands.

"You don't answer. By God! I believe you're as guilty as he."

"I am! I am!" she cried.

"You admit it."

"We're neither of us guilty of anything."

"We'll find out about that in a few moments, my child."

"Don't call me that. I'm not a child. You proved it by marrying me. I'm doing the best thing that can be done, and so is he. Please let me see him alone without interfering. Just let me manage. I can—I have—will you please, please?"

"No."

Suddenly she grew quieter.

"He's honorable," she said slowly. "What you want to do is dishonorable. The moment he comes I'll tell him you're hiding in the window."

She Came to a Stop, But Kept Her Gaze Steadfastly Before Her. "I am Going Back," She Said

"Suit yourself," said the hawk, "but if you don't obey me and greet him as though you were alone I'll have him tried by court-martial for conduct unbecoming an officer and a gentleman."

As he finished speaking they heard the faint clamor of the front door bell. She stiffened at the sound.

"You wouldn't do that?" It was a whisper of horror. "You couldn't. It would be wicked—wicked!"

The hawk rose from the couch. "You heard what I said."

The Number One boy appeared in the doorway leading to the hall.

"Well, Ty Ming?"

"Lieutenant Lee is calling."

"Ah, yes," said the hawk. "You see him, my dear. I must inspect the post. Mrs. Bradley will see Lieutenant Lee."

Jimmy had been admitted to the house by the Number One boy without the faintest sign of recognition. He was wondering over this as he waited in the hall. He had forgotten about the Number One boy. He had hoped that his note would bring her across to the legation for the few words which he felt he must say to her or go mad. But they could be spoken only when they were alone together. He had hoped she would read between the lines and understand. In case she had failed to do so he had sent along a small jade Buddha which he would ask her accept." This would serve as an excuse for his note a call if he again found himself under those loathsome ing eyes so lately cleared of suspicion.

He felt to see if the ornament were safe in his just as the Number One boy reappeared.

"Mrs. Bradley Lieutenant Lee."

ed."

"Don't be," Jimmy told her. "Everything's going to turn out all right."

He devoted a moment to wondering what would be done to him. They couldn't make it desertion; he'd return at once after seeing her safely in charge of the Belknaps at Tientsin. Threatening a superior officer? No, he'd hardly bring that up. Conduct unbecoming an officer and a gentleman? Probably. Dismissal from the Army? Perhaps. Well, it couldn't be helped. That was one astounding fact of which for some reason he was absolutely certain—it couldn't be helped.

"It had to turn out this way," he said aloud. "It simply had to."

She made no reply, but her arm crept further into his and tightened.

In a sudden ecstasy Jimmy ceased to speculate about his fate and became blissfully silent.

They walked a block or more before he spoke again.

"We go out the Chin Mien gates. We can get a cart there. But it's quite a ways from here. Shall I look for a jinricksha?"

"Can't we—just keep on this way?"

"Why, yes," said Jimmy, with another glow of ecstasy. "I'd rather, of course, if you would."

They walked on without noticing, hardly seeing the few Chinese that dared to be abroad after sundown with Peking still full of devil soldiers. The moon was just above the buildings on one side of the street. The front of those buildings was black velvet in which now and then the warm gold of lights would gleam. The buildings on the opposite side of the street, full in the rays of the moon, were gray and silver with geometrical purple shadows. Jimmy thought it best to keep to the darker side.

The spasmodic tightening of her arm in his had done a strange thing to him. He felt tremendously alive and entirely untroubled. It seemed to him that he could walk on with her through the moonlit streets of Peking, on past the Chin Mien gates, clear to Tientsin as buoyantly as he was walking now. Presently, however, he felt her begin to lag.

"Tired?" he asked quickly.

"N-no," she said; "not tired—exactly."

"It isn't so very far now," he urged.

She nodded and made an effort to press on. In a moment she slowed down again.

"You are tired," cried Jimmy.

"Perhaps," she said in a troubled voice, "but I don't feel tired. I feel—I feel ——" She came to a halt.

"Well, it's the queerest feeling," she confessed; "I feel as if there were two of me, and I had to pull the other one along."

"We'll fix that," said Jimmy, and looked about him.

He saw a jinricksha across the street. Telling her to wait he darted over to it.

The squat and sturdy drawer of the vehicle informed him that he was waiting for a high-born passenger who was passing the hours in honorable discourse with his venerated uncle on the maternal side in the august house before which this, his entirely and particularly private jinricksha, was now standing.

As Jimmy recrossed the street he saw that the girl of his dreams was looking back along the way they had come. Before he reached her side she began to move slowly in that direction. Jimmy overtook her.

"The other way," he said. "That's the wrong direction."

She came to a stop, but kept her gaze steadfastly before her.

"I am going back," she said.

A cold sweat broke out on Jimmy's forehead.

"Back? What do you mean?"

"I'm going back," she repeated. "I must."

Jimmy bent forward and looked into her face. Her eyes were wide and strange. They continued to stare fixedly in the direction from which they had come.

"What for?"

"I—I don't know."

"You're going back to him?" cried Jimmy.

"Never, never! But I must go back there now."

"Then you're not going to Tientsin with me?"

"Yes, I'll go anywhere with you—anywhere on earth."

"Then come!" implored Jimmy. "I'll carry you if you can't walk."

"Not now. I must go back. Will you come too?"

"You're mad," cried Jimmy. "We mustn't go back there."

"I must," she said, and moved away from him, slowly at first, and then with rapid, assured strides. In a moment she was almost running.

Jimmy caught up with her.

"What are you going to do back there? Do you want to get something? Won't you explain?"

"I can't," she said. "But please, please, come!"

Jimmy, too dazed for further speech, followed her mechanically.

"Just a minute," he said at last. He was forced to seize her arm before she halted. "You promise me you'll never go back to him?"

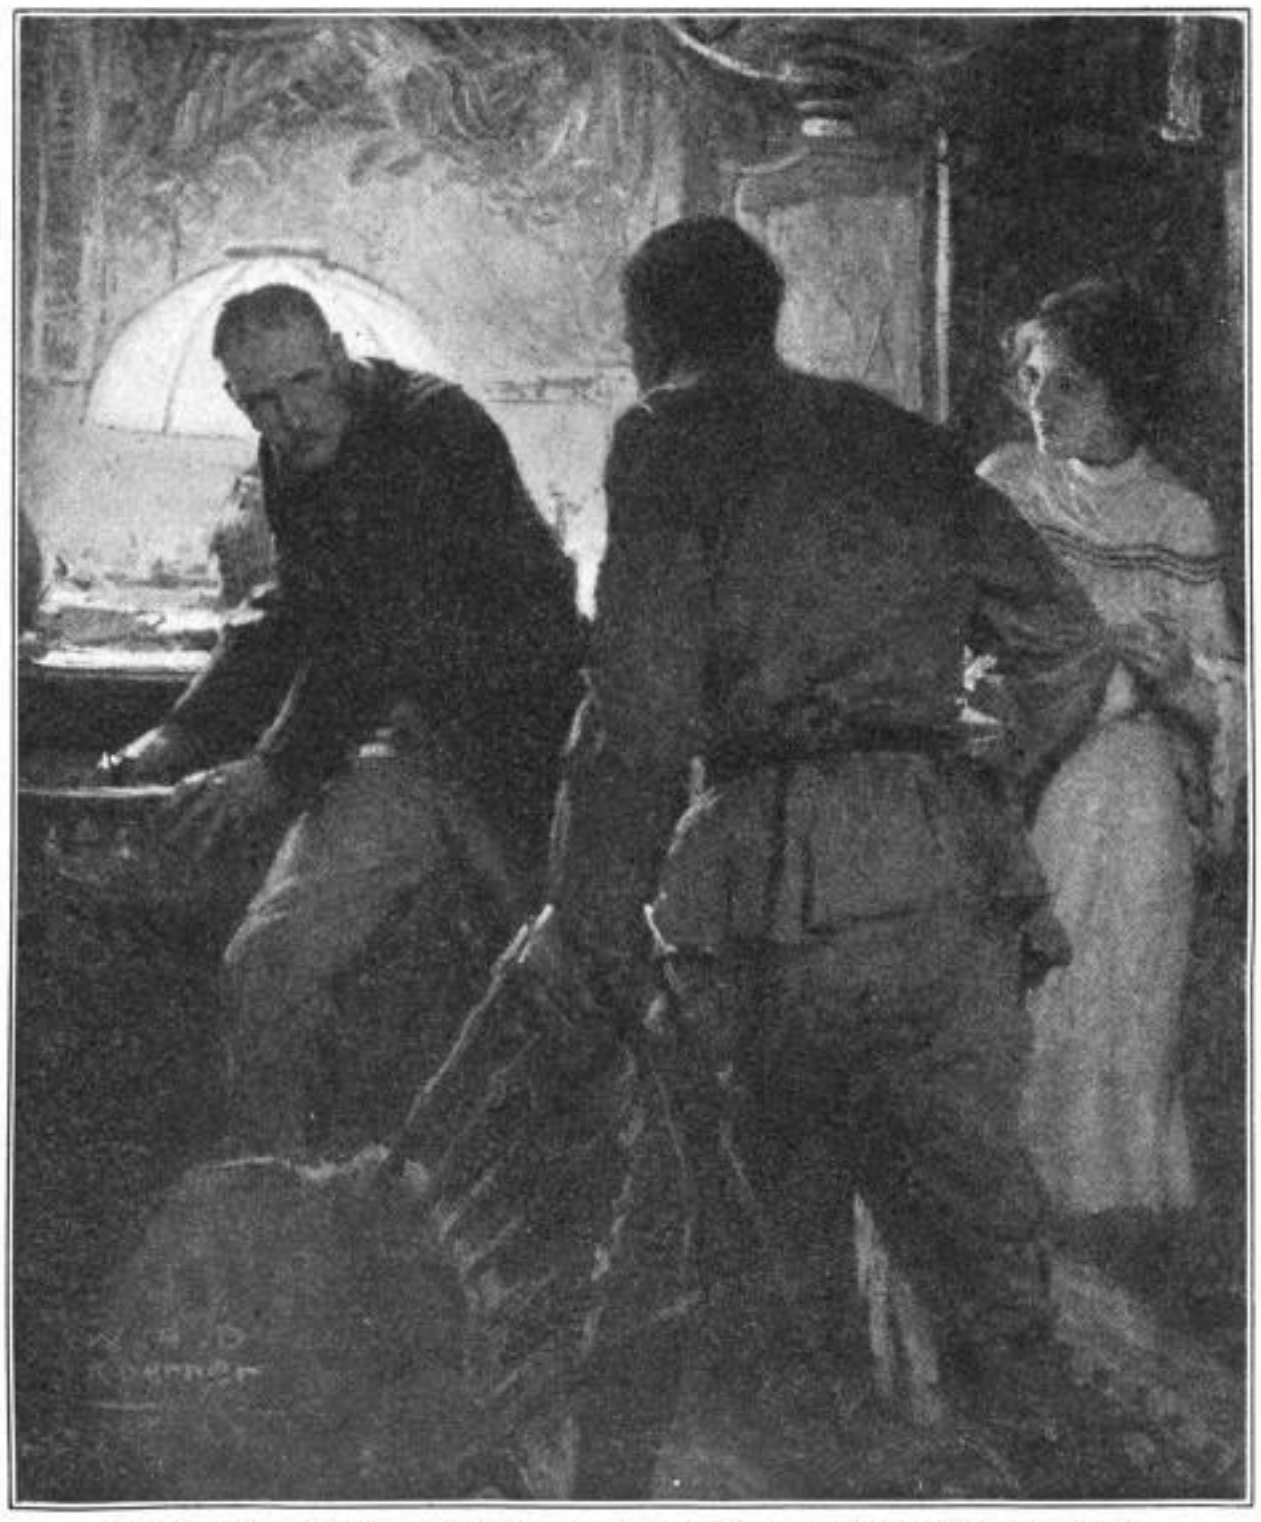
"Never," she said again.

"You promise you'll let me take you to Tientsin later?"

"Yes, anywhere you say—I promise."

"All right, then," said Jimmy. "Whatever this is I'll see it through."

Bewildered, uncertain, fearful, he strode beside her as she sped swiftly, feverishly back to what ten minutes before they had forever left behind.



VI

THE hawk had stood at the mantel for a full minute. His eyes were fixed on a moonlighted doorway. The fierceness had gone out of those eyes for a moment.

Their flame had been extinguished by a dark film of pain. At last they began to roam in dull anguish about the room, to find it empty. They suddenly ceased their wandering. The hawk was listening.

"Post Number One, nine o'clock and a-all's well."

THE ONE-MAN WORL

By Calvin Johnston

ILLUSTRATED BY ARTHUR D. FULLER

AS SPIED upon from an eyehole in the close-curtained window of bankrupt Morley's residence the young man ascending the leaf-strewn walk had nothing better to recommend him to admittance than had the three or four other visitors who had rung and knocked in vain during the past two weeks. His pace was deliberate enough for Claire Morley, kneeling on the window ledge, to inspect him closely, and the embittered little girl had already decided against him as she had against all comers, when he rang at the deadened bell. But, the bow window commanding the porch, she continued to spy on him, and discovering the badge of mourning on his sleeve her sullen curiosity gave place to a fraternal feeling toward the bereaved caller, this fifteen-year-old warden of the bankrupt's castle having clothed herself in deepest black since the demise of the Morley fortune; but she was startled with the unexpected answer to a cherished secret hope when she found the full dark eye of the caller fixed upon her own as if his gaze penetrated the pinhole in the curtain.

He did not ring a second time as the others had done, but, as if assured that his presence on the porch was not unobserved, he smiled slightly and walking to the bow window repeated his knock, upon the pane. Claire drew back, pressing her slim white hands together; but she remembered the sober not unhandsome face, which had lighted so remarkably with the little crinkling smile at the corners of the mouth and eyes; the bright glance that had so quickly detected her hiding place. And the hope, romantic and secret, which she had been nursing, of some messenger to their distress from the old, gay, prosperous world, seemed wondrously verified.

She Felt the Companion of Her Watch Standing Beside Her and Looked Up

She looked hurriedly back through the door to the library, where her father sat by the student lamp as he had sat all day every day for weeks, staring blindly on a book picked up at random, but reading only the chapters of his own life between his eyes and the paper pages—the chapters of industry, honor, failure and poverty. Sometimes during the day he would murmur to himself, stealthily so that Claire might not hear; but at night he would start up exclaiming in his sleep—brief, broken, dreadful apostrophes to God, to fortune, to life.

The single moment that Claire stood with her hands pressed together broadened into ages; beyond the curtain sounded a footfall; the messenger of destiny was departing?

Still she hesitated. Then an abrupt peremptory knocking shook the casement. He was not to be denied, and trembling she flung up the curtain.

But the man facing her with now only the glass between did not see a distressed and trembling little maid; rather, a diminutive grand dame with a mass of brown hair piled high above her slender neck, her slight figure taut as an Indian's war bow; her black habit made her face seem small and ghostly. She looked at him steadily, her bright lips compressed, and gray eyes unwelcoming; then, walking away into the hall, opened the door.

The young man came in, indifferent to the little girl's tragic importance.

"You are Mr. Morley's daughter," he said; "I am Mr. Wickford Sparks. I have come with the means of floating him again."

Claire thrilled to his voice, not a musical one, but clear and low, and grandly offered a chair; then she went to announce the visitor to her father, who, secluding himself since filing his petition for bankruptcy, now made signs of trepidation.

"A Mr. Sparks has come to float you," said Claire. The girl was not looking at her father or at the wall, but, with face lifted slightly and a dazzle in her eyes, studying at life which kept in call of the distressed such deliverers as the composed, dark-browed young man in the hall.

"Float me!" whispered Mr. Morley. "But that is correct; I am sinking; I have sunk!"

Then Claire looked compassionately on his gray hairs and round lugubrious face. "You must just brace up and shake hands and listen to him," she urged, adjusting his tie and wrinkled coat; then with a meaning look, "He is perfectly dressed and good form."

"But, Claire, I have no money, no security! He can't give us things. You will be disappointed."

"No," said she, shaking the small head with its great soft brown coils; "we will not."

She stepped to the hall and beckoned Mr. Sparks, and, after watching him shake hands with the still timorous older man, seated herself in the conference.

"You have been a depositor in the First National, where I am a clerk," said Sparks to Mr. Morley. "I have heard your affairs talked of and know that no one accuses you of fraud or deception. Yours is simply one of the thousand mercantile failures brought about by the panic three years ago, 1907."

"I have been losing money from that time," assented the other.

"In other words, you continued the same business on the chance that it would pick up."

"You might put it that way."

"And when it did not pick up," said Sparks, "you continued to fling good money after bad."

"But you are giving business the aspect of gambling," objected Morley feebly.

"If you please, we will return to that ... your case by and by," observed Sparks respectfully. He had not paid any attention to Claire's ... nor indeed looked at her; yet his concentration upon Morley was strained, obvious ... leaned back in his chair, went on thoughtfully: "I have clerked in the National for five years, supporting my father, ... but two days since I saved eleven hundred dollars. Eleven hundred dollars is the sole ... profit of five of the best years of my life ... hard work."

"But, my dear man," Morley, ... denly to forget his misfortunes, ... "you forget the ... promised for such ... service to a parent."

"You, too, have ... service, Mr. Morley," ... turned the young man ... a smile, "in a ... ways—to business ... ates, to the community ... to personal friends ... how are you regarded?"

"I do not expect ... quited in material ... replied Morley ... dignity than he ... assumed.

"But does the ... belief in a dictum ... console you for the ... of material things ... and comfort?" ... his dark brows ... man. "If it does ... have nothing to ... partnership."

"No; no! You ... not; I know it ... miserable ... claimed the ... brought to face ... dition with a ...

and rising he paced the room its length before his chair. "You say a partnership," he said ... "and you have eleven hundred dollars. That ... but I have nothing; this house has gone ... the sheriff will turn us out any day."

"I have heard at least three men say they ... help you; you can certainly find three men ... thousand dollars in my firm, you to furnish ... one."

"You mean borrow—but none of them ... console me since my failure."

"I never yet knew a lender to seek a borrower," Sparks dryly.

"If I approach them what shall I say? ... know what I intend doing with the money."

Wickford Sparks shook his head. "They ... know nothing. If they should ask, and appear ... posed investment, and then you should ... in a way be committed to back you with more ... bankrupt friend a thousand and let him ... way, and he will never come back for more. ... who lends buys himself free of responsibility ... contribution."

Morley stared. "You speak sagely for so ..."

"It is not age alone that matures one," ... indicating Claire, who leaned forward in ... her hands clasping her knees. The face ... year ago that of any gay careless child, was ... anxiety, and her eyes in a shadow answered ... defiant flashes.

Morley understood and trembled. "What ... posal, Mr. Sparks? The nature of the business ... ship?"

Sparks' answer was so prompt and vigorous ... no doubt of its finality. "That is secret—my ...

urned to Wick and searched his countenance
r. Half whispering, "I can't tell why," she
e up and raised her face to her father in
d entreaty. "I mustn't be disappointed,"

Mr. Morley, beset by conditions that were indeed full of danger to Claire, found her pleading irresistible and yet could not do so unprecedented a thing as borrow from his friends to invest blindly with this young man, however shrewd he might be.

"You have a host of books in this library," said Wick. "Do you read and understand them all?" Mr. Morley nodded. "You ought to be able to read and understand just one man," said Wick. In another moment he retreated, bowing, really departing the house.

"Wait!" said Claire, and her little hand gripped her father's wrist.

"Child, child!" he exclaimed despairingly. "What do you understand of all this—of Mr. Sparks?"

"Yes! I understand," she breathed. "You mustn't let him go."

Suddenly the man, already broken, gave in to her. "God help us, Claire!" he said, patting her head. "I can do no worse than I have done."

"I will write the names of the three friends I heard talking of you," said Wick, and did so on a sheet of paper. "You will see them to-morrow. Ask a thousand apiece."

"Yes—yes; I'll ask them." Mr. Morley shook hands and, the question just occurring to him, asked, "Why didn't you go to a successful man, a wealthy man, instead of to me?"

"They would not admit themselves to be gamblers—nobody but a loser ever does—and would not take a chance on me," explained Wick. "You admit you gambled because you have lost, and are willing to take another fling on my honesty and sense."

"What would you do if a man came to you with such a proposition?"

"Turn him down. I never take a chance."

He moved to the door, Claire beside him.

"Don't you believe the Lord did send you?" she asked.

Wick shook his head, smiling. "He never sent anybody or anything to me," he answered good-humoredly; "I don't see why He should send me to anybody else. Little girl, He doesn't meddle in this world at all."

She closed the door on him slowly, and was drawn to the window to look after. Her father's question haunted her. Why should she believe in him? The answer came with a throb and hurt in the flat little breast, and a scared blush which caused her to hide her face in her arms.

Meantime Wick, reaching his boarding house, fell under the attention of a fellow worker in the bank, who with much curiosity possessed a natural gift of satisfying it. This man, August Framer, was about twenty-five—Wick's own age. There was an incongruity in his physical make-up, the thin inquisitive face with its narrowed green eyes and sandy lashes and high forehead being miscast above the short thick neck and stocky, muscular body.

This evening Framer quietly followed Wick from the dining room and upstairs, and with a single tap on the door of his room pushed it ajar and intruded his head. He saw Wick, bending over his reading table and studying a sheet covered with minute writing and figures, instinctively shelter it with his hand.

"Why, that's the sheet I saw you working up a year ago," observed Framer, whose body had followed his head inside. "Don't put it away if it holds secrets; I only looked in to offer my sympathy and move on." Wick thanked him, and Framer turned, but completely around. "Wick, now that the old gentleman has passed and you're free of responsibility, you ought to be at something better than the bank job. You have a longer head than the rest of us boys."

"I'm leaving the bank job next week," replied Wick, his hand still sprawled over the sheet of paper.

Framer casually seated himself in a chair by the table; his eyes though bright with curiosity did not stray from his companion's face.

"Leaving next week?" he repeated. "Then you have something on the stocks." He drummed on the table within an inch of the paper. "Or is it a hunch, worked out in this Treasure Island puzzle here?"

He smiled, touching the paper itself, and Wick almost imperceptibly winced.

"I never had a hunch," he replied, his anger rising against the meddler.

"But, Wick, I don't get you," urged Framer. "You're leaving the job, as I expected. On your first night free of the care of the old gentleman—God rest him—you have out the plan you've been working up a year or two. Is it your own game or a plan to beat somebody else's game?"

In a rage Wick did the last thing he should have done—seized the paper and tore it into bits.

"Now," he said, controlling himself, "we'll talk of something else." *(Continued on Page 68)*

At the End of the Fourth Race Wick Saw Morley Come Over From the Stand and Join Framer

PHILADELPHIA, JUNE 3, 1922

Water, Water Everywhere

THE farmer too often thinks that he alone is right, while the railroads, the steel industry, the packers, the labor unions, Congress, the board of trade—everybody else is wrong. He knows how the other fellow ought to run his business. He seldom considers that some of his troubles might be lying on his own doorstep.

For example, take this idea of watered stock that the farmer is always talking about. A certain state officer of a farm organization was testifying before the Joint Commission of Agricultural Inquiry at Washington last summer and he made complaint that, as a result of the Cummins-Esch Bill, in the $18,000,000,000 value fixed for the railroads of the country there was $5,000,000,000 of water value. But he failed to mention that the farmer is a great little stock waterer too. Take the land boom of 1919, and from beginning to end it was nothing more nor less than an artificial boosting of the capitalization value of farm investments. It was speculation, too—much harangued about by farm orators.

In the fifty years from 1850 to 1900 the total value of farmland in the United States, exclusive of buildings, implements and livestock, increased something less than $10,000,000,000. But in the ten-year period from 1900 to 1910 it jumped from a little above $13,000,000,000 to nearly $28,500,000,000, or more than 100 per cent. From 1910 to 1920 the increase from this $28,500,000,000 was up to the enormous sum of $54,903,453,925—nearly another 100 per cent. The total value of all farm property increased from approximately $20,000,000,000 in 1900 to $40,000,000,000 in 1910, and to nearly $78,000,000,000 in 1920.

Now what caused such an enormous increase in value? Most of all, it was due to what our economist friends call unearned increment. This is the increase in the value of land which is added on by the growth of population. The past twenty years has seen a constant and rapid increase in farmland values over the country generally, due to this force.

Then came the land boom of 1919 and within the space of a month or two the farmer took matters into his own hands and proceeded to add on to the value of his farms the unearned increment that was due him for the next five or ten years; added on to his book value capitalization anywhere from 15 to 35 per cent for no basic reason under the sun. In 1918 the United States Department of Agriculture estimated the value of plowland to be sixty-eight dollars an acre, the country over. In 1920 it estimated that the value had risen to ninety dollars an acre, an increase of 32.9 per cent.

According to the 1920 census there are 506,982,301 acres of improved farmland in this country. If the term "plowland" is synonymous with "improved land"—and it is approximately—an increase of twenty-two dollars an acre in two years, applied to the whole country, would total to the enormous sum of $11,153,610,622.

The farmer wrote up his values right on the brink of a period of falling prices, and sold his farms by the tens of thousands at these inflated prices, laying vast sums in mortgages upon them. Came 1920 and 1921, and with prices cut in half he was unable to figure profits on the inflated land values of 1919, though there were, of course, other important factors in the situation.

Yet the prairie farm that was valueless when the buffalo roamed over it, worth two dollars an acre when the pioneer's cabin was built, was worth fifty dollars an acre when McKinley was President, and to-day may be worth $300 an acre. Provided it has been farmed judiciously it has been improved all this time and has constantly become more and more valuable. Most of this increase has accrued to the farmer by the economic forces attendant upon the growth of population—this 200 per cent increase that has come in the past twenty years to the land wealth of the farmer—and the rest is due to a writing up of the capitalization, to all intents and purposes a watering of the stock.

Against Everything

A FORMER chairman of the national committee of one of the two great political parties was asked a short time ago if the Democrats had any chance of winning the next presidential election.

"Nobody is for anything in this country," he replied. "Everybody is against something. On that basis alone and without regard to the merits of the case, I think the opposition has an excellent chance."

He went on to say that the attitude of complaint, criticism, opposition and negation seems to have very little to do fundamentally with political parties, but that it is merely a circumstance that might well work for the benefit or injury of particular parties.

Politics aside, there is no denying the injury wrought by the prevailing attitude of chiding and stricture. Specific criticism aimed at proved and actually remediable abuses is one thing; mere grousing against everything in general is what damages and destroys. Nothing is more common than a sort of composite attitude of dissatisfaction, discontent, spleen and suspicion, which is nearly always divorced from constructive and practical working suggestions for improvement.

Those who are rich or in other respects fortunate too often look upon labor unions and their leaders, together with most workmen, domestic servants and employes generally, as robbers and loafers. Those whose work is manual look upon the rich and otherwise fortunate in exactly the same way. Inventors and others in search of capital regard the banks as thieves, and bankers quite often look upon those in search of capital as unbalanced cranks. Landlords and retailers are generally supposed to be profiteers. To those outside of it Wall Street is a den of iniquity. To the city man the farmer seems to be asking for special privileges, the farmer often sees every one else turned against him. Everyone suspects everyone else of raiding the public treasury in the form of tariffs, bonuses, subsidies or other special privileges.

It would be possible to go on in this way indefinitely. Perhaps there will be more straight thinking as the war recedes into the distance and the hysterias that it set in motion are slowly calmed. Mental disturbances and economic fallacies were stimulated also by the business depression of 1920 and 1921. A more reasoning attitude may accompany a less disturbed business movement. But responsibility for the carping, grousing attitude of mind cannot be wholly laid at the door of the war or of the great economic movements over which the individual has no control. There is no such ready escape for any given man or woman. No one is exempt from the biting truth of this passage from A. S. M. Hutchinson's novel If Winter Comes: "She thought charity meant giving jelly and flannel to the poor: she thought generosity meant giving money to some one; she thought selfishness meant not giving money to some one. She had no idea that the only real charity is charity of mind, the only real generosity generosity of mind, and the only real selfishness selfishness of mind."

Education and Success

STATISTICIANS are credited with an estimate with an elementary education your chance of success is 1 in 41,250. With a high-school education in 1608. With a college education it is 1 in 172. are the many compilations which purport to show lation between high standing in school or college and success in one's life work.

Such figures may mean much or very little. In many cases the college or high-school graduate would succeed if he did not have any such education, because money and family position to start with. In many cases it is not the education which makes him a It is exactly the other way around. Having the inherited qualities and capacities which inevitably lead to success, he naturally seeks an education. To a considerable extent those who go through high school or college are a selected group to begin with.

Many are no doubt spoiled by education. It is an excuse for elegant leisure that unfits young men for hard work without which distinction and great achievement are impossible. Many seem to feel that education is a substitute for work. They look upon it as something more than a mere tool, forgetting that the possession of tools is not the only equipment needed by a carpenter. Education cannot take the place of brains, natural efficiency and dependability. The ideal system of education and the most perfect system cannot equalize the lot of those who are not cut out.

If any proof is needed that education is not a key to success it is afforded by the great numbers of men who arrive without any such assistance. But after every allowance and providing for every exception it is probably true that education is the greatest single factor that can be found for the limited inborn capacities which equip the great majority of the human race. The exceptional man of unusual talents is better off with or without formal and conventional education is perhaps a debatable question, but from any broad point of view a rather academic question. Such a man gets ahead anyway. What education does is to give those who have it, whether with or without unusual talents, a start in the race.

Nature is shockingly undemocratic. She goes to the other extreme, giving a few men marvelous gifts and the masses very little. Education is the essence of democracy. Only a few, it is true, can go to the colleges and universities, and still fewer to those which represent the progressive social standards and limitations. But the universities are only one link, and not the most important at that, in the whole scheme of adult education.

The great state universities have no limit to their numbers, they are easy to enter and expensive. To the greater numbers who because of their need of working from early youth must forgo residence at the state university, there are many courses given in the schools of the larger city universities and by such organizations as the Young Men's Christian Association. For those who live in smaller communities, correspondence courses are available in practically every subject as those given by the state and larger city universities. A variety of private correspondence schools. To a constantly increasing extent also the corporations are providing education to their workers, and if the workman is suspicious of a capitalistic taint he will find in many cases that his union itself is engaged in furnishing him with a training of its own.

Anyone who really wants the assistance of education can get it. There is no magic about it, but it is the stuff of life's struggle that only the boldest should be without. Unlike inherited capacities, Nature has put no [illegible]

onsumption After the Boom

By Alonzo Englebert Taylor

last two decades of the past ury witnessed throughout world unusual developments , manufacture, agriculture, transportation, trad- anking. The resultant increase in goods and rmed the basis of enlargement and diversifica- standard of living. The facilities of production with the development of consumers' wants and he rise in the standard of living, from the begin- century until the outbreak of the war, was a nomenon of the first order. This enlargement ification of the standard of living extended in y to all classes. Though wages between 1910 d not display so high buying powers for staple 1895–1900, they purchased many desirables at and provided goods and services not previ- ible. As against cheaper staple foods in the od, one must set the added comforts and of the later period. The business depression wo years provides opportunity for scrutiny of t in consumption in a population to whom ration of the standard of living had not yet ilized into tradition. Consumption may be measured in three ways—by survey of family lysis of retail trade in consumers' goods, and sales of producers' goods.

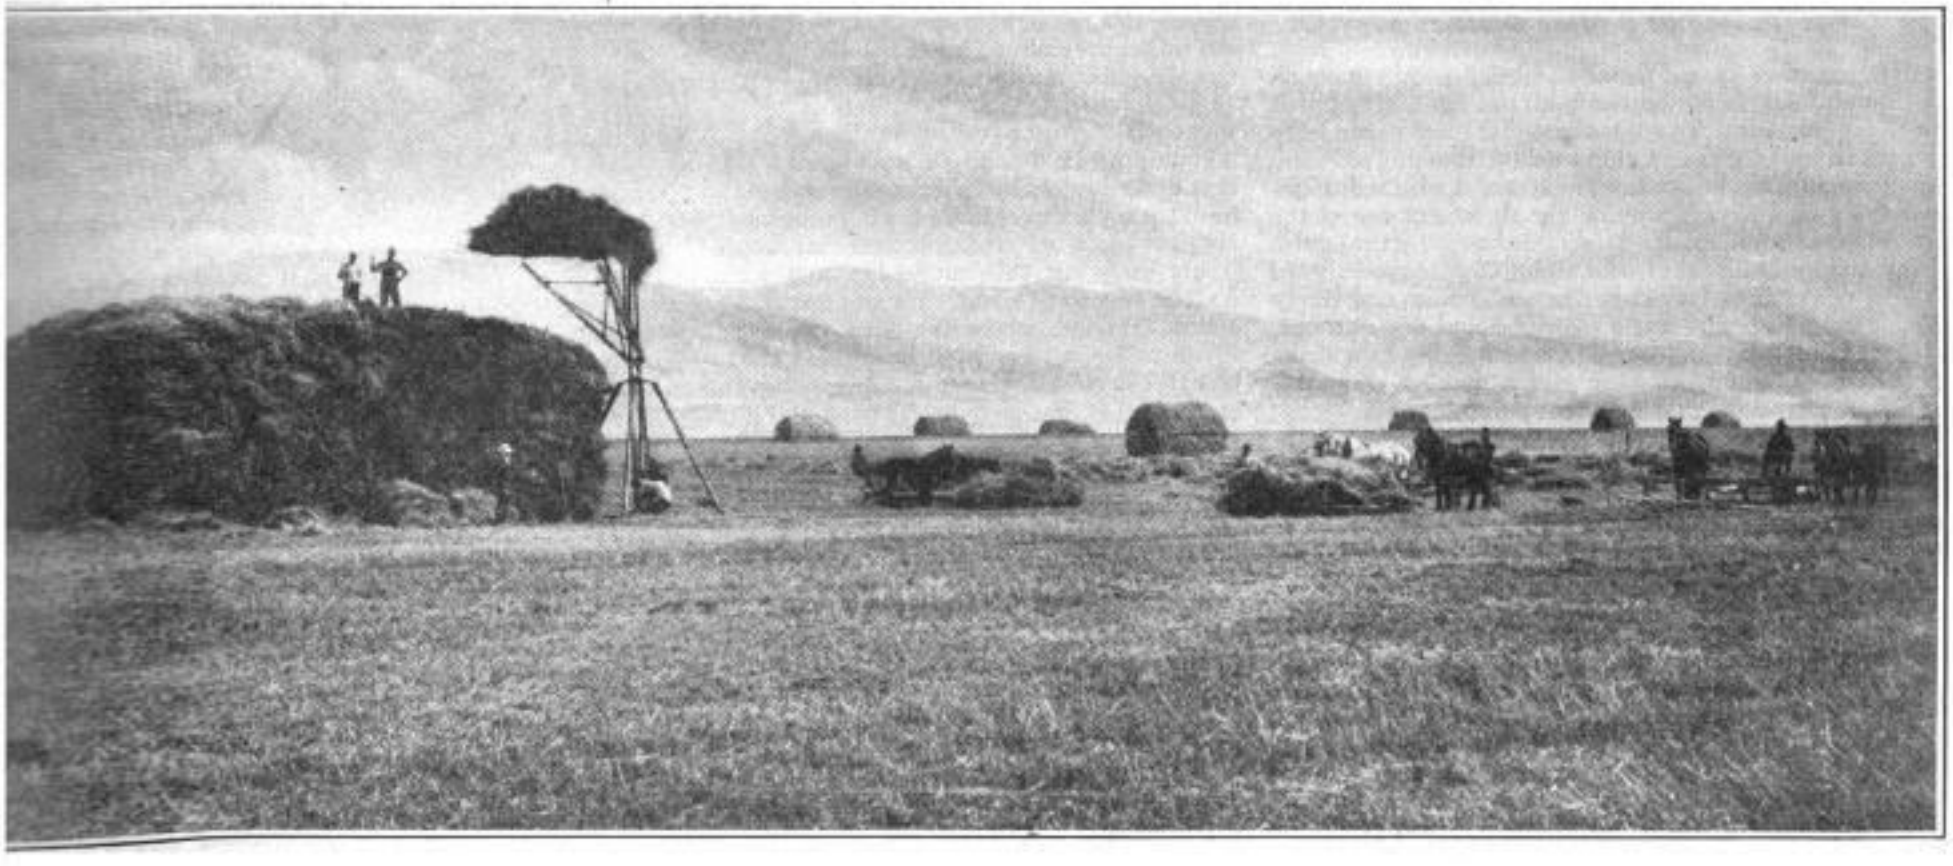
The Family Budget

et of the family is divided naturally into el and light, tools of trade, clothing, house- gs, food, and a group of accessories, sundries including such diversified things as amuse- travel, ornaments, cosmetics, gum, tobacco, coholic beverages, medical services, church . Study of the standard of living from the amily expenditure would be definitive if we esentative budget surveys extending over time, applied to all classes and incomes in country, with sampling so selected as to asies.

we do not possess; we have only isolated f particular instances, some very good, but nt. Really, we are only learning how to mily budget. Index numbers of retail on predicated standards of living, cannot a specific investigation of relations of ndex numbers of wages, contrasted with retail prices, offer indications as to leeway between income and outgo, but give no indication of the directions in which adaptation, expansion or retrenchment may be practiced when the wage curve rises or falls disproportionately to the curve of cost of living. The index number of the standard of living and that of the food supply need not go parallel over a considerable period.

We may compute what a predetermined standard of living would cost a family of set size under varying price conditions. We may work out a series of standards of living that could be maintained on a predetermined income. But we are not comprehensively informed of what families actually do in the different classes of our heterogeneous population. We need selected and comprehensive data on standards of living, family budgets and incomes. We are surfeited with motivated research. In the direction of income the careful and unprejudiced investigations of the National Bureau of Economic Research provide us with a trustworthy basis. Collection of family budgets is more a matter of objective sampling of representative groups than of mass statistics. Standards of living must be studied in terms of scales. Before we can discuss what ought to be we must know more comprehensively what is.

Consumption is nowhere a unit. It is psychological as well as material. Demands for different goods display varying degrees of elasticity. In theory, the accessory outlays should be elastic; in fact, they sometimes incline to be particularly inflexible. The available investigations seem to indicate that when for a short period the income of a family in ordinary circumstances is increased, prices remaining constant, the percentage of income expended for food falls though the absolute amount may rise; outlays for shelter, light and fuel change little; the outlay for clothing is somewhat enlarged; the expenditures for house furnishings and sundries increase most of all. When a family income is reduced, prices remaining constant, the absolute outlay for food inclines to remain the same, but the percentage of income is increased; outlays for shelter, fuel and light remain constant; retrenchment occurs to varying extent in clothing, house furnishings and sundries. If income be sharply reduced the outlay for food may be lowered by substitution of cheaper foodstuffs; expenditures may be restricted to food, rent, fuel and light.



Around food, shelter, fuel and light rotate the other expenditures of the family. Food cost is here usually rated at about 40 per cent of the outlay of the family of a workman. In England it is 60 per cent; in other European countries as high as 70 per cent. But variations in different classes are marked. When prices rise with income all prices do not rise in relative proportions, and different families make different readjustments. When prices fall with income all prices do not decline in relative proportions, and different families make different adaptations. Rising prices and falling prices do not always point to opposite adaptations.

Other Methods of Study

CLASSIFICATION of essentials and nonessentials has shifted within recent years. House furnishings afford a good illustration. To-day the phonograph ranks as a piece of essential furniture; the radio-telephone receiver may be next. The service that families now require from tradesmen illustrates another recent factor. Under different circumstances and with different classes the reactions often depart from expectations, from theory. Trade gives many illustrations of disparities in this direction. The first imports into Rumania after the armistice were perfumes and cosmetics, not shoes. The first smugglers into Germany after the armistice carried tobacco, tobacco hunger exceeding fat hunger. There is much discrepancy in the catalogues of necessaries and desirables as grouped in projected standards of living. Studies from the standpoint of family expenditures, unless carried through with particular care and elaboration, need to be checked up by analyses of trade.

We distinguish between individual or family consumption and collective consumption. Illustrations of individual consumption are: Clothing of wool, cotton and silk; shoes of leather, cotton and rubber; kitchen utensils of iron, aluminum and zinc; hand tools of steel; coffins of lead; ornaments and kettles of copper. Illustrations of collective consumption are: Silk bolting cloths in flour mills; wool and cotton fabrics in railway cars; leather belting; structural and railway steel; lead conduit pipes; copper transmission wires; tinplating for containers. Collective consumption is largely productive consumption that reaches the family later as goods or services. Many instances of collective consumption the individual does not associate with the cost of living. The collective consumption of materials is more reduced in a period of depression than finished articles that appear in the family budget directly. Several forms of consumption are scarcely measurable from the side of the consumer. Railway services,

The Print of My Remembranc

By AUGUSTUS THOMAS

I HAVE written of a visit to and sojourn in Arizona in order to get material for the play of that name. I wrote earlier of going back to Missouri, where I was perfectly familiar with the country, in order to refresh my ideas of its local color. In my opinion it would be difficult to overstate the value of this plan of getting information at first hand. It was Fred Remington's way of keeping himself fresh on his own subjects both for writing and illustrating. Richard Harding Davis made it his practice, visiting nearly every country in the temperate zone in his search for his varied and attractive material. So when Charles Frohman, frankly regretting his failure to produce Arizona, wanted something with similar color I was glad to go to Colorado to look for it.

The result of that trip is not very heartening to write about. I got a play that was heavy and overcumbered with material and dramatic machinery. It opened with a string of burros bringing ore down a mountain trail as I had seen them do it in New Mexico. It seemed a fine touch on paper and very excellent at rehearsals, but when the burros got temperamental on our first night and drew attention from the dialogue they weren't so valuable. The greatest fault with the play was its scattered interest. I fancy that some time or other every playwright fails because of the very things that he has considered his strength; that is, fails from an excessive use of such things. About 1902 that facile and versatile dramatist, Mr. Clyde Fitch, produced a play called Her Own Way in which Maxine Elliott was the heroine, but in which a little hairdresser girl who talked East Side slang made the most pronounced impression.

Nothing had been easier for Fitch than to write this character bit, and when he found it was so acceptable he said, "Well, if you like that kind of thing I'll give you twenty such characters," and immediately wrote a play in which he did. This was a piece called Glad of It in which he multiplied his East Side hairdresser till she was a blemish.

I had been successful with Alabama, with In Mizzoura and with Arizona in carrying forward a simultaneous interest in two or three different couples, being careful, of course, to have them contribute to what was the climax of each story. In Colorado I had practically five such interests, and though the material in the main was good, it failed to focus.

Posing as a Mine Owner

THE gathering of this material, however, may have an interest. My intention had been to write a play about the Colorado mines. To get the material I had meant to go to work in one of them. I didn't believe that any practical miner would mistake me for an expert. I planned to get something in a clerical way on the surface of one of the properties or in the sheds. To do this I went by the advice of my Rocky Mountain friend, John C. Montgomery, to the law offices of ex-Governor Charles Thomas and Harry Lee. Harry Lee, who was a man of about my own age, advised against my project. There had just been a strike in the mines, and there were still a number of secret-service men working under various guises.

"In the way you propose," Lee said, "you won't be in any danger, but the men will promptly put you down as a private detective, and though they wouldn't molest you, you would never get near them, and the intimate stuff you are trying for would elude you."

There was an experienced, practical miner, tough man and strike leader, on their books by the name of Phil Flynn. He was a good deal of a free lance, constantly moving about on new prospects. If they could locate Flynn and put me under his care I'd be in the way of getting the desired information. A long-distance telephone caught Flynn at Colorado City on his way to a copper district in Northern New Mexico. He waited over a train for my coming. I had had a rather romantic account given me of Flynn before joining him. According to the men in Lee's office he had been educated for the priesthood and had abandoned it. At any rate, he had a fashion of quoting Latin. To my mind, after a few minutes with him, he suggested neither the priest nor the scholar, but rather the railroad foreman. He already knew my business from his long-distance telephone talk, and as we went along on the railroad gathered my purpose in detail. It was decided that I was not to pose as a practical miner but as a mine owner investing in properties. He gave me a few stock phrases that would partly carry out this impression, and when in doubt I was to be silent. We stopped at a junction called Trinidad, where the yard foreman knew Flynn. Flynn told him I was from Leadville. The foreman asked how things were up there. I could answer only in the general way that they were pretty good, but a main difficulty was the lack of cars. He knew this, and was trying to forward empties.

"Where did you get that car stuff?" Flynn said as our own train moved on. I told him I had seen it in the morning paper.

"Well, you'll do, Tom."

In the evening we left our railroad at a town called Springer, from which we had a few miles' ride in a stage to the driver's home, where we passed the night. Next morning we started with a two-horse wagon for the foot of the Little Cameron—pronounced Simmaroon. A prospector was camped there with a tent and a few cattle. Flynn made his acquaintance and left our wagon in his care. We went up the trail on horseback. At the end of the afternoon we had got as far as the animals could comfortably go. They were [illegible] the trail again and started [illegible] Flynn explained that there [illegible] way that they could get [illegible] to follow the little stream by [illegible] our trail. No matter how [illegible] them, they would bring up at [illegible] er's outfit where the wagon [illegible]

The kit I started with we [illegible] the stage-driver's home in the [illegible] each carried only a blanket, [illegible] toilet articles as one could [illegible] pockets of his reefer. Leaving [illegible] City, Flynn had asked me if I [illegible] I showed him a .38 hammerless [illegible] thought would do. Before [illegible] mining camp he suggested [illegible] the right-hand pocket of my [illegible] of the hip, where I had it. [illegible] think there would be any [illegible] though my pose was buying [illegible] copper mines, he was really [illegible] recover these claims, which [illegible] had been jumped by the [illegible] big mining company operating [illegible] district. I learned this with a [illegible] ing in certain peripheral nerves, [illegible] reason to think it was not [illegible]

A Chilly Reception

THE camp which was our [illegible] consisted of a bunk house [illegible] house, some fifty feet apart, [illegible] cabins. The bunk house had [illegible] tions, such as they were, for [illegible] Its interior was divided by a [illegible] way, say three feet wide, into [illegible] each about nine by six. Each [illegible] tained two rough sapling [illegible] above the other, each bunk a [illegible] than the ordinary double [illegible] with bedding of pine boughs. [illegible] boughs the miners at night lay [illegible] in their army blankets, two to [illegible] In the cookhouse, besides a [illegible] for dishes and utensils, the [illegible] wooden table about ten [illegible] flanked on each side [illegible] wooden bench. In one [illegible] this room were two [illegible] one over the other, [illegible] and his helper. The [illegible] accommodation [illegible] Flynn and me, as [illegible] miners came in [illegible] work, which they [illegible] half an hour [illegible] rival, there was [illegible] One of the [illegible] romantic-looking [illegible] early twenties, [illegible] duroy suit and [illegible] boots, as pictured [illegible] as one now sees in [illegible] There was one [illegible] ican, a third miner [illegible] of Latin origin, and [illegible] men. The boy in charge [illegible] good-natured and genial. [illegible] to be operating for himself [illegible] men worked for the company [illegible] owned the buildings, the adjacent [illegible] and the few burros that carried the ore down [illegible] We were at a considerable elevation.

The place grew suddenly cold at nightfall [illegible] the days were warm. After supper the men [illegible] tobacco and played cards. The cook let his fire [illegible] order to get rid of them. When they got [illegible] went to bed in the bunk house. The cook [illegible] and I couldn't stay in the cookhouse. Flynn [illegible] was wrong about that; his friend Thomas [illegible] on the table; himself he was going to stretch [illegible] of the benches and some boxes that he put [illegible]

Without removing boots or any garments [illegible] gunny sack for a pillow, and covered by [illegible] slept four nights on the kitchen table. The [illegible] outfit would have had authority to put us [illegible] no attempt to exert it. The first morning [illegible] breakfast, during which nobody but the [illegible] spoke to us, Flynn and I went a mile down [illegible]

MADE BY THE MAKERS OF CAMPBELL'S SOUPS

"—and they're digestible too!"

That's a remark you often hear people make about Campbell's Beans. It is one of the main reasons why so many always insist on getting Campbell's. The secret of their wholesomeness lies in the fact that they are slow-cooked. You can freely indulge in their rich flavor and tasty tomato sauce because you know they always agree with you.

12 cents a can

Except in Rocky Mountain States and in Canada

borrow a couple of picks. The company had plenty in their blacksmith shop, but refused to lend them. The blacksmith, when alone, seemed a little more communicative and more willing to be friendly with Flynn.

When, after getting our picks and an hour's walk, we got to the ground where Flynn had located we found that his identifying stakes and signs had been replaced by newer claimants. These evidences Flynn promptly destroyed, and set up again stakes with his own name on them. This done, we put in the rest of our time digging what in mining parlance was called an assessment. This is the removal of enough cubic material to meet the requirement of the mining laws, and we were just within the expiration of the time limit to do it.

We were in a singular social atmosphere and set of circumstances. The cooks turned us out the same rough meals that they provided the company miners, without any discussion as to the propriety of doing so. The miners ignored us during the meals, although Phil swore roundly at the unidentified thieves who had tried to steal his claims. The cook and his helper were rather poor stuff, and even if they had been friendly, which they were not, Flynn and I and the boy in corduroys, who diplomatically affected an ignorance, all together would have been in the minority against the remaining members of the group.

Alias Jim Jeffries

ALONE each day on the claims, Flynn said he didn't think any of the men had nerve enough to begin shooting, and in his opinion the claim jumping had been inspired by the company, and the men were not to get much out of it, anyway; so that his fears, if he had any, were considerably less than my own, which were numerous. On the fourth morning after our arrival we started on foot down the trail, and to my eyes the landscape grew more beautiful with every rod we covered. We found our horses and wagon with the camping outfit in the little valley, where we arrived in the afternoon. Late that night we were again in the stage-driver's highly civilized quarters, which when quitting I had thought so rude.

On the way north for Cripple Creek we stopped off at the little town, at that time the central office of the Maxwell Land Grant, where Flynn had to make certification of his assessment work, and where much to my astonishment he filed one of his claims as the Little Luke, naming it after my boy and turning over to me the certificate of ownership. The adjoining property belonging to the big copper company was paying heavily, and Phil hoped there might be a fortune in this claim. To hold it required an occasional return to the property and some work with the pick in that unfriendly altitude of the foe and the stranger. So, though I still have the certificate, the claim of the Little Luke is like the grave of Sir John Moore.

At Cripple Creek I met interesting characters and learned much about Flynn. There had been a fire a couple of years before—while Flynn was absent—that swept the side hills and left men, women and children without shelter. Flynn returned when the conflagration was over, and to his astonishment his little cabin was the only one left in that district.

He looked over the surrounding misery a moment and quietly went over to his own cabin and set it on fire. When he rejoined the sufferers he said, "Now I'm with you."

As we went through the little mining city on that first night of our visit we gradually accumulated a crowd of admirers. I was in a fair way to make a mistake about Flynn's popularity until I discovered that the interest was in me. I got Flynn in a corner and made him confess. Someone had asked the name of his companion. As a great secret he had whispered, "Jim Jeffries." Some two years before Jeffries had won the championship from Bob Fitzsimmons, had later won from Sharkey and some months preceding the time of which I write had knocked out James J. Corbett. On the sidewalks and in the barrooms, much to Flynn's amusement, men jostled us a little unpleasantly. I feared that as enthusiasm mounted some local celebrity would take a wallop at me in the belief that he was measuring his capacity against the world champion. Under a pretense of important letters I got back to our hotel.

The stuff I got from Cripple Creek was principally character studies. By the time we reached Leadville, Flynn was thoroughly enjoying the fiction in which we were mutually interested. In that city I was introduced to a man anxious to get rid of a gold mine. It became necessary to inspect it, and I wanted the information that such an inspection would give. To reach its most significant level we had to make a descent of eight hundred feet in the shaft. Our vehicle was what was called a bucket. This was a vessel made of boiler iron, about four feet high, with a diameter of two feet at its rim, used for lifting ore. It was held by a strong iron bale suspended by a steel cable. The rim of this bucket stopped at the ground level. We three men, the mine foreman, Flynn and myself, took hold of the steel cable and stepped on the rim, distributing our weight so that the thing rode level. Upon a signal to the engineer the bucket began to descend. The shaft through which we were going was about four feet square. From one hundred feet down its opening, as one looked up, seemed about the size of a window pane. When we stopped at eight hundred feet it was a pinhole in a sheet of black paper. Our illumination was the three candles that we carried, each set in a miner's candlestick, which was somewhat like an ornamental skewer or steel dagger holding a candle at right angles, and devised to scrape dirt out of crevices or a candle holder to stick point first into a wall. The alley through which we traveled was about as wide as a private hallway in a cheap flat, and not high enough to permit of standing erect.

One trouble with this particular gold mine was that some two hundred feet along this drift the roof had caved in. The owners had dug through this heap a kind of rat hole big enough to permit the passage of a man's body, if he got flat on his stomach and pulled himself along like a lizard. The foreman went first; urged by Flynn, I followed, second. There was no retreat except confession, and the dark shaft from which we had just escaped. After a cold crawl of twelve or fifteen feet we emerged into the unobstructed gallery again. There was no guaranty that the material through which we crawled wouldn't shift once more and imprison us, or even catch us in transit. But it didn't, and after a terrifying hour we were again on the surface in God's free air. I didn't buy the gold mine; the best I could do was to take the matter under advisement. But I was so overloaded with sensations that when I came to write my play I had my villain and his guilty partner eight hundred feet under ground, in a cage on a cable controlled by the hero, who was on the surface with the damning evidence in his hands.

When we got back to Denver, Flynn refused to leave me until I had been given safely into the hands of our friend, Harry Lee. As he said good-by for the time being he turned to Lee:

"What I like about your friend Tom here is we took this two weeks' trip together, and we were in some tough places. But he never said once, 'When are we going to get out of here?' or 'How long does this last?' He's right."

I confessed to Lee that I'd often thought those questions, but had refrained from asking them because I would in nowise hasten our departure or terminate difficulties; and, furthermore, I didn't want Phil Flynn to think I was a quitter, which in my heart I was.

Flynn was much interested in stories of the theater, also the things about Fred Remington, and a year showed up unexpectedly, but not without welcome, New Rochelle.

Remington thought him a veritable nugget, and all the time with him he could in Flynn's two or days in the East.

The twenty years that have gone by have probably tired Phil from very active service, but there are in Colorado, Arizona and New Mexico who remember him and I hope still meet him.

Ex-Governor Charles Thomas' law partner, Harry now dead, was one of the most gifted men of the West. I will quote two examples of his wit if I can stage for them without too much delay: A dinner in the Denver Club at which were toastmaster and one orator, who, I had been led to believe, was most eloquent in the state. When this speaker had talk he made three separate starts at his subject friends regretted the indulgence that left him scattered, and as for the third time he said, "I came through here in '48," Harry Lee remarked record's been lowered since then." The orator the laugh, and under its cover gave way to the next

On one of Lee's visits to New York a club tête-a-tête Lackaye was interrupted by an English actor, the oratorical friend at Denver was not in full possession of his faculties. Each attempt to score off Lackaye more of a cue than a hit. His continued failure triumph of Lackaye growing a little monotonous interposed:

"I don't know what the game laws are in New Mr. Lackaye, but in Colorado it's considered sportsmanlike to shoot mackerel in a barrel."

"Mackerel in a barrel" is now a Lambs Club

The Craving for Variety

HUMAN nature is so constituted that the wish from boredom is one of its strongest motives. every playwright is driven into new kinds of his wish for change. Bronson Howard, after his of Saratoga and Green Room Fun, wrote The Daughter, Young Mrs. Winthrop, and after another edy, The Henrietta, returned to serious work doah and Aristocracy. Gillette wrote his comedy Professor, The Legal Wreck, then his serious play the Enemy, and, after a string of comedies which Mr. Wilkinson's Widows, Too Much Johnson and She Loved Him So, returned to serious work Service and Sherlock Holmes. Henry Arthur even a wider range through outright melodrama ranging from The Silver King to Whitewashing Clyde Fitch, after his lighter social portraiture, big play, The City. One will not be accused a professional kinship to these masters if I confesses the human side which craves variety attempts ranged all the way from melodrama comedies and broad fa the experience with the reaction was t the lighter mood Before Colorado duced, and w in rehearsa one night t pire The H. In every man's mind there is the hope that at some stage of his career he will own a Cadillac.

He may declare that ambition to his intimates, or cherish it silently in his thoughts, but in either case it remains a strong and inspiring influence.

He ardently desires a Cadillac because he knows it is conceded the world over to be the acme of motor car perfection and enjoyment.

But his regard for the car goes deeper even than that. Acquiring his Cadillac is to be a signal event, a milestone in his affairs. He contemplates the Cadillac as a possession that will reflect his own tastes and standards, be the outward sign of his success and position in life.

He looks forward to its ownership as a form of self-expression, whereby, in the last analysis, he may reveal his innate human love of fine and beautiful things.

In this practically universal admiration and aspiration for the Cadillac there is involved a responsibility which might well cause any manufacturer serious reflection.

We pledge ourselves to uphold rigidly the standards of the Cadillac, that it may be always worthy of the tribute paid it by these future Cadillac owners.

audience settled back in their seats. They had moved forward in their attention in less concerted action; but as they heard D'Orsay approaching for his second scene their interest was immediate and the forward inclination was in unison. I called my wife's attention to the fact, and when D'Orsay came on for the third time we both noticed the peculiar response. I felt that the player so welcome in such negligible material as his slight rôle offered was of stellar quality.

I knew D'Orsay as an actor who had attracted attention in Captain Marshall's play, The Royal Family, and as an interesting personal figure about the clubs. To describe him in a line, one would have to use the phrase so often applied to him by his critics: "The Ouida type of heavy guardsman." His expression is the dominant one of distinguished, opaque, English toleration, alternated with bland astonishment, not unmixed with good nature, but always self-confident, self-sufficient and aristocratic. I began thinking about him as the central figure for a comedy that I had agreed to write for Mr. Frohman.

On the American stage, to get the greatest value from such a man as a kind of comic-paper Englishman of breeding, it was imperative to surround him with Americans and give him an American background. In doing this I naturally saw the Americans amused with his speech and manner as I had seen them amused by him in private life; but as I thought more intimately of him I remembered that his funniest moments were his attempts to be ultra-American. This phase seemed only incidentally valuable until, through dwelling on it, the idea came to me to put him in a situation where he would be seriously obliged to assume it altogether, and with the inception of that idea I had the bent and the impelling factor of my story. The construction would be along the line of establishing an Englishman who would have to pretend to be an American, and his experiences after he began to do so.

If I were permitted to say to a dozen English and American playwrights of today—Pinero, Jones, Gillette, Pollock, Al Thomas, Forbes, Winchell Smith, Davis, Maugham, and so on, "What made an ultra-Englishman in America pretend to be an American? Answer promptly," they would reply in chorus, "A woman." That is the dramatist's formula, and it was mine. And the dramatists would be agreed on the next step: Find the woman.

I felt that it would be piquant for the woman to be a grass widow who had resumed her maiden name. Under the proverb this would make her twice shy, while at the same time it would remove her from the ingénue class, then being badly overworked. After considerable study, which must not be minimized by any ready relation of it, I hit upon the idea of having my Englishman masquerading as an American unwittingly take for sufficient reason the name of the girl's divorced husband. This was a great find, as any one interested in playmaking will readily agree. I decided that my Englishman should have seen and been attracted by this young woman while she was traveling on the Continent, and that instead of coming to America in search of an heiress his trip should be one definitely in search of the woman.

Augustus Thomas and Phil Flynn After Their Trip Into the Mine

Producing the Earl of Pawtucket

I HAVE more than once in these pages spoken of the value of material which seemed to have no significance at the time of its acquisition. Here's another example: I didn't go up in the Ferris wheel at the Chicago World's Fair in 1893 because I dramatized the wheel sticking when my car should reach the top of the turn. In 1899 I said so to Maurice Barrymore as we stood looking at the same wheel transported to and set up at Earl's Court, London.

"Well, since it's been here the thing has stuck twice," said Barry; "one time for twenty-four hours."

A policeman standing by took up the story and told us how a sailorman climbed to the cars with coffee and sandwiches for the imprisoned patrons.

"A lot of good stories," he added, smiling, "fellows with other fellows' wives, and all that sort of thing."

I expressed my yokel astonishment as to how the sailorman could have managed it up to the topmost cars. The bobby's tolerant answer set the story in my mind for all time:

"Well, you see, sir, 'is mother'd taught 'im to 'old on good and 'ard, and 'e did."

The idea of putting two romantic people together for twenty-four hours in the same car at the top of the Ferris wheel seemed to me excellent preparation for a comedy.

When my story was well in hand, newspaper training impelled me to familiarize myself with the proposed scenes of it, the three locations in the Waldorf-Astoria Hotel. I stated my project to the business manager of the hotel, and met a chilling and discouraging reception. The house could lend itself to no enterprise of that kind. So two days later I drove to the hotel in a cab with my wife, and with a trunk and valises. The room clerk had us shown several rooms and suites. I chose a suite I thought suited to the earl. The rate, without meals, was forty dollars a day. We stopped only one day, but the forty dollars put into my hands many valuable physical suggestions, as well as the truthful color which is so valuable in a well-known district. It also enabled me to make sketches for the scenic artist and get suggestions helpful in the general construction of the story.

After I had begun to write the play Mr. Frohman had gone to London. I cabled him, asking if I might have D'Orsay for the piece.

With characteristic brevity he answered "Yes."

My comedy, The Earl of Pawtucket, was done by the time Mr. Frohman came back, but the cable for D'Orsay had meant to him only the engagement of a minor character. He was warm in his approval of the play, but declined to risk D'Orsay as the star. I could see no other exponent. Frohman generously released D'Orsay. Two hours after he had done so I had completed an arrangement with Kirke La Shelle, who took the play solely upon my description of it, and because he had to move promptly in order to get time at the Madison Square Theater, where Elizabeth Tyree was starring under her own management in a play not very successful. Miss Tyree was exactly the type of girl that we wanted for the heroine, and she had the additional attraction of being the owner of this lease for the Madison Square Theater. While I was still in La Shelle's office, La Shelle arranged for Miss Tyree to hear the play, and before she went to the theater that night I had read it to her, she had accepted it, and after giving the following day to the selection of the company we started on the second morning to rehearse the piece, with only eleven days between us and the Monday on which we proposed to open. Among the company assembled on the stage of the Madison Square Theater for rehearsal was an actor of experience and ability, Mr. Ernest Elton, engaged for the part of the valet. He and D'Orsay had been together in an English company some fifteen years before in the provinces, and met now for the first time since.

"Oh," said Elton to D'Orsay, "are you in this piece?"

D'Orsay said, "I hope to be."

Elton gradually realized he had been speaking to the star. The reported episode amused C. F.

We had one of our best first nights, and next morning a fine press; but our performance had been with insufficient preparation. Being familiar with the script from both writing and rehearsing it, I had at the first performance undertaken the office of prompter, and in order that I might not be more audible than the players stood in the first entrance with a small megaphone through which I whispered when they seemed to hesitate.

In the second intermission a prominent critic said, "I like everything about the play except the wretch with the megaphone."

But feeling that much more depended upon ma of our tempo than absence of the occasional note megaphone I stuck to the method. Our stage m time card registered our last curtain at an hour tha improved upon during the long run of the piece. starred in the play under La Shelle's management years, and at the end of that time returned to M man to star in another play.

Altogether I read or proposed many plays t Frohman. Some were accepted, many were refu in script and in projected story. Charley one da me: "It's always a great pleasure to refuse a pla because it seems to get the thing off your mind, we have an interesting conversation."

For my own part, as I look back, I can add pleasure was not altogether one-sided, becaus never refused a play or a story without propo project for another one.

When he turned back the script of Paw released D'Orsay from his company in order th do the play elsewhere he said: "I this is off your mind start in an a comedy for John Drew, and if y like you to put a part in it for L

Drew had recently had great s play called The Mummy and the Bird, in which his nephew, Li more, had the part of an Italian w English words and ventured on phrases, but trusted to convey meaning by eloquent pantomim

The wave of admiration which the beauty of the good Maxwell inspired upon its first appearance, has widened steadily as the cars have multiplied.

Seven months have now elapsed, since the new series was introduced, and more than 25,000 of the cars are in continuous daily use.

Everywhere there has grown up around the good Maxwell a warm feeling of good will which is the direct out-growth of the sterling qualities which it has proven that it possesses.

Cord tires, non-skid front and rear; disc steel wheels, demountable at rim and at hub; drum type lamps; Alemite lubrication; motor driven electric horn; unusually long springs; deep, wide, roomy seats; real leather upholstery in open cars, broadcloth in closed cars; open car side curtains open with doors; clutch and brake action, steering and gear shifting, remarkably easy; new type water-tight windshield. Prices F. O. B. Factory, revenue tax to be added: Touring Car, $885; Roadster, $885; Coupé, $1385; Sedan, $1485.

PIONEER METHOD

By George F. Parker

ILLUSTRATED BY FRANK STICK

AS SIMPLE as the thing itself may seem, it is by no means an easy task to describe and analyze the industry of the pioneer life. Primarily, it is a large subject of itself, but it is made larger and more important by the rapidity and magnitude of the whole Western movement. It is so different from what is now seen in the collective occupations of a given community or state anywhere, that it is difficult to understand how, only a half century away, such primitive conditions could have persisted.

And yet, if even the alphabet of our earlier development is to be learned, some fair comprehension must be reached of the economic surroundings of that day. It is almost impossible to present to the modern student or reader a picture of how these people lived, when there was not a mile of railroad in Iowa until 1854, when nearly one-half of our period had passed away; to realize that the people were subduing, creative and happy; buying and selling, devising and making, taking their pay in money when they could get it, but living still largely in the age of barter, to which their forerunners had been almost bound during their tedious journey from the seaboard.

When the Pioneer Emerged From the Forest He Had Become the Most Expert Woodman Then Known to History

Large as the subject is, running, as it does, into so many unfamiliar grooves, making so many ruts which had to be filled before the present industrial road could be fairly completed—it represents the stage of development reached by its time. From the Alleghanies westward, and from Tennessee and Missouri northward, the same general methods were employed, the same tools or rude machines were in use, and men subjected themselves to the same hard training for rewards which, judged by modern standards, seem petty and unattractive.

In dealing with education it is often spoken of as something to be written on the blank piece of paper wrongly supposed to stand for the mind of the child. As applied to a sentient human figure the comparison is ridiculous; but it does seem fairly to describe an area like that of Iowa when, long held back from settlement, it was at last thrown open. Access to its 55,000 square miles of land, of unknown but, as was soon recognized, of unexampled fertility, was all at once opened along one side.

The Opening Up of the West

ONE settler after another timidly crossed the great river at widely separated points, generally as an individual, sometimes as a member of a small group. He only knew that he did not have to fight his way, so no colony was needed; he had not even the advantage that his predecessor had, as the Indian and the buffalo had not been before him to mark out along the most eligible lines the trail that he could safely follow as the natural path between two given points; there were not even enough Indians to do this unconscious service. There were no houses, only here and there a rude wigwam; no cultivation of the soil except an occasional small patch, planted to corn but imperfectly cultivated. There were no facilities for grinding the grain even when produced; nothing but rude sets of stones for crushing it by hand; no smith or carpenter had been seen; no vehicle, however crude or rough, had crossed the wide, easy-flowing river. No regular industry had found development anywhere within its borders. For the white man's purpose it was literally a blank.

No Man Was More Really Trusted Than the Blacksmith

The Government, which owned the land, so far as it had been acquired at all, had not yet passed or confirmed title to a single rood; and yet, with all this before them, with no enemy to check or arrest their progress, the settler and his fellows were as distinctly limited as if they had access to only a landing place on the river's bank. Each had to do everything for himself. There were no engineers to go ahead and blaze a trail for him; although he had gone to territory distinctly prairie, he was still in leash to the forest. He had no axman, as in war, to clear the spaces ahead of him. There were no soldiers to make roads; he could go only so far as the surveyor had marked his series of artificial metes and bounds. He could advance only as fast and as far as he and his fellows were able to carry with them those cognate industries which would enable him in due time to add another mile strip to its occupied predecessors. Even then he had to take with him a blacksmith shop, a gristmill and a sawmill; and he could not go far without a carpenter and a wheelwright. He had probably never even heard that there was, anywhere in all the world, a plumber or an architect; even if he had come from the most highly developed city he would have had no use for such helpers.

In short, the settler really had before him the equivalent of the fabled white sheet of paper, and he proceeded to write upon its surface. All his first signs and marks were material. He had to provide food, shelter and clothing. As he had passed the time when he could find the first of these by killing wild animals, he had perforce to carry with him supplies and the simple machinery and the skill required to furnish all things for himself.

He had his own hands, the raw land, and neighbors, more or less remote, united with him; with these he had to work until, in a few years, he, as one of a multitude, had built a state. He could neither have government help nor borrow money for development. In all the financial centers there was no banker who would have accepted him as a debtor, and no government which could do more than permit him, under the operation of general law, to provide himself with funds.

In the passage through the great wilderness there had been little change in the style of building—it had become almost an order of architecture—employed by the pioneer. It was invariably of wood; whether constructed of logs or of lumber it was of the square-pa pattern, which had given shelter and su taste of the earliest colonists in Virginia, M land, the middle and the new states. For a hundred ye along the Coast it was build a cru house of bri been custo bring them land, with tion that n and New Y were sough land; but th The people ing through wood from ancestors tries of E caped with then compa cent. PATTON'S

Velumina

The OIL Flat Wall Paint

Pore-Proof

Love's Young Dream!

ITS signs and symbols are washed away, as all defacements may be, from walls that are decorated with this sanitary, oil flat wall paint.

Patton's Velumina gives walls an enduring finish that has no pores by which dirt can penetrate and stain the finish itself. All dirt stays on the surface and is easily washed away.

Residences, apartments, business buildings, schools, hotels are restoring Patton Velumina walls to freshness merely by washing instead of re-decorating.

No wall decoration is softer, more beautiful in tone,—and it shows no laps or brush marks.

It is ready to use, in white and sixteen distinctive artistic tones.

Sold everywhere by quality dealers; used by exacting painters and decorators.

Write for "Proof" booklet.

The easy-to-clean rug—

"Look, John. No more of that hard work for me. Not while I can have easy-to-clean Congoleum Rugs on my floors."

The woman who does her own housework finds *Gold-Seal* Art-Rugs a real blessing. They save her so much time and labor. In place of hard, tiresome sweeping and beating, she whisks a damp mop over the firm, waterproof surface. In a twinkling her rug is spotlessly clean.

Needs No Fastening

It lies perfectly flat on the floor without any fastening—never "kicks up" at the edges.

You find in *Gold-Seal* Congoleum Rugs all the warmth of color and beauty of design formerly available only in the better grade of fabric rugs.

They come in most attractive patterns, appropriate for the various rooms of the house; neat tile and wood designs for kitchen and bathroom, more fanciful ones for bedrooms, dining room and living room.

With all their beauty, and their sanitary, durable and easy-to-clean features, *Gold-Seal* Congoleum Art-Rugs are surprisingly low-priced.

Note the Low Prices

6 x 9 feet	$ 8.10	9 x 9 feet	$12.15
7½ x 9 feet	10.10	9 x 10½ feet	14.15
9 x 12 feet	$16.20		

The rugs illustrated are made only in the five large sizes. The small rugs are made in other designs to harmonize with them.

1½ x 3 feet	$ .50	3 x 4½ feet	$1.50
3 x 3 feet	1.00	3 x 6 feet	2.00

Owing to freight rates, prices in the South, west of the Mississippi and in Canada are higher than those quoted.

logs of the house itself. It was necessary to daub ily inside and out, to protect it from fire. Of course ases the brick fireplace would serve as the founda- such a chimney probably to a height of from five feet, or up to the average mantel.

of was generally made of clapboards, about thirty ng, in effect large shingles, rived out with much white oak, black walnut or other straight hard ow and then from the linden or some soft wood, ese involved too much risk from fire to justify except as a necessity. Such houses were built, another, by the combined labor of the men in eighborhood. When a settler went six or eight y he had to draw help from this distance, though often that this was common anywhere in the t, because of the Indians, on earlier scenes, and habit and the necessity for association.

described thus briefly the best of the log houses ey were the earliest. They had their grades— , the finish and the comfort all depending upon ual; but for the later pioneer the sawmill often eded settlement or followed it so closely that house soon became the standard. It still had g-box shape, generally one story and an attic, l little from the American standard for frame pted when the material could be sawed instead When the shingle-saw attachment came into the abundant black walnut along the rivers on the bluffs made as fine a quality of shingle e desired. The lath saw was still longer development, so that laths were split out of r woods, with such skill that only slowness of interfered with satisfaction of the demand.

Tight, Bull Strong, Horse High

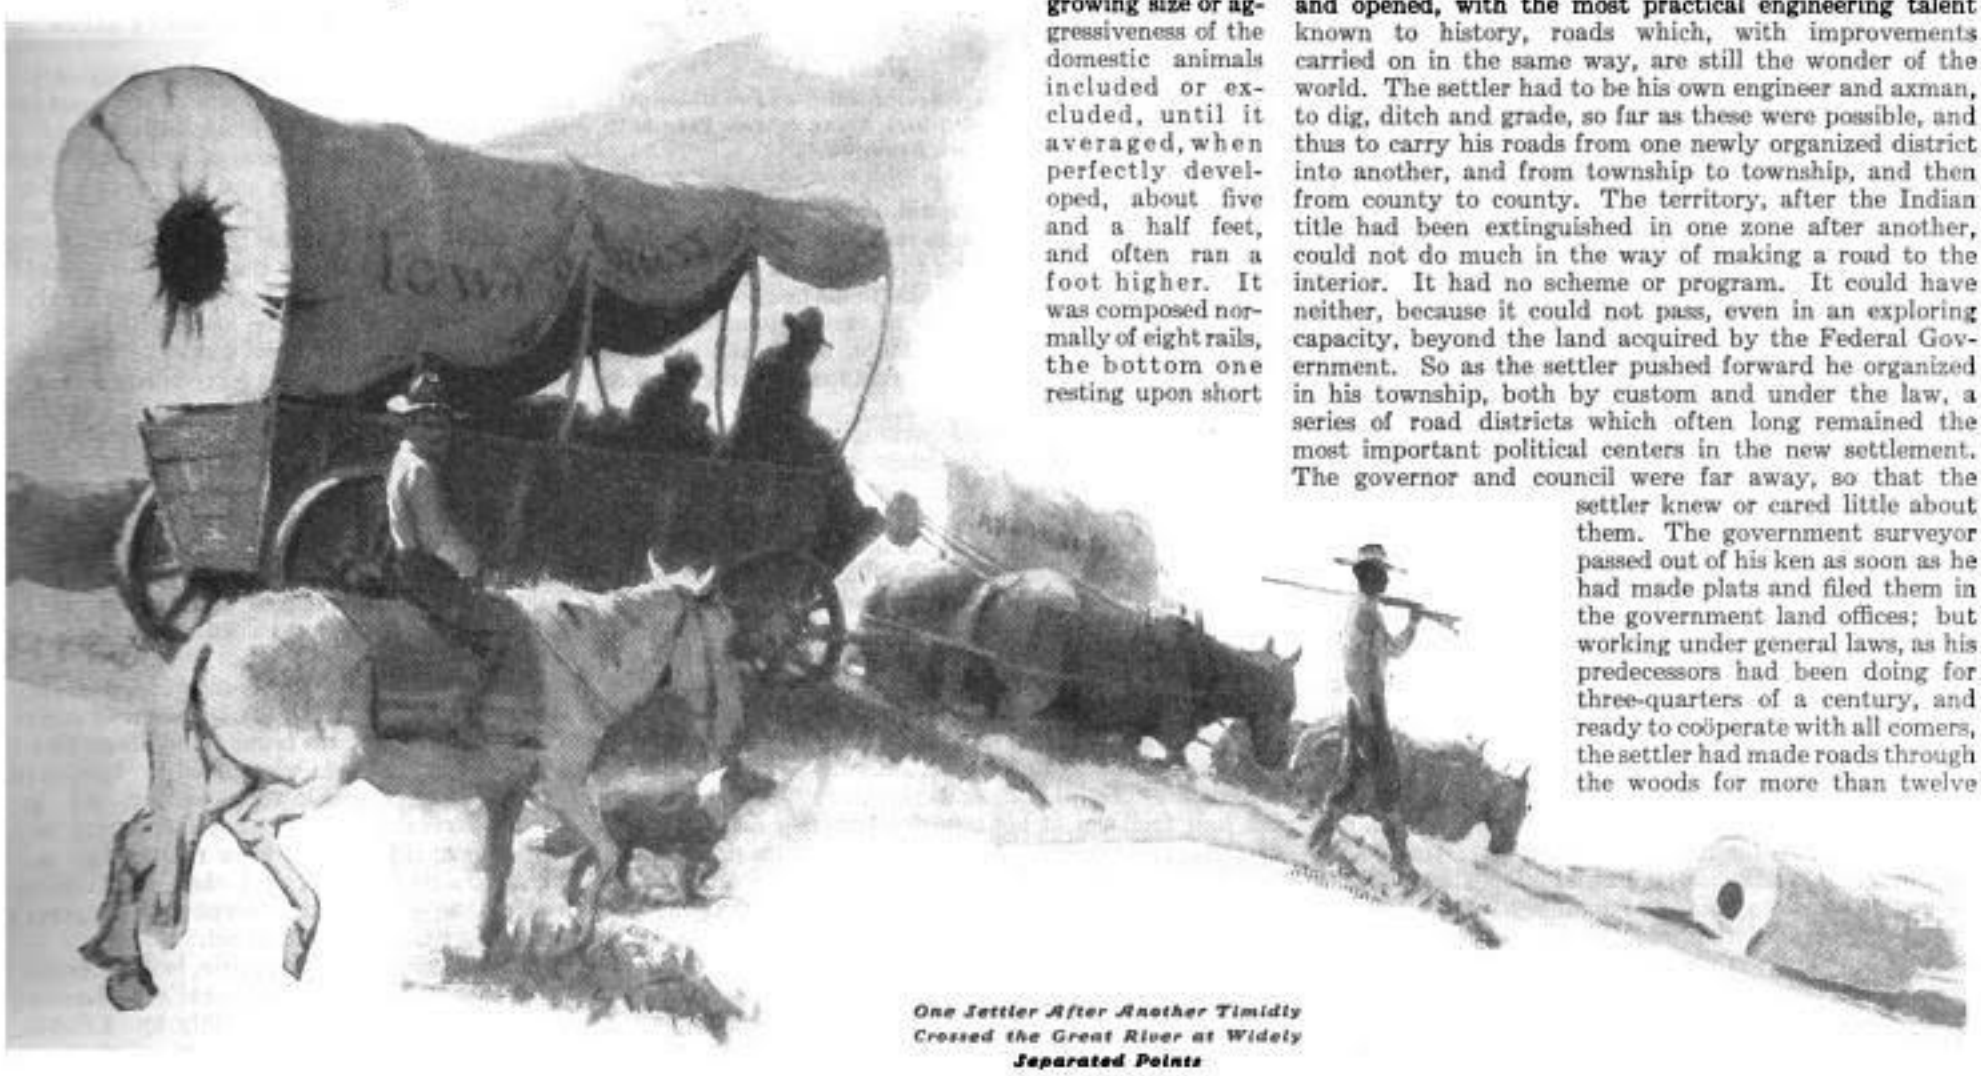
evitable that no distinctive architecture should ut of the pioneer times. Houses, which, like else, had to be utilitarian, were constructed mplest lines. They were rectangular, as both and nature's lines of least resistance dictated, thout a porch; so that log, frame, brick and ing one another, maintained the original form nce, with only small variations. Often these terials succeeded one another up to four in he same site.

liest days, after the settler had provided the ry of his buildings, and had added to them, lescribed, according to his needs, he began the his land. By this time, though not wholly the broad prairie, which had no tree in sight, then some of the advantages which the larger berland were to enlarge. While crossing the was limited to a plow little less primitive ed in the days of the Gracchi. There was, ough level smooth land to encourage the lopment of the large prairie plow for cutting the roots of the native grass. The river bottoms being sufficiently extensive to justify the use of this new implement, the farmer and the inventor used their opportunities. The native grasses, whether they grew on the bottoms or the uplands, rooted themselves very shallowly but with great firmness; experience, however, soon taught that the need was for an instrument which while breaking these roots would at the same time turn a furrow so wide as still to leave the operation profitable on an economic basis.

More than any other single agency, the plow enforced coöperation. Out of a group of neighbors each would have from one to three or four yoke of oxen, some of them large, powerful animals, from five to ten years old, well-broken and trained to the heaviest tasks. These would be combined as a single source of power, known as a team, and, managed by their owners, go from one piece of land to another until the season was over. The plow was an effective machine, rather heavy and crude, not much changed for many years in its form or weight. It was fitted with levers, had attached at the front two wheels of different sizes, which enabled the operator at the handles to keep it in the ground, to regulate the depth of the furrow, and to carry it through brush, briers or roots.

A proper plow cut twenty-four inches, and to operate it in land of average difficulty eight to ten yoke of oxen were required. These were chosen, as to leaders and wheelers, with almost as much care as a coachman would have taken with his team of horses with which he desired to make fancy movements upon the road or in a track competition. The team could then be completed in the center with animals less well trained, and even smaller. Three or four men were required for the management of such an outfit, and the task of driving the furrow in a fairly straight line across the field was one requiring much experience and a good measure of skill.

With his buildings up and his land broken to the plow the pioneer farmer must make inclosures. So long as he was in or near the timber he could do this only by a worm fence, another American institution. It grew out of the early customs of Virginia, where, after many difficulties and through many vicissitudes, it was enacted by law that livestock should be fenced out rather than either herded or fenced in. There was timber to the torture of all concerned, and so it was easy both to devise and to enforce such a law. From that time until the timber was exhausted or the railroad overtook the pioneer the worm fence was one of the necessary though costly and somewhat crude agencies of progress. Iowa, being the last of the pioneer states, was also the last that used or could use this form of fence to any extent. Perhaps a brief description of it as an actual force during this period may be justified.



As the pioneer went on his westward journey this crooked structure, winding its way over wilderness, river bottoms and prairie, came to be known merely as a rail fence, often acquiring the nickname snake fence. It grew in elaborateness, and certainly the legal height of four and a half feet, as originally fixed in Virginia, was considerably increased, probably due to the use of larger rails or sleepers, or to the growing size or aggressiveness of the domestic animals included or excluded, until it averaged, when perfectly developed, about five and a half feet, and often ran a foot higher. It was composed normally of eight rails, the bottom one resting upon short sleepers under each corner, the latter so buried that swine could not dig under and yet raised enough to prevent decay.

It was essential to choose as straight a rail as could be found, fairly large, as it must serve for a foundation. A rail was ten feet long and the depth of a fence from its straight outer line was four feet. A panel of it—that is, the length of two rails—when carefully made, covered a space of one rod, sixteen and a half feet; the size of a field so inclosed could be accurately estimated by counting the number of corners, or locks, as they were sometimes called farther south. After the foundation had been laid ahead for some rods the building of the fence proper began. Each rail for the various tiers was chosen with care until six had been laid. Crooked rails were so turned and tried that no possible chance remained for the energetic outside marauder to get in or, when penned inside, to get out. The corners were so laid that they would satisfy the requirements of a plumb, although one was seldom used, so accurate was the builder's eye. There was one universal formula both for the making and the judging of a rail fence like that described: It must be hog tight, bull strong and horse high.

Pioneers as Road-Builders

ALL this care was the absolute necessity of the time. Those familiar only with the ordinary well-fed, lazy domestic animal have no conception of the cleverness as well as the strength of each of the species mentioned when running at large, idle and mischievous, often uncared for and hungry, outside a fence, with a rich growth of half-ripe corn on the other side, only a few feet away from a feast. If there was anywhere a hole that could be enlarged by digging, the hog's snout would find it, and it took many precautions to overcome his ingenuity, power of calculation, and that persistence which nothing could surpass. Oxen, especially powerful animals, from five to ten years old, when turned out to pasture, however rich it might be, seemed to have a genius, hardly to be suspected, for finding weak spots in the fence, which in like manner was the only object between them and a bovine banquet. The horse also ran at large with equal freedom. In his marauding hours he developed on his own account jumping abilities that would not have discredited the best trained high-bred hunter, come from where he might. As these horses and cattle were almost sure to gorge themselves, as well as to destroy, it was to the interest of their owners that the neighborhood fences should be kept in the most effective condition. Probably more lawsuits grew out of such cases than from all others together, so that the primary test of a good farmer came to be the efficiency of his fences. Twice a year—in spring, before planting, and in fall, after harvesting—they were inspected for repairs or renewals.

Even in the matter of roads the American pioneer was dependent upon his own efforts. Other settlements of civilians—especially those in Western Europe—were made after the soldier had blazed the way through the forests and opened, with the most practical engineering talent known to history, roads which, with improvements carried on in the same way, are still the wonder of the world. The settler had to be his own engineer and axman, to dig, ditch and grade, so far as these were possible, and thus to carry his roads from one newly organized district into another, and from township to township, and then from county to county. The territory, after the Indian title had been extinguished in one zone after another, could not do much in the way of making a road to the interior. It had no scheme or program. It could have neither, because it could not pass, even in an exploring capacity, beyond the land acquired by the Federal Government. So as the settler pushed forward he organized in his township, both by custom and under the law, a series of road districts which often long remained the most important political centers in the new settlement. The governor and council were far away, so that the settler knew or cared little about them. The government surveyor passed out of his ken as soon as he had made plats and filed them in the government land offices; but working under general laws, as his predecessors had been doing for three-quarters of a century, and ready to coöperate with all comers, the settler had made roads through the woods for more than twelve

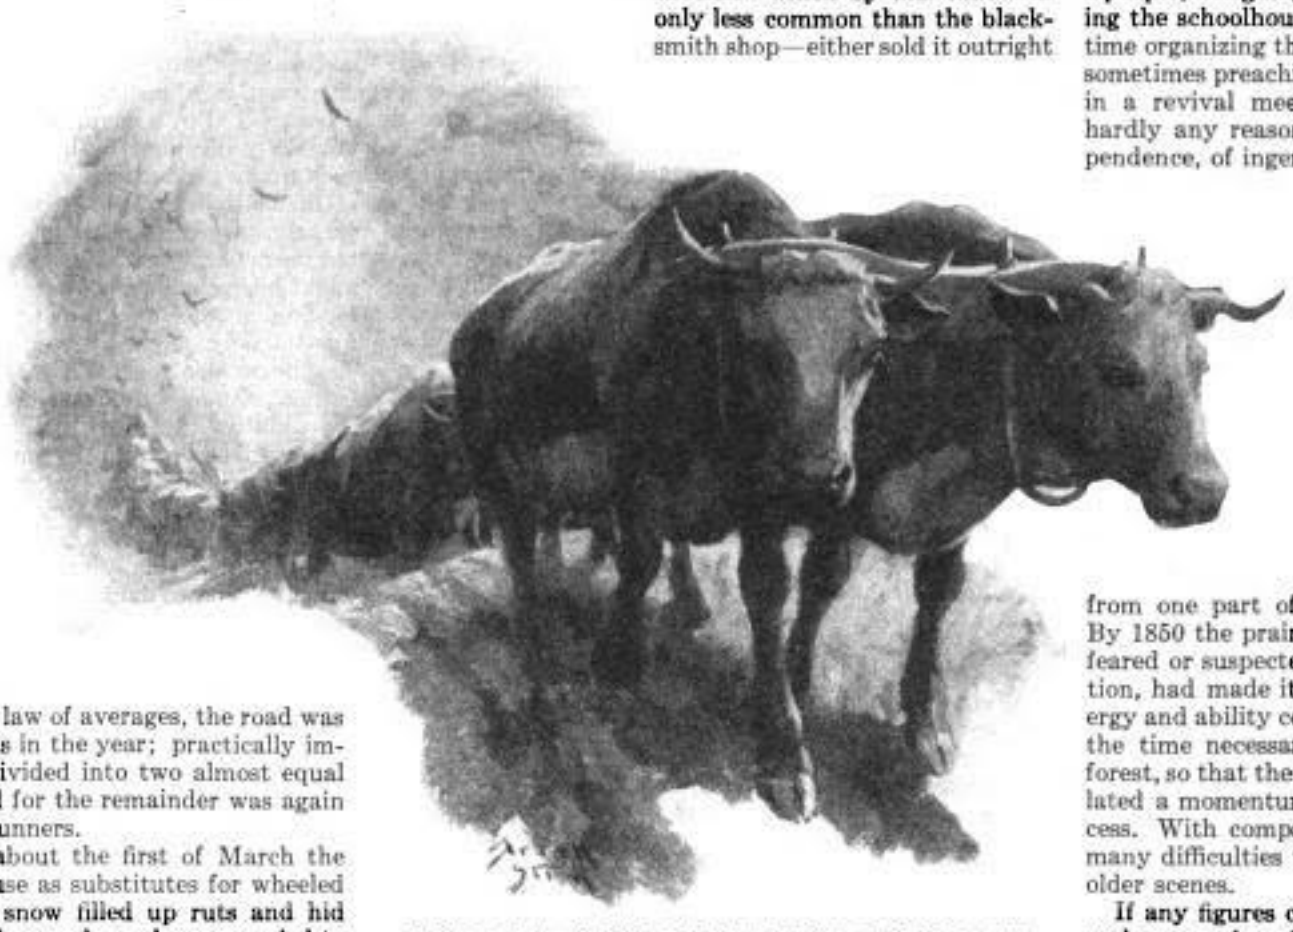
One Settler After Another Timidly Crossed the Great River at Widely Separated Points

Digitized by Google

hundred miles. In pursuance of this object he had felled the great trees which grew in a soil of surpassing richness—the gift of producing mud being one of the primary evidences of this quality. He threw the tree trunks into the chosen way, only to see them sink, in many cases, into the almost bottomless morass; he made corduroy roads, the wonder of those who saw, the torment of those who had to use them; and finally worked up to plank roads and, when he found stone and gravel, built company turnpikes and, very properly, charged toll upon them.

The early roads were of necessity crudely constructed; the only wonder was that they could be made at all. They were the product of the plow and the scraper, the latter then a rude instrument, with some help from a field roller made from a peeled log, generally of sycamore, because of its weight. Working in a loose black loam, without even clay as a binder, without stone or gravel, often over a surface so nearly level that drainage was difficult; forced by the absence of bridges to creep along the low, often marshy bottom lands until they came to an eligible site—which during low water would be a ford, and in floods a ferry—the task was one that would have taxed the resources and the ingenuity of an experienced road builder working with instruments, materials and men in an old and settled region.

It was here that the resource and adaptability of the pioneer served him well. With his quick eye both for the practical and for an emergency, without any trained or technical supervision, he worked away in patience, year after year, until he had so heaped up dirt over a long distance that, at its best estate, either when dry weather came to his aid or the ground was hard frozen, he had something that the king's highway could not excel. Over it the heaviest load could be drawn or the most famous driving speed reached and maintained; let the frost but heave up the ground in the spring or the early fall rains soak down to its uttermost depths, and there were not enough oxen in a neighborhood to draw a quarter-ton load to market or horses sufficiently swift to drive at more than a snail's pace. Perhaps, roughly speaking, under the law of averages, the road was perfect for about four months in the year; practically impassable for another four, divided into two almost equal parts in spring and fall; and for the remainder was again nearly perfect for use with runners.



From mid-November to about the first of March the sled and the sleigh were in use as substitutes for wheeled vehicles. The early fall of snow filled up ruts and hid imperfections so that grain, hay and wood were carried to market, logging was done, rails distributed for making and repairing fences, fertilizers scattered over the fields—when indeed almost half the heavy miscellaneous work of the year was done. This both saved time in the summer and, fortunately perhaps, rendered it unnecessary to maintain the roads at the high state of improvement otherwise necessary. On the prairie at a later day, when board fences had become common, if the snow so drifted in the lanes as to make it impossible to break or clear them, a sleet, soon frozen into a heavy crust, enabled the heaviest loads to be drawn on sleds over the drifts. This often continued for weeks together; if the heaps in the lanes became too mountainlike or irregular it was easy enough to drive over the fences and make a trail in the adjoining field, returning to the road again at a favorable point.

Past Masters of the Ax

AT A VERY early period, when interior counties were still more than one hundred and fifty miles from a railroad or a Mississippi steamboat, it was common for the best farmers to haul to market the surplus products of the year's labor. Loads of small grain—wheat, oats, buckwheat, seeds, corn shelled by hand—or dressed hogs, now and then the skins of the simple wild animals left in the woods along the streams, averaging perhaps over a ton for two horses, and considerably more for four, or even, in rare emergency, with oxen for power, would be drawn for long distances and sold in these remote markets for money to pay taxes or purchase necessaries that could not be grown at home. These were, mainly, salt, sugar, coffee and other groceries, or leather for boots, shoes or harness.

Such wagons would be loaded both ways, bringing back supplies for their owners or neighbors or for the country store. These journeys often required four weeks and, as experiences, were about as lonely as any that men could have. Camping out or stopping with farmers of their own type, often delayed by bad weather, illness or loss of a horse, the wanderings of Ulysses could scarcely have been more trying; but, next to endurance, patience was the one great pioneer trait. Nor was it all hardship. Such a man had many interesting adventures. He saw larger, or at least more life than that immediately about him, he expanded his business training and experience, and formed with remote and congenial people many friendships that stood him in good stead. These business errands had much to do with drawing farther into the state men who, having already succeeded, carried their small but helpful resources inland, to cast in their fortunes with a still newer community.

When the pioneer emerged from the forest he had become the most expert woodman then known to history. He no longer thought of clearing a farm for himself by barking, cutting or burning trees; instead he began to employ all his skill in woodcraft and to utilize every machine, whether it was old or so new that it had been hurriedly designed to meet some particular emergency. Soon the bottom portion of his land became a source of revenue. He was then the farmer, pure and simple, and this occupied him during the season of planting, cultivating, harvesting and garnering. With the cold weather he became again the woodman. He felled his timber, drew it to the sawmill—which by this time was only less common than the blacksmith shop—either sold it outright

A Proper Plow Cut Twenty-Four Inches, and to Operate It in Land of Average Difficulty Eight to Ten Yoke of Oxen Were Required

or had it sawed, by his own aid, on shares, or for money payment, and had the product ready for an addition to his house or for a frame building to replace the outgrown log one, for his own fencing or for sale to his neighbors, near or remote. Often in the scarcity of ready money he could only exchange his product for labor, which had a double value because otherwise his progress toward independence would have been retarded.

These river bottoms were covered with a virgin forest, never before seen by the white man. The principal varieties were black walnut, the sycamore, the white hickory, the hackberry, the horse-chestnut, the oak and the white walnut. It was upon these that the American woodman exercised his strength and skill when he found himself in surroundings where handling timber was an industry and not merely a destructive orgy. An early Iowa farm, thus divided into meadow and woodland, became a factory of double capacity for food and for articles in wood. Its owner was both a worker and a merchant with a market for something that had formerly been without commercial or moral value, and he brought to bear a large degree of skill both as workman and trader. He had the best facilities of his time for handling his secondary product, and the help of men thoroughly trained in their art. The woodman's ingenuity could only be appreciated when by his skill in cutting great trees; in handling the logs with the oxen or horses which he had trained into a large intelligence; in eking out his chains or ropes when, in loading great logs, he would bring the wild grapevine into service to reach those remote from the wood roads; in the manipulation of skids, wagons or sleds; in the use of crowbars, cant hooks and all the devices of timber dling, he showed as much courage and almost as knowledge as if he had been in command of an army

The making of rails, generally supposed to be a process, was far otherwise. The felling of the tre most favorable spot for the use of the crosscut saw driving of wedges for starting the work of splitting making and the use of gluts and mauls; the knowle how to handle a given cut in order to get just the siz shape of rail wanted; the calculation, by eye rather by mathematics, of the number of rails that co expected—all these were operations in which the m mechanical workman would be lost. It was no w that the rail-splitting experiences of Lincoln appea the West—where every man and boy knew what meant—or that they excited mirth or ridicule in to or in Europe. He had no unusual gift; he merely part in the life which surrounded him. Even the of cordwood, though only into four-foot lengths, dem an art and an experience the absence of which woul impress itself upon both the spectator and the work the making of pickets, palings or fence posts—every indeed, the wonderful training of the American arm both apparent and necessary.

The Lure of the Prairie

AND yet this man was essentially a farmer, fi home in the wilderness; helping to make the w a people; designing, making and repairing the roads ing the schoolhouses and employing the teachers. time organizing the churches, leading the prayer m sometimes preaching the sermon, and very often ex in a revival meeting. With such foundations t hardly any reason to ask why this is a country pendence, of ingenuity and character, of mechani and of great industrial achiev every line of human endeavor

The average age of the families who went to Iowa, year 1840 onward until its for were completed, must have be thirty. Most of them had already started in life, with promising families, but had some measure of success. T demonstrated what could b simple surroundings through and steadiness. They went remote pioneer life for the m sons that then entered into a from one part of a new country to another st By 1850 the prairie had become a lure; it was feared or suspected; proximity and use, as well a tion, had made it familiar. It had become clear ergy and ability could command their reward in a the time necessary under the forgotten despotis forest, so that the majority of the newcomers soon lated a momentum that meant continuance of su cess. With comparative ease this would carry th many difficulties that had hampered their fathe older scenes.

If any figures could be compiled they would s such men, when destined to win a fair measure o started by the purchase, often with some defe ments, of about eighty acres of land, of which s like one-third was timber, and the remainder bot or on the ridge between two streams. It was th rule that forty acres of this land would be broke pared for cultivation by the farmer himself. T wait some years for help from his boys, relying ginning almost wholly upon his own labor. In t from fifteen to twenty acres would be fenced in f pasture. Of the cultivated forty acres about thi be planted in corn, leaving some ten acres for sm including a tiny plot, perhaps a quarter or half a a garden, in which the potato would occupy space. There was no allotment for fruit, becau not yet become acclimated or adapted to the s the further reason that crab apples, wild plums blackberries, strawberries and grapes grew in p fusion. For either pasture or hay there lay th government land or that owned by the speculat rank growths going to waste.

By the time the really enterprising man ne land his boys had come into adolescence and man these were convertible terms—and the farmer w to spread out. Those who failed or became di could sell on favorable terms so far as prices relation to real values; so that the man who ha fully managed his eighty grew naturally and eas quarter-section holder, and that without incu heavy debt which both precept and example ta the pioneer to dread and avoid.

While passing into the prairie, invention had p work that the farmer's personal efficiency was between 1840 and 1860, certainly by 1865. In

thing uncommon for Peerless owners to at they have driven their cars an almost number of miles without finding it to remove the carbon from the cylinders, valves, or indulge in any readjust- repair of any consequence whatsoever.

be difficult to overestimate the impor- uch experiences occurring as frequently with the Peerless.

course, spell one thing and only one ot merely correctness of design, but an of measurement and of manufacturing r above the ordinary.

experience of men who have always the highest type of manufacturing o draw upon, it is safe to say that n the world is closer, finer craftsman- applied to a motor car than is being the Peerless.

The same principles and practices which keep cylinders clear of carbon over extraordinarily long periods, and free the Peerless owner from readjustments and repairs to a really unusual extent, express themselves also in every phase of Peerless performance.

The car reveals its greatness every time it is called upon to do those things which motorists value most—in its smooth, unlabored start, which merges instantly into sweet, even running; in its swift rush of acceleration; in the certainty of everything it does.

There is warrant for repeating the conviction that, considering its charm of performance, its luxurious comfort, its pronounced beauty and its economy, it would be impossible to find a sounder, better investment than the Peerless in the motor car market today.

SOUTH BEND QUALITY TACKLE BAIT COMPANY

King of the Waters

THERE'S thrill a-plenty to the fight which a black bass can give you. Any angler will tell you that. But, for greater thrill, genuine action, and a real battle, just let a fightin'-mad Muskellunge start south with your *Musk-Oreno* bait—you being on the holding end of the line. Man! There's a thrill that *is* a thrill.

Next to the desire to battle this "king of the waters" is the need for tackle that's extra strong and dependable, to meet the wild rushes and frantic leaps of the mighty Muskie. Such is *South Bend Quality Tackle* which includes the *Musk-Oreno* and numerous other tried, proven and tested Muskie lures. Ask for them at 'most any sporting goods dealer's.

"Fishing—*What Baits and When*" shows and describes Muskie and other game-fish lures. Gives valuable fishing hints. *Sent Free.*

also, land and stock had acquired sufficient value to give the really efficient man a standing with the neighborhood banker, who, himself, had so improved his position that he was no longer dependent upon a discredited currency, and had become something other than a usurer or note shaver. The tendency to expand farms was not speculative, leading into the morass of debt, nor was the ownership a thing of boast or show. It was a real and wholesome progress for the fit with an accession of nature's tendency to eliminate the weak and unfit. This does not imply that all farming or any large proportion of it was high class, because this never became the case, but it afforded an opportunity to the best to improve their methods and made them exemplars for those prone to be careless or idle.

While this process was fairly under way the younger generation was making itself felt. As a rule it stayed at home later than had been the custom, and the labor of all began to count, so that the family position, which in the pioneer life inspired a real pride, became fixed. There was hard work for the first and second generations—neither yet in middle life, and all still able to do it—and when this was over, markets had come, railroads were on the way, the character of local industries had become fixed, the prairie had justified itself, and Iowa had taken another step in its making.

Scientific Farming

It was to the growing of corn that the pioneer farmer had mainly to devote himself, and he soon carried on this trade in all its branches with a proficiency that for the time was surprising. Working on a small scale, without help from the Government or anybody else, they learned the secrets of their trade, not in a laboratory but by themselves. It has become impossible fully to understand the many farm theories, propounded with a confusion of authority; but before the formal application of science to agriculture these early men not only knew the soils they worked in, what fertilizers were needed and how to treat and apply them, and how products must be grown in rotation, but they had a practical knowledge of the nutritive value of the corn which, fed to animals, would yield the best and quickest results. The experiments were unrecorded, but they were practical, and news of them was spread about and shared with all who might be interested in it. The few best farmers in a given county, seldom more than one to a township, soon became the exponents of these ideas and the improved methods based upon them. They early formed local agricultural societies, whose annual fairs became features in the social and economic life of the day. Such men were never content with what they themselves had tried to do. Drawn from many geographical sources they kept in touch with the progress made in their old homes. They were little given to writing or lecturing, but useful information was so passed on from one individual to another that the best that could be known was probably distributed almost as effectively as now—though less widely.

There was such a strong desire to cooperate with all honest effort, such a concentration of thought and intelligence, that the greatest pains were taken to be helpful. As I have already insisted, it was more than an economic system that was under development; it was free republican institutions, and as in the public mind these were so closely related to every individual, he was encouraged to make himself worthy of his great privilege.

It is almost impossible to understand how closely every industry, every development in education, every social improvement, was connected with the fundamental institutions and ideas of government, which, curiously enough, were thought to be still on trial. Everywhere talk was heard about the great experiment, the importance of making no mistakes, or of doing nothing that would betray to the watching monarchic peoples of Europe—from whose ideas of government it was supposed that we had emancipated ourselves—the slightest suggestion of failure. These could only be avoided by constant watchfulness, even more in government and political methods than in industry and social systems. Every man was constantly admonished that success depended upon him; if danger was finally to be averted he and his family might aspire to anything within the world's gift. Responsibility was not limited to what each might make of himself, but by a curious process of reasoning it was impressed upon him that he was an Atlas upon whose shoulders, potentially, the weight of the world might rest. Seen now, in time's long perspective, there is something of the grotesque in this idea; then it was serious, an ever-present reality which contributed in a high degree to make and keep life hopeful. It may have been a delusion, so far as individuals were concerned, but if so it was a dear and powerful one.

Coöperation was not a cant word, something to be talked about; people both meant what they said and did it. The newcomer was tested by the help afforded him. If he deserved it there was no withdrawal; no begrudging in offering or giving; he might have seed, tools and assistance until he could get on his feet. If he was inappreciative—or worse, if he was useless—he and his family were soon dropped, and there was the end of him, as he would probably soon become a mover-on or a mover-back.

This helpfulness to others, indeed to all, has gone deep down into American life, and it is only when its loss is threatened that its value to society is recognized. It was not an incident of big business, about which so much is now heard; but it was the one quality which made possible every kind of business, big or little. The old custom of the newcomer borrowing seed to plant his first crop, with the promise to pay back at a given rate after harvest, had come down without interruption from the earliest settlements. It saved the settler the trouble of carrying such supplies with him and he was able to procure those adjusted to his new environment. Under these conditions, dealing with a soil of such surpassing fertility, the increase in the production of grains outran the growth of population and the demand or market necessary to give them a value, judged by modern prices, fairly commensurate with the labor of producing them. This concurrence of conditions, then thought favorable, long confined the Western farmer to a standard of success that was much lower, from a money point of view, than that of the artisan, who was so distinctly the beneficiary of both the increase in population and the favoring legislation of the time. It gradually drew away from their historic industry a considerable proportion of the more active and intelligent of the young yeomanry and drove them prematurely into the cities. This production of grain beyond what could find a market at a price competitive with other forms of industry has had a permanent influence upon American life, one from which it is to be feared that small agriculture will never again so recover as to attract the type of men who for nearly three centuries made it what it was, and, with it, made their country and its institutions.

Coöperative Threshing

Perhaps nothing better illustrated the actual working of a coöperation that was almost unconscious than did the threshing machine. No farmer in any given township would have enough grain to warrant the individual ownership of a thresher; so two active and experienced men, generally handy mechanics, often blacksmiths, would purchase one, and then start out just after the small-grain harvest to canvass the neighborhood for threshing. This done, they would make their plans, so fixing their route that they would double on their tracks as little as possible. Each of these men would have a pair of good horses, well trained for their duty of furnishing their share of the power, which required for its proper generation either eight or ten horses, the rest being furnished by the customer. Everybody was expected to be on hand as nearly about sunup—"sunrise" was practically an unknown word—as possible. The owner with all his hands was there, and he had drawn the remainder of the necessary labor from his nearest or most efficient neighbor. The assignment of crew, probably numbering ten or twelve, was made with as close reference as possible to the known fitness or training for this particular work.

One of the owners of the machine drove the horses from the always-turning circular platform, this being perhaps the most difficult part of the work. The other owner was known as the feeder, a task requiring an almost equivalent amount of skill. Alongside of him was the band cutter, who was generally a nimble, well-trained, [illegible] grown boy. He had to have a steady [illegible] and study the feeder's moods and [illegible] in order to keep a regular supply of [illegible] properly spread upon the apron [illegible] pitchers from the stack—or from a [illegible] when grain came in from the small [illegible] who had not a sufficient product to [illegible] them in hiring the machine—were [illegible] portant links in the chain, while [illegible] stackers had the dirtiest job of all. [illegible] under way the machine would prob[illegible] stop for more than a few minutes [illegible] noon hour came.

The threshers' dinner made one [illegible] hard days of the year for the house[illegible] her help, which was drawn main[illegible] neighbor women, who thus did their [illegible] in the coöperation process. There [illegible] real rivalry between the housewives [illegible] neighborhood in the matter of [illegible] the best dinner for a dozen men [illegible] by their long turns at work and [illegible] looking forward, ready afterward [illegible] the palm of merit to the cook [illegible] thought to be the best. As a rule [illegible] was laid out for completion within [illegible] after which the threshers would [illegible] old-fashioned circus, pull up stakes [illegible] move on in the darkness to the [illegible]

A Race of Horse Trad[illegible]

This was a strenuous work [illegible] men in both strength and [illegible] Every workman had his stint; if [illegible] the whole crew was stopped [illegible] that seldom happened, because [illegible] was really working for himself. [illegible] set of farmers would thus work [illegible] for ten days or a fortnight, or [illegible] stack in the neighborhood [illegible] threshed, and the grain garnered [illegible] keted; so that the owners could [illegible] the next township, when another [illegible] workers would be taken on, and [illegible] continue until their season [illegible] With fairly good crops the thresher's [illegible] job was moderately lucrative and [illegible] always as agreeable as such [illegible] could be made.

No like animal, whether useful [illegible] mental, has ever been able to [illegible] greater devotion, even from [illegible] master, than did the horse that [illegible] conquer the West. The skill that [illegible] veloped in knowing horses grew [illegible] stinct, a sort of sixth sense. A [illegible] natural history might have learned [illegible] lessons from the American past [illegible] the structure of the horse as well [illegible] his character and his useful[illegible] mystery in judging him, the [illegible] seeing faults, the brutality in put[illegible] out when owned by another, and [illegible] ness in concealing them in his [illegible] knowledge used in the determination [illegible] a gift now almost lost; the instinctive [illegible] position; the suspicion of [illegible] viciousness; the quick recognition [illegible] difference in values when trading [illegible] another, and, in the latter case, [illegible] higher quality of reading his [illegible] united to make the born horse trader [illegible] apart, far above anything [illegible] David Harum and other books [illegible] with this subtle gift. Even [illegible] whose ownership was involved [illegible] were credited with the power [illegible] the slave, of watching with [illegible] the processes incident to exchanging [illegible] thus of showing off ill or well [illegible] with their desire to remain [illegible] owner or go to a new one.

The skilled horse trader acquired [illegible] an uncanny reputation in his own [illegible] hood, not of necessity from any [illegible] in his character, but because [illegible] recognized and feared. As each [illegible] township was nearly as well known [illegible] owner, an expert, with whom [illegible] almost a mania, had to seek [illegible] portunities farther afield. Many [illegible] would take advantage of a local [illegible] ride off on some animal not [illegible] factory, for the purpose of [illegible] match—this was a difficult problem [illegible] it put all the trader's powers [illegible] pick out a mate for an absent [illegible] would drive away with a pair [illegible] some other errand when, in fact, [illegible] was in his mind except to [illegible] or two new horses better suited [illegible] needs. The art of showing off [illegible] of the most recondite as well as [illegible] most interesting ever practiced. [illegible] many cases the exchange was [illegible] tageous to both parties, especially [illegible] were well-matched, so both [illegible]

Cool, Comfortable Hours

Hot afternoon hours become cool, comfortable hours where VUDOR Shades are used. Their beautifully stained wood strips impart a pleasing, easy restfulness to the light which filters through. Invigorating fresh air circulates freely through the ventilator at top (an exclusive VUDOR feature).

VUDOR Porch Shades are greatly reduced in price. A shade 6 feet wide with a drop of 7 feet, 6 inches, now costs only..... $6.25 north of Alabama and east of Colorado. Sizes to fit any porch priced proportionately.

Send for illustrations in colors and the name of your local dealer.

way get what they most wanted. Taken all in all, horse trading was one of the distinctive features to be found in the pioneer life, and often guided the expert to some other branch of work or business. It was a natural gift which often indicated to men that some kind of merchandising was their special forte.

The horsemanship of the pioneer was less theatrical or showy than that of the vaunted cowboy; it dealt with the animal not alone as a mount but for driving. Such a rider did not belong to a type that wanted to become part of a circus or to amuse a gaping crowd. He did not affect the single horse to harness, but give him the lines over two, four, six or even eight, with the right kind of wagon or sled, harness and whip, either with a company of merrymakers or a heavy load, and he could handle them with characteristic skill. When four horses were necessary to draw a reaper the old custom of putting a boy on one of the leaders to guide them was given up and the driver managed both his four-in-hand and his machine. It required a coolness and skill seldom brought into play in the handling of a coach, because in this case the driver had no help and was dependent wholly upon himself for managing both machine and its motive power.

The sure-footedness of the pioneer riding horse, acquired by long practice over difficult roads and through heavy timber, early attracted the attention of foreign travelers. Though the breeds did not develop special qualities until the Morgan horse was fairly perfected, these soon grew, out of necessity and use. Probably at no time or place in modern history has the horse been so distinctly a riding horse as he was in America from the middle of the eighteenth century until the close of the Civil War. This horse, with that variety of gaits which has made Kentucky famous, was no accident, nor was he so much the outcome of horse breeding as of the uses which made it necessary for the man and the horse to cultivate and perfect these gaits. The trotter, which came later, grew out of the continued devotion to the horse and the desire to find a new form of an old sport. It was an evolution slowly reached, and had its beginnings mainly within the period covered by my study, although it was not to reach its perfection until some years later than 1870, the period marked by its ending.

Horse Stealing

Along these simple lines the horse was the close associate of the man. His treatment, even in a period when there were much coarseness and some brutality, was better than might have been expected. Among some classes or types of the population this was the result of imitation of their real superiors and leaders, but mainly from the necessity which recognized the horse to be next in importance to the man. For the most part, he was well housed and amply though often somewhat coarsely fed. He worked no harder than his master, and in the hands of idle or lazy owners he was often better off, so far as mere hard work was concerned, than under the ownership of more energetic men. Where he was treated viciously he generally returned it in kind; he would kick or bite or balk, and often become almost unmanageable, but in general this conduct would change when he fell into the hands of a considerate owner. Wherever a hired man was kept this merciful treatment was enforced, often at the cost of severe suffering by some incorrigible reprobate. No facility or willingness could save such a man from punishment with a black-snake whip or the fists, or dismissal, or both.

With the pioneer the institution of lynching was built up round the horse. He was such a constituent part of life that to steal him incurred the fate decreed, as the clay tablets attest, in like cases, from the times of King Hammurabai. It came to mean the summary punishment of the offender, without the possibility of successful appeal either to law or to mercy. It stood next to the taking of human life, because it was considered that many lives were dependent upon the work of the horse. If the statue of a saint to represent the pioneer should ever be raised it would be difficult to find a subject more appropriate than the figure of a horse under the name of Saint Equus.

But the horse did not come into the ordinary definition of livestock, a term reserved for the meat-producing animals—cattle, swine and sheep, in the order named. Of these the milch cow stood next to the horse in importance and immediate value; but even her portion was far from ideal for an animal that must make so much of a return to man. Her yield of milk would have put her at the very rear of even the worst herd now to be found anywhere between the Missouri and Mississippi rivers and the far-off Atlantic Coast. She was generally small in size, and had her calf to nourish besides supplying her product to many hungry children. One relief came from the fact that because of the poor quality and small quantity of their milk every farmer had to keep two or three cows where now one would serve. With all the facilities for feeding and keeping cows, probably one-half the families did not own one; so though there was milk to give away to poor neighbors its sale was practically unknown. If the cow failed to breed within any given year, regardless of what she had done in the past, she never had another chance, but was fattened and the meat she produced was distributed in the neighborhood to be eaten fresh or it was packed in a barrel for summer use as corned beef. The same fate awaited the heifer when she had entered her third summer and still remained barren. It was seldom that a steer was butchered for family use; he was too valuable, either as an ox or for shipment—often, in succession, for both uses—to be sacrificed upon the altar of the family.

Crude Dairy Methods

The vicious cow was more than an incident, she was an element, in this early life. Added to the occasional case of bad temper in the animal was the awful exposure to cold, heat, floods, noisome insects, and the brave struggle for forage. Worst of all was the carelessness or brutality of boys or hired men, or more frequently of cross, tired women with peevish children waiting impatiently for the milk while it was still warm. Almost uniformly the milking was done in the open, without shelter for animal or human, and the cow, suffering perhaps from an overfull udder which demanded relief, with teats cracked from the cold or torn by briers or by struggles in the brush when seeking food, was expected to bear the roughness of treatment from a coarse, freezing man or an ignorant learner, and then to stand, thus exposed and treated, until the milking process was over.

In the main the methods of gathering and saving the milk were dirty and discreditable; in these days, when the product is offered for sale, they would not be countenanced; but when used at home, in perhaps half the cases it was collected in a way as primitive as in patriarchal days when men wandered with their flocks.

Though this describes a general tendency, it must not, however, be concluded that ill treatment of the milk-producing animal and slovenliness in the man or woman were universal. Here again it became a question of type; the really good, efficient farmer taking the best care of his cows in the matter of shelter and food as well as in methods of handling and milking, caring for the milk in cool cellars or wells or spring houses, and in making butter, which was the only form in which the cow yielded a money profit. In such cases the animals were afforded the same good housing provided for the horse, the money profit being multiplied many fold, and the example of efficiency spreading slowly down among that part of the population open to influence.

The American pioneer in his different stages of development has generally had some product that would yield ready money. Living through successive generations practically limited to barter, it was a necessity to have or find some article that would enable him to meet the demands of the taxgatherer and to buy the supplies that he could not produce, or exchange with an accessible neighbor. Taking things in the mass, in Virginia, tobacco; in New England, the fisheries, enabled him to provide the circulating medium, which, in the case of his predecessor, was the wampum of the Indian.

In the remainder of the country the swine furnished this ready money. Everywhere in the Southern colonies its flesh became a standard article of diet in spite of prejudices and attachment to the letter of Scripture, where in those days of literalness reference to it as an unclean animal was not easily explained or overcome. In Virginia, Maryland and Pennsylvania it was universal, and from there it spread to the Southern colonies and into the West settlement went slowly forward. In former colonies and their offshoots hog—the term "swine" was never in general use—ran at large, and in so doing caused an unusual amount of trouble. Always recognized as a born marauder, its victims were protected by a varied assortment of laws, ordinances, regulations, proclamations. It was probably responsible for more damage claims than all other causes combined.

And yet in a favorable climate and encouraging surroundings it grew not only in numbers but in importance. In addition to furnishing wholesome food in large quantities at a nominal cost for labor, its universal demand soon made it the one producer of ready money. This was increased as wild game declined and the settler plunged farther into the wilderness. Indeed, in the business, it was as easy to raise two hogs as one, or twenty as ten; and in spite of this facility, many families would not or did not grow their own supply, for there was an assured demand for the surplus at a price which, though low, was fairly remunerative. In the scarcity of money a married hired man could settle in part with a ham, a shoulder, a side of bacon or some lard, which he would take home to his family; or these articles could be traded for something else or taken at the store in payment for necessary products from the outside world.

The hog was the early and sure resource in paying a debt on the farm, taxes of all kinds, interest on the small credit necessary; and its proceeds were available for doctors' bills, the extension of boundaries, additional land as wanted. It was practically the only meat-producing animal that could be moved bodily as population shifted from one place to another.

Hog-Killing Time

The slaughter, dressing and curing of the hog were something that the farmer had to learn, just as he mastered the growing of corn and the various processes that were his main business. On the prosperous farm that day in early December that marked the butchering—after the corn crop had been gathered and preparations were made for the winter—was one of the busiest and most important of the whole year. Around the great kettles for heating the water, barrels or hogsheads into which the slaughtered animals were twice plunged, the careful dressing after they had been hung on long poles erected for the purpose, their gradual pushing together, as the flesh was cooled, for cutting into the various parts; the division into heads, feet, hams, shoulders, sides, backbones, fat, lard, and offal—all these processes were carried on with an efficiency or a carelessness that marked the character and training of the man in charge.

Often one or more farmers with a considerable number of animals would combine, while other neighbors with one or two would also bring theirs and assist in carrying on the work. By night the whole thing would be done, the animals slaughtered, was over, and the supply of meat for the demand of one or more families and their immediate neighbors. Meanwhile the livers, hearts, ribs and head would be eaten fresh—the first as a natural preservative—the meats would be cured with salt in barrels or smoked until spring opened, serving for the whole year so far as this variety of meat was concerned.

The smoking process was the maintenance of an old art handed down century to century, but always adapted to conditions. In the Middle West it was done in small log or frame smokehouses or sheds, not far from the house, with wood chips that had been carefully saved from all the chopping of the winter put into a little heap, supplemented with limbs from the same trees, and then, when it a smoldering fire was lighted, was never permitted to come to a blaze. It became both house and contents were lost, so that success literally depended upon having smoke without fire. This had to be maintained in this form night and night. When, at the end of the weeks of watchfulness, the meats came out they were ready to store in the assured sustenance of the during the next year. They were in their particular form that

He Trained for Bigger Pay

Now He Earns $100 a Week

Fifty-two hundred a year! And yet there are many men who still wonder whether specialized training *pays!*

Tom Blythe used to wonder, too. That was only a few years ago—when he was earning less than $30 a week. All around him in the big main office other fellows his own age were pegging away at their little routine jobs and trusting to luck to get them by.

But Blythe wasn't satisfied. He could not leave work to attend a resident school—nor could he afford to wait ten or fifteen years for "experience" to push him ahead. His only alternative was home-study training. He enrolled with LaSalle Extension University.

Remarkable how a fellow's viewpoint changes once he really starts after the bigger job!

First thing that surprised Blythe was the actual fun that he got out of home-study training under the LaSalle Problem Method. Mighty interesting, he said, to take those everyday problems which highly successful business men are compelled to solve and to work them out for himself.

Next thing that surprised him was the fact that the bigger job he had longed for was actually *waiting* for him! His chief had been quick to observe the better work he was doing—how he was now able to help on the more important tasks; and to make a long story short, Harris was leaving and how would Blythe like to take his place?

That was how Blythe stepped into his first real executive position—and why he today is earning a salary of $5,200 a year.

Your Shortest Route to a Big-Pay Position

Typical, Blythe's experience, of that of thousands of ambitious men who have found their path to success in the LaSalle Problem Method.

Letter after letter in the files of LaSalle Extension University tells the same thrilling story. If the men now in low-pay jobs could see those actual letters, literally thousands of them, telling of rapid advancement to positions paying $3,000, $5,000 and up to $10,000 a year, they would never rest until they had mastered the specialized training that they absolutely need to win success.

Send for "Ten Years' Promotion in One"

What are you going to do with your spare time during the next few months? Will you use some portion of it to help you on your way to bigger things, or will you continue to drift—drift—drift—and be forced to content yourself with your present earnings?

One thing, mighty important, you should do at once—you should get the facts. The coupon will bring them to you without obligation, together with particulars of our convenient-payment plan; also your copy of that inspiring book, "Ten Years' Promotion in One." "Get this book," said a prominent Chicago executive, "even if you have to pay five dollars for it." We will send it free.

of provisions required for home use, for exchange with neighbors and for hospitality. They worked into that general system of foresight which made independence the pride and the distinguishing characteristic of the pioneer.

Sheep growing developed slowly in the pioneer states west of Ohio, and never became a dependence. As early as 1840 the old-fashioned domestic processes of carding, spinning and weaving had begun to decline; the American woolen mill was fairly under way. While these processes survived it was almost a necessity for each neighborhood to grow its own wool, but even then mutton did not become a profitable venture. It did not fit the popular palate and it was long before its dressing became familiar knowledge. When the big Eastern woolen mill came to its own, local sheep growing naturally declined.

After the settler emerged from the woods the difficulties incident to this branch of industry were enhanced. The rank prairie grass was not adapted to sheep, and the lack of shelter was so serious as a drawback that even the Vermont-bred merino did not thrive; but the most serious trouble was the dog. Whatever the quality of animal carried into a new country, or whatever effort may have been made to improve breeds, no such process entered into the dog. Perhaps as many as ninety-five of every hundred were of the worst mongrel order. As the supply seemed to be legion—the proportion in both number and badness bearing a universal ratio to the uselessness of their owners—the dog, instead of being a credit to his masters, became and remained through most of the settlement period in the West a nuisance more destructive than his predecessor and relative, the wolf. It became the practice of industrious and enterprising men to shoot dogs on sight—not from cruelty, but for the protection of the community.

No present-day knowledge and even no effort of the imagination can measure the task of caring for animals on the wide-open prairies, where there was no natural shelter and no time or opportunity to provide it through barns, sheds, high fences, groves or other contrivances suggested by necessity or ingenuity. All this made the task of the settler a constant trial of work, patience and persistence. He knew that upon the care of his stock depended his home and any reward of his labors to which he might aspire. He must watch the approaching rain or snow storm, the tornado or blizzard, which might scatter his few cattle, hogs or horses to the four winds and often doom them to destruction in their effort to protect themselves. It was his business never to let them get out of reach, and no labor or exposure could be spared to insure this result. After a few years, by the planting of cottonwood or soft maple, he could have a fairly efficient windbreak. In his dire necessity he thus made himself a forester long before conservation and even Arbor Day were so much as heard of as public movements.

Early Trade in Livestock

It was well into the Civil War before hay and animal scales came into general use even in the older West; it would probably be safe to say that they did not become universal until after 1870, when the region had attained a large measure of prosperity and wealth. It was possible to weigh a pig or a sheep on the old-fashioned beam scales or steelyards, but there were few even of these. The weight of cattle and hogs when ready for sale was determined by guess, with the usual byplay between buyer and seller. Sometimes the dispute would be left to a supposed expert, but in most cases it was settled upon the well-known splitting-the-difference practice. After much negotiation over an animal or a drove the seller would make his maximum claim and the buyer his maximum concession, and the sum would be divided by two. As this guessing of the weights of animals was one of the things upon which men prided themselves, sufficient earnestness was generated to have settled grave questions in law, politics or religion.

The fattening of livestock was much slower than now, due in part to the inferior quality and the lack of knowing how to mix feeds; but the process continued even after the improvement in this respect had substituted Shorthorns for native breeds. Calves, pigs or lambs were seldom slaughtered, the youngest animal that was habitually sacrificed being a three-year-old heifer when barrenness was assured. There was a pride, inherited from English habits and traditions, in sending to market large animals; but perhaps the principal reason was found in the universal belief that meat produced slowly was more wholesome and nutritious than that which came from a stuffing process similar in character to the making of pâté de foie gras in Switzerland and Germany. It was the custom to send steers to market upon the completion of their fourth year, when, by 1870, with improved stocks and stall feeding, the best animals would have reached weights running from thirteen hundred to fifteen hundred pounds. Hogs were kept until they were eighteen months or two years old, and an average weight for many droves of eighty or a hundred was often three hundred pounds. Corn was cheap, perhaps averaging, from 1850 to 1870, round twenty cents a bushel, and seldom reaching twenty-five cents anywhere, except during the war period; woods along the river bottoms were available for summer pasturage for hogs; while the prairie afforded free range for cattle at costs which bear no comparison with modern standards.

Village Blacksmiths

Prices were correspondingly low. In the spring of 1860, hogs sold on foot within ten miles of Des Moines, the capital, at two cents a pound; cattle brought three or four cents; yearling wethers, two to three dollars a head; turkeys of ten to fifteen pounds brought at Christmas from seventy-five cents to a dollar apiece; geese, when eaten at all, about the same price; chickens were marketed, when purchasers could be found, for three dollars a dozen, and often for two dollars; eggs were considered high when paid for by the store at ten cents a dozen in trade, and even then the demand was narrow and uncertain; the best butter brought ten to fifteen cents a pound, and the average price through the year did not perhaps rise much above the sum first named.

The ability to draw from the outside tools and machinery to meet the ever-broadening demand gave the settler a decided advantage over his forerunner, the colonist, in that he carried with him in larger degree the essentials of manufacture, and had command in his work of the wider variety of articles that had become either necessary or desirable. He could exercise and develop his domestic industries either for himself or others, so that gradually he could produce food, tools, vehicles, houses, clothing and the necessary paraphernalia of his life without outside help, his own skill and the finding of the necessary raw materials being the prime essentials.

He carried with him, as part of himself, his own blacksmiths and machinists, wheelwrights, carpenters, spinners and weavers, millers, hatters, and others trained in mechanical trades. Even before the farmer could break his land and raise his trial crops these artisans were ready to set up their shops in every neighborhood large enough to require their services. They belonged to the same type from which the farmer himself was drawn—the sturdy yeoman. They were an essential part of the general scheme of life in which they found themselves. In many instances they bought land, although in few cases did they give personal labor to its cultivation.

The most indispensable mechanic was the blacksmith. In his special work the farmer, however ingenious, could not compete. In general he had reached what then passed for middle life, with experience in several tasks in various stages of development. Though the shoeing of horses and, later in the season, of oxen constituted perhaps the bulk of his work during the winter, the summer brought with it the making of plows or their sharpening, harrows, cultivators, hoes, scythes, rakes and tools used in field or garden.

He must not only have acquired a fixed skill—something that would always stand him in stead—but must be able to work rapidly. When something went wrong with a prairie plow, leaving men and oxen idle, or with a threshing machine, where ten to fifteen men and almost as many horses were left for the time with nothing to do, the blacksmith was expected to drop everything else and, without regard to meals, sleep or rest, to persevere until his task was done. This was the essence of his unconscious contract with his customers and he must keep it. If there was one thing that the industrial leader in a [illegible] community dreaded more than [illegible] was that men assembled for a [illegible] should be left idle while daylight and [illegible] weather were running.

The neighborhood that commanded [illegible] service of a really expert and artistic [illegible] smith could count itself fortunate. [illegible] trade was naturally the primary attraction, but it meant even more to have a [illegible] who was really interested in the people [illegible] were his constituents and had their [illegible] peculiar interests. His shop was the [illegible] nized meeting place, a social center [illegible] more important than the country store [illegible] was the resort of boys of all ages, two [illegible] of whom were often gratified in their [illegible] to blow the bellows or even to handle [illegible] mysterious tool, the great sledge, with [illegible] red-hot heavy bars of iron were to be [illegible] or welded or others were to be split [illegible] strips. The passing matron or [illegible] looked in through the open door [illegible] sort of awe; so that the blacksmith either had or might develop the [illegible] of the curmudgeon was destined to [illegible] career or absolute failure, and [illegible] as well make up his mind to move.

It was, however, as the meeting [illegible] an ever-ready debating society for [illegible] questions that the smithy was [illegible] tinguished. There the fate of [illegible] universal questions—baptism, [illegible] tism, free will, foreordination, [illegible] destination, the final perseverance [illegible] saints—whatever this common [illegible] cryptic phrase might mean—were [illegible] stantly under discussion. The [illegible] literally earned his living by the [illegible] his brow, but a day was never more [illegible] day even if prolonged far into the [illegible] No true smith could resist the challenge [illegible] talk on these subjects, then the [illegible] problems of surrounding humanity [illegible] was nearly always active, sometimes [illegible] unctuous, in the Wednesday-night [illegible] meeting or in the Sunday class-meeting [illegible] that in those historic days nobody [illegible] much as thought it among possibilities [illegible] there could be an undevout blacksmith.

Backwoods Carpenter

No man in any pioneer community [illegible] more really trusted than the blacksmith. His nature united with his trade to make him as nearly strictly honest as mortal [illegible] Other men—the carpenter, the shoemaker, the weaver or the tinker—might [illegible] pect, and the customer could go somewhere else; but the blacksmith was the [illegible] monopolist of a neighborhood, so that [illegible] he held his place there was little [illegible] question his position or his probity. He was seldom a leader in matters of [illegible] import he was knowing to everything that was going on. Take him all in all, a fine figure in the pioneer life, as he had been in his association with [illegible] during the preceding five hundred years. His character and its peculiar [illegible] been overlaid, though it is [illegible] even under the lavalike inclosure of the factory system entirely to hide from view.

The carpenter was a less [illegible] figure. In the first place, there [illegible] of mystery about his trade. It was [illegible] to follow every part of his material, the great tree as it stood in the [illegible] it took new shapes under the [illegible] the sawmill, the broadax or [illegible] when it finally found its way [illegible] for manipulation under the [illegible] handsaw, adz, plane, drawknife, [illegible] hatchet. It was, comparatively, an easy trade to learn and, because [illegible] versal demand, its votaries were [illegible] number. It was more often than [illegible] inherited trade, so that the boy could easier pick it up from his father. [illegible] pioneer life did not lend itself [illegible] spicuous success to the higher [illegible] of this trade. Everything was [illegible] there was, as already narrated, [illegible] sence of architectural form, [illegible] pretension, that little opportunity [illegible] forded for much effort outside the [illegible] ordinary slop-shop order. The [illegible] windows were rude, with little [illegible] earliest days had passed, to [illegible] them from one another, when [illegible] into the largest frame house, [illegible] tive in size and design, or into [illegible] log cabin. The carpenter [illegible] fore inclined to be migratory, [illegible] subject to fitful employment, [illegible] boisterous in habit, and not [illegible] the leaders of the average [illegible]

It scores with Golfers

El Dallo is the golfer's smoke—the ideal cigar for active men. Activity whets smoke-appetite. The palate is keenest to appreciate fine flavor, rich bouquet.

El Dallo meets the *activity* test. On the course, or in the club house after the game, it "hits the spot." Every puff is *satisfaction*. That's because El Dallo is made of finely blended tobaccos, properly aged for flavor and bouquet.

You get El Dallo *factory-fresh* at all times. The tinfoil-tissue "humidor" wrapping protects against "killing" climate changes. Each cigar in the box is of even quality.

Prove the quality with 3 El Dallos the next time you play.

If your dealer hasn't El Dallo, send us $1.00 for the Handy Pocket Edition Package of 12 large Invincibles.

Wertheimer Bros.

"Straights" Size 2 for 15¢

(Continued from Page 42)

Another worker in wood, few in number but always having in him the potentialities of the artist, was the cabinetmaker. The number was small because the demand for furniture other than that of the plainest order was limited and grew slowly. This was one of those slow-working trades where quality was always more important than quantity—with too few men engaged to enable it to lend itself to distinct characterization; but whatever articles they made, its votaries worked only in fine woods and with delicate tools. As the ordinary products disappeared the fashions of the time required the use of mahogany and rosewood, and yet it may well be a question whether, within the area under study, there now remains any considerable number of the prized household articles of the time. Other than as an item in an exhibit the old four-poster is as dead as the Cæsars; the elaborate cupboards would fit only in museums, if any exist; the chests were as antiquated as the furniture of the ancients and have disappeared as kindling; while the walls and wainscoting, which in an older and more fortunate time the makers would have fashioned, were never thought of and so did not come into existence. Another historic trade was thus driven out of the world—this time by automatic planers and gigantic glue pots, often employed to turn out articles with little more character than an angleworm.

Coopers and Millers

The cooper was present, but his function was never important. He had awaiting him, in white oak for staves and heads, and hickory for hoops, the most perfect of materials; but as few products took a liquid form there was not much for him to do. It was before the days of cider, and vinegar was imported from great distances, as were all the intoxicants used. The occasional cooper who made his way into this unfriendly environment turned to his trade mostly for odd jobs, thus really merging himself gradually into the class of real farmers.

Another interesting character was the miller. There was more of mystery about him than could exist in the blacksmith or any other artisan. In the first place, as considerable capital was required, the working miller was generally a hired man, the agent or representative of an owner in the form of a company or at least of a man who seldom knew the technic of the business. Mills, whether grist or saw, were the only factories in the neighborhood or district; if both existed they were often under a common ownership or control, so that their managers never became individual to the degree that was inevitable in the personal trades, where no intermediary was possible. To the spectator, unfamiliar with the miller's work, his passed for a lazy sort of business. He had only to take in the grain brought to him by a large number or variety of customers, keep all the bags or barrels separate, after taking out his legal toll put one grist after another into the hopper, see to it that his power was ready and kept in order, pull the lever controlling the water from the race or stream, and then wait with patience until one batch after another was ground. The customer, perhaps waiting nervously to get flour for the family dinner, or the boy loitering about or fishing above or below the dam or in the mill race, or exploring the mysteries of machinery, so new to him, thought this a simple job; but those who knew how many things this one man had to do—the irregular but heavy weights he had to lift, the help he had to give in so many directions—realized that here was no easy task.

In the earliest days custom came to a gristmill from long distances, not seldom from sixty miles away. One man would carry to the mill as large a load as the roads would permit, made up of contributions from several neighbors, some other making the next trip for the same purpose. As they came from every direction and often met remote from a village, at the mill, it would be surrounded for days with campers, each awaiting his turn, all impatient to get back to a neighborhood often not too well supplied with bread. This was additional to the custom of the miller's own neighborhood, which could not be favored until all ahead were served. The miller was therefore often in a quandary how to meet the most emergent demands; so that, taken in connection with the uncertainty of water—often he had to wait for it to accumulate—the necessity for sharpening the burrs from time to time, the poor quality or bad condition of much of the grain offered, his lot was not one of unalloyed happiness.

Closely related to these trades, and inseparable from them, was the mechanical skill inherent in the great body of settlers. There were so many articles that could not be bought—for the double reason that they could not be found in the market and there was no money to pay for them—that versatility became a necessity.

If an ax handle was needed somebody in the neighborhood had to make it. To do this generally lay out of the way of the carpenter, the wheelwright or the cabinetmaker; so it remained for some man familiar with the ax to become an expert in fashioning this particular article. Generally speaking this man was a farmer who was also a woodman. He thus drew from his own woods the material, chosen with a care that was characteristic; and executed his task with a skill that could not be surpassed. It required the choicest of hickory, first split into a half square or square, containing material for two or four handles, then hewn into rough shape with the ax or the adz, and ripped by a handsaw into parts for the individual article. After it was still further roughly shaped with a hatchet and then with a plane on a workbench and by the drawshave until it neared completion, it was finished with a large, very sharp pocketknife, English made, remaining only to be smoothed with broken glass and polished with various grades of sand and emery paper from coarse to the finest, until it shone almost like ivory, oiled, and then so seasoned before the fire that it lost none of its straightness or flexibility. No pattern was used in these various stages of progress; the maker must know to a nicety every curve and line, and be sure that, when inserted in the ax, it would balance to perfection.

Craftsmanship in Wood

The making of a whipstock from the same fine variety of wood required skill and art. The long slim piece of wood, ranging from three to eight feet in length, balanced for carrying a whiplash ranging from six to twenty feet long, according to its uses, had to be so strong and flexible as to respond to every motion, whether it was used in the driving of a spirited four-horse team or eighty or ten yoke of oxen in front of a breaking plow on the virgin prairie, or by a drover, guiding from the back of a horse a herd of refractory cattle. The fashioning of a wooden ramrod for a squirrel rifle, whether from hickory or white oak, was another delicate process. The plaiting of a whip of the order that fitted the handles already described was scarcely less difficult. Beginning in a simple way with four strands of leather—generally buckskin, calfskin or sheepskin, though sometimes dogskin—the skilled whip maker would so practice his art that he ran up to as many as twelve strands, putting the bulge at just the place to balance it, both in itself and

uses. As much pride was taken in t could have been found in some achieve much more talked about, but probab useful or important. The skins of t fur-bearing animals were dressed for making mittens, rugs, lap robes, and articles for use or ornament.

These accomplishments and many of a mechanical sort carried out wi ple tools, though with the best ma executed with a patience that was mental and a skill that could be learn not taught, belonged to the best far every considerable neighborhood th out the whole of the pioneer area were passed on from father to son loss of skill or efficiency, and becam of the mental and industrial outfit community. This comprehensive knowledge of a variety of trades- few of the articles thus produced ha mentioned—gave the farm boy an into many forms of useful work out nominal occupation as farmer.

The Gospel of Work

Interest in work did not stop general knowledge of it; but all pated in it. Everybody—except corrigibly lazy and idle, doomed or uselessness—if strong and well pected to support himself and tha tribute to the general stock. The of a garden was universal, and neit women nor children thought th exempt from its making and ca Probably the majority of the child on high-class pioneer farms, whet or girls, had paid back to their pa the world every possible penny actual money cost before they we years old, and in many cases, during the Civil War, at least a years earlier.

The work was not considered d it was a part of the general sch sumed to be as necessary to the men and women as it was to com world at all, and the better the f more keenly its heads felt their bilities to society and to them their children, the more effectiv rigid training. If the growing routed out of bed early in the either by inclination or insistence it with the same relative earliness so that probably no class of chil where were better provided with ing their years of rapid growth, subject to interference by the l methods or the outside attractio incident of urban life. Food wa wholesome, though somewhat c well cooked, and in only a few there exaction. The pioneer f seldom a slave driver except of h very interest in the work of the in it sometimes leading to ov Owing to the extreme heat the early and late, but there were s ruptions for rest; much thought man and beast. There was som winter, less in hours than in int the work impulse was never sleep; that which the bounte had produced, the cold sterile w use, foster or preserve. It w season of lethargy, of bearing accumulated fat; but, as will be there was a constant study of and an effort to learn how bet or improve them.

In the pioneer theology not tention was paid to mortal sin by the church; instead, how was one of their own—lazine thing else could be expiated as but nothing could overcome tha Ill health might excuse the sick like other people, but only the invalid, the idiot, and the old wh a full share, were exempt. As a might accept in theory the idea was a curse, but every act sh they both felt and knew it to b exalted of blessings.

Author's Note—This article on "P ods," and a successor on "The Pion soon to follow it, have been extracted orate, and as yet unpublished, study author on "The American Pioneer comprehensively with the population West, with settlement, with politics, ization, with religion, with education conditions, between 1840 and 187[illegible] the Civil War. It is not, in any sense tory, but seeks to interpret the philo movement that made possible the gr velopment of that great region.

After One Year the 6-66 Records Stand Unbeaten

Just one year ago—on May 18th, 1921—the Paige Daytona Model 6-66 astounded all Motordom by breaking every world's stock chassis speedway record from 5 to 100 miles.

These are the most highly prized records in the automobile world, for they are final and convincing proof, not only of power and speed, but the more heroic qualities, brute strength and endurance.

Today these records stand unbeaten, practically unchallenged. A full year has passed, but no car in the entire field of American manufacture has lowered a single mark in the group.

We make this statement in a spirit of pride and not mere boastfulness. We offer it as the most convincing evidence that Paige is, indeed, supreme and absolute Master of the Highway.

Let the nearest Paige Dealer prove this to your entire satisfaction. Telephone him for a demonstration

It's made of STEEL

HERE is a tennis racquet that can be used *every* day in *any* kind of weather. It is unaffected by sun, rain, heat or cold. It can not warp or break and does not require a press.

DAYTON
Steel Racquet

It has a steel frame and is strung with resilient steel strings. It is perfectly balanced and is made with standard wooden handles and grips.

Invented by William A. Larned

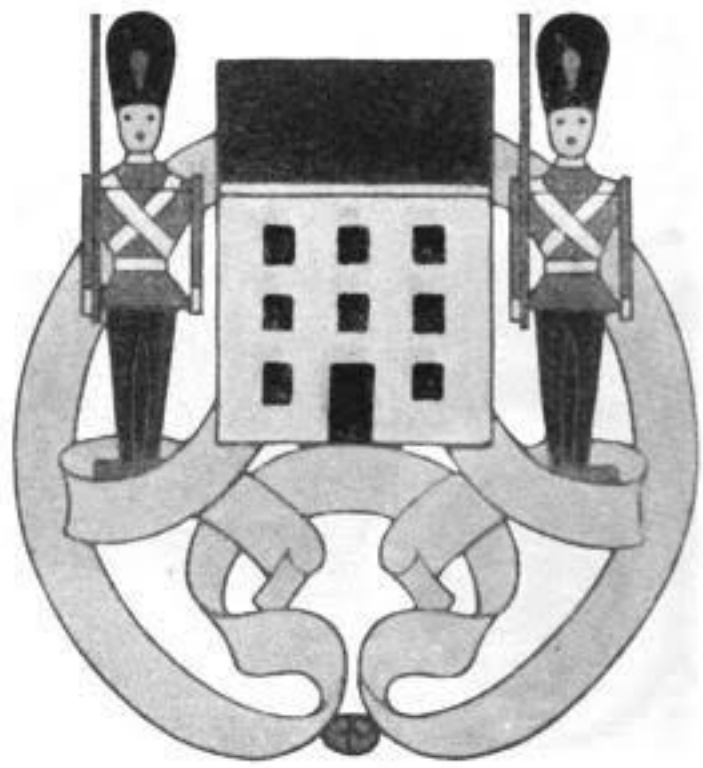
The Dayton Steel Racquet is the invention of William A. Larned, *seven times national champion*. It is the result of more than twenty years' experience and has the enthusiastic approval of every player who has used it.

See It! Swing It!

This new racquet is distributed by A. G. Spalding & Bros., Wright & Ditson, Wright & Ditson-Victor Co., and Alex. Taylor & Co. You can see it in any store where their goods are sold.

Ask for it. See how freely it swings. The steel frame offers less than one-third the air-resistance of a wooden frame. Notice the balance, the larger playing surface, the ease with which it is controlled. Test the strings for resilience.

The Price is $10
($13.50 if Strung with Gut)



Then consider that the Dayton Steel Racquet keeps its shape, reduces restringing and costs only ten dollars. It is not only the best but the most economical racquet you can buy.

Booklet will be sent on request.

The Dayton Steel Racquet Co.
Dayton - - - Ohio

HARD TO PICK 'E

By a Village Movie Man

I WAS placing an easel in the lobby of my movie theater this spring, showing the photograph of a golden-haired young lady standing barefooted on the sands of a desert island. Her clothes seemed to be made up of a couple of shredded linen handkerchiefs tied around her waist. The sea breeze was making the golden hair and the tattered handkerchiefs flap.

In the background of the photograph came a hairy-looking Robinson Crusoe. He wore the conventional sheepskin. Quite a nifty poster, I should say. For better effect I was about to move the easel closer to a lobby palm. Someone touched me on the shoulder.

"Mr. Dowe," said a voice, "do you realize that such pictures as that are endangering the morals of our children?"

It was Doctor Alton, our leading village minister.

"What do you mean — our children?" I came back with a smile. "I've got no children, and neither have you."

"Unhappily, that's quite true," he agreed. "But it's my duty, you know, to guard the morals of the children of the whole community. I don't think you realize how these sex pictures are affecting them."

"I don't think you do, either, doctor."

I'm not lacking in respect for the cloth and didn't mean to be impudent, but I could see him stiffen a little.

"You mean ——"

"Listen, doctor. No reflection intended, but in ten years of the movie business I believe I've found out more about kids than you'll ever know in your life. I've still got a lot to learn, at that. You folks are doing all the good you can—I know that—but you've got the wrong angle."

I wasn't looking for an argument, but the attitude of my minister friend kind of got me going.

"And you think I have the wrong angle, as you call it, in protesting against movies like that?" He pointed at the bare-kneed lady in the photograph.

"Exactly," I said. "In the first place, you think that is suggestive or has something to do with a sex problem, don't you? Well, it's nothing of the kind. That's a nice clean picture—nice as you ever saw. Just go in and take a look at it."

"I'll do it," he decided, "but I still can't understand your putting out a poster like that."

"It's pretty, at that, isn't it?"

"Well, er—yes, artistically," he agreed, "but not for children."

Catering to the Kids

"Why not? That's exactly the point. They see worse than that every day down at the beach. Doctor, bare legs don't mean anything to a kid. Now I'll show you where you've got the wrong angle. You notice that I'm just putting this poster out, don't you?"

The picture inside had been running for nearly an hour. He had not thought of that.

"And?"

"Why, I'm putting out this advance poster now so as to catch the eye of the old folks for to-night. They may think it a sex picture—just like you did—but I'll have to take a chance. Believe me, though, I take no chances on kids. If I'd put that out before the matinée there wouldn't have been a kid in the house. Take it from me, doctor, if there's anything in the world a kid hates it is a vamp movie, a sex-problem triangle, or a long love scene. I know. The surest way to kill a picture house is to run suggestive pictures for kids. If you want to ruin your kid trade just give 'em sex problems. It's sure-fire. They are wise little owls. They catch the posters first, and if they see any signs of mush stuff they are through for the day. Didn't you ever hear them give one of those long kissing scenes the razz?"

He shook his head and smiled.

"After that," he said, "I guess I will step in and see a little of it."

And what I told him was the truth. All this stuff about kids being lured to suggestive pictures gives me a pain. It's the older folks who fall for the lure. It's been more than a year now since I ran a sex picture in my house. I stopped simply because it was killing my trade, and I got my first hint from the kids. They have healthy minds and they want healthy stuff. Everybody does, for that matter, but older people are not so frank in expressing their tastes. If you will remember, a few years ago the woman vampires of literature were considered terrible things—things folks weren't supposed to talk about. Everybody talks about 'em now, and it's always good for a laugh.

Putting vampires in the pictures didn't even splinter a moral in my town, simply because the kids turned 'em into a joke. Kids even invented the word "vamp." I don't believe anybody ever took the vamps seriously.

But what I can't get into my head is where people get all these queer notions about kids and their morals. If Doctor Alton had just remembered himself as a youngster he would have been on. At heart kids are no different now than when we were all kids. Just think back a moment. Did you ever sneak around somewhere to read a sickening love novel when you were a boy? You did not. If you were like me you got off in the barn and read the daring deeds of Diamond Dick and Calamity Jane. I don't know quite so much about girls, but I do remember that they always wanted to play our games and we had a tough time slipping off from them.

Did you ever spend your own quarter to slip into the gallery of a theater to see a show with a lot of kissing and love stuff in it? No. You saved up your money for real he-stuff, like the minstrels and plays like Old Glory Betrayed and In the Cowboy's Cave. Remember how the peanut galleries were packed to see the daring hero batter down the door and shoot up the villain? Remember the laughs in MacFadden's Row of Flats and Humpty-Dumpty? Remember how we all applauded with hands and feet and shrill whistles when Little Nell staggered into the police station with the telltale message, and the heroic coppers, led by Lieutenant Fearnot, started to the rescue? Oh, boy!

Yes, and I'm going to tell you something else. If you weren't afraid of being undignified you'd go to see the same things to-day—if they had 'em.

Your kid is no different. I've watched him, and those are the things he—and she, too—wants to see in the movies. Did it ever occur to you that nickel novels began to die with the birth of the movies?

Doctor Alton came [illegible] box office, laughing [illegible]

"You were right. My [illegible] he said. "It's a regular [illegible] Family Robinson story [illegible] mit I was fooled. You [illegible] took me back a few years [illegible] those adventure stories [illegible]

"Of course you [illegible] Now come around here [illegible] a minute. I'll give you [illegible] thing—provided you [illegible]

Though we are both [illegible] he read something [illegible] eye, and came in expe[illegible] reached over in the [illegible] handed him a rolled-up [illegible] It was an old-fashioned [illegible] novel entitled Dick [illegible] The Road Agents of De[illegible] The minister smiled [illegible] tucked it in his pocket

"I used to read th[illegible] sometimes," he said [illegible] I'll look this one over

Since I've got a [illegible] it's kind of easy to [illegible] figure things out. [illegible] always like that with [illegible] ning a movie house [illegible] town has taught me a [illegible]

I never was much [illegible] young fellow. My mo[illegible] say I'd never get a re[illegible] lar job, simply because [illegible] take commonplace [illegible] ously. From her I inherited two [illegible] of the ridiculous ever to strike [illegible]

They first picked out a newspa[illegible] for me, but I got fired out of t[illegible] newspaper office for making [illegible] up type—did it on purpose to [illegible] could not resist the temptation [illegible] ing up the old editor's masterp[illegible] he wrote a long-winded boost[illegible] gressman in which he said "He[illegible] to the home town radiant with [illegible] I used an *s* instead of an *e* on t[illegible] It got in the paper that way.

Pioneer Days

After that I worked as mas[illegible] ery stable, but it didn't last [illegible] father, who died when I was [illegible] was a prominent man and ev[illegible] to help me along on his account [illegible] no use. They tried me in the [illegible] then gave me a job as notary [illegible] so it went. We had a big fire [illegible] ing it out I managed to [illegible] many years. I spent my life [illegible] the village and on weekly [illegible] York, about thirty miles away

I read extensively and [illegible] up on what was going on. [illegible] upon as a sort of ne'er-do-[illegible] distinct disappointment to [illegible] whole thing. I know now, [illegible] struck anything that really [illegible]

I was past forty, unmar[illegible] paratively happy when the [illegible] craze set in. I saw possibil[illegible] start. At that time, thou[illegible] regarded it as a sort of cu[illegible] a glorified magic-lantern [illegible]

A plumber started a mo[illegible] town and I was a regular [illegible] thing fascinated me. He [illegible] old shack into a theater, [illegible] ing about two hundred pe[illegible] place wasn't very inviting [illegible] every day. The audience [illegible] entirely of men and boys. [illegible] usual to see a woman at [illegible]

To attract passers-by [illegible] phonograph outside and [illegible] house was covered with [illegible] posters. Inside there was [illegible] floor, and an old nickel-in[illegible] tonk piano rattled from [illegible] night. It was enough to [illegible] the timid. Even so, the cro[illegible] good. I studied the thing [illegible] up my mind that this was [illegible] ness. I talked to Ben ab[illegible] out. He admitted he was [illegible] money as people thought, [illegible] hear to selling. His rent [illegible] a month and his picture [illegible] twenty-one dollars a week [illegible] five and ten cents admissi[illegible]

it is first necessary
e best plates—the
est lived plates.

And there is always *one best* of anything manufactured.

It is best—usually because the maker first realized the full importance of it, and next, specialized in manufacturing it.

PREST-O-PLATES For Long Life

Alert to the importance of plates, Prest-O-Lite has always made them the outstanding feature of Prest-O-Lite Batteries.

But not content with having superior plates, Prest-O-Lite experts went deep into the peculiar nature of plates, and produced Prest-O-Plates, a basic improvement in quality battery making.

What the thoroughbred is to commonbred, Prest-O-Plates are to ordinary plates.

They are bred, so to speak, to possess finer properties, and deliver finer performance.

They have a certain tenacious hardness, linked with the *utmost porosity* possible in a long lasting plate. The combination so eagerly sought by battery makers.

Prest-O-Plates reveal their two-fold value in a heat-resisting, non-buckling strength in hottest summer, and a ready reserve power in coldest winter.

PREST-O-LITE Best All-Weather Battery

Tried and tested from the Arctics to the Tropics, they have established Prest-O-Lite as the all-around, all-weather battery. The battery for all climates and all seasons.

Car owners may well select Prest-O-Lite Batteries on account of Prest-O-Plates alone.

But they may choose them, confident that every other part of the battery is par with Prest-O-Plates.

Secure in the certainty of quality and uniform product, Prest-O-Lite underwrites every Prest-O-Lite Battery with a liberal guaranty.

PREST-O-LITE'S Strong Guaranty

This is a specifically stated obligation, plus a policy that says the car owner must be pleased.

Prest-O-Plates, in themselves, hold forth the assurance of a better battery.

The name, *Prest-O-Lite*, guarantees it, and Prest-O-Lite Service carries it to complete fulfillment.

Select the Prest-O-Lite Battery. Prest-O-Lite Sales and Service Stations everywhere.

Look for the label

(Continued from Page 46)

I had about a thousand dollars that I could put my hands on, and I desired to do a little financing. I had some big ideas about what I'd do if I could get hold of a theater. I was determined to open up in opposition to Ben.

After many conferences I persuaded a friend in the real-estate business—he is rich now—to build a frame theater, seating about six hundred, and rent it to me for a term of three years at one hundred dollars a month. He owned a store on one side of the site and a vacant lot on the other, and figured that it would increase the value of his property. It did—about 400 per cent.

Ben heard about what I was doing, but didn't worry. He claimed there wasn't room for two movies and that he had the jump on me. Ninety per cent of the movies went broke in those days.

Anyway, I started. As Ben's pictures cost him only seven dollars each and he had a change three times a week, my idea was to get the real classy trade by putting on something expensive and using better judgment in selection. To begin with, I called my house the Elite. Ben's was the Nickelodeon.

While the building was going on I got in touch with the proper people for a picture service. There were two services, but, as I learned later, both were controlled by one head. There were a twenty-one-dollar service and a fifty-dollar one. Each would give me three changes a week and allow me to hold the Saturday pictures over for Sunday.

I was in for shocks and disappointments, and have been having them ever since. With everything ready for a start I engaged a boy to run the projecting machine for twelve and a half dollars a week. Then I engaged a young lady in town, who worked at the music store, to play the piano during the performances, for the same amount. I proposed to stay in the box office and take in the money myself. I had to be around, anyway, to see that everything was run right; besides I wanted to talk to the patrons. I wouldn't have a door tender at first, but would let the patrons walk right in after buying their tickets. My electric bill I figured would be about fifty dollars a month, which included lobby and entrance display. Later I would need heat, and that I figured to cost around fifty dollars a month. So, you see, with my pictures costing two hundred dollars, help one hundred dollars, heat and light one hundred dollars, and rent one hundred dollars, I had an overhead of five hundred dollars a month to start with. Later I had to get two ushers, who also worked as cleaners, and they cost me another hundred. No matter how I figured, it was bound to cost me about twenty dollars a day. Immediately I saw why Ben wasn't making so much money as people thought. It takes a lot of dimes and nickels to wipe out twenty dollars in a day. And I hadn't figured my salary at anything. To make money I'd have to pack the place.

Getting Started

I was in pretty deep but decided to go through with it. I've done many foolish things, but I was never accused of being a piker. With my staff engaged I went to New York—an hour's ride—to close the deal for my picture service.

"I'm going to run a high-class place," I said to a little squint-eyed man who came out to see me. He took me into his office.

"You want a fifty-dollar service, then," he said.

"That's the idea," I told him; "and I want to select my comedies very carefully."

"What do you mean—select?"

"Why, I think a theater manager ought to use a little more judgment about what to offer than my competitor does. Don't you?"

"Sure," he agreed; "but there ain't no such thing as selection for a hick house."

"No selection?"

"I should say not!" he explained. "Why, if every movie man could come in here and pick out his bill how do you think we'd ever get 'em all around?"

"Then you make up these bills to suit yourself, and we've got to take 'em—sight unseen?"

"That's the general idea. But we've got a coupla guys back here that's pretty good pickers. They'll give you somethin' to knock 'em dead."

"Somehow I don't like that," I said.

"Well, friend, that's what you'll have to take, whether you like it or not. You ain't runnin' the Metropolitan Opera House, you know."

"About what will I get for fifty dollars?" I asked. I didn't like this fellow at all. I think I must have shown it.

"Oh, a world's news feature, a coupla trick comedies, and maybe a prairie rescue—oh, the stuff'll get you by all right. Your fillums will all be first runners, and clear. The twenty-one-dollar-a-week fellows run seconds—fillums that's old and chipped. There's some snappy French-girl stuff coming over soon."

There being no competitive service I was helpless. It made me sick.

"Oh, all right," I surrendered. "Start me off for a week from next Saturday." I got up to leave.

"How about the dough?" he asked.

"Oh, that'll be all right."

"How do we know it'll be all right? Guess you'd better leave half payment in advance. That's the rule. We make some of 'em pay in full before turning a hand."

In those days there was no such thing as a picture that ran more than one reel. We had no regular plays, as we do nowadays. Stars had not been heard of. Regular actors scoffed at the movies.

The so-called comedies consisted mainly of Frenchmen jumping out of second-story windows and falling to pieces. Then the parts would run back together again by a camera trick. I never knew now they did that, but it was considered great stuff. After that the comedians would start running down the street, gathering a crowd as they went, and knocking over fruit stands, apple carts, ash cans, baby carriages, and so on. The American comedies had pie throwing from the start, and, strangely enough, it's good stuff to-day. I used to wonder why the French pictures didn't have pie throwing, but I learned that they don't have pies in France. As a result they missed a lot of comedy. The American slapstick boys then began to invent mechanical tricks with automobiles and other forms of machinery. They gradually dug up so many new forms of rough stuff that the old-fashioned French comedies—the pioneers—became *passé*.

Close Figuring

That is the kind of stuff that I had to offer in what I thought was going to be a movie of class.

The first night, the formal opening, I had four hundred dime customers. Forty dollars for a single performance made the prospects look a little rosy. In a few days, though, it began to die down. I caught Ben's man counting my house one afternoon, and I promptly sent a boy over to count his. I had thirty dime customers and fifty-one kids at a nickel. Ben had a total of eighteen, ten at a nickel a head. Somebody was going broke; I could see that.

At the end of three weeks I was able to get a pretty good line on my house. It was costing a little more than twenty dollars a day and I was running but one afternoon and one night performance. This meant of course that I would have to have a little more than two hundred dime patrons or four hundred nickel fellows to break even. And I wasn't getting anything like that!

We then inaugurated the system, used in nearly all movies to-day, of giving two afternoon and two night performances. It didn't work so well at first, due to the crowd refusing to leave after the first performance to make room for newcomers. In time, though, they got used to it.

To boost up the business I put on a bill of cheap vaudeville Saturday nights. That was the worst thing I ever did. People would rather see a poor picture than a poor vaudeville act. It cheapened the tone of my house—already dirt cheap—and I was farther than ever from the high-class trade. I simply couldn't get the women to come. I found that they couldn't stand the loud language and disorderly conduct of the boys. This was a dilemma. If I got rid of the boys I might not have any trade at all.

In the meantime Ben's house went flooey. His failure helped me some, but I was still on a losing basis.

A change for the better started when we began to get two-reel pictures. Each of these had a sort of story, worked out in a crude way. They began to interest the women. The brightest spot in [illegible] as a movie manager was when [illegible] stopped at the box office one [illegible] that they had enjoyed a picture [illegible] the story was so interesting. They [illegible] viously read it in a magazine, [illegible]

I urged the distributing [illegible] some more of that kind, but [illegible] was one of annoyance. I got [illegible] to them, and by degrees we [illegible] pictures.

By this time I had to hire a [illegible] go through the audience and [illegible] quiet. My great problem was [illegible] from eating peanuts. The [illegible] got on the ladies' nerves, and [illegible] noise as patrons walked on [illegible] nut shells was an added objection [illegible] to sweep out twice a day.

Keeping the Boys in [illegible]

The climax came, though, [illegible] mer, a boatman, stopped at the [illegible] suggest that I put in a few cusp[illegible] couldn't enjoy a picture, he said, [illegible] chewing tobacco. Others must [illegible] the same idea of enjoyment, [illegible] so particular about cuspidors. [illegible] a more serious problem than [illegible] imagine.

After thinking it over I [illegible] printed sign in the lobby:

TOBACCO CHEWING AND PEANUT
ANNOY LADIES
MAYBE YOU HAVE FORGOTTEN

It didn't bring about complete [illegible] but we could notice an improvement. [illegible] stop the rowdy conduct of boys [illegible] been a stickler. If I had been [illegible] this task would have been impossible.

In my theater I have seen the [illegible] lows grow up from babyhood. [illegible] know that I know all about them, [illegible] not want to appear badly in my [illegible] cause I know their families. Boys [illegible] to be watched constantly. I have [illegible] my ushers to pick the rowdy ones [illegible] reprimand them by name. Those [illegible] brought to me I give them a severe [illegible] Often I bar them from the theater [illegible] porarily, and that is considered a [illegible] disgrace. My office is frequently [illegible] juvenile court.

My favorite method of impressing [illegible] little fellows is to take them into [illegible] call up an imaginary judge on the [illegible] and lay the whole case before him, [illegible] ask for instructions. Whether [illegible] ment from the theater or a trip [illegible] parents, I repeat these imaginary [illegible] rulings to the little culprits. Their [illegible] and frightened faces always move [illegible] pity, but I have to force myself [illegible] deadly serious.

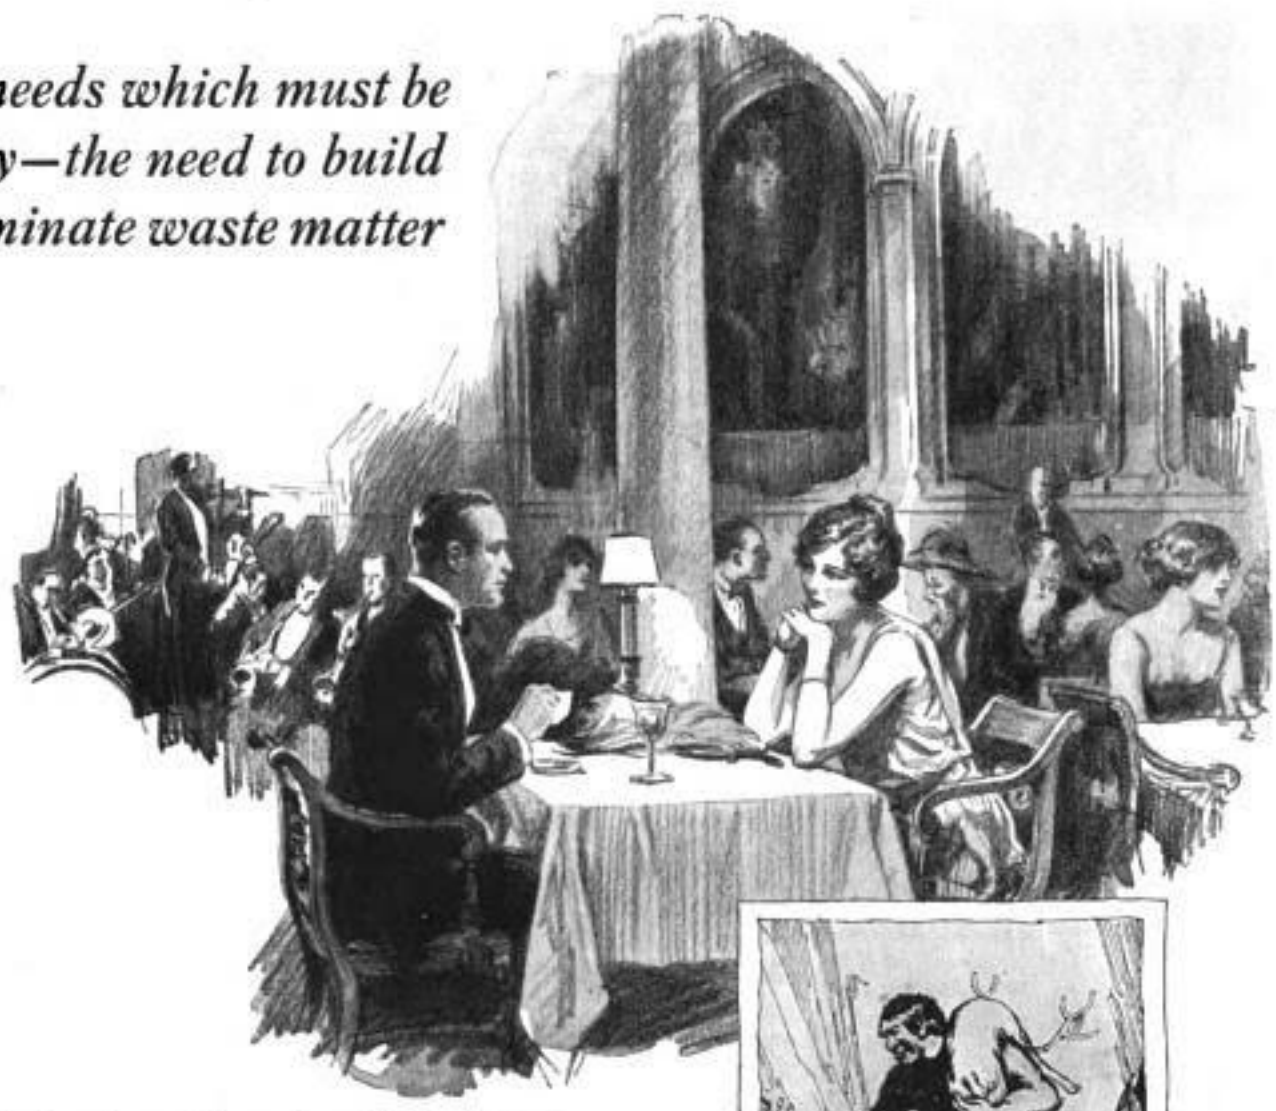
The main crimes committed [illegible] youthful theatergoers are yelling [illegible] ing their feet, booing the lovers, [illegible] peanuts, throwing candy and [illegible] at each other, and putting chewing [illegible] the seats. Another favorite sport [illegible] at the pianist, who occasionally [illegible] mistake of trying to correct the [illegible]

Not long ago a bright-eyed [illegible] boy was caught in the act of [illegible] ing gum where he knew some [illegible] ing to sit. A few minutes before [illegible] tacked one girl's hair to the back [illegible] in front of him. Children of [illegible] entage are more easily frightened [illegible] imaginary conversations with [illegible] are the American boys. This [illegible] was a handsome, happy-faced [illegible] His eyes fairly twinkled with [illegible] One couldn't help liking him. [illegible] ribly mischievous, though, that [illegible] had to be done or I should lose [illegible] patrons.

When the boy came into my [illegible] the usher, his big brown eyes [illegible] ened look. Someone was using [illegible] phone and I could not call up the [illegible] judge. In a very solemn voice [illegible] the little fellow, putting great [illegible] every word. Then I decided [illegible] scheme.

"Now, young man," I said, [illegible] the crime, "I want you to go [illegible] the judge's office"—the village [illegible] trate—"and tell him just what [illegible] done. Tell him the truth just [illegible] told me. Then ask him to put [illegible] tence on you."

The boy, I figured, would [illegible] just as soon as he got out of my [illegible] way, the scare would be beaten.



Three-quarters of an hour [illegible] terrupted by a little boy who [illegible]

Fleischmann's Yeast—a natural corrective food

Because Fleischmann's Yeast is a fresh food it does for you naturally and permanently what drugs, with merely temporary effect, can never do. One cake of Fleischmann's Yeast gives you ten times the amount of yeast-vitamin found in most so-called yeast-vitamin preparations to which drugs have been added. Be sure you get Fleischmann's fresh yeast. Do not be misled by substitutes.

(Continued from Page 48)

into my office—an unusual occurrence. I had forgotten all about my instructions to the little Italian, and looked up, surprised. But, sure enough, here he was.

"Mister, I went and waited," he announced tearfully, "but de judge he don't come."

"You mean you have been at the judge's office all this time?"

"Yes, mister, but he won't come." He was about to cry. "Can I go home now?"

Of course I couldn't hug that little shaver, but I felt like it. I told him he could go on probation. The incident had a very salutary effect in his neighborhood of foreigners.

I didn't make any money for three years, but I held on. I knew the business would be standardized or systematized sooner or later, and I was patient. Visits to the film-distributing company had taught me that the trouble was with the type of men at the head. An enormous industry had grown up over their heads and it was of such proportions that they couldn't see it.

The tide turned very suddenly for me. It turned with one little incident. For some time I had been reading of the invention of a moving picture that talked. Articles in the trade papers told of a man's having succeeded in synchronizing a phonograph with a picture machine so that the voice and the action would be simultaneous. The thing was finally put on the market and an expert came out to see me about putting on a talking picture in my house.

I am a gambler at heart, and decided to take a chance. It would be expensive, though. The talking-picture man demanded half the gross receipts. A special man was sent out to rig up the attachment and instruct my boy in the projecting room how to use it. I advertised the novelty extensively and got everybody in the village talking about it a week in advance.

At the first performance the house was packed. Women of all classes had come in numbers, and I even noticed the presence of leading business men for the first time. At last, I gloated, I had turned the trick.

The voices on the phonograph were those of a man and a woman, each taking all the male or female voices. Of course these tinpanny voices didn't sound natural and true, but they worked—at first. I walked about the house, convinced that the future of pictures was the talking screen.

A Costly Experiment

The two machines were synchronized perfectly; so perfectly that in the first scene the effect was uncanny. Even if it didn't sound real it was interesting.

Suddenly a titter ran over the audience. Then another. I stepped in from the box office to see what was the matter. In a few minutes the crowd was rocking with laughter. The screen showed a love scene in a kitchen. The hero had just taken the heroine into his arms, but the talk didn't fit. The girl released herself and went over to the stove to take out a pan of biscuits. As she did so the voice of the man was saying "Look at me again, darling."

Instead of looking at him she was touching the hot biscuits with the tip of her fingers, and evidently had burned her hand.

"My hero," the phonograph said for her, "I could look into your eyes forever. Oh, let me run and look after the biscuits." But she already had looked at the biscuits and the hero was now tying his shoe.

The film had been damaged and in repairing it they had cut it and pasted the ends together, but something had slipped. The loss of inches was not compensated for in the phonograph and it went right on talking a full minute behind the action of the picture. Later on there had been another cut and the thing got worse. It looked like a good bet that the picture would beat the phonograph to the finish by two or three minutes.

The people never enjoyed a show so much in their lives. But they were giving the picture the razz. No business can stand ridicule. I writhed in mortification. On top of this fiasco I had to pay the man 50 per cent. My profits were no greater than if I had run my regular bill with an ordinary crowd.

The talking picture, as a new idea, died a quick death. The trouble I had was typical. Something always came up to spoil the synchronization. Besides, the monotonous voices grew extremely tiresome after the novelty had worn off.

The next day I had several complaints from ladies whose skirts had been ruined by wads of chewing gum stuck on the seats. By the way, I have had so many cases of this kind that I have learned to tell them that benzine will take chewing gum out of a garment instantly.

That might be a tip for some ladies who don't know it.

The big crowd also had brought in some new peanut and tobacco offenders. The wife of one of my neighbors told me she was so annoyed that she couldn't even enjoy the hilarious fun of my talking picture. This was pretty tough luck. At last I had got the women to my theater, only to lose them through the bad manners of my regular audience.

One of the habitual peanut eaters passed my place the next morning and was pointed out to me by an usher. I knew the young fellow very well and hailed him.

"Say," I said to him, "why do you persist in eating peanuts in my theater when you ought to know it annoys others?"

"Never thought of it," he said. "Forgot to read your sign."

"You may not know it," I informed him, "but you and the other peanut eaters are going to cost me a lot of money."

That seemed to surprise him.

"If folks can't stand a little thing like that they ought to stay out of the movies," he retorted. He was not at all apologetic.

"You don't eat peanuts and scatter the shells around when you visit people's houses, do you?"

"Of course not. I don't eat 'em in church, either. But I do in a circus."

"Well, my theater isn't a circus, you know."

"It was last night."

The First Five-Reeler

The young man was inclined to be a smart-Aleck. I gave up trying to appeal to his sense of politeness, but he had given me an idea.

Right then I recognized forcibly a truth that has been of much value to me in the last few years. To make a man or boy act like a gentleman, as a rule, treat him as if you thought him one. I was going to make these thoughtless peanut and tobacco eaters feel as though they were in somebody's parlor or in a church when they came to my movie. My plan at that moment was to install an organ instead of a piano, but a big thing happened unexpectedly, and I didn't carry out that part of my scheme for a long time.

For some time the producers had been talking of wonderful five-reel pictures. Two days after my interview with the peanut eater I was notified that a great feature picture had been completed with a famous grand-opera singer as star. It was the screening of one of the classic novels at enormous expense, a hundred thousand dollars; some of them cost a quarter of a million now.

Knowing my willingness to try out new ideas they had invited me to come to New York to see an advance showing of the film, with a view to leasing it for a run in my house.

Never before had a star of international fame appeared in a movie. I was eager to see it. Already I had made up my mind to show that five-reeler if the price was anywhere near within reason.

The time had come when movie men would be able to select their own attractions. This was a starter, and I flatter myself I saw it quickly.

I went to New York full of enthusiasm, and was not disappointed. The picture was a wonderful piece of work for those days. They quoted me a price of one hundred dollars for two days or one hundred and twenty for three days. I jumped at the three-day offer. The bigger movie theaters just beginning to operate on Broadway had to pay more. But of course they would get the first crack at it.

The big picture was to run on Broadway for a week before being sent out, just as they do new plays. I was promised it in three weeks.

Now was the chance to try out the scheme suggested to me by the attitude of the peanut eater—a way to make my rough customers act like gentlemen. I couldn't have hoped for a better combination of circumstances.

First, though, I took pains to see that my master picture was well advertised. After hanging out a big sign I went to the editor of the local weekly and got him to write a piece explaining that our town would be the first village outside of New York to exhibit this wonderful work of dramatic ar... took the attitude that it was a tri... showmanship on my part, but fully as ... an honor to the town as to the thea... helped him a little.

They Tempt the Whole Family to be Neat with Trash

Nothing is more discouraging (as every woman knows) about keeping a home neat than the eternal "picking things up." Odd pieces of trash tossed carelessly on tables, chairs or floors; a crumpled newspaper, an empty package, scraps of lint or string, a cigar band, children's bits of cloth or paper—there's no end to the discarded things which are just dropped or laid about to be picked up and thrown away.

Sometimes it's just thoughtlessness, but more often it's simply the lack of a trash basket conveniently placed wherever trash accumulates. The whole family would welcome a handy Vul-Cot Basket in each room as the easiest place to "throw things."

And more housewives would have had these convenient places for trash long before, had they known just where to get the right kind of baskets. Now there is an absolutely new and different line of Vul-Cot receptacles to meet this need.

Office men, and business men in general, have long known Vul-Cot Baskets. Made of vulcanized fibre, they withstand the roughest possible usage—they can't dent or rust like a metal basket—they can't break like a wicker basket. They can't chip or crack like an enameled basket; nor can bits of paper and other trash sift through Vul-Cots, because sides and bottom are solid.

This new line of Vul-Cots for the home has all those advantages and in addition is now made with a very attractive basket-weave design stamped right into the fibre, and finished in three colors which perfectly harmonize with any of your furniture—a rich brown and deep green for general use, and light colors appropriate with white enamel of bath and kitchen. The new sizes also are most convenient:—a smaller basket for the living room and bed room, a large one for the kitchen, and a roomy clothes hamper.

Attached to every Vul-Cot is an absolute guarantee to replace any basket that fails in normal service in five years.

Your favorite department store or house-furnishings store should now have Vul-Cots in stock. If for some reason you can't get Vul-Cots in your neighborhood, write us at once, giving us the name of your dealer, and we will see that you are supplied.

An interesting color-booklet illustrates all of the Vul-Cots; gives sizes and many suggestions of their helpfulness to you. We'll be glad to mail you a free copy. Just ask for it on a postal.

The pass- s bound to come because st sight of the public's d is, a big advantage to ie to offer, but it becomes to the theater and to the ad, in other words, if the . The story is what one to tell another. Poor material blots out a star very quickly. When the eggs are no longer golden the goose is dead.

I have found that the screening of any well-known old book—a story that everybody has heard of—always draws well. For instance, stories of similar prominence to Oliver Twist, Les Miserables, Enoch Arden, Ivanhoe, Rip Van Winkle—books that school children are taught to know as classics—are sure-fire. A lot of people have talked about these classics but never have read them. It's less trouble to see them in the movies than to read them.

This drawing power of famous works is pretty good proof to me that the story counts more than the star in the long run. And the evident desire to see stories of recognized merit convinces me that people—in a small town, anyway—never did want to see the cheap triangular sex problems or suggestive pictures. They came to the movies because the star was advertised and because there was nothing else to see.

I listen very carefully to what people say going out of the theater, and I also ask them to send in written suggestions. Very seldom have I heard anybody speak a good word for one of those suggestive pictures, or express a desire to have them put on. For a long time the market was surfeited with vamp and sex stuff, and we simply couldn't get anything else. I had to use them. Understand me, I had no particular moral scruples against the sex-problem pictures. Perhaps, though, I should have had. I objected to them for business reasons, purely and simply. I also understand how pictures of that nature might go well in some Broadway houses, and still be offensive to our village.

After seeing a suggestive picture young ladies and their escorts are deprived of something to discuss after the show. Neither can they talk about the story around the dinner table at home. That hurts my business. Children quickly spot a picture of that kind and tell their mothers. As a result they don't go. They are the best censors in the world.

The vamp pictures, of course, were a joke. I don't believe anybody ever took them seriously. Little girls eight and ten years old joke each other about being vamps. The real, suggestive idea of the picture never reached them at all. With older people all that leopard-skin covering and eye-rolling stuff was so ridiculous as to be laughable. Often I have had to stop the running of one of the reels until I could quiet the little boys and persuade them not to give the picture the razz, as they call it.

Bad Taste Reflected

Give the same little girls, little boys and old people a simple, sweet, wholesome love story and they will eat it up. They all like rural stuff.

Naturally, one will ask: "Well, if nobody wanted to see the sex pictures why did they produce them?"

I may be wrong, but I think I know. At the beginning the picture business was in the hands of many ignorant, stupid men whose one idea was to make money quickly and who were carried away with success. They knew nothing of the wholesome life outside of Broadway places. The picture business gave them money to throw around in those places for the first time in their lives. Their ideas of enjoyment were coarse and vulgar. They knew nothing about the rest of the country, but had an idea that other people liked what they did. This kind of taste was quickly reflected in their products. The cure set in when the public began to discriminate. That type of movie man is passing out and some of the bigger producing companies are now directed by men with broader vision. There are still many who won't wake up until they are broke.

Though we have a free hand now in selection, the picking business is still no easy job. For instance, I change my bill every day. That means that I must have seven feature pictures and a like number of comedies and news or educational features every week. I could save a lot of money by running pictures two days, but it does not pay in the long run.

My bill at present costs me about four hundred dollars a week. Our admission fee ordinarily is twenty-two cents, including war tax. On special occasions we charge twenty-seven. Now consider the running expenses—they have doubled since I started—and you will see that we have to keep the house crowded to make any money. I am now building a larger one.

A great step toward better pictures and toward giving us little fellows a standard was the establishment in New York of a first-class theater for presenting the highest grade of new pictures. With the opening of this theater came the motion-picture critic. The newspaper criticisms of pictures, I believe, are of much more practical benefit to outside towns than are the criticisms of regular dramatic shows. Outside of the daily receipts and occasional suggestions from patrons, the criticisms are the only thing I have for guidance in selecting attractions to please my people. I keep a careful index of these newspaper notices, so as to be prepared when the salesman comes around.

If a picture makes an unusual hit I go to see it. I have made some ten-strikes this way, giving my people a sensational production within a week or so of its New York opening. Of course it would be impossible for me to see all my stuff in advance. That's where I rely on the criticisms.

An Old Lady's Criticism

A few months ago I saw where some concern was about to produce a screen version of a well-known, old-fashioned rural play. It is a sweet, wholesome story of old folks and young people in a small town—most all of you saw it when you were young. I went to the New York opening. There wasn't a low-necked gown or a leg showing throughout the picture. It was wonderful. Even the so-called wise crowd in New York ate it up.

To run this picture cost me two hundred dollars for two days. It was a pretty stiff price, but I took a chance. I figured it well worth while holding over for a second day. It was necessary to raise my prices to thirty cents, including war tax. Apparently nobody objected. I ran the picture eight times in the two days, and had to turn people away at each presentation. Mind you, this in a town of less than four thousand!

An old lady, an acquaintance since my boyhood, stopped on the way out to tell me how much she had enjoyed the picture.

"I guess that's the kind they like to see, isn't it?" I asked.

"Oh, yes," she said; "such a relief after all the vamps."

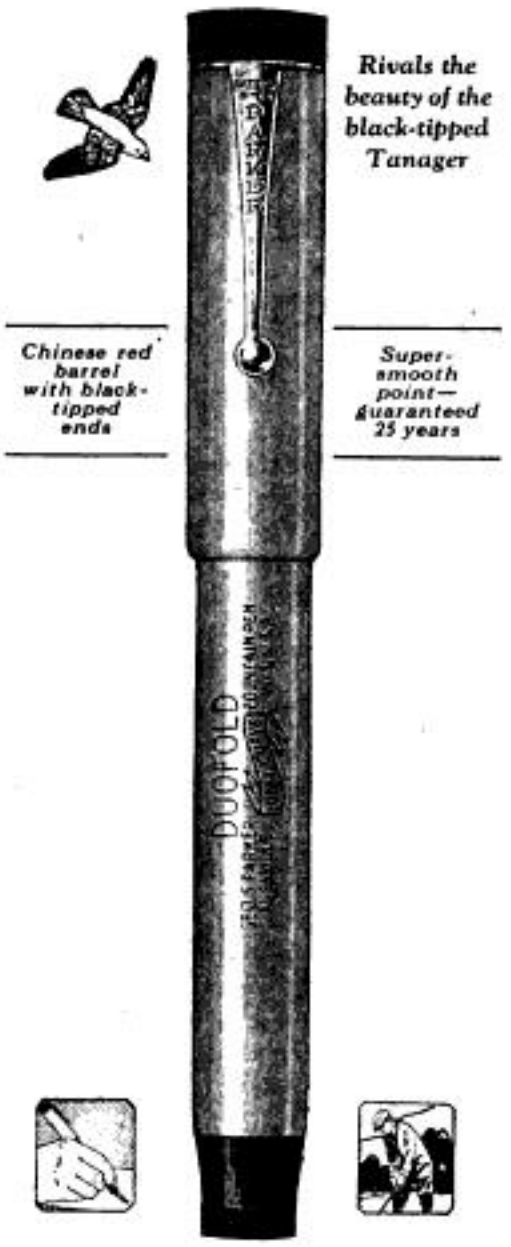
This old lady never missed a show—took in vamps, sex triangles and everything. She had occupied the same seat for two years.

"How do you explain that?" I asked, anxious to draw her out.

"I reckon you know," she said. "You stood right back of me, and"—she poked at me with her parasol—"I saw you wipe your eyes and blow your nose when the old farmer found his missing boy on the church steps."

"It did take us back some, didn't it?"

"Don't you know," she went on, "that all girls and boys who go to a theater want to imagine themselves as the girl and boy in the picture? Yes, and we old folks love to forget where we are and imagine ourselves like the old folks that's sitting there in the play taking part."



It looked as if she had the real answer.

"And," she asked, "how on earth is an old woman like me going to imagine herself the mother of a vamp, and enjoy it? How's a nice girl going to imagine herself sittin' there on a lounge in a leopard robe, looking wall-eyed at some fool man?"

I had to laugh.

"Young man, they simply can't do it, that's all. Because it ain't so!"

Hands Crave this Over-size Pen

as they crave a balanced golf stick

NO ONE more appreciates the new Parker Duofold than men and women who play golf. The moment you grasp its over-size barrel your hand responds to that unmistakable feel that means business. Its fit, weight and balance produce a thrill akin to the pleasure of gripping your favorite club. It holds nearly twice the ink of the ordinary pen. And its lacquer-like beauty captivates all eyes.

The Duofold point of native Iridium needs no "breaking in." It's as smooth and life-enduring as a hard jewel bearing. And we guarantee it 25 years for wear and mechanical perfection.

This is the pen that Geo. S. Parker, inventor of the leakproof "Lucky Curve," perfected through 30 years of infinite pains. Money can buy fancier mountings, but the world contains no other writing instrument like this. Its popularity has made a stir in the fountain pen business unlike anything known before. People pronounce it "handsomer than gold."

Get one at any good pen counter. If your dealer has not received his supply give him your order subject to your approval after 30 Days' Trial. Or write us, giving your dealer's name.

Have you a friend who is a printer?

If you haven't, you may sometimes feel that printers are a cantankerous lot, whose chief business is keeping you from having the kind of printing you think you want.

But if you know a printer *well*, you can testify to a keen, marrowy man; a man of agile intellect and sound instinct in matters of taste.

There's something in the tradition of the art of Bodoni and Ben Franklin that attracts and holds that sort of man.

We firmly believe that it is because printers *are* like this that Old Hampshire Bond is so well known. For longer than we can remember, printers and Old Hampshire Bond have had a strong affinity—it just seems as though they get on together naturally and with mutual respect.

Printers buy almost all of the Old Hampshire Bond that is made. They buy it to make into business letterheads which they design and print and sell to their customers everywhere.

We have never met a printer who did not appreciate this fine paper and recommend it whenever he was called on to supply business stationery of character and distinction. And if you have acquired wisdom in printing matters, you will take his say-so as the dictum of the man who knows, and use Old Hampshire Bond for *your* letterheads.

For printers and business men interested in fine paper, we have some interesting samples, which we shall gladly send to all who write on their business letterheads.

Big Towns and Little One

By J. R. Sprague

ALL that morning in the Pullman smoking compartment the conversation had hinged on a series of very important questions, to wit: If you were going to start in business where would you go? Is it easier to make a living in one place than in another? Would you tackle a big town or a small one, and why?

All sorts of opinions were offered. A New England man said he believed it was much easier to get along in the West, where there is not so much competition in every line. An Idaho man discredited this by affirming that if a man wanted to make money he ought to go after it in the East, where there is so much more capital.

Everyone present had something to say on the comparative advantages of big towns and little ones. The merchant from Arkansas said he had done all right in a small town, but if he had to do it over again he believed he would tackle a big-league city. Another speaker held to the idea that a small town is best, because a man can get quicker action; in the big cities, he maintained, it takes too long to get a start. As we neared the station where I had to get off the determined-looking man who had held the seat next the window against all comers for four hours was giving his opinion.

"Before you go to any town, big or little," he said decidedly, "the main thing is to find out whether you fit the place. Lots of men are just grubbing along in big cities who would do better in small towns. And there are men in small towns who ought to be in big ones. It's a case of temperament."

The Young Merchant's Story

The determined man's words were still ringing in my ears when I got off the train and was whisked to the leading hotel by an enterprising jitneyman at cost of twenty-five cents. The town was a nice-looking place of perhaps six thousand people, the business district centering about a public square with the courthouse in the middle. Retail stores clustered about the four sides of the square, with a sprinkling of farm wagons and automobiles drawn up at their fronts. A low-swung machine, painted yellow, with two large extra tires on its rear, and operated by a boy who sat on the small of his back, kept popping into the square from side streets, only to race rapidly around the business district and to pop out again. I did not need to be told that he was the son of the town's richest man, home on a vacation.

Occupying a strategic location at one corner of the square, next to the moving-picture house, was a particularly nice-looking retail store. Its single big show window was attractive with merchandise displayed on a background of unfaded crêpe paper. Warm human interest was injected into the window display by a life-sized cardboard girl, very pretty, who bent over some salable articles in an attitude of admiration. Such an attractive store could hardly be passed up; I invented some trifling want and stepped inside.

The proprietor himself came forward to wait on me, as was indeed necessary, because the only other salesperson in the place was a somewhat ineffectual-looking boy of fifteen who was on a high stepladder cleaning the electric-light globes. The merchant was a good-looking man of perhaps thirty-two, with affable manners and the insignia of three different lodges pinned on his left coat lapel. After I had made my purchase I stuck around a little with the idea of getting into conversation, and began by remarking that it certainly was a nice store for the size of the town.

He appeared pleased at this praise coming from a total stranger, and replied that he always tried to keep what the public wanted. But he modestly disclaimed the notion that his store was any too good for the size of the town. It was merely up to date, he said. The conversation thus pleasantly opened finally led to the point about which I had been thinking.

"Wouldn't you do better," I suggested, "if you should locate in some big city? Running your business so efficiently, it seems to me that you ought to go where there are more people. If you were in a city of two or three hundred thousand population you would have fifty chances to make sales where you have one here."

If my remark was intended to stimulate him by visions of possible big-town prosperity it failed of its mission. He merely shook his head.

"I know when I'm well off," he remarked. "I'm not cut out for a big city. I belong right here."

Merely for the sake of argument I countered by saying that no one knows what he can do until he has tried it, but the young merchant blew up this argument with a single shot.

"I tried the big-league stuff once," he said briefly, "and it didn't work. It just about ruined me."

During the next two or three days I got the young merchant's story, partly from him and partly from other business men of the town. He had, it seems, been brought up in the community, clerking in the very store over which he now presided as owner. He saved up a little money, had a little more left him, and at twenty-four bought it from his boss, who wanted to retire.

Under his ownership the enterprise did very well indeed. He knew everyone in town and the farmers' families as well for ten miles around. He belonged to the chamber of commerce and several lodges, but in no way let these things interfere with business. He did his social work at night and attended strictly to his job during the day. When he was twenty-six he got married.

People began to remark what an efficient business man he was. Whenever a stranger would come to town with an idea of locating in the community the secretary of the chamber of commerce invariably brought him into the store to prove that the town's retail establishments were second to none. Traveling salesmen, too, showered many compliments on the young merchant, particularly when they wanted to get him to buy a good bunch of their stuff.

These things began to have an effect on him. He got to the point where he began to suspect that he was just a little too strong for his home town. A hundred miles away is a city of a quarter of a million population, and on his occasional trips there the young merchant looked critically at the stores along the busy streets, mentally making comparisons and being led to the inevitable conclusion that no merchant in the city had anything on him.

Pulling Up Stakes

After one of these trips he went home and talked matters over with his wife. Why should they stay in the poky home town, he argued, when by moving up to the city he would have a chance to do twenty times as much business? He was not in the least afraid to match his ability against any man he knew there.

His wife thoroughly agreed with him in everything he said. She had unbounded faith in his ability, and, besides, from a woman's standpoint the idea of city life had its attractions. The two picture shows of the home town compared feebly with the big-city palaces of amusement with their regular orchestras, electric signs and girl ushers in military-looking uniforms. The Sunday papers of the city, too, carried whole pages of news about receptions, parties and after-theater suppers. The upshot of the whole thing was that when a man came along and offered the young merchant a good price for his business he sold out, lock, stock and barrel. Then, foot loose and with money in bank, he went up to the city to tackle big-league conditions.

He confesses that he had a different feeling when he arrived in the city on this occasion from any he had ever had before. On his former trips he had looked upon it merely as a pleasant playground, and the livelier it looked the better he liked it. But now, as he and his wife took a taxicab and made their way through the busy streets toward their hotel, the bigness of the place rather appalled him. It was not a playground this time, but a citadel which had to be stormed. The big business [illegible] which lined the downtown district [illegible] strong and energetic contestants who [illegible] terests lay in crushing the efforts of [illegible] tious newcomers. The whole affair [illegible] more serious aspect than had occurred [illegible] him when he had optimistically [illegible] his mind to quit the home town [illegible] before.

Nevertheless, he had made his bow [illegible] could not back out. He had a [illegible] shock when he started out to find [illegible] quarters in which to open up his [illegible] In the home town he had paid fifty [illegible] a month rent; in the city the same [illegible] quarters brought five hundred [illegible] month. That was the regular [illegible] rental agent told him, and if he [illegible] want to pay it someone else would [illegible] shut his eyes and signed a lease [illegible] figure, securing a really good location [illegible] the main business section. He [illegible] place up in attractive fashion, got [illegible] merchandise and opened up for [illegible]

A Staggering Overhead

He got another little shock in connection with his formal opening. He felt [illegible] ought to buy some newspaper [illegible] in connection with the event, and [illegible] down to one of the newspaper offices [illegible] see about an advertising contract [illegible] was startled to learn that the price [illegible] licity was a dollar and a half an inch [illegible] space sufficiently large to make [illegible] of showing he would have to pay [illegible] fifty dollars for a single advertisement [illegible] There were three newspapers in the city [illegible] it meant a hundred and fifty dollars [illegible] to tell the people that a new store [illegible] was being launched in their midst. In the [illegible] old home town one could buy a full [illegible] page in the local newspaper for [illegible] dollars and have a news story thrown in [illegible] free!

Other expenses of operating a business, the young merchant found [illegible] heavy in proportion. Crêpe-paper [illegible] decorations would hardly do [illegible] around him other merchants were [illegible] velvet. People would not buy unless [illegible] carry the packages home themselves [illegible] they did in the small town; [illegible] lishments maintained delivery service [illegible] he had to do the same or lose [illegible] The store porter, even, had to [illegible] up in a cap and blue uniform to [illegible] appearances suitable to the establishment [illegible]

All these things disarranged the [illegible] merchant's plans. He had figured [illegible] ning his establishment very economically [illegible] until he should have built up a [illegible] trade; he had the idea of doing [illegible] the selling himself, keeping only [illegible] of cheap assistants to help with [illegible] But it became manifest that such [illegible] would not work. His overhead charges [illegible] were so great that he could [illegible] of his own efforts sell enough [illegible] to keep things going, even to [illegible] wait on customers steadily [illegible] time until closing. Cheap help [illegible] worse than none at all. He [illegible] must organize an efficient force [illegible] It was hopeless to think that [illegible] unaided efforts he could produce [illegible] pay the cost of running the [illegible]

Right here was where the [illegible] chant fell down. He had no [illegible] organization. It was easy enough [illegible] men, but another thing to have [illegible] they would pay a profit. In the [illegible] he had never been trained [illegible] of labor other than to direct [illegible] of the series of half-grown boys [illegible] been his casual assistants. In [illegible] enterprise he was on strange [illegible] he employed mature men [illegible] paid salaries of forty or fifty dollars [illegible] To be frank about it, he was afraid [illegible] of his high-priced help.

This matter of his being afraid [illegible] help was probably due to the fact [illegible] young merchant was naturally a [illegible] bashful person. Especially he [illegible] have anything disagreeable occur [illegible] relations with other people, and [illegible] long way to avoid a clash [illegible] This tinge of bashfulness probably [illegible] him a more agreeable companion [illegible] but it was disastrous from the [illegible] of handling employes.

Shall They Suffer

As you did from film on teeth?

'SODENT is largely for the coming :neration. It brings to adults whiter new protection. But to children it a new dental era.

· teeth, perhaps, have always been ated, save right after dental cleaning. iter has been dimmed by film. Film ised decay, no doubt, despite your rushing.

dental authorities urge you to fight bove all, have your children fight it this scientific way.

How troubles come

rn science traces most tooth troubles —to that viscous film you feel. It teeth, enters crevices and stays.

t removed it forms a constant Millions of teeth are made dingy l millions of teeth are ruined.

and day that clinging film threat- ige to the teeth. So able men have seeking a daily film remover.

Makes teeth dingy

)sorbs stains, making the teeth look ilm is the basis of tartar. It holds :tance which ferments and forms iolds the acid in contact with the ause decay.

breed by millions in it. They, with tartar, are the chief cause of many troubles, local and internal.

Dental science has for years been seeking a way to daily combat that film. It is the teeth's great enemy.

Two ways now found

Two effective film combatants have been found. Able authorities have subjected them to many careful tests. Dental science now approves them, and leading dentists, here and abroad, urge their daily use.

A new-day tooth paste has been perfected, complying with modern requirements. It is called Pepsodent. And these two film-combating methods are embodied in it.

Also starch deposits

Starch deposits also attack teeth. In fermenting they form acids.

Nature puts a starch digestant in the saliva. It puts alkalis there to neutralize the acids.

Pepsodent multiplies that starch digestant, also the alkalinity. Thus Nature's teeth-protecting forces are multiplied.

Thus twice a day, in all these ways, Pepsodent combats the enemies of teeth.

Millions of people now use Pepsodent, largely by dental advice. Anyone who once employs it can see and feel its need.

Watch the added beauty

Send the coupon for a ten-day test. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

The lasting benefits appear more slowly. But all who love clean, glistening teeth will see effects at once. And the book we send explains the reasons for them.

The glistening teeth you see everywhere now are largely due to Pepsodent. Learn how you can attain them. Cut out the coupon now.

Pepsodent PAT. OFF. REG. U. S.

The New-Day Dentifrice

The scientific film combatant, approved by modern authorities and now advised by leading dentists everywhere. Each use brings five desired effects. All druggists supply the large tubes.

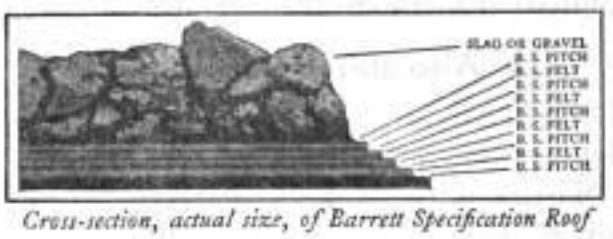
And Now— The Barrett Specification Roof!

FROM corner-stone to cornice, the modern structures that house the nation's business are built to endure. The foundations rest on bed rock. Steel frame-work and steel girders support the weight of walls and floors. And when they are ready to be roofed the great majority of them are covered with Barrett Specification Roofs.



That Barrett Specification Roofs should be the virtually unanimous choice of the owners and architects of such buildings, is not surprising when you consider—

That we can name many roofs of this type that are in good condition after forty or more years of service. Their durability is *proved*, not estimated.

That they are *bonded* against maintenance expense. Barrett Inspection Service *during construction* insures strict compliance with the roofing specifications, and a 20- or 10-year Surety Company Bond absolutely protects the owner from all roof repair during the bonded period.

That moderate first cost and guaranteed freedom from maintenance make them the most economical roofs it is possible to build.

That they provide a degree of fire protection not exceeded by any other roof. Barrett Specification Roofs always take the base rate of fire insurance.

Cross-section, actual size, of Barrett Specification Roof

The Barrett Specification Type "AA" 20-Year Bonded Roof represents the most permanent roof covering it is possible to construct, and while we bond it for 20 years only, we can name many roofs of this type that have been in service over 40 years and are still in good condition.

Where the character of the building does not justify a roof of such extreme length of service, we recommend the Barrett Specification Type "A" Roof, bonded for 10 years. Both roofs are built of the same high grade materials, the only difference being in the quantity used.

Any roofing job of 50 squares or over in a town of 25,000 or more and *in smaller places where our Inspection Service is available*, can be protected by a Free Surety Bond issued by the U. S. Fidelity & Guaranty Company, of Baltimore.

Copies of The Barrett Specification sent free on request.

s any community in the United
is not supporting its full quota
nal and business men I have
n across it. Usually, in fact,
h a surplus that a few are con-
ping over the edges.

Not long ago a chamber-of-commerce secretary in an Idaho town showed me a letter from an ambitious young dentist in an Eastern city. The letter stated that the writer was thinking of moving out West and locating in some growing community where his activities would not be hampered by competition. He wanted to know specifically whether any dentist had yet located in the Idaho town, and if not, how far it was to the nearest place that did maintain a dentist. It was evident that he wanted plenty of elbowroom.

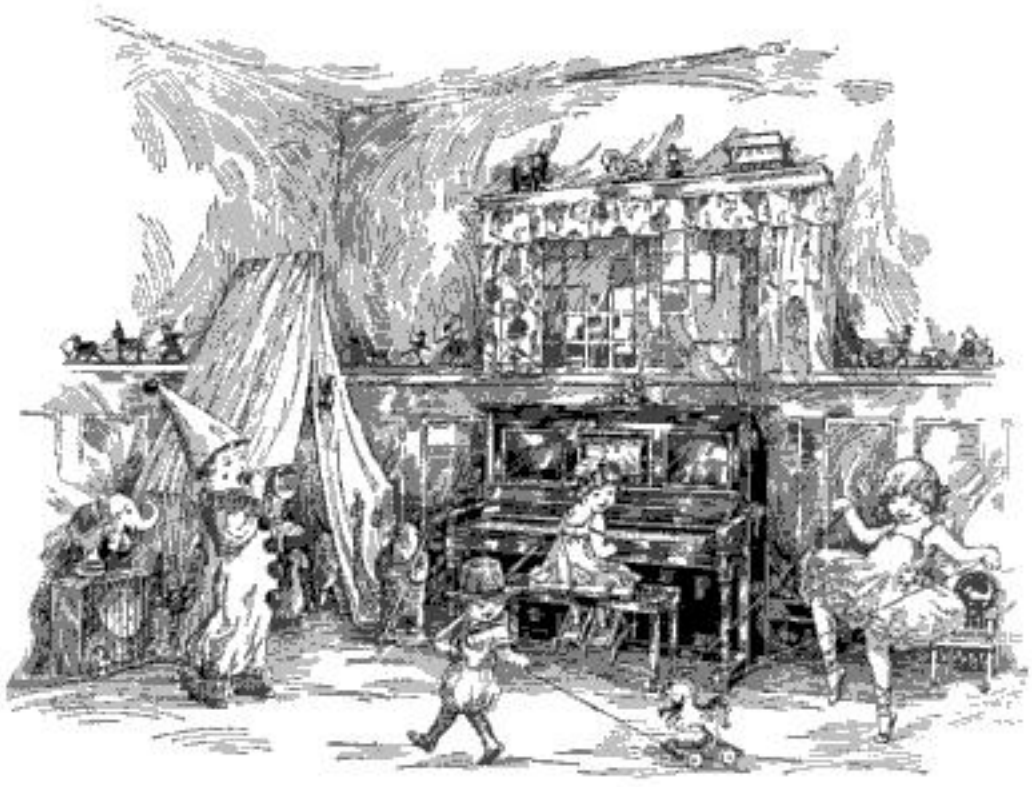
The chamber-of-commerce secretary was obliged to tell the distressing truth in replying to the letter, even though it was his business to encourage new settlers. There were seven dentists in the town, he wrote, and three had recently left because there were not quite enough teeth in the community to be worked on.

A few years ago a friend of mine graduated in medicine from an Eastern university and decided he would go to a new town in Oklahoma, which someone told him was a coming place. With the assurance of youth he got married the day after graduation and took his wife to the new home for a wedding trip. He was a little dashed when he arrived there to find that eighteen other physicians had decided to seek their fortunes in the new town, which really made the community a little top-heavy in the medical profession, in as much as the total population was only two thousand people.

The Lawyer's Story

My friend stayed, both because he did not know where else to go and because he did not have enough money to travel much farther. In time the number of physicians gradually dwindled to half the original number and he got to earning a pretty fair income. He finally left, but it was for temperamental reasons and not because he did not do well. The one really wealthy citizen of the community had to have an operation for appendicitis, and instead of patronizing home industry he passed up the local talent and went to Kansas City to have himself operated on.

This happened several years ago and my friend can speak calmly about the incident now; but leaving that aside he says he would never again go to a new town with the idea of escaping competition. It is better, he claims, to go to a place that has already arrived, and to hit the ball as hard as possible, trusting that merit will tell in the long run.



A good many big-city people are inclined to believe that it is easy to get along in a small town; that one can just drone along into prosperity without much effort. It would not be wise for anyone who believes that way to go to a small town and risk much of his money. The young merchant whom I described at the beginning of this article did, to be sure, go to the big town and make a fizzle, but that was because he lacked the particular quality of organization. In his home town he is just about as hard a competitor as one would want to find. It might be entirely possible that a man who had been successful in a large city could go to a small town and make just as bad a fizzle.

One of my own friends furnishes a case in point. He is a lawyer, connected with a financial institution in a Middle West metropolis, having charge of the legal end of the business and earning upwards of twenty thousand dollars a year. Before coming to the city he tried practicing in a small town and could not earn a living.

"I was just naturally a flivver in a small town," he told me. "For several years after I graduated from law school I worked with a legal firm in my native city, getting experience by doing the small jobs that came into the office. When I was about twenty-eight I decided I ought to strike out for myself.

"The home city seemed pretty well crowded with attorneys and I thought I would have a better chance in a newer and smaller place. The town I picked out for my operations had about eight thousand people and was in the center of a rich farming community. I went there, furnished a nice office in the main business building and sat down to wait for clients.

"I did not expect to have much of a rush the first year, and my expectations were quite realized. Somehow I could not get in touch with the life of the place. I am not a very good mixer. No matter how friendly I felt toward people I could not

Perspiration odor and stain

You can overcome both—easily and safely

YOU can be free from the objectionable odor and stain of perspiration which ruins clothing and mars your personal charm.

Profuse underarm perspiration, called Hyperidrosis, is caused by local irregularities of the sweat glands. Even the healthiest people are often troubled with it.

It can be easily and safely corrected by Odorono, without affecting the natural, healthful perspiration of the rest of the body.

Originally a doctor's prescription, Odorono has become the accepted deodorant and perspiration corrective of more than two million people. It is used in 47 countries besides our own. Physicians and nurses use and prescribe it.

A clear antiseptic liquid, Odorono is not sticky nor greasy. Its mild but effective action immediately checks profuse underarm perspiration and destroys all odor.

One application of Odorono is effective for at least three days and prevents moisture and stain as well as odor, thus protecting waists and gowns from being ruined.

Try a bottle of Odorono tonight.

At all toilet counters —35c, 60c and $1.00, or by mail postpaid. Write for booklet. The Odorono Company, 1306 Blair Ave., Cincinnati, Ohio.

show it in public. I could sit down alone with a man and be perfectly free and natural, but out on the street or around the courthouse I was about as natural as a boy in his first pair of long pants. I would have given anything to be able to walk down Main Street, waving my hand in a friendly way to acquaintances and calling them by their first names, but that was just the thing I could not do.

"I joined the chamber of commerce and two or three lodges, attending meetings regularly, with the thought that I would get an easier social manner by mixing more in the social life of the community. It didn't work. Whenever I tried especially hard to loosen up I felt I was making a spectacle of myself.

"Once I decided to make a particular effort. The occasion was the annual booster meeting of the chamber of commerce, and I went there resolved to be a hail fellow among my fellow citizens. During the business session I got on my feet two or three times to make sprightly speeches, and afterward at the social session I forced myself to go from group to group, heartily familiar with everyone. My efforts were not successful; it was not my rôle. I slapped an elderly banker on the back and he did not take it kindly. Two or three of the men whose hands I grasped warmly acted as though they suspected I was going to try to borrow money from them. Toward the end of the affair I overheard someone comment on my actions, observing that I must be lit up."

The Vanishing Rube

"Walking home alone that night I took stock of myself. Manifestly I was not fitted to make out in a small community, where success depended so largely on maintaining an easy social footing. I liked people, but I could not show it attractively. I told myself that if I were going to succeed I would have to get myself into some position where my work would count without any help from social graces which I did not possess. I figured that the best thing to do would be to get in with some corporation where I could do its legal work and come in contact with only a few men who would understand my limitations and appreciate the desire I really had for giving good service.

"I had to come to a big city to find such a niche. I managed to get a corporation position at a small salary, and have gradually worked up to a very good thing. I have got over a good deal of my self-consciousness, but even now I know I could not go to a small community and earn a living at my profession."

In spite of my lawyer friend's experience it must not be supposed that small-town success can be attained through easy geniality alone. Country people are no longer countrified. The rube passed away with the coming of the automobile and the picture show. The small-town business or professional man may get customers by his personality, but he can hold them only by delivering the goods.

It is a trite thing to say that automobiles have brought city and country closer together, but they have done more than that: they have made country people more sophisticated and less awed by the weight of great cities. No one who has seen the scurrying caravans of flivvers going westward across the waste places of Nevada or Arizona can think for a moment that their occupants will be in the least awed by the bigness of Los Angeles or San Francisco when they reach the Pacific rim. And when they get back home it is a foregone conclusion that they will hold their local business men to somewhat the same standards of efficiency that they have observed on their travels.

In big cities and little ones the job of achieving business success is becoming harder every day for those who are not willing to pay the price in hard work. It is increasingly important that a man shall find a place where he fits in best, so there will be as little lost motion as possible. Competition is too keen to be struggling against temperament all the time.

One of the phenomena of the last twenty years in the United States is the rise of the branch-manager profession. There have always, of course, been nation-wide concerns which maintained branches throughout the country, but their number has vastly increased during the last couple of decades. Nowadays one can walk along the streets of Atlanta or Seattle, Dallas or Minneapolis, and see the same names on the windows of tall office buildings that meet the eye on Broadway or State Street.

To the average business man the management of one of these branch offices seems a pretty soft snap. The branch manager, it appears, is a business man without the ordinary business man's worries. He is surrounded with all the elements of authority in the way of elaborately fitted offices and competent help. He never has to worry over the coming month's rent; to meet his pay roll he merely has to go down to the bank and draw on the home office for the money.

But the branch manager's life has its troubles, just the same. The home office fixes him up comfortably, but it demands results in return. He is expected to send in business, not excuses. Ordinarily the home office fixes a certain quota which it believes a territory should produce, and it is simply up to the branch manager to get the business or get out. If a man shows he is capable of handling a big-town office he will eventually get a chance at one. Otherwise it is the small town for him.

Out in one of the large cities of the Pacific Northwest there is a young man who is a manager for one of the great credit agencies of the country, more than making good on the job. Up to a year or so ago he had been in charge of a small office where he had done pretty well, and the big job was given him as a tryout. The business of the branch had become run down through a series of unfortunate circumstances, and it was intimated to him that if he could bring it back to normal within six months he could have the office permanently; otherwise it was back to the sticks.

Full of the bright prospects thus unfolded before him he tackled the job with enthusiasm. He had made good in the small town mainly through his ability as a salesman, and he saw no reason why the big town should not yield to the same methods. He made up his mind that he would be no swivel-chair manager; the day after he took charge of the office he put on his fighting clothes and started out to show what his personal salesmanship could do.

His efforts brought almost immediate results. The business to which a credit agency caters is naturally among bankers and the larger commercial houses, and the young manager's friendly, convincing manner usually got him a hearing from executives of those concerns. During the first three months he put over enough new contracts to satisfy himself that he would surely make good in the big-town job.

A Bright Man's Mistake

But complications began to develop. In the credit-agency business the selling of a contract is only the beginning of a year of service to the firm which buys it. The new branch manager had not only sold a lot of contracts but he had sold himself. Invariably he had told each new customer that he would give personal attention to all calls for service, and the customers took him at his word. He had a competent office force under him, but the business men to whom he had sold contracts were not satisfied to have dealings with anyone but himself. If he happened to be out of the office when a telephone call was made the business man would leave word for him to call back; no one else in the office would do.

It was borne in on the new manager that he had bitten off a rather larger slice than he could chew. He could still go out and get new business, but when he tried it his customers complained that they had trouble in getting hold of him when they needed service. It frequently happened that he would meet a customer on the street who would insist that he go along to the customer's own office for a consultation which one of the clerks could have attended just as well.

This state of affairs naturally affected his office organization. Having little chance to assume responsibility his clerks began to avoid it when they did have a chance. At first when telephone calls were made for the manager they would inquire if someone else would not do as well; but later on this dwindled down to saying that the manager was not in and if the customer would leave his number they would tell the manager about it when he did come in.

He took stock of affairs and placed the blame where it belonged, which was on himself. He was, he reflected, trying to do things in a big city in a small-town way. In the small town his methods had been successful because the volume of business was limited and he had plenty of time to sell contracts and give the service as well. But in the city, with a heavy office expense and a dozen people on the pay roll, no one man's efforts could possibly produce enough to keep things going.

He worked himself out of his troubles in a rather ingenious way. Going down to the office one morning he announced to the assembled help that he felt pretty bad and believed he was in for a spell of sickness. He made out a list of prospects and gave it to his two outside men, telling them to call on all the firms listed and try their best to sell new contracts. He instructed the office help to tell all telephone callers that the manager was unavoidably absent but that all information and service would be given as accurately as usual. Then he went home and pretended to be sick for a week.

The plan worked quite well. For the first time he had put responsibility squarely up to his assistants and left them to meet it. The customers who were in the habit of demanding his personal attention learned that they could get service even though he was not there to give it. For the first time he had accomplished something in the way of organization. At the end of the six months' probation he had satisfied the home office that he was capable of running a big-town business. What he said in the conclusion is, I think, pretty good philosophy for business men as well as for salesmen.

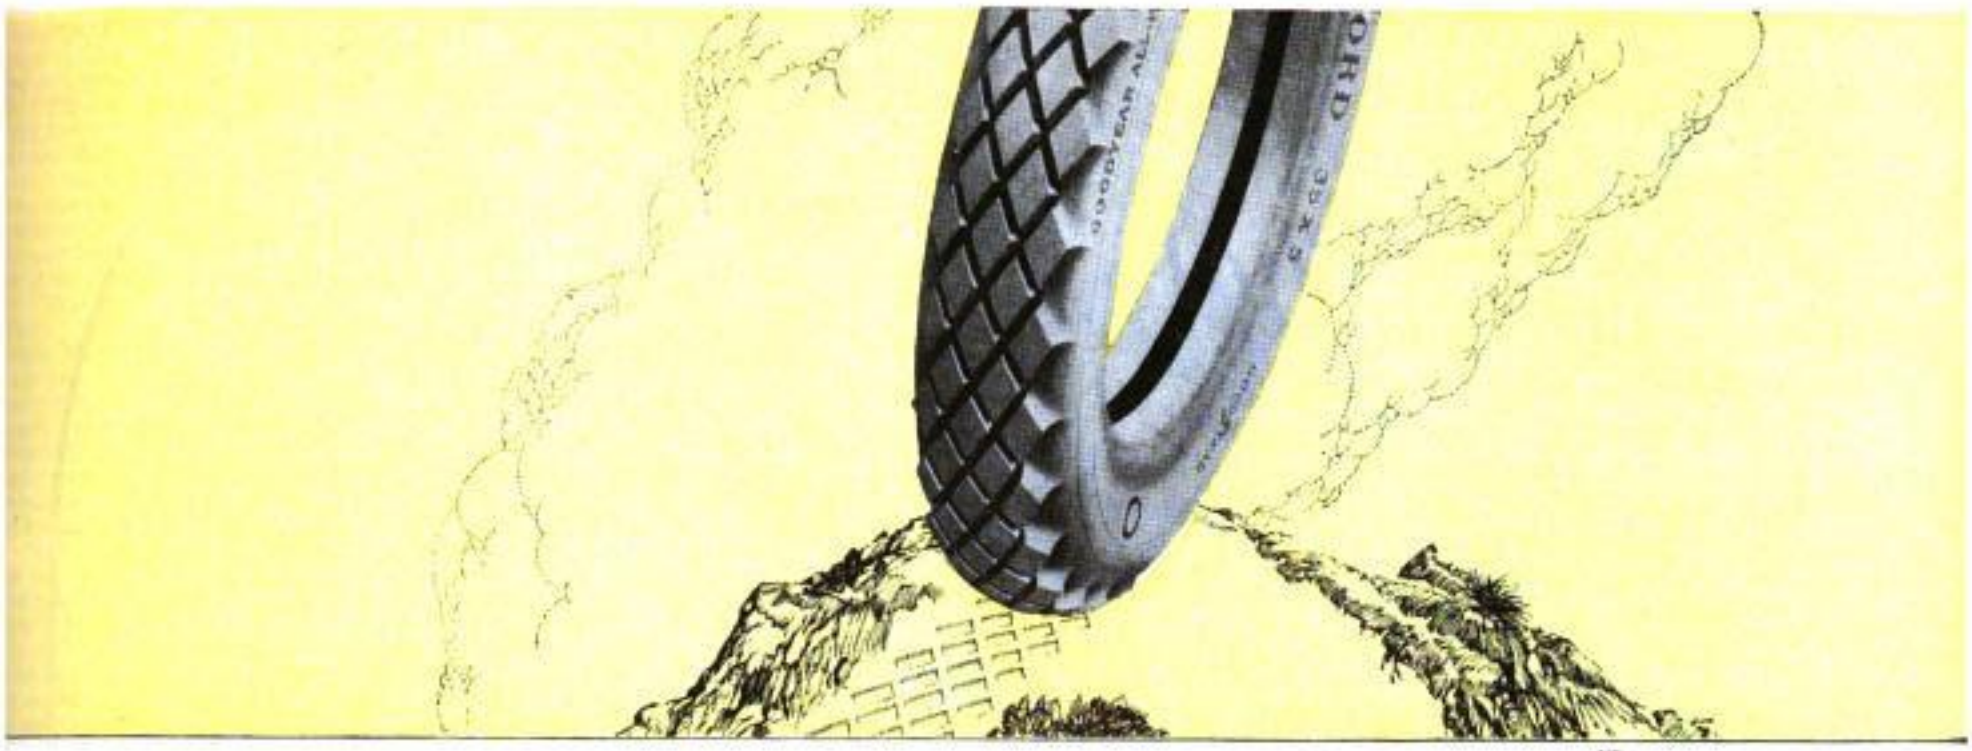
How a Banker Made Good

"The man who sells his own personality too strong," he commented, "will never very far in big company. I thought I was doing wonders when I made myself solid with customers that they felt they were doing business with me instead of with the concern. In reality I was limiting myself.

"Then there is the firm's standpoint as well. Almost every day in my relations with business men I hear of salesmen who apply for positions and advance the statement that they have a personal following which they can carry to any firm which employs them. In the first place, they can't usually deliver as many customers as they think they can. In the second place, if they decide to quit they can take only as many customers as they brought in.

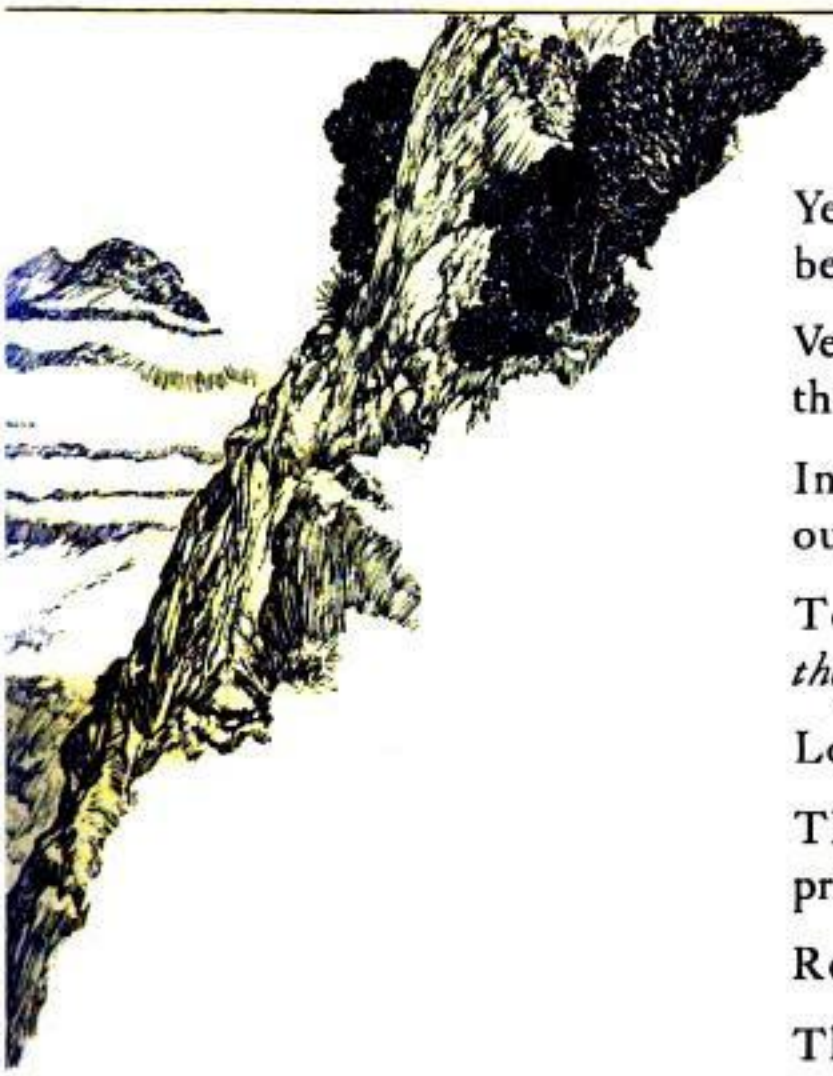
It is manifest that if a man is ambitious to get into big business he ought first to take stock of himself to see if he has organizing capacity, because he will not go far without it.

The young merchant whose experience I related fell down in his city operation because he did not have the faculty of handling his clerks so they would produce a profit. But organization does not always consist in handling help. Primarily it is an ability to do the big things efficiently and getting other people to do the little things efficiently.



A couple of years ago a banker acquaintance of mine in a small town was offered one of the responsible positions in a large city institution at a salary that could hardly be resisted. He accepted, and has made good in a big way. I saw him recently and made bold to ask him how he had done it. I could not understand, I told him, how he could have learned enough about the big bank's customers in such a time to pass on loans intelligently. "The new proposition," I reminded him, "is so different from the situation in his old home town, where he had a first-name acquaintance with practically every depositor."

"First-name acquaintance isn't a thing," he responded energetically. "The only real bad bust I ever pulled off was in the old home town, when I made a loan to a fellow I used to go in swimming with when we were boys together. I didn't get any interest on the loan, to say nothing about the principal."



I was sorry to have brought up such a disagreeable a memory, and made haste to state that every man ought to have at least one bad bust in his past as a warning against future indiscretions. But what I wanted to get at was this: In the small-town bank his customers came into the private office and laid their wants before him, face to face. He knew all about them personally as well as financially. He could on the spot he could say yes or no. But coming as a stranger into a big-city institution he could not have this intimate knowledge. It would take years to acquire it. How could he pass on loans without it?

QUALITY IS AT THE PEAK PRICES ARE AT BEDROCK

Year after year the quality of Goodyear Tires has been going up and up.

Veteran users say Goodyear Tires today give more than twice the mileage they did ten years ago.

In the meantime, there has been no slackening in our effort to push Goodyear prices down.

Today these prices are at bedrock—*the lowest they have ever been.*

Look at the figures listed below.

They represent an average decrease in Goodyear prices since 1910 of more than 60 per cent.

Remember—Goodyear quality is at its peak.

These prices, divided by your speedometer reading, tell the story.

Now is the time to buy.

30 x 3½ Cross-Rib Fabric	$10.95	32 x 3½ All-Weather Tread Cord	$25.50	33 x 4½ All-Weather Tread Cord	$42.85
30 x 3½ All-Weather Tread Fabric	$14.75	32 x 4 All-Weather Tread Cord	$32.40	34 x 4½ All-Weather Tread Cord	$43.90
30 x 3½ All-Weather Tread Cord	$18.00	33 x 4 All-Weather Tread Cord	$33.40	35 x 5 All-Weather Tread Cord	$54.75

walk around to the wagon yard ok at the animals to see if they rth the money. I knew already s record; if he was the kind of uld not substitute a less desir- mules in case of a crisis, I took the bank with me and gave ey.

town grew, and with it the usiness we did in the bank. any longer spare the time to make these personal first-hand investigations. I had to form an organization that could do the work for me. I had a man who understood the mercantile business and trusted his judgment in reporting on the condition of merchants who wanted loans, and another man who knew farming problems to get me information about country borrowers. All I had to do then was to go over any information they brought me; I could come to an intelligent decision on any problem in ten minutes, where before it might have taken me half a day.

"My own earning capacity was of course increased in proportion. Somehow the board of directors of this city institution learned that I had a capacity for making a profit out of other people's work, and I suppose that is the reason they made me the offer to come here. My work is exactly the same as I had developed it in the home town, only it is carried on in wider compass. I don't have to know the people who borrow from us. I only have to know that the man I send to get information has sound judgment."

The banker turned to his desk and showed me a sheaf of papers.

"There is an example right here," he said. "A bank in the Texas cattle country wants a hundred thousand dollars from us and has sent us a bunch of its own customers' notes as security. I suppose these notes are all good; but it is my duty to make sure of it. Among the lot there is, for instance, a note signed by a cattleman who has given a chattel mortgage on a thousand steers as security. Right now I have a man looking over that bunch of steers. If he reports that they are not in good shape, or if there is any doubt about their being worth the loan, I shall write the Texas bank to send us another customer's note backed up by other security. I can't go to Texas to look after the safety of my loans, but I can pick out men who are capable of doing such things.

"I guess that is about all there is to it. If I didn't have the organizing faculty I should have no business running the affairs of a big-city institution. The place for me would be in a small town, where I could look after everything personally."

erybody's Business

ost of Letter Writing

t you prepare a story dealing high cost of writing a business subject that very few people out. Nine executives out of opinion that the average cost ordinary, everyday business n amounts to only a trifling y not more than two or three s the actual charges in- e majority of concerns in amount to a figure that is rge."

the remarks of one of my y, and as a result I started ns of others concerning the riting.

n of whom I inquired replied know exactly what it cost in te a letter of average length e, but he felt sure that the o more than four or five f that much. Several other stimated the cost of writing ywhere from four to twelve f them had made a careful o of course they were only r I met a government offi- iven close attention to the as even then working on a correspondence charges in nost recent analysis showed of writing a letter in his ington was slightly in ex- , and it was his opinion that ad obtained along this line than those in most other ces.

inary inquiries were suffi- e on a search for more de- ite information, and I am of the facts discovered will to business men in general s encourage many of them research of their own. are good or bad, there is one problem that is ever deserving of close attention, and that is ways and means to decrease the cost of doing business. Letter writing, as will be shown, is an item of no small consequence.

Fact Number One is: Most business houses do not consider the cost of producing their letters at all, the popular impression being that the two-cent stamp affixed to the envelope represents the greatest item of expense aside from the stenographer's salary.

Fact Number Two is: The firms which have gone into the matter of letter writing on a so-called scientific-cost-analysis basis differ materially in the items of overhead charged against the stenographic department. Many smaller companies employ only two or three stenographers, and these are partly engaged in other office routine, such as filing, ledger work, and the like.

Frequently in such cases the stenographic and transcribing work is considered as only an important part of the day's work, and therefore these companies do not feel that it is necessary to isolate costs incurred in the production of letters.

Where stenographers are kept steadily at work dictating and transcribing letters the element of cost assumes quite significant proportions. One large banking house in the financial district of New York City, on examining the problem, made the startling discovery that each letter represented an actual financial outlay of forty cents. This particular concern pays its stenographers comparatively high salaries, uses expensive stationery and occupies quarters for which it pays a large rental.

One of the large insurance companies does much better than this, its analyzed cost of producing letters being sixteen cents apiece for the stenographic method and eleven cents apiece for the dictating-machine method. These figures represent the averages for an entire year. The interesting point in this comparison is that the

Why You Should Change Your Spark Plugs Now

Most engine troubles come from worn-out or incorrectly designed spark plugs.

If your car starts hard, don't run the battery down; if it splutters and runs jerkily, if it misses on the hills and at high speed, don't blame it on the carburetor or piston rings.

Probably all you need is a new set of AC Spark Plugs.

Go to any good dealer and tell him you want a set of AC Plugs specially designed for your car.

Then see the difference in performance!

Most manufacturers of costly cars, trucks and tractors equip their engines with AC Spark Plugs because they know there is nothing like the old reliable AC to make a motor run smoothly.

Race drivers, aviators, speed-boat pilots also insist that their engines be AC-equipped.

You can't go wrong if you follow these experts.

Ask for and see that you get the genuine AC Spark Plugs specially designed for your car.

Ford Owners:—The AC 1075 for Ford engines is the plug you should use. It has our patented wire clip for the Ford terminal, our new design electrode which prevents oil from lodging in the spark gap and the famous AC Carbon Proof porcelain. If your Ford dealer will not supply you any other good dealer can meet your needs.

AC Spark Plug Company, FLINT, *Michigan*

U. S. Pat. No. 1,135,727, April 13, 1915, U. S. Pat. No. 1,216,139, Feb. 13, 1917, Other Patents Pending

The Standard Spark Plug of the World

great difference in the cost of producing letters by the banking house and the insurance company is probably due to the fact that the financial institution pays its stenographers straight salaries, while the insurance company pays its girls, who use dictating machines when transcribing, one-half cent a line based on sixty spaces to the line, the date, salutation and close of the letter counting as two lines.

It is rather unusual for typists to be paid on a line basis when employed regularly by some business house, and so far as I can discover there is but one other large corporation in New York City that pays its typists on this same basis or rate of one-half cent a line. Both of these corporations use dictating machines.

It appears to be an established fact that in the larger concerns, where considerable typing and correspondence are performed, dictating machines are fast supplanting the old-time stenographer with notebook and pencil. One large educational institution which employs thirty-seven operators, both stenographers and typists, has analyzed its production of letters and learned that the notebook operator produces but 300 lines a day as against 800 turned out daily by the typists working with dictating machines. It should not be inferred from this, however, that the machines excel in all cases. The notebook stenographer remains supreme in certain fields. Many executives use code or paragraph systems in handling their correspondence, and in such cases prefer the personal touch whereby they can hand over the letters from correspondents, at the same time commenting briefly and privately on the nature of the reply to be written. Thousands of executives do no more than indicate in a few words the kind of an answer each letter is to have, and the stenographer is expected to frame the reply accordingly. But for routine work in a large corporation the mechanical devices for receiving and repeating dictation undoubtedly possess advantages.

Interesting facts resulted from one examination of a large Eastern corporation, where it was found that four notebook stenographers had all they could do to take the dictation of twelve men, while five typists using the reproducing-machine method turned out with ease the dictation of sixty men. This same investigation disclosed that the average stenographer writes twenty-two letters a day, while the busy dictating-machine operator turns out sixty-five.

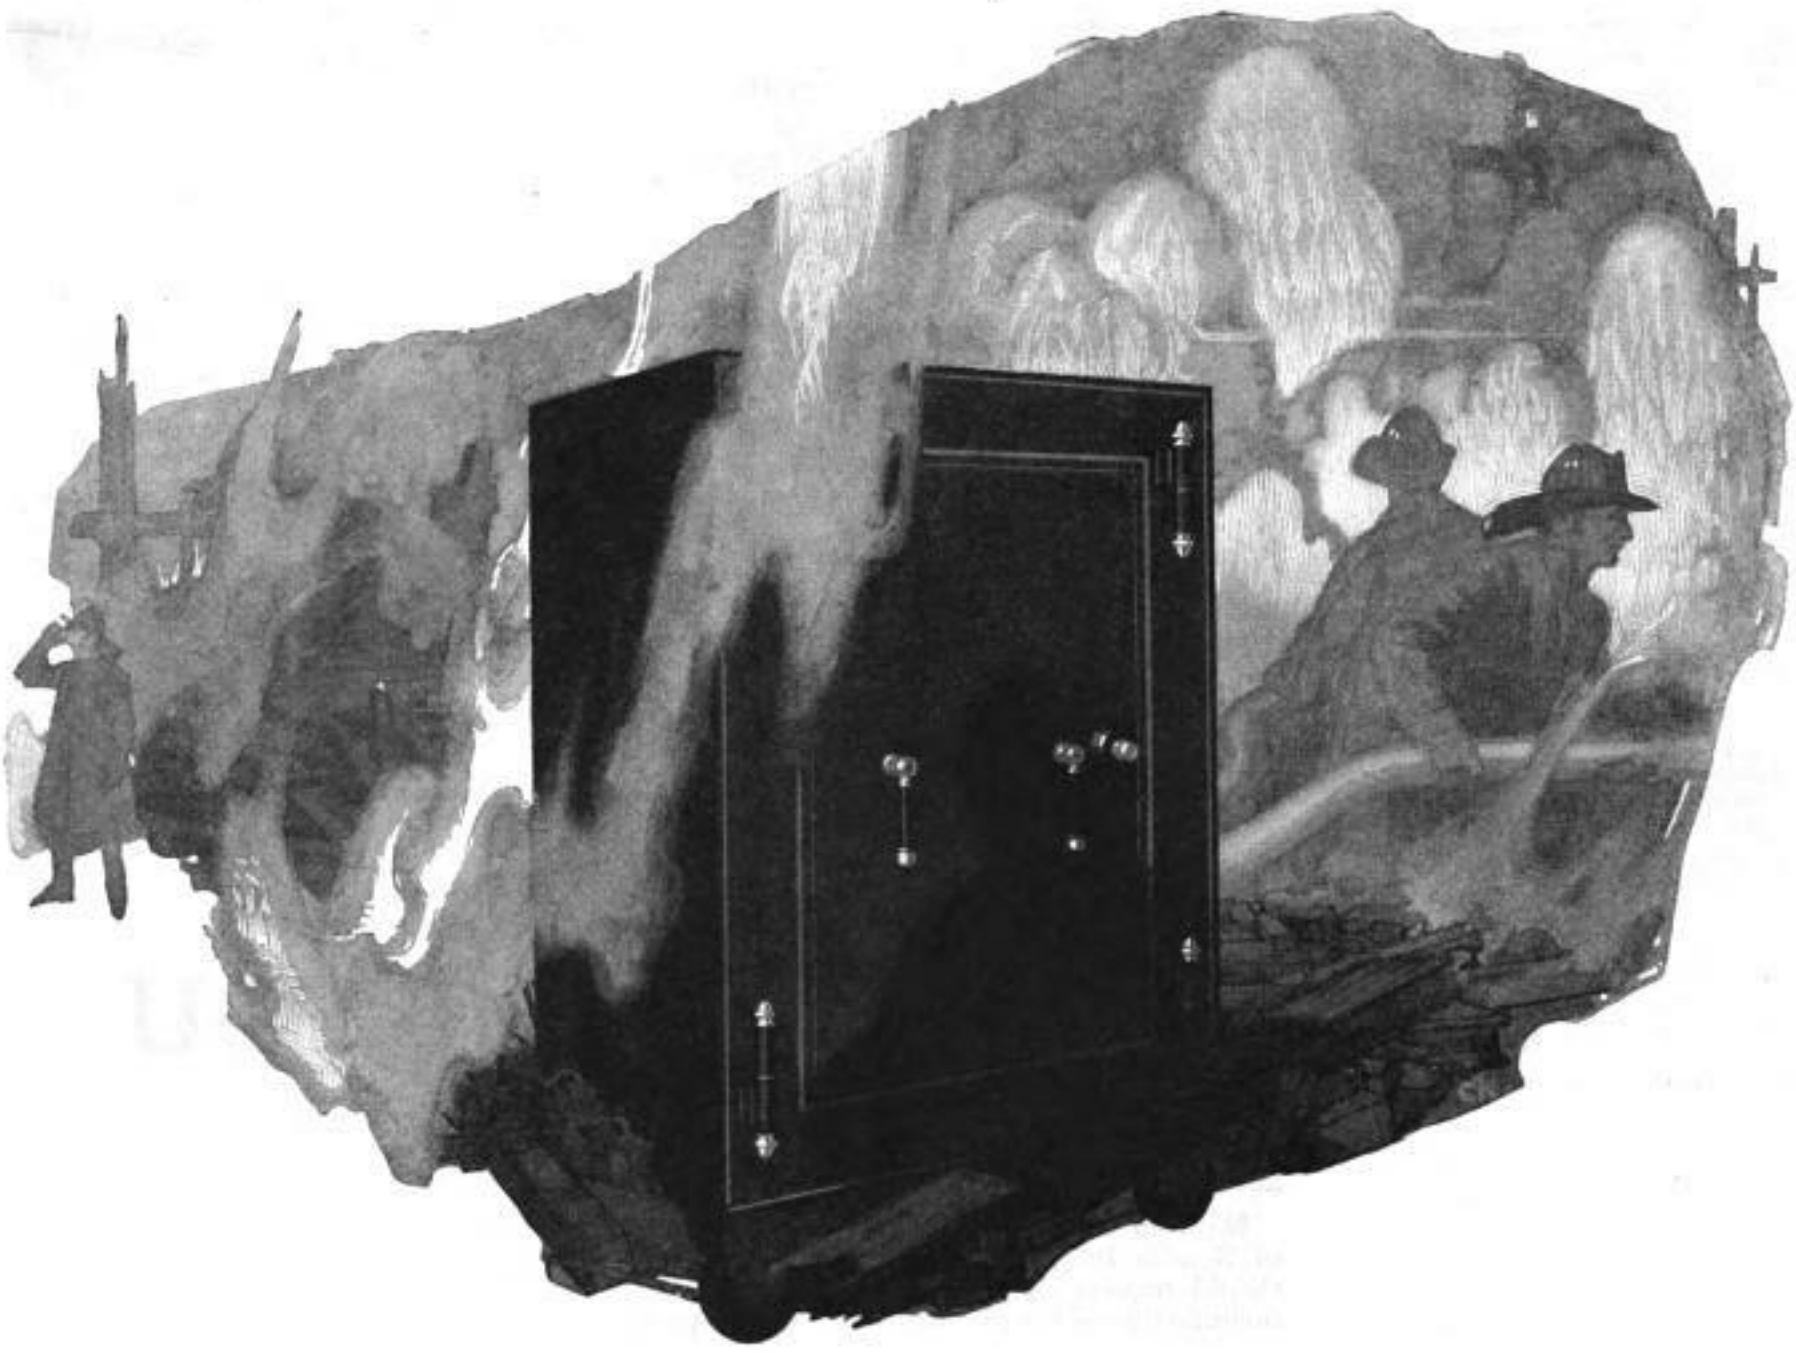
A large automobile-manufacturing concern in making an analysis of its correspondence costs found that the expense incurred in writing an average letter totaled nearly nineteen cents. This company sends out approximately 5000 letters a day, and employs both stenographers and dictating-machine operators. Sixty to eighty correspondents are employed, either whole or part time, and there is a transcribing force of twenty-five girls utilized to write letters from machine dictation. Assuming that a half-page letter was the average length of the company's written communications, the following costs were compiled for letters transcribed from dictating machines:

Mail room	$0.002
Dictation	.09
Cylinders, Letterheads, Envelopes, Carbon paper, Copy sheet	.0073
Typewriter—interest, depreciation, repairs	.0005
Dictating machine—interest, depreciation, repairs	.0015
Transcribing	.045
Supervision	.005
Space, heat, light, power	.016
Filing	.002
Postage	.02
Total	$0.1893

As before stated, the foregoing costs cover the charges resulting when dictating machines are used. The company in question found that in its stenographic work, where such machines are not used, most

items of cost are practically the same both methods, only the cylinders and cost, interest, depreciation and repairs the reproducing machines being The investigation showed that stenographic work the cost of transcri is doubled when machines are and of course the charge for floor is likewise doubled. These charges the stenographic costs about $0.24 letter written from shorthand compared with $0.1893 with reproducing machines.

In arriving at the results stated the vestigators included collections from deliveries to the post office in the main costs. These also included the labor in handling incoming mail, opening and distributing. Much difficulty experienced in getting an average figure cover dictation costs, because some respondents are very slow, while others tate rapidly. Furthermore, it was sary to arrive at a figure that approximate an average salary for who dictate letters. As to the phonograph cylinders, this was worked on the basis that each cylinder would tain 800 letters. In the matter of scribing it was assumed that a business letter contains fifteen square inches, includes the date, name, address and tation. It was further estimated that average typist costs thirty cents square inches of work done, and that out at about $0.045 for each letter cost of supervision includes clerical shaving records and the distribution collection of letters and cylinders charge for space, heat, light and power based on an assumed cost of forty square foot annually, and the space for dictation, transcription, filing and ing was estimated to be about square feet, or the equivalent of a room each side of which would be mately 155 feet. The filing cost based on the handling of 1000 pieces by each clerk.



In every analysis of this sort essential that the company making investigation shall carefully consider program that will call for an investigation of each and every item that should charged under the head of correspondence. The insurance company earlier alluded which went exhaustively into the charges against each operator's desk chair, typewriter, floor space (costing so much a square foot, salary, locks, lockers. In departments where dictating machines are employed the cost the machine is added. This machine charges only $2.25 a year for this floor feet of floor space, which obviously usually low. It is able to write a low charge for floor space because company owns its own building.

One authority arrives at the conclusion that if we consider only the of a very large corporation which out several thousand letters each day that if we further assume that in instance the reproducing machine quickest method and has a value of 100 per cent, then analysis shows that book dictation is 80 per cent efficient soft pencil 70 per cent, fountain pen selected point 65 per cent, improperly pointed pens 55 per cent, while the fashioned steel pen for letter writing 40 per cent efficient, as compared results obtained when a mechanical tating device is employed.

Few business men know what it costs to write the routine letters turned out each day. This is especially true matter of sales letters, which are produced in such large volume. Many tives will contend that their letters only five or six cents each, where would carefully investigate the matter take into consideration the many expense which they have never charged the cost of letter writing, they would astonished by the results of their At any rate, here is a subject about and experiment with in the of slackened trade. If it costs two to write a letter, no wonder the lines are congested with business

A Revolutionary Advance in Safe Building

CULMINATING eighty years of progress in safe manufacture, the Herring-Hall-Marvin organization now offers in the New Herring-Hall-Marvin Safe a degree of protection from fire that goes far beyond previously recognized standards and provides a measure of safety heretofore considered impossible.

Briefly, we have built a safe which our exhaustive tests show conclusively will go clear through the worst fire that may be expected. This safe proved its capacity to withstand a heat ranging up to 2100 degrees Fahrenheit over a period of five and one-quarter hours, with a temperature of only 300 degrees inside. This is one and one-quarter hours longer than is necessary to secure the "A" Label of the Underwriters' Laboratories, Inc. This is thirty per cent more protection than is considered the standard.

In addition to its power of heat resistance we have given the New Herring-Hall-Marvin Safe sufficient structural strength to stand up under falling debris and steel work; to resist explosions; to withstand sudden cooling by water when at white heat. The most destructive fire does not present a single element which the New Herring-Hall-Marvin Safe has not been prepared to meet.

The Underwriters' Laboratories, Inc., have formally approved this new safe; the sixteen larger models bear their "A" Label, the six smaller models their "B" Label. But what is more important, this safe realizes to the full the Herring-Hall-Marvin *ideal* of what protection should be; it gives the user the practical protection he should have rather than the protection which might be theoretically adequate; it gives this *new* measure of protection that goes *clear through the fire*.

The widest variety of interchangeable equipment is provided for the interior of this new safe. The arrangement you require will be furnished. Find out the particular model of the safe that will meet your needs and get this greater protection. Sold by representative dealers.

PERFECTED FOR YOU

The House of Squibb came into being for the purpose of furnishing to the medical profession chemical and pharmaceutical products of known purity and dependability.

Naturally, during more than half a century of endeavor, the variety of Squibb Products has increased. It was inevitable that physicians should request that Squibb knowledge and skill be directed also to the manufacture of finer household and toilet products.

If, in your selection of such important daily toilet requisites as talcum powder, cold cream and dental cream, you depend upon Squibb knowledge and professional skill your confidence will be rewarded with products whose quality yields entire satisfaction.

SQUIBB'S TALCUM POWDER—To the woman who understands the true uses of talcum powder as a boudoir necessity, the Squibb product is indispensable. Its delightful smoothness and delicacy are the results of Squibb's perfected methods of preparation applied to the finest Italian Talc.

Boudoir, Carnation and Violet are the perfumes from which you may choose—also Unscented talcum for those who prefer it.

SQUIBB'S COLD CREAM—Every ingredient in this perfect toilet requisite is tested—the materials combined in proper and scientific manner. Even the perfume is especially prepared in the Squibb Laboratory. There can be no comparison between Squibb's Cold Cream and the inferior commercial product. To use it is to understand what Squibb knowledge has done for the care and preservation of a smooth and healthy skin.

SQUIBB'S MAGNESIA DENTAL CREAM—In this product Squibb has met the demands of dental authorities for a dentifrice known to be absolutely safe and correct in composition. Its base is Squibb's Milk of Magnesia, prescribed by physicians and dentists for the protection of the teeth; it cleans, polishes and preserves without the use of injurious substances. Rigid chemical control insures the fitness and purity of every ingredient used. Young children can use Squibb's Magnesia Dental Cream with perfect safety.

Squibb's Bicarbonate Soda—exceedingly pu therefore without bit taste.

Squibb's Stearate of Z —a soft and protec powder of highest pur

Squibb's Olive Oil—sele ed oil from South France. Absolutely p (Sold only thro druggists.)

Squibb's Pure Spic specially selected laboratory tests for t full strength and fl (Sold only thro druggists.)

Sold by reliable druggists everywhere, in original sealed packages.
"The Priceless Ingredient" of every product is the honor and integrity of its maker.

beyond his first two-year term is to be reëlected for another two-year term. Consequently every congressman is trying to be reëlected. A few sometimes deliberately vote for measures that they believe their constituents ought to have but that their constituents do not want. But the majority of them will vote for almost anything under the sun that their constituents seem to demand.

That is the reason for the great success of the propagandists, better known as organized minorities, with Congress. If any group of people can so organize themselves and so bring pressure to bear on any congressman that he is persuaded they represent the sentiment of his district he will almost invariably vote for what they ask. If a society were to be formed in this country to force every girl between the ages of thirteen and seventeen to wear light coffee-colored stockings and shoes, and if this society were able to persuade five thousand persons in each congressional district to write to their congressman insisting that said stockings and shoes be worn by all girls, there would be at least three hundred and seventy-five members of the House to think that these messages represented a great popular demand. In trembling voices they would assure one another that if they didn't accede to the demand their names in the next election would be Mud or something worse.

Unless an organized opposition were made to the nuts who advocated coffee-colored stockings and shoes some wild-eyed flitterbrain would introduce a bill making these things compulsory for flappers and novitiate flappers, and the bill would pass.

The Power of Minorities

What bothers these congressmen is how a measure will affect them, not how it will affect their people or the nation. Yet for some peculiar reason a majority of the men in the House of Representatives are unable to distinguish between the true sentiment of their districts and the fake sentiment represented by a few hundred letters from the members of an interested organization. Consequently they are perpetually voting for what they think are popular measures in order to get votes in the next election, only to find that they could have voted the other way without damaging their chances for reëlection at all.

Viscount Bryce, one of the keenest and most dispassionate observers of American politics, wrote of Congress that "in the handling of national finance it is alternately narrow-minded in its parsimony and extravagant in its efforts to propitiate some class or locality. The monstrous waste of money on war pensions, a waste for which both parties are almost equally to blame, was prompted by mere vote-catching." A perfect sample of this same procedure may be seen in the recent attempt of the House to cut expenses by reducing the size of the Army and Navy to a point that imperiled the national defense, and its determination at the same time to pass a bonus bill that would leave the great American taxpayer as bruised as though he had passed over Niagara Falls in a butter firkin.

The efforts of congressmen to "propitiate some class or locality," as noted by Viscount Bryce, has resulted in the formation of legislative blocs—the proper definition of bloc, in this sense, being "the small offspring of large blockheads." Even foreign governments are waking up to the delightful opportunities opened up to them by the extreme and ever-present eagerness of American congressmen to propitiate some class or locality; and the logical outcome of this bloc and blockhead business in the not distant future is a House of Representatives made up of many separate blocs, all blocking vigorously in different directions, in the manner of corresponding legislative bodies in several European countries.

The proceedings of these European legislative bodies, in which no single bloc or party is large enough to control a majority, are very like large and successful dog fights. The sounds that come from them are dog-fight sounds; and the results obtained by them are about as valuable.

A recent Chicago Tribune dispatch stated: "The activities of foreign diplomats in the United States in lining up the nationals of their respective countries for organizing solid

TO write that two twenty-five dollar machines can save almost $4,000 a year may seem an exaggeration. Yet this was the experience of a large New Jersey plant which purchased two Clipper Belt Lacers. Following are figures supplied by the cost equipment engineer:

To lace belts by hand cost them in idle men and machine time and material $4,350 a year. Only $455 a year was the cost of the Clipper method—because the Clipper method not only reduces the time to lace a broken belt but it actually makes a 50% reduction in the number of lacing operations.

The Clipper method is speedy. *Any* operative can lace a belt in three minutes with a Clipper. The Clipper joint outlasts two or three hand lacings because it is anchored by interlaced hooks sunk deep into the belt.

We stand ready to supply you with authentic, cost-sheet data from Clipper users which is convincing proof that the Clipper method of lacing belts *does reduce* operating costs. It's free upon request.

STICK TO Cinco IT'S SAFE

votes in American political campaigns is being freely discussed in European circles. . . . The Italians, Greeks, Germans, Poles and Czecho-Slovaks all are engaged in consolidating their former nationals to vote solidly henceforth."

Thus, in time, unless the members of the House improve in character and backbone, the people of the country will be edified by an I.W.W. Bloc sitting at the extreme left of the House, a Parlor Bolshevik Bloc sitting next, a Daylight Saving Bloc next; and then, scattered indiscriminately in the auditorium, a Czecho-Slovak Bloc, an Anti-Bobbed-Hair Bloc, an Italian Bloc, a Hotel Owners Bloc, a Steamship Bloc, a Filipino Independence Bloc, a Polish Bloc, a Three Per Cent Beer Bloc, a German Bloc, a Bootleggers' Bloc, a Russian Refugee Bloc, an Unrestricted Immigration Bloc, a Flivver Owners' Bloc, a New York City Bloc, a Lithuanian Bloc, an Esthonian Bloc, a Theatrical Managers' Bloc, and what not. The only thing lacking will be a Native-American Bloc.

It is a generally accepted fact that the country gets about what it deserves in the line of representation. When a city, for example, elects a cheap, ignorant, blatant ass as its mayor the city deserves that sort of mayor. This is a country of majority rule; and if the majority insists on picking stupid, incompetent men, then the majority is uneducated, incompetent and stupid as well. And it might be remarked in passing that if the majority is not fit to determine its own policies popular government is a failure.

The same thing holds true in the matter of congressmen. If a congressional district has picked a lightweight or a fatheaded or a poorly balanced congressman, and has kept returning him to Congress for such a long time that he has become, through the seniority system, an important committee chairman whose ideas and decisions must be accepted by the whole House, then the majority of people in that congressional district that elected him are incompetent dubs and fatuous hoddydoddies.

Stay-at-Home Voters

There is a ward in Boston, a city once noted as a center of culture and refinement, whose blue-stockinged residents read the Transcript nightly with religious fervor, and rail bitterly against the low quality of the men who have been known to obtain a foothold in Boston's city government. Yet these people can be depended on for only one thing on election day: They can be depended on to stay away from the polls. They are even worse—men and women, too—than the gullible folk who vote for a man because he has pretty hair or a rich mellifluous voice and makes lots of pretty promises; or than the ignorant naturalized Americans who vote for a man because the boss told 'em to; or than the other dolts who vote for a congressman merely because he supplies vegetable seeds or is a pension getter. They know how to vote for good men, and then don't do it. They deserve exactly what they receive in the matter of bad government. Boston is not alone in this respect. Every American city has a similar ward.

As has been said, there are four hundred and thirty-five members of the House, and that's at least two hundred too
Once upon a time the House had a
able number of members. If a

Clipper Ships and Copper Roofs

Their great day over, the fine old clipper ships are still doing service. Bowsprits gone, only the stumps of lower masts left, laden with coal, they obediently follow sea-going tugs up and down the coast.

"These old vessels, after fifty years' service, will stand four times as much as new barges. They were *built*," said the old sea captain recently.

"I'd rather go to sea today in a clipper ship made into a coal barge than in the finest, brand-new carrier afloat."

"This is a Copper spike from the old J. B. Walker. Exposed to salt water for fifty years and *it's as good as ever.*"

—From a newspaper interview

The same old metal, Copper the Everlasting, is serving mankind today as it has for ages.

Yesterday, the Copper spike—"Exposed to salt water for fifty years, it is as good as ever."

Today, Copper is giving the same expense-proof service in the Copper roof (in shingles, standing seam, or any style you prefer), in Copper spouting, in Copper flashing, in Copper wire screening, and—as the principal constituent of the alloys Brass and Bronze—in Brass plumbing and in Brass and Bronze hardware.

Use *Copper,* and fifty years from now you will say, as the old sea captain said, "It's as good as ever."

Copper, Brass and Bronze are cheaper because you pay for them only ONCE.

Never Limp In On a "Flat"

The carcass chewed to pieces—the tube shredded—the car's life shortened by jarring—the trip spoiled . . a terrific expense that Locktite would have forestalled.

In two minutes (without tools) it permanently mends any cut, puncture, blowout or casing break, no matter how large.

It's far better to say "I'm glad I did" than "I wish I had." Order Locktite from your dealer today.

Reinforcing Makes It Strongest

Locktite's patented construction holds the cut tightly together—no stretching apart. The tube is strongest at repair. Complete Kit—enough patch for 25 ordinary repairs—Locktite Cement and Emery Buffer, 50c.

of four hundred and sixty. At the present time a roll call takes twenty-five minutes; and when the Democrats are trying to keep the Republicans from getting to what they consider an offensive piece of legislation they raise points of order and points of no quorum that necessitate seven or eight roll calls in slow and stately succession. If the House increases its membership many more times the roll call will take all day and leave no time in which to do business.

The leaders' argument in favor of the increase is that twenty-five members more or less won't make any difference. The same old whiskered argument has been used ever since the membership of the House passed three hundred, and has always been true, because even a membership of three hundred is too large to permit intelligent deliberation. Their real reasons are that the twenty-five new members will strengthen the hold of the party in the House, and that some of the boys want to come back to Congress instead of staying back home and earning their living in the old, tiresome, humdrum way. Congressman Nelson, of Wisconsin, blew the lid neatly from the latter group of serious thinkers in the following cold and unenthusiastic manner:

"My first proposition is that to evade the Constitution is the chief purpose of this apportionment bill. Article 1, section 2, provides for an 'apportionment according to number' and a 'census every ten years.' It is to evade this section that the House membership is increased. The mischief behind this evasion consists first of self-interest. This self-interest arises because of the change of population. Thus at the present time the states of Indiana, Iowa, Kansas, Kentucky, Maine, Mississippi, Missouri, Nebraska, Rhode Island and Vermont, having failed to keep pace in population, will each lose one member—Missouri, two—to other states that have moved ahead in population. The members from these states are keenly affected by anticipated loss of their seats. No one knows beforehand who will be the victim. These generally group themselves together, therefore, to evade the Constitution by increasing the membership. Self-interest appeals to fellow members for sympathy and aid. Usually this sympathy is successfully worked, and always self-interest seeks the aid of political expediency. The claim is put forward that by the increase of membership party success in various forms will be promoted; so that a most powerful group is thus organized with self-interest at the center, supported by the evils of partiality and of political expediency."

As the House has increased in membership its members have shrunk in stature. In the good old days the House used to be as important as the Senate—if not more so. Everybody recognizes that practically all congressmen, in the districts that they represent, are prominent and important and popular men. In Washington, as the House has increased in size the individual members have diminished in importance until even congressmen themselves frequently moan that a congressman ranks below almost every other form of human life in popular estimation.

The country at large knows only two or three representatives by reputation. Visitors to the House Gallery know about Joe Cannon because of his past exploits. They know about Nick Longworth, not because of the very high ability which he really possesses, but because he married President Roosevelt's daughter. They know about Volstead, because his name is attached to the well-known act that put the teeth in the Prohibition Amendment. They know about Bourke Cockran because of his golden tongue. But they stare in uncomprehending silence or ask blankly "Who's he?" when their guides point out to them such persons as Jim Mann, of Illinois; Martin Madden, of Illinois; Philip P. Campbell, of Kansas; Simeon D. Fess, of Ohio; Joe Walsh, of Massachusetts; Sydney Anderson, of Minnesota; Frank Greene, of Vermont; Joseph Fordney, of Michigan; Frank Mondell, of Wyoming; Frederick H. Gillett, of Massachusetts, the Speaker of the House; Finis J. Garrett, of Tennessee; Edward Pou, of North Carolina; James F. Byrnes, of South Carolina; Joseph Byrns, of Tennessee; Sam Rayburn, of Texas; Charles R. Crisp, of Georgia; or William A. Oldfield, of Arkansas. Yet the latter gentlemen, with the addition of Bourke Cockran, of New York, and Nick Longworth, of Ohio, are leaders of the House. Few in the galleries ever k... of Samuel E. Winslow, of Massach... or John Q. Tilson, of Connecticut; o... Wingo, of Arkansas; or Walter M... Virginia; yet these are men who are r... rising to leadership.

One of the reasons for this entire l... knowledge concerning the House ... part of the general public lies in t... that during the war and during th... on the League of Nations all the int... debates on the great issues of the d... place in the Senate. The W... newspaper correspondents have a p... habit of hanging around the place... the important news can be found; ... a result most of them persisted in ... around the Senate. The House w... and of little general interest; ... kept away from it. This state of ... went on for more than four ye... years during which senators got ... advertising and representatives g... tically none at all. At the pres... however, the House, poor as it is, ... ning to look better than the Senate. ... THE ONE-MAN WORLD

(Continued from Page 23)

Framer's eyes glittered, his face twitched with curiosity. "Some secret!" he said, not at all disconcerted. "But, of course, it's your business."

He left within a few minutes and Wick locked the door, glowering. Framer had indeed discovered him working out his formula a year or so ago, but that record once written out and memorized had been destroyed; the one Framer had glimpsed to-night had been drawn up to convince Morley, in case argument unsupported by evidence failed to draw him into the scheme.

Wick glowered as he locked the door, but after a few moments with his cigar in his favorite chair, admitted: "Serves me right for getting caught; even friends are spies. This is a one-man world." Yes, it was a one-man world.

Wick's father, endowed with good business capacity and during certain periods prosperous, had often been seized with a mania for taking chances. Sometimes it would be at downright gambling; again he would plunge on mercantile ventures regarded as legitimate by business men. Wick had a dreadful remembrance of his mother, who had no peace of mind or pleasure during a prosperous period, but was always a careworn, shivering creature, confidently awaiting the upset which always came. Three times during those years, clinging to her skirts as a little fellow or standing by her side when half grown, Wick had seen his father enter, throwing up his hands.

"All gone!" the latter would say with that gesture of defeat. Small wonder that Wick had his one fierce resolve to give his life stability. "Security" was his watchword; and his a one-man world.

He was assured that the business he was going into with Morley would pay its twenty-four thousand a year till the end of time. He never had any reason to doubt it, and that same business guarantees the same return on a six-thousand-dollar investment to this day. However, with characteristic caution Wick had mapped his life with two highways across it; while traveling one he would not neglect to keep the other open.

Being now on guard against Framer he contrived a means to appease him; curiosity was after all so profitless a pursuit that no man could or would indulge it at the expense of money and effort.

Profitless, idle? Yet as some are born to explore the farthest earth or heavens, so some are indefatigable explorers of other people's business.

II

THE sky line of Midwest City's business district floated in the grays of October dawn; the crests of the elms around the old Morley house lightened, too, and Claire, still sleeping, sighed heavily with presentiment of the approach of her enemy, day. Recently her father and herself had gone furtively at dusk in hunt of a cheap flat, where they had hoped to subsist on the two hundred dollars remaining in Morley's pocket, until he could obtain employment. A night-long dream still clung in her brain, of the mean streets, the dingy halls and the denizens with their abrupt, noisy manners and strange, unlighted faces.

The girl buried her face in the pillow, then slowly raised up, the gray eyes darkling in her ghostly little face. Surely a figure of strength had mounted guard here since yesterday. Claire read into such a type as Wick an invincibility against the misfortunes of ordinary people. His oval face with its round, firm chin; the steadfast dark eyes under their level black brows; his light deliberate step and habit of immovability in his tracks as he spoke; above all, his air of breeding proved him a man apart.

Slowly emerging from the tossed covers she peered into the mirror at her small face in its massy shining frame. She shook her hair over her shoulders, and then coiled it as worn by a grown-up woman, but confessed candidly in the end, "I am too ugly now for anybody to love me, and have no figure; all skin and bone." Moving slowly toward the window she gazed ... ward.

No Wonder It Is Popular!

Fine Appearance, Comfort, and Doubled Utility Make the Modern Davenport Bed Extremely Desirable

Serves By Day and By Night

ARE you aware of the great advances that have been accomplished recently in the design of Davenport Beds? The piece pictured above typifies this progress. Today, eighty-three manufacturers offer through their dealers inexpensive Davenport Beds that are of correct, distinctive appearance and are comfortable by day or by night. The modern Davenport Beds recall nothing of those earlier pieces that had only utility to commend them.

In thousands of houses, in apartments and summer homes, Davenport Beds are favored for their fine appearance, complete comfort and doubled utility. They are used in living rooms, libraries, sun rooms—wherever there is need for an ordinary davenport. Whether it be used nightly, or only occasionally, the Davenport Bed is extremely desirable.

By one easy motion this remarkably fine piece of furniture is transformed into a comfortable bed for one or two persons. Mattress and springs are of regulation size and type.

The Davenport Bed, shown above, arranged for night. There are other types—long and short models—of equally good appearance and utility

In the morning, it is returned to day du equal ease. Mattress and bedding ar pletely concealed. There is no sugges the Davenport Bed's dual purpose.

Everywhere there are dealers who c vide you with a Davenport Bed to mat furnishings. Styles include period, oven and other types. They are covered in tries, velours, leathers or other ma Prices are lower than you might expect article of such utility.

Step into any good furniture store a how beauty, comfort, and usefulness ar bined in the new Davenport Beds. Y find models on display, or obtainable, tha every requirement of fine furniture. can be had with chairs and rockers to

Send for our handsome brochure. It s great variety of modern Davenport Beds choice of styles, woods, and covering ma

"When did you say you'd come again?"
"A year this midwinter."
She was looking up at him queerly. "Won't I ever see you in summertime?"
"Not ever." And he was gone.

Ten minutes later a man who had been standing back in the deep shadow of the elms came out to the walk and with a hurrying step ran up on the porch and knocked vigorously. To Claire, who answered quickly in the hope that Wick had returned, the newcomer said, "Is Mr. Sparks here?" He heard her reply that Wick had just gone, with a gesture of impatience. "And he's leaving town, too, isn't he?"

"To-morrow."

"Can I see your father a moment, miss?" Framer, plainly a friend of Wick's and one of the gentlemanly sort which Claire set such store by, was instantly admitted and conducted to the library. Mr. Morley rose, holding onto the book picked up at random.

"I'm leaving town over to-morrow," explained Framer, "and if I'm not able to reach Sparks in the meantime would you please tell him I'll take a thousand stock with him?"

"But I shan't see him again," replied Morley; and then: "Stock? Is he organizing a corporation?"

"I supposed you knew," August returned cautiously. Then his eyes began twinkling. "I saw you talking to him in the bank to-day, Mr. Morley, and later heard you had been raising money. When I missed Wick at his boarding place to-night I thought of looking him up here. As for the corporation, well—since it's in the way of secrecy for the present, perhaps we'd just as well not discuss it. Sorry to trouble you—I'll have to get in touch with Wick by wire."

He was an enticing fellow, with his twinkling eyes and hand raised as cautioning his companions not to say another word on Wick's secret. He hurried toward the door, then hurried back again, a maneuver which enabled him to surprise a strange look between father and daughter—the former's suspicious angry expression being answered by the calm high defiance of Claire's.

"He didn't leave his forwarding address? No? Well, I'll hear from him. August Framer, one of his pals at the First National. Good night." And having seized the strategic moment for intrusion into these people's business he hurried out.

Along the street he ruminated, rubbing his hands, "Now that I've opened the discussion Wick can say I'm a liar and meddler, but old Morley will still have his suspicions and will talk to me. What the devil," he said, stopping dead, "can Wick have up his sleeve to roll Morley for all that money?" He had stood without the library window and watched his friend count the five thousand currency, through a cranny in the curtain. August ceased rubbing his hands and ran them despairingly through his hair.

"What's his dope?" he said indignantly. "But he can't double-deal with me," and started at redoubled speed after Sparks. August had never before been put to such trouble to find out anything about anybody.

Wick Sparks had gone to bed when August knocked on his door, but he rose with hospitable alacrity and shook hands.

"Looking for you a while ago, Framer," he said. "You seemed to take a friendly interest in what I intend to do, and I made up my mind to tell you and let you in on a good thing. I've worked out a system for beating the races ——"

"Gambling ——"

"Do I look like a man who would gamble? What in my record would justify such a suspicion?"

August began to concede that Wick was a liar worthy of respect. "Old Morley a while ago said something about a stock company," he countered glibly.

"He might have gotten that idea," admitted Wick, heaping a thousand curses on his companion; but his demeanor told the latter nothing. "Now I will take five hundred dollars from you and double it every year." It was worth that much to keep Framer from meddling. "Want in?"

"Damned if I do!" snarled Framer. "It's some sort of a shady game."

"Framer, what brought you in here?" asked Wick.

"To learn what you were about, of course," replied the other with no idea of brazenness.

(Continued on Page 73)

So that you can read in the train

WHEN you open the curtains of your Pullman berth, you find a little electric light burning at the head of your bed.

To what one metal, do you suppose, are we indebted largely for the installation and operation of this convenient little light? Would you guess that lead is all-important for the electric lights of trains, steamships, automobiles, aëroplanes?

Lead in the bulb itself makes the glass more brilliant and gives greater heat-resistance. There's lead in the push-buttons of hard rubber that you use to switch the light on and off. The fuse may be a little piece of lead wire. In the storage batteries essential to all such lighting systems are three different products of lead—hard-lead, red-lead, and litharge.

But you do not need to travel to find how important lead is in daily life. The electric light system at home requires lead the same as that in the car. The dishes from which you eat have a smooth glaze in which lead is an essential factor. The rubber stoppers in your bathroom contain lead. Your cigarettes are wrapped in lead foil.

Almost countless are the ways in which civilized man makes use of lead and its products, and of them all, none is so important as the use of white-lead in the manufacture of good paint.

Buildings, unpainted, crumble into decay. Buildings protected with good paint withstand time and weather. "Save the surface and you save all" is a maxim that wise men have always heeded. The more white-lead any paint contains, the greater its protecting power and durability.

National Lead Company makes white-lead of the highest quality, and sells it, mixed with pure linseed oil, under the name and trade-mark of

Dutch Boy White-Lead

Write our nearest branch office, Department A, for a free copy of our "Wonder Book of Lead," which interestingly describes the hundred-and-one ways in which lead enters into the daily life of everyone.

Nash Leads the World in Motor Car Value

Six Touring Model
Five Passengers

One thing stands out sharply and clearly.

And that is the pronounced rapidity with which purchasers are turning to the Nash as the soundest investment value.

In the five-year period since the first Nash was placed on the market the volume of Nash business has multiplied itself at a far faster rate than that of any other maker.

Remarkable as this sales record is, it is in truth no more worthy of comment than the condition of Nash finances.

There's not one dollar owing; an evenly balanced inventory; no bonded obligation; and between four-teen and fifteen millions of dollars on deposit and in government securities.

Fours and Sixes
Prices range from $965 to $2390, f. o. b. factory

City was announced."

"Did the usher say that?" asked Wick. "He should have announced Mr. Sparks with a letter of introduction from the president of the First National—who warned me, however, that I would not get to present it. Here it is, sir."

Mr. Gower glanced at the letter laid open before him. "Well, what do you want? I haven't time to talk to you. You got in by mistake. Here, take it to the cashier."

Wick stood in his tracks. "That letter is addressed to you, Mr. Gower; I will answer your question. I wish to open an account for three thousand dollars. I am going into business here, and trust you will help me to turn over my profits."

"When you make them! Well, well, well, I tell you—go to the cashier, go to anybody."

The young man proceeded unhurriedly: "I have a partner; our profits will run twenty-four thousand dollars a year on an investment of six thousand dollars; out of my share I shall wish you to advise me on the investing of eight thousand dollars a year."

"Four hundred per cent! Burglary. No—insanity." Struck by his own explanation Mr. Gower scrutinized his unwelcome caller warily.

"If I make the eight thousand dollars a year you will advise me how to invest it?" asked Wick imperturbably. The other nodded, humoring him. "Then, if you will permit, I have one more word, and will go out quietly. I am an enterprising young man—about the age of your son here—who has never been nursed in anybody's bosom, and therefore entitled to your personal respect. And I am one of the mass of small depositors who in the aggregate are the real resource and profit of the banks, and therefore entitled to your counsel and protection."

He held out his hand; Gower shook it. "I'll be hanged!" he said as, with the smile which had fascinated Claire wrinkling the corners of his mouth and eyes, Wick thanked him and retired.

Old Gower turned on his son. "Take note of that fellow, Algy; keep him in mind. 'Four hundred per cent,' he said, and makes me believe it's a conservative estimate."

"Front," said Algy nonchalantly.

"You say so because you couldn't go out with six thousand and come back with your shirt. That what's-his-name Sparks knows the ropes. He's so different from you that I have every confidence in him. 'Not nursed in anybody's bosom.' Well said! Ha; take a letter."

Mr. Gower's references to Wick did not cease with this conversation, and Algy, feeling aggrieved at the comparison, later took the trouble to find out whether Mr. Sparks had actually opened an account, and then to keep an eye on his balance. To his consternation he saw it mount at the rate of ten or twelve hundred dollars a month, and could only hope that the governor would never remember to look it up, or he would make comparisons more odious than ever.

"I should be ruined, rather," said Algy. "I say, I must get that fellow Sparks to tip me to a mount in this race of life." He got his tip, but not until fourteen months later.

With Wickford Sparks' passing from the Gower office that morning the unknown claimed him for over a year; then he reappeared to Mr. Morley for ten minutes, to Mr. Gower for fifteen. Both were the annual meetings which he had scheduled. In January, Algy met him in the betting ring at the Havana track, and the two had the experience which, as gamblers say, made a Christian of Algy, and sent him back to his father and business with a better ambition than the invention of a shorthand system of paragraph signs. Wick's share in the experience was a knife scratch on the left breast, received in warning a race-track crook away from Algy. It was

In This Company Ditto Pays for Itself 14 Times Every Year

About 45,000 orders a year arrive at the International Time Recording Company, New York.

An average of 20 copies is required of each order.

Under the old method, with billing machines, annual copying costs were $8,098.21.

Ditto cut this to $4,143.24.

Previously, it cost 18 cents to copy an order.

Ditto costs less than 10 cents an order.

Two people do the job instead of four.

Costly errors—common under the old method—are practically eliminated.

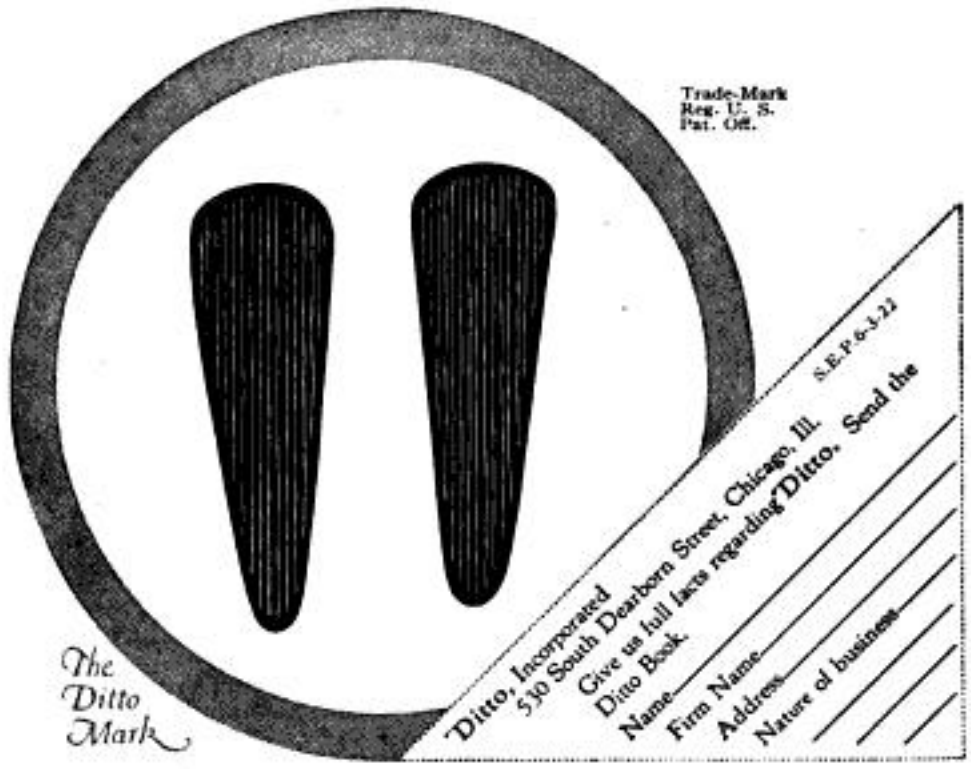
This concern finds that Ditto pays for itself more than 14 times a year.

Ditto Saves Money, Time & Errors in all Sorts of Copying Work

Ditto is a simple machine that swiftly provides up to one hundred exact, legible copies of anything that can be typed, written or drawn. It makes these copies upon blank sheets or printed forms. Lasting, heavy paper—even cardboard—can be used if desired. Ditto copies in colors, if you wish. There is no carbon paper to pack, no stencil to cut, no type to set with Ditto.

Orders, material bills, invoices, stock records—any of the thousand and one forms essential in modern business—are swiftly, economically and accurately prepared with Ditto.

Ditto provides improved methods for handling all routine, yet it is so versatile it adapts itself immediately to any existing system. What Ditto is doing for thousands of progressive firms throughout the world, Ditto will do for you.



Send for the Ditto Book. It shows ways Ditto can be applied to save money, time and errors in all sorts of uses. Every department of any business—large or small—can profit by a survey of Ditto's successes.

Use the coupon. Pin it to your letterhead and send it today.

merely a mean little scrape without a feature of interest to Wick; the lasting gratitude and admiration of the lanky fashion exquisite he always ignored, with characteristic indifference to opinion.

Algy, however, never overlooked a chance for Wick's company after that. He hunted up his rescuer the following summer at Belmont, and came upon him as he had at Havana, standing aloof in the rear of the betting ring, studying in a memorandum book.

"Banking," explained the student when Algy glanced at the notes inquiringly. Wick touched the textbook in his pocket, and added that he had put in a couple of months of study at a school of banking during the winter.

"But don't you expect your system to work indefinitely?" asked Algy, whereupon the other explained his plan of keeping two roads open through life.

"Which means," he said, "that if race horses all die or bookmakers quit laying odds, I shall have accumulated enough money and knowledge for a start in banking. I have placed myself in contact with Mr. Gower to assure this start."

Algy whistled admiringly. "But I say, Wickford, you'd better never let the governor be wised to your race-track activities."

"I will tell him," said Wick with his half smile.

"And you don't look on banking as a gamble, like other businesses?"

"Now that you've settled down to banking, in a responsible position, do you gamble?"

"Gamble? While handling other people's money, I say!" replied Algy with a frightened look.

"You have answered your own question," said Wick.

By this time Wickford Sparks was known to the betting ring from Windsor and New York to Bowie and Havana. But he was known as a man of means who followed the game for the sport of it; neither piker nor plunger, he won or lost easily. His bets rarely went above a thousand, even on a horse he liked, and frequently were only nominal, twenty or thirty dollars. He made his own choices and, though an affable listener, had been given up by the touts long ago.

As he kept himself unsuspected of system play no limit had ever been placed on his bets by the bookmakers to prevent his retrieving his losses.

At Belmont that summer day the band blared from the stand while the two young men were conversing; the shout, "They're off!" swept over them and the crowd in the ring began scampering to see the start. Algy quivered with excitement, but Wick studied at his notes again.

"Oh, yes," he replied smilingly to a question of his companion, "I watch the horses being led out or warmed up sometimes. I admire a handsome brute. There's one colt, Gold Dragon, well named—a breath of flame blown into the brazen cast of some old Greek sculptor—like the casts you see at the museums. Sorry he's not starting to-day so I can show him to you."

Wick dismissed Algy from his thoughts as soon as they separated that evening; nobody was admitted to the one-man world in which he was now well secured. His weak-kneed old partner and the prying Framer were consigned to limbo. He had called on Morley between trains last midwinter, while en route between New Orleans and New York, and listened good-humoredly to hints that he should increase the working capital of their business. These hints had, of course, been inspired by August, who, wild with chagrin on worming the truth about the dividends from the old man, wanted in. Morley had talked with hands clenching and pale blue eyes gleaming with cupidity. He was still writing letters urging that Framer be let in and the capital be increased; the business that paid four hundred per cent had become a game and Morley, a prey to the master passion, was himself bent on a killing. Wick laughed as he tore up the unanswered letters and forgot them.

Claire's friend, waited and watched for a long year, had come and gone without seeing her. She examined, blamed, cross-examined her father for a message from Wick, but he had left none. In this very room where she had given him the touch of shoulder valiantly in the Gettysburg of his fortunes, he had forgotten her.

"Has Wickford changed? How does he look?" Mr. Morley had repeated her questions, and replied to them: "Wickford has a dark smile and a lighted forehead, like the young noble in the painting we saw. He keeps even me, his partner, at a distance. Well, genius is solitary and peculiar, and who but a genius can turn over money as he can?"

Words which sketched Claire's hero as a being too grand to exact gratitude or friendship of. She would never hear him called proud and selfish by her father or the outraged August. When December came round again she would not go out of sight of the house lest his welcome be below his deserts and station. At last he rang at the door and Claire threw it open to him. Her father telephoned August from his study.

Wick Backed Him Into a Corner by the Throat, But Claire Grasped His Arm, Begging, "Don't, Don't, Wick! He's Surrendered"

Immediately after the greetings Wick stated: "You have been writing your dissatisfaction with our partnership, Mr. Morley. I am now ready to buy out your interest."

The latter pursed his lips and looked around guardedly; it was the forthright Claire who answered.

"We don't want to break up the partnership."

Wick looked at her. "You are growing up."

"I am nearly eighteen, Mr. Sparks."

"And pretty enough to have lots of beaux."

The girl blushed scarlet, but found composure enough to answer, "I have not; nor want them. My old boy friends don't count, do they?"

Wick pointed his hands judicially. "I'm not so sure."

"Oh, I'll send 'em away," declared the girl.

"Mr. Sparks and I are talking business," reproved her father.

"Then you've reached a decision, Mr. Morley?"

"Papa, you must not sell!" exclaimed Claire. She turned to Wick. "Please listen to what I want to say, Mr. Sparks."

"Speak up."

Wick raised his hand to Morley, a gesture for silence. The latter, however, asked time to consult his usual adviser in business matters.

"Framer?" asked Wick. "Show him in. Now, Claire, your objections."

It was a queer unlearned little Portia who stood arguing the law of partnership before this lordly young judge sitting with hands on the arms of his chair and black brows bent upon her.

"Remember, Mr. Sparks, when papa would have backed out of borrowing money from his friends to start you in business, that I persuaded him. Then, after you had gone with all the five thousand and the sheriff was coming to turn us out of home, I took my rings and pins and bracelets that mamma had left me, and sold them to the jeweler, and we paid the mortgage man some money and he let us stay on."

Claire's voice was silver-clear and she leaned a little toward the judge, impressing him with a gesture strange, indeed, to law-court oratory; but so eloquent was the gesture of the child pleading for what it knows to be right as to appeal irresistibly to heart justice.

But this was not a court of sentiment. "You showed good understanding of the necessities of your position for so young a person," said Wick.

Only a small endearing note in his voice, a friendly nod that would have cost him nothing, would have encouraged her so. As it was she strung herself for a struggle, her eyes darkled.

"Mr. Sparks, aren't I a partner, too, in papa's share? Didn't I buy a right with the jewels? And I don't want to sell out!"

Her father, who had returned to them, began fuming. "Preposterous! You are a child." He puffed out his cheeks so that his florid face was round as a plum, and waved her aside importantly.

"If Claire has a case, why shouldn't she state it?" said Wick without turning his head; his quick sternness compelled a silence.

"That's all, Mr. Sparks," said Claire.

The form of Portia was no longer that of the child who had stood in the rose window of dawn, mistily gowned in white, and looking out on a world enlightened more by the presence of her hero than the sun. Trim and straight and rounding, Wick saw it, and her face lovely with its pearl-like flush and clear gray eyes and shining hair. Her mouth drooped as she waited the word of the judge which was to pronounce her fate and his own, along with the partnership.

He saw her and yet did not; and his decision, already made, was withheld as an expression altogether strange to this secure and indifferent man, of frowning and fear, gathered on his face. For as Claire had talked and he had listened, the one-man world had witnessed this phenomenon: A scene of maddened men showering out money in the betting ring; a scampering to the blare of bands and thunder-roll of hoofs. A shout: "They're off! Gold Drag[on] the lead!" Wick saw the [scud]ding [fig]pass like lightning around the [fa]beaten track, and into the stre[tch] der a blanket with one nosing [at] on—Gold Dragon!" Wickford Spark[s] gambling in his thoughts!

Suddenly he focused his fro[wning] look on Claire. "I will not buy [a] day," he said.

He threw his coat over his arm as [C] hurried in. Wick nodded in [an]swer effusive cries of greeting, shook [hands] tily with the Morleys and moved [to] "But I came to consult with [you,] Morley," urged August; "to [ar]range difference; it is not necessary to [in]the business."

Wick was deaf to his expostulat[ions] they reached the hall. Here [he] Claire, trembling and blushing [and] phant, helped on his coat, her [hand] ing on his [arm]. resounding alarm [was] struck through [the] world still startled August perceived [a] bation; this mystery who had baffled [the] sional's investigat[ion] his neighbor's [affairs] cornered at last. burly body bustled twitched with [ex]

IVED from the farmer, finest leaf tobacco is , untempered state. e various methods of ıd handling tobacco ıds of processes and s—but every pound af tobacco used for s packed away in ıogsheads and aged ong years.

IN THE WOOD OES THIS:

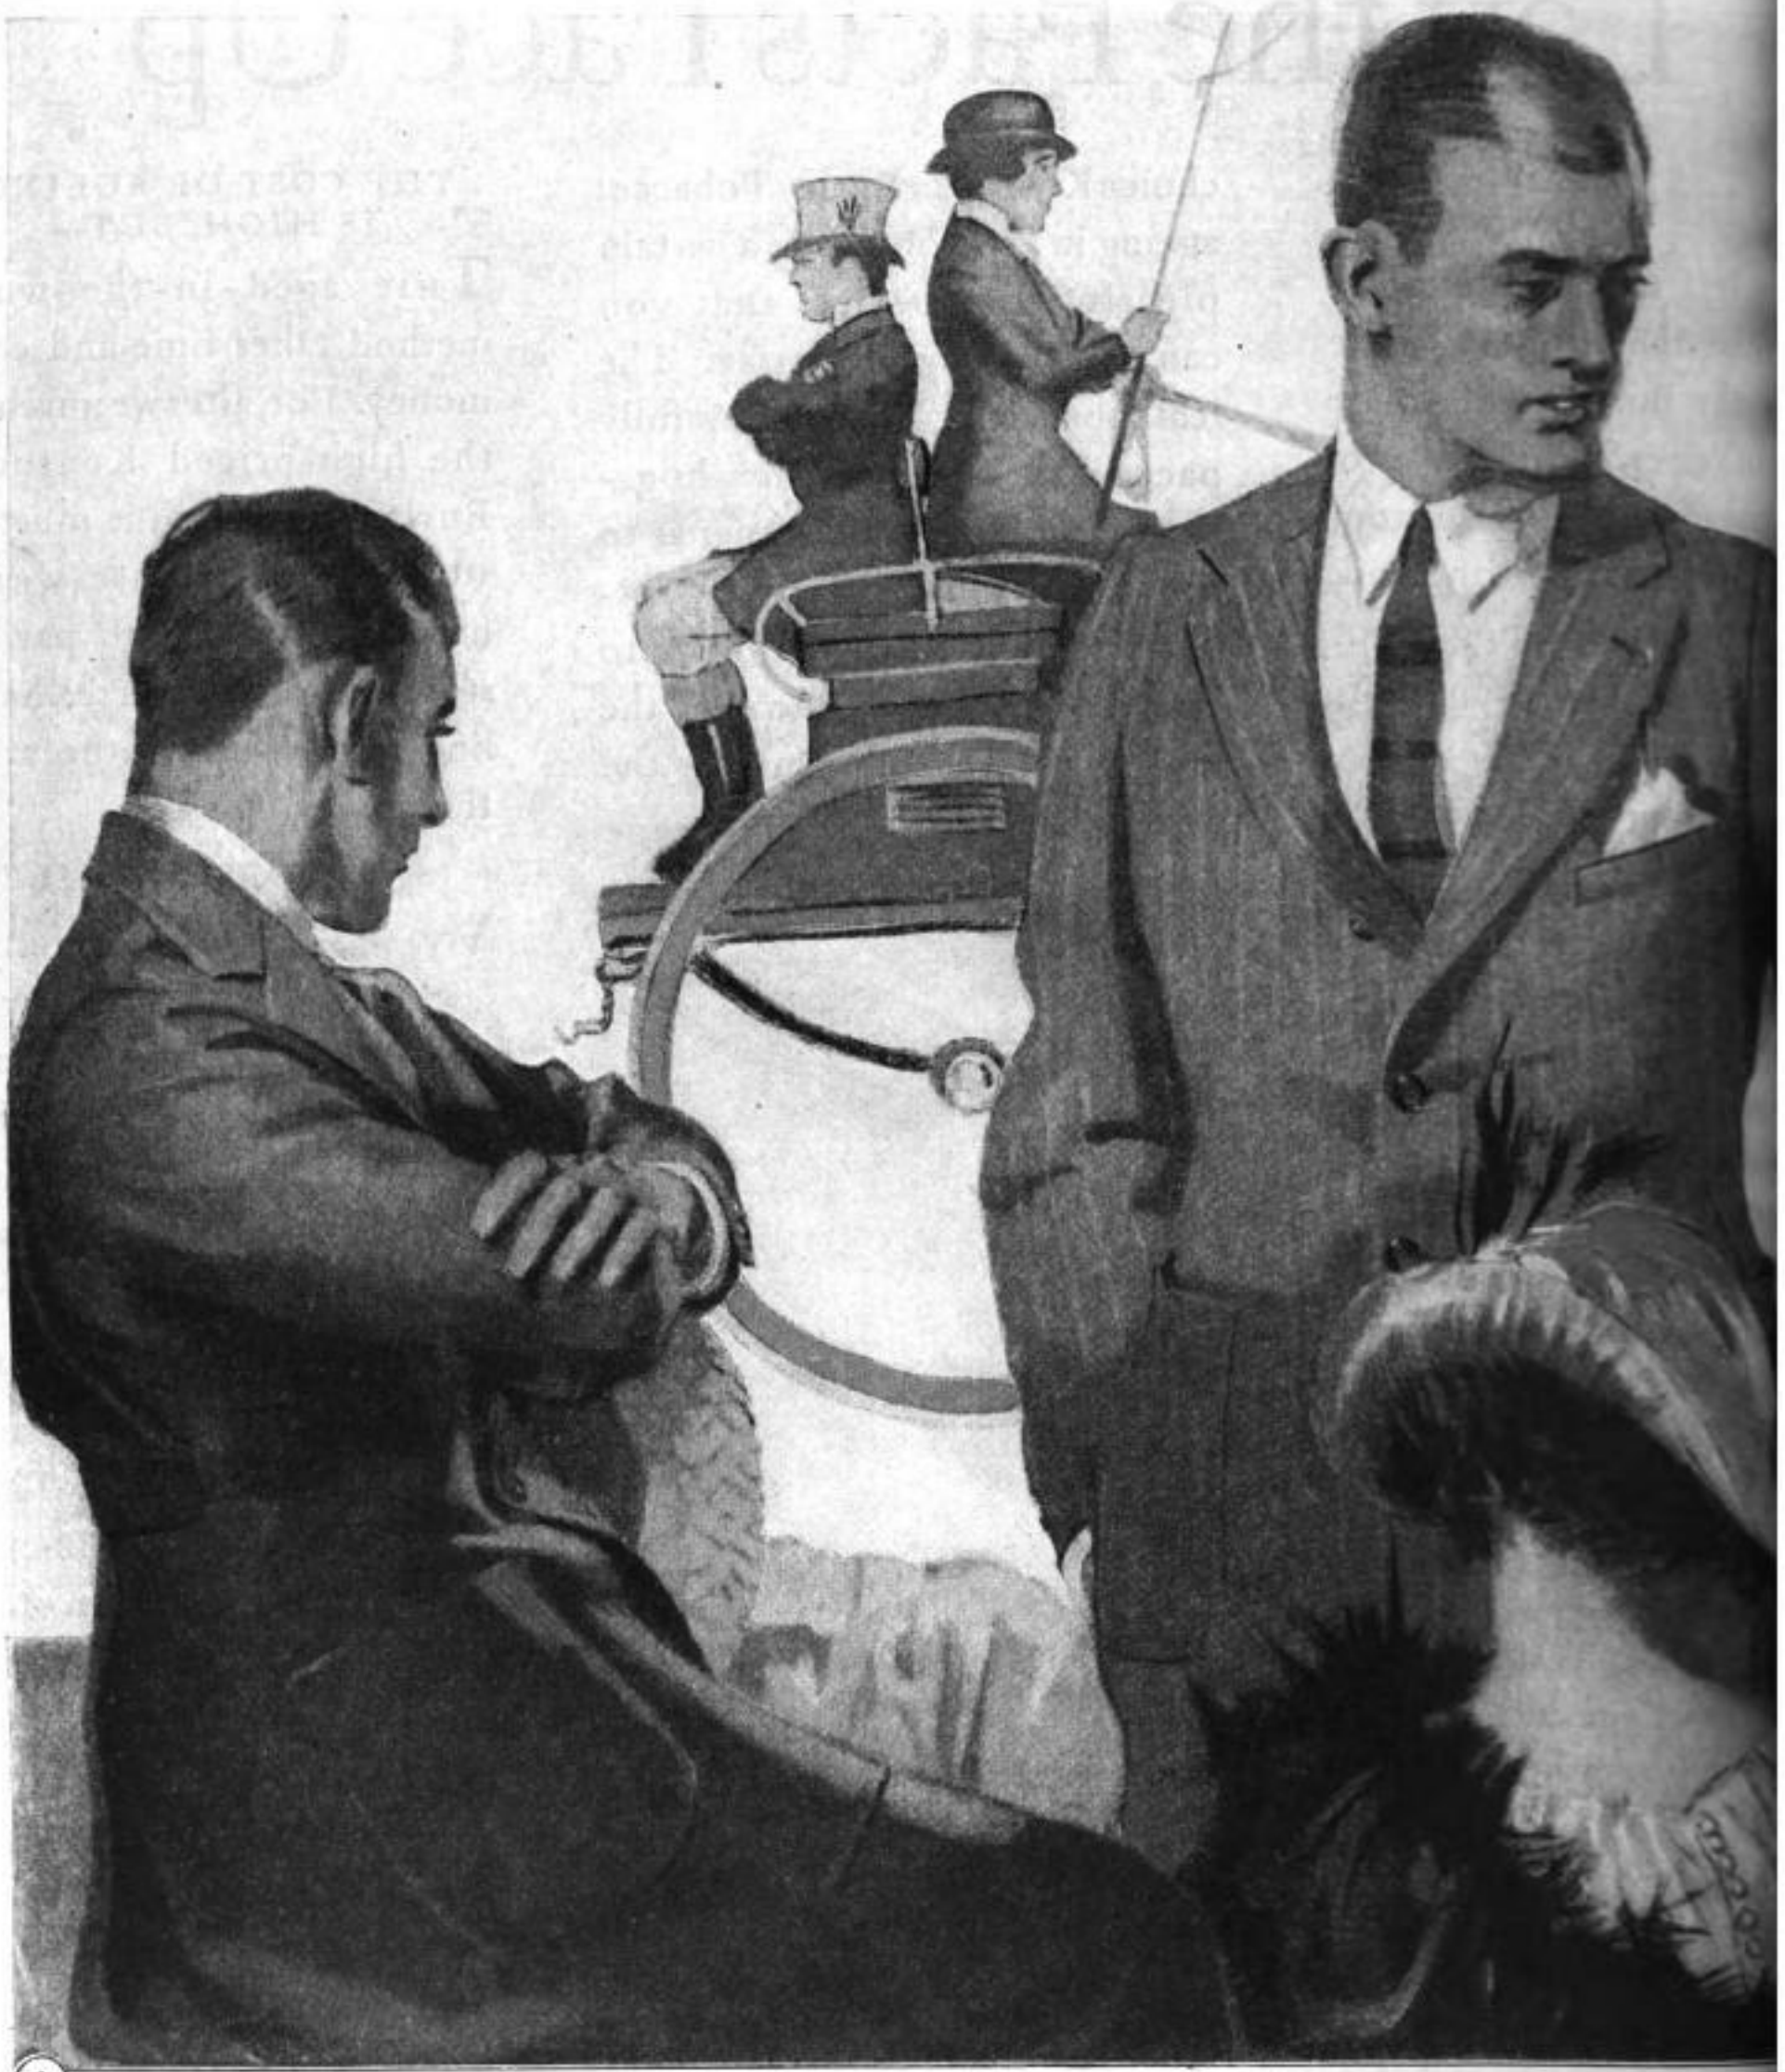
R it's a cask of rare ne or a hogshead of choice Kentucky Burley Tobacco, ageing in the wood gives a certain pleasing mellowness that you can't get in any other way. The leaf tobacco for Velvet is carefully packed in huge wooden hogsheads and in such a manner as to subject the tobacco to the atmospheric conditions, causing it to "sweat"—that is, to throw off the raw, bitter properties, leaving the tobacco mild and mellow.

THE COST OF AGEING IS HIGH, BUT—

THIS aged-in-the-wood method takes time and costs money. For, after we purchase the high-priced Kentucky Burley Tobacco, it must be stored in immense warehouses. We have to pay for storage, insurance, taxes, handling charges and interest on the money invested.

IS IT WORTH-WHILE?

VELVET, introduced only a few years ago, has grown year by year in popular favor and it is our honest belief that it is the best pipe tobacco that is manufactured. We invite comparison.



JUST pour a little Velvet in your hand and compare it with any pipe tobacco. There is none that equals in mellowness this aged-in-the-wood Velvet. Buy Velvet—and let your true and honest pipe decide.

Dr. West's TOOTH BRUSH

WECO Product

Cleans *Between* the Teeth

DENTAL SCIENCE worked out this new Tooth Brush and this one right method for properly brushing your teeth.

There's no technical mystery surrounding this brush—it goes back to the simplest of hygienic principles, making it easy to clean *outside, inside* and *between* the teeth.

Don't brush your gums away from the teeth—brush them over the teeth—note the proper method illustrated at the right.

Your Dentist will tell you that Dr. West's Tooth Brush is a safeguard to Health.

1. Brush upper outside down.

2. Brush upper inside down.

3. Brush lower outside up.

4. Brush lower inside up.

condition when he said "I, alone, am." Outside of Wickford Sparks his world was empty; it was an enduring world, a safe world of shelter and good living, and he was happy.

Along in midseason he became aware that he was being shadowed, and surmised that the person at his mailing address had been bribed to disclose his hotel. Wick observed this shadow at his elbow several times when making his bets, and led him aside.

"What is it you wish to know?" he asked; and when the man resented the question: "You can no more conceal what you are than a donkey can deny his ancestry. Private detective is branded all over you."

The detective was not pleased, but thought it his rôle to become friendly, and said that for several days he had been keeping tab on Wick's bets. Wick grinned satirically.

"Come to any conclusion?"

"I can't make head or tail out of it."

"Neither can I," Wick confided; "it's a gift," and left him with an admonishing glance.

He was not followed again, but ten days later in his room received a message in the most wailing voice ever heard over the telephone: "Mr. Sparks—it's me, Claire. Papa and I are here at the hotel."

"Pleasing news; we'll meet for dinner," replied Wick, and appointed place and minute on the mezzanine.

"You don't mind me coming? They have been telling such horrid things about you that I want you to face them down."

"I'll make up my face, all ready, Claire," laughed Wick.

"I'm so—so very glad to hear you talk like that."

He met them as appointed a little later; but Morley iterating and reiterating a dozen times in two or three minutes that he could neither dine nor amuse himself with Wick until a difference between them was adjusted, they drew up chairs where they were.

"I must know more about your operations. I must know how my money is being handled," continued Morley.

Wick looked from the agitated, half-threatening old man in evening clothes to Claire, who smiled back suddenly and was in the same instant as solemnly anxious as before.

"No doubt," observed Wick, "you employed the detective to investigate me at the suggestion of Mr. Framer."

"At the suggestion of my friend and adviser, Mr. Framer, yes, sir."

"But he could only learn what I informed August when I started out—that I had a system of betting at the tracks."

Claire's sobbing little cry interrupted: "How could you—disappoint us so?" Wick surveyed quizzically the girl, who in a very agony to keep control of her emotions gripped her hands together and bit her lips, her eyes glistening with tears. "But tell me, it isn't gambling," she exclaimed, taking such hope in Wick's smile that her lips quivered in a smile of her own.

"I am in good standing with you there," said Wick; "it is the bookmakers—the horsy sports you understand—who gamble against me. As long as they persist in it they lose. For, however the horses run, my system beats them."

Morley heard with increased excitement. "How do I know how much you win?" he demanded hoarsely, but under Wick's glance immediately repudiated his very palpable insinuation. "I do not hint that you would cheat me, Mr. Sparks—far from it. You would use our joint capital honestly. But on the side—ah, on the side, with your own money? That is another story. It is all right as far as it has gone—but ——"

Claire had been silent with eyes cast down, as if nothing else mattered now that the knightly and talented Wickford of her romance had discovered himself as a race-track gamester, for she scorned the fine distinction between the man who bet on a sure thing and the one who took chances.

But as her father talked she asked spiritedly, "Do you mean to say, father, that you will continue partnership in this—system?"

"I'll do as I please with my own money. Shut up!" commanded the old man, whose bloodshot face already reflected the passion of the ring.

Claire was amazed at his rough manner, and a little frightened. "But why not sell out? Mr. Sparks once offered to buy, and surely this is a business which no one of our class and name can touch without defilement!"

"You blow hot and then cold, Claire," said Wick good-humoredly.

"I did persuade you last winter to withdraw your offer to buy papa's share, but," she added proudly, "I believed then that the profits came from a clean and respectable business. It was a sorry day for me that I interfered."

"You need not lament; your persuasion at that meeting had nothing to do with the decision."

It was spoken so indifferently that the girl resented it. "Surely what I had done to help gave me a little right to speak."

"It did—if business transactions were based on sentiment. Mine never are." Wick, whose eyes had been following Morley's, interrupted himself: "Why is Framer waiting in the lobby? Give him the sign to come up."

Morley did so.

During that moment before August appeared in the mezzanine floor Wick turned again to Claire, who had learned much about her hero in the last few minutes that in the three years of their acquaintance. He valued not at all that blind worship, trustfulness of the child who had begged and threatened the weak-kneed old banker into giving the borrowed money, their last resource, to Wick. Herself, herself alone had given him his start in his chosen career. It seemed incredible that he should have ignored the little Parisian plea.

"Wickford," she exclaimed in a tense tone, leaning forward for confidence, "what kind of world do you live in?"

"The mortal man only really lives who lives for himself alone," replied Wick with some acerbity. "There are no such things as friends and enemies; it is everyone for himself. To escape the miseries which life, and incessant plunder by the miserable, one must build his own individual world and guard it fearlessly."

She pondered this an instant. "You mean you live in your world alone? That is awful!"

"It is secure."

"I should be afraid," said she slowly; "I should be more afraid that I live among folks, even if some hated me robbed me."

"You would make life a gamble," smiled Wick, amused; "I will not."

She was amazed that she could resort to this, but could only admit it. "Maybe; but it would be gambling for something more splendid than money or security for myself."

"What, for instance?"

"Oh, friends to love me, and have and just general goodness, I guess," she sighed.

Wick was still amused by her philosophy and let his mind drift after into her fanciful vein. Suppose a man could bet himself; suppose Wick Sparks and his strong box of a world could be wagered against all outside stakes; what a hazard! But if he won honors, friends, riches, pleasures, he had the chance of losing them again. And if he would only be a beggared gambler at life. Once a gambler, always gambler. Nothing was secure out of all-men's world; it could keep its honors and pleasures. There was something too; Wick knit his brows, not observing Framer's approach. That all-men's world had a curious promise wherein lay the supreme gamble. For of all the millions of losers who looked up patiently from their miseries and helped out in the misery of others because of that promise, not one knew that it would ever come true.

"Whew! One life at a time is enough for me," grinned Wick. "I'll live the other, if there is one, when I come to it."

Wick nodded to August but the latter persisted. All in this world for sec... the next; backing the promise to be... A stiffer gamble than any race could ever saw; give Claire credit. He started at the old alarm. "Something about this makes a gamester of me."

And from that moment he suspected queerly and disliked her.

Framer had seated himself and, at interrogatory nod from Wick, said: "Mr. Morley demands that the betting [illegible] of which he owns five-sixths be divided him."

"Certainly." Wick had no objection letting them have the secret, but on two conditions: First, that Morley close out his partnership interest to

old an interest yielding twelve year for five thousand cash? e to the psychopathic ward

"An additional consideration on my part was my formula for the manufacture of money."

Gower studied him. "Such a secret exists," he said with astonishing acumen, "but it is dangerous, or even fatal to all but one man in a million."

"It will probably be so to my former partner," replied Wick. To the banker, for once candidly attentive, he explained his system, whose workings were altogether contradictory to the theories proved by the banker's experience.

"It can't be done!" he exploded. "You will gamble in the long run."

"I am the man in a million," reminded Wick. "Now I have another and entirely different business to take up with you."

But Algy interrupted.

"Governor, before Wick approaches you on his other proposition I want to state that I'd back him as the Rock of Gibraltar; I've seen him in action. Do you know what he does in the midst of the lunacy when a race is on? Studies a textbook on banking in a corner!"

"You are not backing Mr. Sparks because he is a Gibraltar."

"Dash it, I am not!" assented Algy emphatically. "Two years ago at the Havana track Wick risked his life to save me from a jolly bookmaker who had robbed me blind. He showed me I was an ass to be playing against a sure game, and bought my ticket home. That's what made a Christian of me."

He told the story with a warmth of gratitude which touched even Mr. Gower. But Wick, with that honesty almost as terrible to himself as to others, supplemented Algy's account.

"I feared Algy would tell the tout of my steady winnings as recorded in the bank's books, and the bookmakers put a limit on my bets. So I broke up the combination. There's nothing else to it."

"Wick!" exclaimed his young friend. "I'm sorry you said that." He shook his head mournfully, disappointed of a hero.

The elder Gower regarded him curiously. "You're keeping me waiting for your new proposition, Mr. Sparks."

"I have made a study of accounting and banking," resumed Wick, "and this winter complete a course in the best finance school in the United States. I now have about thirty thousand dollars which I will add to with twenty thousand dollars a year. Would you be willing to employ me in some executive position or assist me to start a bank of my own?"

"You foresee that you will be tempted at last and your system collapse."

"I foresee that I shall never gamble," replied Wick. "But horses may stop racing, or bookmakers laying odds. A man is trusting to luck who makes secure only one way out of life."

"And I am chosen to open the second?"

"If you are convinced I can travel it," replied Wick.

"As you are! I will take you and make you, but as you are," agreed Gower. "After you've made your first gamble I wouldn't trust you with my watch!"

Wick, who offered or accepted nothing conditionally, merely said, "This rounds out my scheme of things." Himself, as he was, he knew to be a certainty.

It was on the day of this meeting that he saw Claire Morley again, in a limousine at the curb of the Avenue. He took the costly new car and the chauffeur and Claire's rich furs as the natural spoil of the bookmakers by the new system-players, greedier than himself.

Claire stared at him haughtily when he crossed the pavement to speak. "What, are you already puffed up with pride and pomp? Remember, I knew you back in the old home town."

The girl's eyes darkled on him and he went on, finding amusement in the situation. "You watched me come up the walk, suspecting a sheriff, and had on, I remember, a kitchen apron with black smuts."

"Till just now I didn't believe we would meet again," replied Claire with a face of stone. "I thought you would be too ashamed to face us."

If the girl could have understood, Wick's reply was in deadly earnest. "Ashamed? I ought to be for letting you innocents in for a trimming at a master-player's game."

"I trusted you for a long time," said Claire, "and believed you good and generous till that night at the hotel. Even then I didn't suspect you of being any worse than selfish and ungrateful."

Talk about A REGULAR HE-GUN!

This is it!

This wonderful gun costs only 25¢

Also made in polished nickel plate at 50c. Both are higher in the West and Canada.

Ronson Redskin Reloads

1000 Shots for One Cent

Those mysterious little red reloads that you slip into the Ronson Repeater—every one good for 5000 shots! Buy several extras when you get your Ronson Repeater. You'll want 'em. Price 5 cents each, higher in the West and Canada.

It looks like a real automatic revolver
It shoots and FLASHES like a real gun
It is absolutely harmless

YOU'LL want to own the Ronson Repeater. Every time you pull the trigger, you hear it shoot and see it shoot! It flashes—big, red flashes just like a real gun.

But these flashes are absolutely harmless. Shoot them anywhere. The Ronson Repeater is perfectly safe. What makes the flashes and smoke is a secret, but their harmlessness is guaranteed.

You get 5000 flashes from the Ronson Repeater, before you have to reload. This is a real repeater. And you don't have to cock it—just pull the trigger.

The Ronson Repeater has the shape, the grip and the gun-metal finish of a real automatic revolver. It is strongly made of pressed steel.

Get one right away at your dealer's. If he doesn't carry the Ronson Repeater, cut out the attached coupon and mail to us. We will send you one by return mail, loaded and ready to shoot. Mention your dealer's name. Write us today.

Power

—from cold to full load in less than one minute

—turn off the oil and in seconds it is still

—fuel is used only when power is needed—and in proportion to its load.

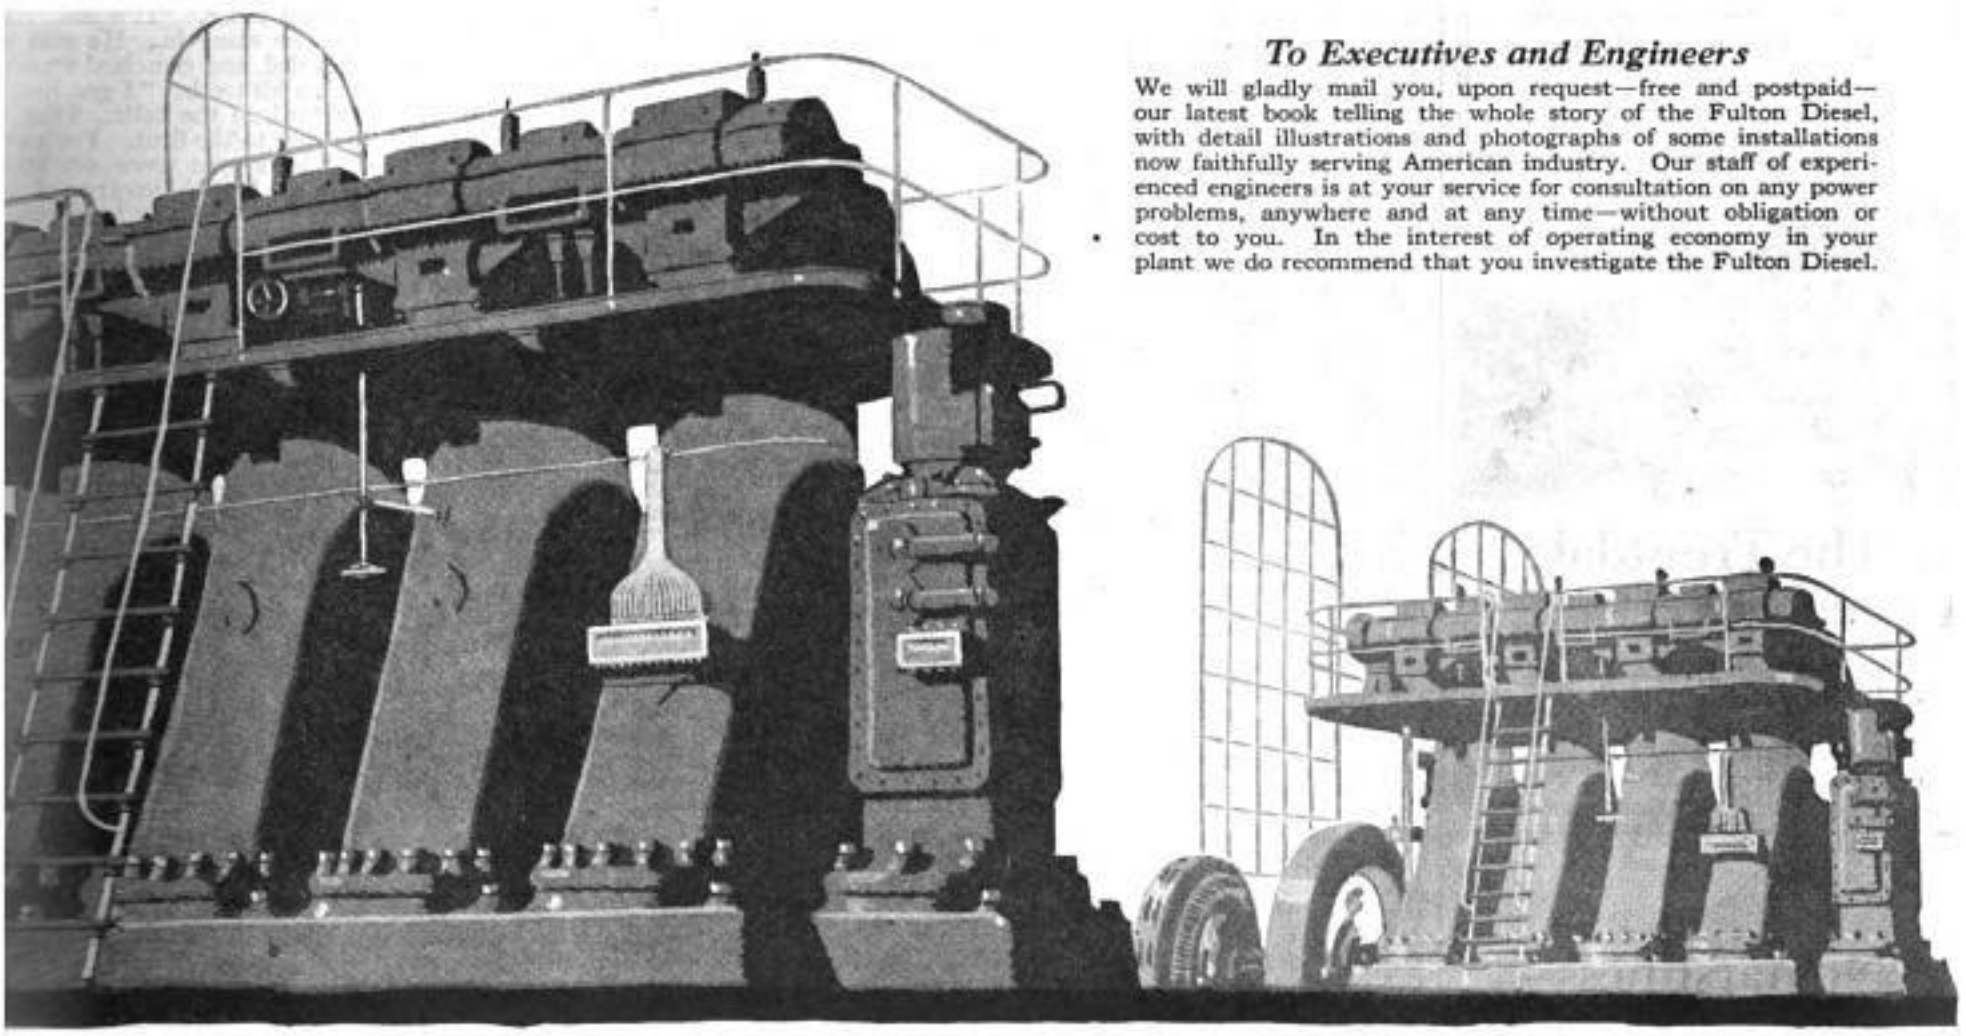
FULTON

Digitized by Google

Savings paid for two of the three

A 200 horse power Fulton Diesel was installed in a central power station in 1917. Its power savings soon paid for a second Fulton Diesel, installed in 1919. Savings by these two then paid for a third, purchased in 1921.

The Fulton Diesel—American built, perfected internal-combustion, stationary engine—running on low-grade fuel oil, may be likened to a huge, high-class automobile motor in a power plant. Instant in action, automatic in control, consuming fuel only when in use and maintaining continuous high efficiency with practically no upkeep cost. In addition, it operates on one-third of the fuel required to produce equivalent steam power. A self-contained power unit, it calls for no investment in boilers, stacks, condensers or any such steam plant auxiliaries. One engineer runs it. Fuel handling and waste removal, with all attendant labor costs, are abolished.



The Fulton Diesel is a development of 70 years' successful experience in engine building. Ten years have been concentrated on perfecting it, and its economy and efficiency stand proved in varying and exacting tests of service. Thus, through its mechanical excellence, the Fulton Diesel is established in the industrial world today as the stationary power producer that saves the appalling cost of power waste.

FULTON IRON WORKS COMPANY, ST. LOUIS, U. S. A.

Successful Engine Builders for 70 Years

Branch Offices:

New York—82 Wall St. Dallas, Texas, Praetorian Bldg. Havana, Cuba—401-402 Banco Nacional

To Executives and Engineers

We will gladly mail you, upon request—free and postpaid—our latest book telling the whole story of the Fulton Diesel, with detail illustrations and photographs of some installations now faithfully serving American industry. Our staff of experienced engineers is at your service for consultation on any power problems, anywhere and at any time—without obligation or cost to you. In the interest of operating economy in your plant we do recommend that you investigate the Fulton Diesel.

BUY DIAMONDS DIRECT
FROM JASON WEILER & SONS
of Boston, Mass., one of America's leading diamond importers

For over 46 years the house of **Jason Weiler & Sons, of Boston,** has been one of the leading diamond importing concerns in America selling to jewelers. However, a large business is done **direct by mail** with customers at **importing prices! Here are several diamond offers—direct to you by mail**—which clearly demonstrate our position to name prices on diamonds that should surely interest any present or prospective diamond purchaser.

1 carat $145.00
This one carat diamond is of good brilliancy. Mounted in Tiffany style 14K solid gold setting. Order this diamond, take it to any expert, make any comparisons you wish—if you are not entirely satisfied your money will be returned at once without a quibble. Our price direct to you . . . **$145.00**

Ladies' Platinum Diamond Ring.. $265.00
Perfectly cut blue white diamond of exceptional brilliancy with four smaller perfectly cut, blue white diamonds on the sides. The ring is all platinum, beautifully pierced and carved.

A few weights and prices of other diamond rings:

⅛ carat, $31.00	½ carat, $73.00	2 carats, $290.00
⅜ carat, 50.00	1½ carats, 217.00	3 carats, 435.00

We refer you as to our reliability to any bank or newspaper in Boston

If desired, rings will be sent to any **bank** you may name or any **Express Co.** with privilege of examination. Our diamond guarantee for full value for all time goes with every purchase.

WRITE TODAY FOR THIS 67th VALUABLE CATALOG FREE ON *"HOW TO BUY DIAMONDS"*

This book is beautifully illustrated. Tells how to judge, select and buy diamonds. Tells how they mine, cut and market diamonds. This book, showing weights, sizes, prices and qualities of a Million Dollars' worth of Diamonds, is considered an authority.

(Continued from Page 79)

"So much innocence! Such a trimming," said Wick. "But why should I warn everybody else? Gamble they will!"

"I hate it!" she flamed, and went on with trembling lips. "But why is it, Mr. Sparks, that with a system paying a hundred thousand a year you gave papa only twelve thousand for his share?"

Wick found this funny enough to laugh at. "I will tell you why," he answered confidingly. "I couldn't spare it!" and bowed himself away, as August Framer, a sublimated August in beavered overcoat and Avenue haberdashery, crossed the pavement, a stick under his arm.

"By the great monocle of—of the Lord High Chancellor," said Wick. "My old friend!"

"How-do," said August and lifted his stick to the chauffeur; "Café Pompeian," he ordered.

Wick sighed, passed on, chuckled; he was not mistaken in vowing that he could feel the inquisitive green eyes squinting after him to see how he took it.

IV

THERE was a formidable turnout of talent and sporting fashionables on the second last day of the Metropolitan spring meeting. The track was lightning fast under a cool high sky, and the card announced included a number of famous runners with rivalries to settle. Among these Gold Dragon was eminent, and Wick, with his old interest in the horse, intended to visit him in the paddock.

The odds for the first race had been quoted by the bookies and Wick, his money down, was entertaining himself as usual with the memorandum book, hardly conscious of the distant music and rising excitement of the crowd as the entrants loped up to the starter. Then the first cheer, always a burst of joyous harmony, sent them off, and the sport of old kings and old gods, and barbarism ever young in all of us, was on for the day. Wick glanced up and saw August Framer running with the others for a view of the race; he had noticed him earlier, and repeated his old prophecy indifferently: "Such a trimming!"

To Wick's knowledge neither August nor Morley had ever transacted business at the tracks. The two had, in fact, been shy of sporting publicity, and Morley particularly, jealous of his business reputation and respectability, had decreed that they conduct their operations in the clubs or among the handbook men found everywhere. They had separated for this purpose for a time, Framer making his investments in New Orleans and his senior partner in New York.

Of course, Wick's twenty-dollar limit of winning on each race had seemed contemptible piking to them; in fact, they reviled his statement to that effect as a ridiculous lie, and asked each other and Claire mockingly why a man should limit himself to one hundred and twenty dollars a racing day when he could win six hundred dollars just as easily. They estimated that Wick had won a hundred thousand or so which he had not divided with his partner. So they had raised the limit fivefold and thriven tremendously. This was in part the luck of the amateur.

But the present season at New York opened dismally for second choices; very few of them had run in the money at all, and this dereliction had called for bets into the thousands which almost went begging among the clubs and handbook men. And this, the day before Getaway, was actually the seventh of second-choice failures, and a limit had been called everywhere on Morley. The alternative to letting the system go smash, admitting its incompetence, which would never do, was for August to take their bets to the track. A second choice, under the law of averages, had to win soon.

It did, that day, not only in the first race but in the second, third and fourth; it was a day of second choices, one even being declared a winner by the disqualification of the favorite for fouling. At the end of the fourth race, in which Gold Dragon had been scratched, Wick saw Morley come over from the stand and join Framer. The old man was jubilant, greeting his partner with outstretched hands and laughing incessantly as he stood gesticulating with his stick and talking to the latter and a companion just introduced. The latter was an ex-jockey who had been assigned here to duty by the bookmaker hardest hit during this run of heavily played second choices.

August, his panama pushed back, his white serges wrinkled, tie awry, began by turns to listen to the jockey and argue with increasing earnestness with his partner. The crowd's cheering had by this time a muttered, snarling undertone; the music vibrated with the hollow beating of spear on shield, and in a lull they heard the gust of hoof beats.

More intensely, fiercely, August argued, his green eyes glowing; blood suffused the face of the excited old man. Belated gamesters hustled them, frantic with the fear that they would not get their money down; and others, triumphant as if they had already won, elbowed past with their markers in their pockets. Another gust of hoofs, a howl from twenty thousand throats—the horses were at the barrier.

"Too late," said the jockey with an oath; he had picked a ringer for them, in this race!

"No!" shrieked Morley, beside himself with this supreme challenge. "Run, August, run!"

The bookmaker toying with his field glasses looked at August coldly.

"Cinders—to win!" yelled the latter, tearing through an eddying skirt of the crowd. "Twenty thousand."

Cinders was the second choice; it was the day of second choices; nothing could beat them.

The bookmaker's white fingers flashed through the currency; his assistant wrote on the slip of stiff paper 40,000/20,000. August, battered and torn, sauntered away proudly.

Cinders ran third.

Wick eying them humorously from a distance saw the thunderbolt of defeat strike. The old man, but now so jubilant, stood gaping, trembling, actually aging. August, who had been looking down at his empty hands and scarcely crediting that the bills they had so lately held were gone, staggered a step as if from the edge of an abyss, and laughed loudly.

His partner managed a questioning pathetic smile, but as August took out his bulging wallet and shook it Morley pleaded. "No—for God's sake—it's the last!" In fact, they had brought all their capital with them to meet their late crisis, and though the debacle of Cinders had taken a part of it and wiped out their winnings for the day, there was nearly twenty thousand remaining.

As the old man pleaded, August argued; then, learning the odds on the last race, began to bluster. At last Morley acquiesced, smiling frightenedly, and doddering along with the other as he bet the money.

Wick was tired of them by this time, and the second choice losing in the last race he hurried out of the gate and away without looking back. The spectacle of the ruined gambler was familiar to boredom. His thoughts did not touch on them again during the evening, which, as usual, was taken up with a leisurely dinner and reading. He had just put out the lights in his room and started to bed, when his phone rang. Claire Morley was on the wire.

"I'm downstairs," she said. "Will you meet me—as quickly as you can?"

Wick answered graciously and after a few minutes joined her in the lobby.

"Father sent for you," said Claire. "He's dying."

"I wouldn't take such a misfortune for granted," replied Wick, so calmly deliberate that the girl looked at him with horror.

"I'd forgotten," she said bitterly, "that you live in a world by yourself—with no thought or care for anybody. Though I don't see how I could forget it, even at such a time as this."

"Size me up your way," replied Wick; "I'm not what you'd call unfriendly to anyone who doesn't interfere with my affairs."

He followed Claire into the street and the two entered the cab which had brought her to the hotel; not a word passed between them until the ride was finished and they were in the Morley home, a Central Park apartment.

Morley was in bed, a physician holding solemn guard over him. The latter stepped into the hall to admonish the visitor that the sick man's moments were few, and gave his diagnosis.

Morley was at the last gasp, though at sound of Wick's voice he actually raised on his elbow, and his eyes were bright and he spoke with the ring of youth.

"Close the door. Now sit on the of the bed. Wickford, we overplayed system; you were right in your lau believe now that you were always ri with me."

"Pass that, Mr. Morley," said Wi The other smiled understandingly.

"Yes—I've got to make haste. W our joint money to-day; the partn went broke. But"—his mild blue shot a glance of triumph—"I ha private cache—five thousand dol for the wallet under the pillow—s Correct?"

"Correct, five thousand dollars," swered Wick. He put it in his vest p

"It's for Claire—it's all that s every penny. Wickford!" The eye were glittering, the sagging cheeks "I had a presentiment—a year ago day it came again. You will leave money for Claire! You will swear it as I tell you for your old partner's orphan. Swear."

"Yes."

"Remember, she was the one t suade me to give you your start, little girl! To trust you first; to gi jewels for you! Remember! It is to forget." The sick man's thoughts to wander.

"Wickford, to-night I saw—ra from this pillow—the horses sai walking out of the paddock; the ra race! The big bright colt breaking the bunch!"

"Tell of the investment," said peremptorily.

The old man, already at the p dissolution, struggled up farther, a coming down on Wick's with a gr ground the bones together.

"Investment? To-morrow on Dragon to win!"

Impotent to release himself, the man's violent start and wrest cold skeleton grip held fast. Sight in the wide menacing blue eyes deeper, till only a spark in an abys it was out; but the cruel surface gri the threatening grin and icy lip ished Wick Sparks of his only master passion, which had challe itself till the money was down.

"S-h-h-h!" The crack of t opened wider. "It's me, Wick!" Framer came in. He was sc sheveled, and clenched an extin tween his teeth. "I got here in ti I heard all the talk. That five belongs to the firm. Fork over."

Wick's eyes were on him, and seemed hardly aware of the p presence. "I mean business," said "I'm desperate."

"You'll get it off my dead body," Wick abstractedly.

Claire hearing the voices ente with her sobbing cry the interv for the moment.

Wick talked with the physici adjoining room, and then sat lo Claire's reappearance; August station like a guard near the there was no further conversation.

Claire presently came in; Wick told her in a few w Morley's bequest and instruc

"It's the firm's money. Cl minded August. "We'll take it it. Where does Wick Sparks

"I hate the thought of gain sound of the word! Look w brought us to. Give me my pa me go home and bury my fath

"You can't go back to Mi August, "where Mr. Morley o thousand dollars we borrowed investment company. We ha interest on it, but not a dol principal."

"I'll pay them what I have

"I am executor of Mr. Mor said Wick with his uncompro ner. "I promised to lay his m Dragon to win to-morrow. Th ing will prevent me."

"Claire, he's not honest; yo not honest! That he held out dred thousand on Mr. Morley

"I will remain here to-nig arranged with the physicia undertaker," said Wick. "To ning I will give you the wi horse comes in first."

The girl made a sign of resig even August was bound to silence ensued until the arriv sent by the physician.

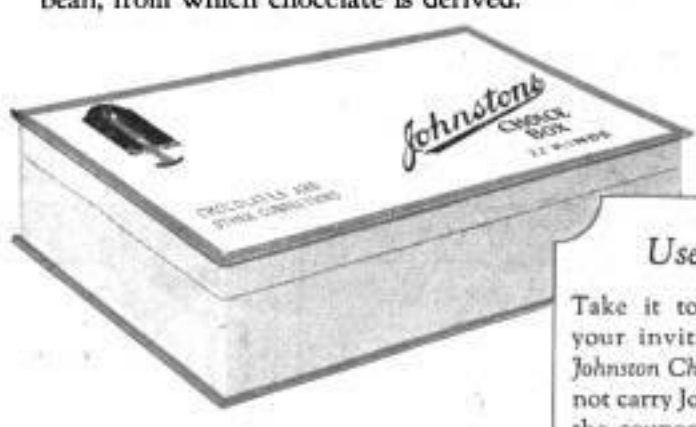
How we make certain of Johnston quality

A Johnston confection must always be the finest of its kind that can be made.

To insure this we even make our own chocolate, using only the very finest of the 110 grades of cocoa bean, from which chocolate is derived.

Only the costliest Cuban sugar is used. It is much finer than ordinary sugar. We accept only whole nuts and fruits. Thus we are sure of luscious fruit centers, of nut centers full flavored and sound.



We make our own syrups. Likewise our cream fondant—the creamy inside of chocolate creams.

Every Johnston process gets the utmost in time and care. The longer chocolate is whipped the better it becomes. Ours is worked four times as long as the average.

As a chocolate's coating costs more than its center, some makers are tempted to thin it. A Johnston chocolate is always easily recognized by its extra *thick*, rich chocolate coating.

Finally, all Johnston candies are packed in rooms where the air is washed. And each box comes to you in its sealed envelope, just as it left us.

the day should return the
ke him home. The dead
ghter, waiting on his last
y him decently, stood before
Wick, heartsick, when he came to the apartment about seven o'clock.

And when he told her briefly that Gold Dragon had come in winner at odds of eight to one, she could only reply, "Why couldn't it have happened yesterday?"

"It is well for you that it happened to-day," Wick said. "You are forty-five thousand to the good."

"There are the friends who lent us money, to repay."

Wick began taking folds of bills out of every pocket, but she stopped him.

"I can't keep it here; I'm afraid of August. He wants to start the system again instead of paying our friends."

August on waking that morning had rushed off furiously in search of Wick and had not returned since. Claire was expecting him every minute. "Let's go to the office quickly," she said, "and find out from the books exactly what the debts are, and send the money to-night by telegraph."

The office, in a Forty-second Street building near Fifth Avenue, was a large one, showily furnished; the door was lettered: "Morley-Framer. Investments." There was a desk, a long table, and a cabinet from which Claire produced the one ledger of the firm. The two were bending over it, and Wick was copying names and amounts, when a prodigious shaking of the door and a shout admonished that Framer had overtaken them. Wick promptly admitted him and stepped clear as August rushed.

"The Dragon won!" exclaimed the latter, wild-eyed and coming on in a crouch. "I want my money. Twenty-two thousand five hundred ——"

"Just a moment," said Wick. "Take hold of the end of this table and help me push it against the wall." August complied involuntarily. "Now, Claire, jump up here. You can't reason or explain to this fellow. I know gamblers. The notion that he's won something has to be knocked out of him. Hold onto this coat."

August threw his own into a corner and the two met like wildcats. All over the room they fought, grappling, breaking, and the girl thought such blows must kill. Then all at once in the midst of a terrific milling August quit.

Wick backed him into a corner by the throat, but Claire grasped his arm, begging, "Don't, don't, Wick! He's surrendered."

The faces of both boys were bruised and bleeding, but Wick, his breath laboring and eyes dilated with fury, stalked to the ledger and was copying again, when Claire began dabbing his face with her handkerchief. He frowned but could not be ill-humored with her. Then over her shoulder he noticed August in a hang-dog attitude but eying them with inveterate curiosity.

"Claire, give Framer a thousand dollars; his subscription to the capital as entered in this book," said Wick. His command being complied with he added briefly, "Now you're a thousand better off than I am. I took the field to win against the Dragon."

August's eyes started from his head. "You! Plunge! How ——"

"For forty thousand," said Wick, advancing with a stony look; August retreated. His lips and nose twitched, his eyes were bright green. "Not a question," said Wick, "or I'll murder you." And in an agony which never quite subsided the explorer into other people's business was driven before the stony presence, from this half-discovered secret. The door and their lives closed upon him.

"We're ready to do our telegraphing, Claire," said Wick presently.

The business was done and they were leaving the telegraph office, Claire with nearly four thousand dollars in her possession.

"I'll take you safely home, and you can bank it to-morrow," said Wick.

"You really lost all your money? I'm not doubting." The girl looked at him with pride. "You wouldn't lie, even to August; you couldn't lie. But you must let me divide with you."

He shook his head. "I never borrow."

"But what will you do? Where will you go?"

"I will decide that sometime during the night."

Claire, searching in her bag, asserted she had left her purse, containing the apartment key, at the office, but once there the girl admitted a ruse, dragged a chair to the door and seated herself on guard, much as August had done the night before.

"What am I in for now?" asked Wick.

"You say you'll decide what you're going to do sometime during the night; I'm going to wait up with you."

The hour was already late; soon the building would be deserted; Wick did not know exactly how to put his negative on her suggestion. "You ought to, and must go home," he said.

"You mean it won't look proper for me to stay." With her elbow on the arm of the chair and chin in hand she studied him. "But who is there to care? What does it matter?"

"I can't permit it. What use would you be to me anyway?"

"I might not be useful; but I'd be in the way if you decided to do the wrong thing," she explained. "The loss hasn't got to you yet. Don't I know what black thoughts come the first night after you're bankrupt? I used to listen till papa would scream out in his sleep, sometimes with curses; or till he began walking, and then go in to him. I'd talk and quiet him."

Wick threw up his hands in exasperation. "But what business is it of yours?"

"Wickford, I'm so tired I can't think very well; I only know that I oughtn't to leave you. And I won't go home, and won't be scared or dragged away from watching with you to-night."

Wick threw himself into a chair and glared at the uncompromising jailer, who folded her arms and tried to hold her tired body very erect.

"Well, I'll promise you not to make any decision at all to-night, and do nothing whatever, and report to you in the morning," he said.

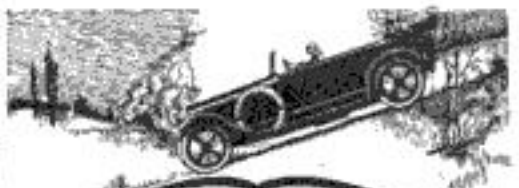
"You don't know what you'll do to-night if you're left alone. Why won't you lie down on the table there and try to sleep?"

Wick gave up and dismissing her from his mind concentrated abruptly on his own affairs. His world of security seemed wrecked to the rock it was built upon. Had his character been too unsteadied to found another? Could he regain his strength of will, maintain his integrity of purpose? Or would he plunge again when he had accumulated enough to make a killing?

He started up, but at his first steps the nodding jailer straightened and her heavy eyes cleared anxiously. "If you'll just be patient you'll find a way out," she said in a voice so firm that he was taken by surprise, and his thoughts broken up for the moment. But he repudiated her suggestion and in his chair again reflected bitterly, "A way out! I've worked three years to have one open if the system collapsed. Now that's closed." With his resolve to notify Gower in the morning it seemed that life, not as he had known it but as other people knew it, was about to engulf him; the young man who had not for a long time known an anxiety began wondering like the rest of us how to get by—to escape care, hardship—what course of action offers the best chance!

He cursed the word which is the opposite of security, and looked at Claire, who was huddled in the big chair, her head fallen aside, asleep.

Wick went over and roused her. "If you won't go home, let me make a pallet on the table for you," he said impatiently. "You're breaking your neck."



"Will you put the table across the door?"

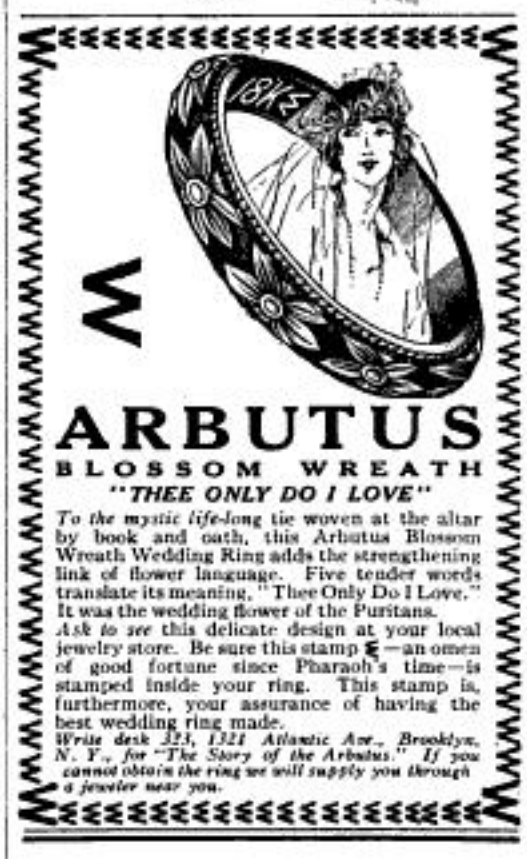
He complied surlily, and with a sigh she laid herself down. "If you're having a bad time I'll be sure to wake up and talk to you."

"A bad time!" said Wick to himself. "What's every minute from now on, but a bad time!" After a while he must walk, and slipped off his shoes to pad up and down. "Gambling's got me," he said. His loss was irreparable and he threw up his hands even as his father had done. "All gone! I'd rather be dead a thousand times. I'm no good to myself here now. I'm a gambler." He cursed softly in utter frenzy, darting glances at the guarded door, trying a window furtively.

"Wick, has it come?" Claire raised herself on her elbow, fell back heavily and raised again. "Wick, I'm dizzy and played out. I'm afraid I'll fall down if I try to stand. You must come over here. Push up the chair."

He started, terribly frightened at being caught at the yawning window, and did as he was bidden. Claire took his hand in both her own and he sat pulled up close with his chest against the table. That was the best she could do to comfort him; she could hardly utter a word. After a time

Depending on GARCO



ASBESTOS PRODUCTS

Motorists use GARCO Asbestos Brake Lining because it is so *lidly woven* and wear-resisting. Battleships, liners, railways and great industrial plants depend upon GARCO packings to conserve power and increase efficiency. The housewife, too, knows well the durability of GARCO Asbestos Heater Cord. In industry, public service, on the seas and in the home, GARCO Asbestos Products are selected because of *standardized* Quality.

ARBUTUS

BLOSSOM WREATH

"THEE ONLY DO I LOVE"

To the mystic life-long tie woven at the altar by book and oath, this Arbutus Blossom Wreath Wedding Ring adds the strengthening link of flower language. Five tender words translate its meaning, "Thee Only Do I Love." It was the wedding flower of the Puritans. Ask to see this delicate design at your local jewelry store. Be sure this stamp ℰ—an omen of good fortune since Pharaoh's time—is stamped inside your ring. This stamp is, furthermore, your assurance of having the best wedding ring made. Write desk 325, 1321 Atlantic Ave., Brooklyn, N. Y., for "The Story of the Arbutus." If you cannot obtain the ring we will supply you through a jeweler near you.

You may have smoked a pipe for years, but do you know what "aged in the wood" tobacco means?

WALLACE
Silver
Sterling & Plate

IN HONOR OF THE BRIDE OF TODAY, who tomorrow will be a hostess, this superb new Wallace design in silver plate has been named the

Hostess

Distinctive and decorative in its every line, delightfully proportioned for practical use, it is so well made by Wallace Silver craftsmen that it is guaranteed without time limit. The best dealers have it or can quickly secure it for you. Made in flatware and hollow ware so that the dinner service may be complete. The Dinner Knives are with stainless steel blades.

The Wallace Hostess Book tells what every hostess should know. Correct table settings illustrated and explained. Postpaid for 50c. Address: Hostess Department, Box No. 18.

Wallace prices have been reduced. For example, "Hostess" teaspoons that were $3.50, are now $6.50 a dozen, etc., etc.

"1835 R·WALLACE" HEAVIEST SILVER PLATE

R. WALLACE & SONS MFG. CO.
Wallingford — Connecticut
SILVERSMITHS FOUNDED 1835

she turned in a dead sleep, but gripping his hands with the grip of rescue and drew them upon her breast. They touched the round white throat, rose and fell with her breathing. The angry despairing man remained very still, looking at the tired little face in its scattered hair. In wonderment he felt her heartbeats meet and mingle with his own. Presently his face fell upon his outstretched arms and he was asleep too.

When Wick came to a slow awakening soon after dawn, Claire, with her hat on, was standing at the open window, waiting.

"We'll feel more like business after our sleep," she said, and invited him to breakfast.

Wick brushed his hair, glanced in the glass at his bruised cheek and followed her out.

"I didn't decide on anything," he told her at breakfast. "I can't see my way back to where I was."

"You are the same Wickford Sparks."

"You know better, Claire. You know what gambling does to a man; I've lost all confidence in myself."

"But you've got to go on living!"

"I'll be too disgusted to play at a life where no security is to be won. Now come on; we'll get your ticket to Midwest and buy a draft with the rest of your money. I have one little matter left to attend to; then I'll join you again and put you on your train this afternoon."

She saw that nothing was to be done with him; his features were set as granite and his tone final. Still she stuck.

"Take me where you're going, Wick; I'll wait until your business is attended to, and then we can go to the apartment and I'll pack."

"Come on," he answered.

It was immediately after this breakfast that he made his visit to the bank, leaving Claire in the lobby while he went into Mr. Gower's office. He told the banker without preliminary that gambling had got him. "The other road out, which you promised to keep open for me, is closed up," he said.

Even old Gower, used to bankrupts with every conceivable tale, was a little aghast over the tragedy. "Bad," he said; "but maybe something else can be done for you."

"Nothing can be done."

Algy came in from his office and stared after Wick. "What's happened?" he asked.

"Your friend has plunged! Gone broke!"

Algy repeated the words with tremendous concern and, running, came up with Wick in the lobby, where Claire had rejoined him.

"I say, you can't leave me with plenty of money, flat like this," gasped Algy. "It isn't being done by a friend of mine who's gone broke."

Wick smiled grimly and introduced his companion.

"On my word, he's been in a fight," Algy told Claire. "You must explain to me and the governor, you really must. He's terribly cut up by your rushing him."

"It wasn't very courteous," admitted Wick. "Naturally I haven't much to say this morning, but if Mr. Gower believes I owe him an explanation I'll give it. You can come, too, Claire."

Algy, overjoyed, escorted them back and stood stiffly beside his friend as the latter explained to Mr. Gower.

Wick told of Mr. Morley and of the latter's giving him the five thousand to place on Gold Dragon. "The horse won at eight to one," he said, "and paid enough to satisfy Mr. Morley's investors and leave his daughter about four thousand. I lost my money on this race; forty thousand dollars."

"What horse did you take?"

"The field against the Dragon."

"You took to the track forty thousand dollars, and bet it with the bookmakers on the field?"

"Not with the bookmakers," replied Wick, frowning.

Gower leaned forward, his finger tips crawling over the desk, as if summoning spirits at a séance. "Who did you bet with?"

"Mr. Morley!"

Gower's huge body sprang back; he had established a contact he had not looked for. "You took his bet! You didn't put up his five thousand with the bookmakers either?"

"I had given Mr. Morley my promise and oath that I would place that five thousand on Gold Dragon to win; I took his bet myself."

Again Gower went after this witness, who was not reluctant, but who seemed to possess some sort of evidence which he did not know how to divulge.

"Did you do that for the sake of the young woman?"

Wick came up to the desk, Algy [illegible] in his friend's cause—whatever it was—keeping step, at his shoulder.

The clasped hands and appealing [illegible] of Claire did not escape Gower's eye; little Portia, no longer unlearned, was pleading her own cause, but that of Wickford Sparks, ungrateful hero, man of iron and self-sufficiency. Something [illegible] than her happiness and life hung on answer to this leading question.

"Did you cover Mr. Morley's five thousand yourself, for the sake of this young woman, Morley's daughter? So that if the horse lost the race you could tell her that you had believed the bet a bad one, and having failed to bet the money, could not offer it to her? Was love or sympathy [illegible] your motive? Answer that!"

His witness was cornered; the [illegible] autocrat of banking settled back in a tolerant air; already the growl of pardon was in his throat for this [illegible] of love. Then his jaws clashed, the [illegible] forgiveness became a muffled roar [illegible]

Wick had turned to Claire at this question, bent his brows, studied her. "It was not for Claire," he answered [illegible] "I had persuaded Mr. Morley to [illegible] partnership in the system; that led to his demanding the secret and starting on his own account with some of [illegible] I knew all along he couldn't resist the temptation to gamble. Yet I got him [illegible] plunged. Well, here was five thousand, very last of the money he and his [illegible] had invested. I figured: 'With the bookmakers it may be lost.' I could [illegible] that! But I really owed them a chance to win back their money by getting them into a game too strong for them. I couldn't resist it; I [illegible] that Gold Dragon would not win if it was not for Claire."

"Oh, Wick, I'm so glad!" The [illegible] in astonishment at the clasped hands, happy face. "He didn't do it for [illegible] didn't do it for anybody. He did it because it was good; it was right." Wick"—forgetting the others, as one else—"you can't help but [illegible] now! Don't you remember, [illegible] 'Blessed are the righteous'?"

"That," said Wick coldly to the [illegible] slider, "is just a promise. There is a chance that it is true."

Old Gower bulked among them, lifted hand forbade all further [illegible] "That, Wickford," he said, his [illegible] awed and still, "is the chance [illegible]

Wick followed with astonished [illegible] form of the old banker as he [illegible] his son before him out of the room. "Come here with me to-morrow," he said [illegible] door. "The way out is open."

Wick gazed back at Claire, [illegible] himself, not her: "Did I do that [illegible] he staked the one-man world [illegible] promise was true? Now he was [illegible] losers of the present; one of the [illegible] Could he look up uncomplainingly [illegible] accumulate, plunge again—how [illegible] righteously? He stood listening, [illegible] with a faint, delightful interest [illegible]

"Claire!" He groped abstractedly [illegible] her hand, and clasped it. "I have [illegible] fortune, yet I don't feel so very [illegible]

"See, you are blessed already [illegible]

"Last night while you were [illegible] with me for my hour of horror, [illegible] I thought, 'If I had back my fortune [illegible] had back my own secure world [illegible] I would not be happy without [illegible] Wick talked up to himself again: [illegible] have been fighting a losing fight [illegible] loving her, for a long while—it was [illegible] and beat me down so suddenly."

"I didn't know ——" she faltered [illegible]

"Why, you look as you did when [illegible] girl and I first saw you."

"I haven't changed," sighed [illegible] loved you then just the same as [illegible]

He held her closely to his side [illegible] walked away. At the very door [illegible] limped haltingly with a make-believe [illegible] of all-men's world, which was [illegible] make-believe; Claire observed [illegible] ing, watching, with so delightful [illegible] terest in his face that she blushed [illegible] not help putting her arm around [illegible]

The door opened a crack; the [illegible] System Player, unmoved by the [illegible] passion gusts of the betting room, [illegible] black brows and with an eager [illegible] pressed on, into the great [illegible] security; Claire's blessed [illegible]

$100.00 in prizes

What is she saying?

HERE is a woman buying underwear. She's probably buying it for her husband—perhaps for herself—or her children. The question is: What is she saying to the clerk that is making him turn to Sealpax? She must be saying something about Sealpax—something important—*what?*

Think it over! Write it down! There is no set answer to guess—yours may be the winner. Study the facts about Sealpax given below—they'll help you. Your answer may be anything but it must not be more than twenty words in length. Competent neutral judges will award prizes. Send your answer to the Prize Department, The Sealpax Company, Baltimore, Md. The contest closes July 29th and the winners will be announced in The Saturday Evening Post, October 28th, 1922. Think about it and win a prize!

Best Answer .	$500
Second Prize . . .	$200
Third Prize	$100
Fourth Prize . . .	$50
Next Best Five (each)	$15
Next Best Five (each)	$10
Next Best Five (each)	$5
Next Fifty (each)—one suit of Sealpax	

(In event of ties for any prize offered the full amount of such prize will be awarded to each tying contestant.)

Sealpax

REG. U.S. PAT. OFF.

Athletic Underwear

SIXTY-NINE nimble-witted citizens are going to win prizes in the Sealpax thousand-dollar contest. But *everybody* can win the prize of luxurious underwear comfort that slips over a man when he slips into a suit of Sealpax!

Get Sealpax for yourself—you can't imagine how much cooler, how much more comfortable it is until you try it. The light-and-breezy fabric—the elastic webbed shoulders and full roomy armholes—the elastic webbed waistband—all combine to make Sealpax Athletic Underwear the coolest, easiest underwear that ever carried you through the sultry heat of the summer months.

And we can't speak of Sealpax without emphasizing the way it is sold. Each garment is packed individually in a sealed envelope—each garment is delivered to you as fresh and crisp and clean as on the day it was made and laundered.

Sealpax is such a wonderful underwear it just had to be made for women and children, too. And so, "Lady Sealpax" offers to women all the comforts of an athletic underwear, daintily made in a wide range of fabrics.

And "Little Brother" and "Little Sister" Sealpax bring "Dad's Comfort to Dad's Kids," a cool, comfortable athletic underwear for the children, reinforced for long and hard wear. *Sealpax for all the family—try it!*

Men's Sealpax (Union Suit) $1.25

"Lady Sealpax" $1.00 up

Children's Sealpax $1.00

Metal Window-Frames and all sheet metal made of galvanized "Armco" Ingot Iron.

Geo. W. Kelham, Architect
Foederer Cornice Works,
Sheet Metal Contractor

ARMCO
TRADE MARK
INGOT IRON
For Window Frames

"Armco" Ingot Iron
RESISTS RUST

The trade-mark "Armco" carries the assurance that products bearing that mark are manufactured by The American Rolling Mill Company with the skill, intelligence, and fidelity associated with its products, and hence can be depended upon to possess in the highest degree the merit claimed for them. The trade-mark "Armco" is registered in the U. S. Patent Office

Windows are the eyes of buildings

The massive structures of steel, concrete, and stone must get the living light through these delicate "eyes." Time, and all the destructive elements, attack the windows and window-frames, for they are the weakest places in the exterior of buildings.

Here, then, for window-frames, is an ideal use of "Armco" Ingot Iron, the iron which resists rust.

"Armco" Ingot Iron is of uniform purity. The surface is smooth and even. The metal is ductile and easy to form. Internal corrosion in iron is largely caused by impurities, which have been removed by a special process in the manufacture of "Armco" Ingot Iron. Because of its purity, it takes a coat of galvanizing and holds it.

Architects are finding many uses for "Armco" Ingot Iron. In addition to window-frames, it is used for grilles, cornices, ventilator systems, skylights, and ornamental architectural ironwork.

Prices istent demand and lagging ucers sought to bring supply demand by speeding up the he tools of production and by acts for raw materials over s of time and in amounts in t requirements. Manufac- twice what they needed in btaining as much as they large extent the emergency als was spurious. Retailers, unable to satisfy customers, placed orders in every conceivable direction, in excess of measurable requirements, and at high prices. Retailer, wholesaler, jobber and manufacturer bought and ordered more than they expected to receive or use.

After the holiday season of '19, production had gotten well under way and each week consumers found less difficulty in supplying their wants. Gradually the number of consumers whose demands were satisfied, or at least not insistent, increased. People of foresight began to restrict purchases. Gradually the volume of production approached that of consumption. In the spring of 1920 it became apparent that the curves of production and consumption would soon meet, that in many lines production would soon exceed consumption. The emergency of civilian goods and services was thereafter not only satisfied but in many directions overcompensated. Overcompensation occurred in two directions—in actual production of raw materials in excess of consumers' requirements of finished goods after the war depletion had been repaired, and in future contracts and commitments for raw materials in excess of reasonable consumption, and even in excess of plant capacity.

The Signal for Deflation

In the summer of 1920 the curve of demand flattened out, the curve of production rose above it. With this reversal of the relations of production and consumption what had been a seller's market became a buyer's market. So soon as this was apparent, possessors of excess materials attempted to dispose of them, holders of future contracts and commitments sought to evade them. Manufacturers who were not overextended were soon able profitably to purchase raw materials and offer finished goods at cut prices. Excess stocks began to appear on the market under liquidation. Contraction of credit to producer, manufacturer and dealer accentuated discrepancy between supply and demand on a purely commodity basis. When buyers found they could obtain the goods they did not really need they awaited further fall of prices; this was the so-called buyers' strike. From the fall of '20 all factors tended to operate in the direction of deflation of prices. The entire year '21 was characterized by deflation—precipitous and, indeed, forced with certain commodities, halting and restrained with others. The last half of '21 witnessed interactions towards rectification of disparities of prices produced by unequal deflations.

In the early months of '22 are observed further reactions in the removal of price disparities and the reëstablishment of natural price relations between different classes of commodities by advances in the price of farm products. When disparities in prices have been corrected it is believed that the general price level will be temporarily stabilized at about 150 compared with the prewar level of 100. With some materials, where deflation occurred early and fully, recovery appeared early, as in the case of wool and silk.

In stressing the commodity aspect of the picture of the business cycle I do not undertake to underestimate the influence of accumulation of gold and the monetary policy on prices. When the accentuated European demand for goods came in 1915, this had a double effect: It called forth extension along normal civilian lines, as in agriculture; it also called into being new plant expansion along abnormal non-civilian lines. The latter was fully developed in 1917, and became topheavy in 1918. During 1915–16 we competed with Europeans for the products of our industries. During 1917–18 we competed with our Allies for the civilian and military products of our factories. After the armistice the competition between Europe and ourselves for our products was turned into civilian channels, but remained intense. The scarcity of raw materials was largely spurious, except for transient lack of transportation. The scarcity of consumers' goods was actual but ephemeral. The buying power of Europe was low but desperate. The buying power of our people was lower than commonly rated, because the increased income of the war years had been largely neutralized by increased prices, as has been clearly shown by the National Bureau of Economic Research.

Decline in price of hogs in 1919 sounded the signal for deflation. There was some deflation in 1920, particularly in raw materials. With few exceptions the year '21 presented continuing deflation and decline of prices. There is still deflation to be accomplished in 1922, particularly in fuel, building materials and finished commodities. The year 1921 presented continuing decline in consumption, or at least in manufacturers' disposal of goods, in consumers' takings of goods. It is instructive to analyze this decline in consumption.

A study of consumption is illuminated by contrasting and comparing final consumption with productive consumption. By final consumption we mean, for example, the purchase of flour by the housewife; by productive consumption, the purchase of wheat by the miller. For each material there is a natural relation, in quantity and time, between producers' goods and consumers' goods. If imports, exports and stocks are known, figures for productive consumption can be used to measure takings of consumers' goods and check the results of direct measurements. On the other hand, direct measurement of purchase of consumers' goods may be used to check the figures of productive consumption, where these seem divergent or incongruous. It will be an advantage in the survey that follows to take up the study by commodities.

Contradictory Figures

Bread Grains. During 1919 and until June, 1920, wheat was under the liquidating control of the United States Grain Corporation. This corporation delivered grain to the mills, promulgated milling regulations, controlled prices of milling, jobbing and retailing, had charge of imports and exports, and was obligated to purchase all offerings at the price fixed by national enactment. Convinced that supplies of wheat and rye were adequate the grain corporation early in 1919 wisely released millers, jobbers, wholesalers, retailers and bakers from war restrictions and returned them to the operations of free trade, but retained control of imports and exports. Early in 1919 the United States Treasury suspended governmental credits to the ex-allied governments for purchase of American commodities. The wheat and rye crops of 1918 were large. We entered the year with a good carry-over of wheat and a small stock of flour. Some time was required for mills to return to normal operations and to reëstablish their brands in the retail market. From the official data for production, net export and supply, the per capita consumption of wheat flour over a period of years is seen to have been as follows:

YEAR	POUNDS PER CAPITA
1914	229.3
1915	215.6
1916	205.8
1917	201.8
1918	170.5
1919	197.9
1920	168.6
1921	192.1

The figures for flour production are obtained from trade sources with the same methods employed by the Food Administration. During the years '14, '15 and '16, while we were neutral, the average consumption was 216.9 lbs. During the war years '17 and '18, the average consumption was 186.1 lbs. During '19, '20 and '21, the average consumption was 186.2 lbs. Conservation of wheat flour was not gotten under way until late in '17. The low consumption of '18—170.5—may be regarded as the direct result of the efforts of the Food Administration. With the setting free of bread the figure for consumption rebounded in '19 to practically 198 pounds, declined in '20 to below the level of consumption in '18, and returned in '21 to 192 pounds.

The decline in consumption in 1920 is difficult to understand. It is well known that flour consumption falls during prosperity and rises during hard times. The figures for consumption in '20 and '21 would follow this rule, but the figures for '19 and '20 are in contradiction. Observation in homes and public eating places lends no support to the idea of decline in actual use of products of wheat flour. On the other hand, it is certain that the lesson of elimination of waste of wheat, inculcated during the war, has not been forgotten. In every direction in which the subject is to be investigated less waste is encountered than before the war.

It is possible that increased consumption of rye flour might help to explain the lowered figures for wheat consumption. Rye flour production is not known in the same way as is wheat flour production; but one does not see how we could hope to find in rye flour an explanation for the low figure for '20 compared with '19 and '21. Before the war the use of corn and rice was receding in the Southern States, being replaced by wheat. During the war corn and rice were pushed forward. In '19 the use of corn and rice again declined in favor of wheat. Corn and rice have been cheaper than wheat flour in the Southern States. With hard times it was to be expected that the use of wheat would decline, the people returning to the not-yet-forgotten use of cheaper corn and rice. Such surveys as have been made in the South confirm this inference. These explanations may suffice to cover the lower consumption of the three years after the war; but they give no explanation for the aberrant figure for 1920.

It is probable that the grindings of nonreporting mills have been increased since elevation of freight rates. Stocks of flour diminished from December, '19, to December, '20, and remained low during '21. The decline in stocks during '20 must be added to the figure for production during '20 to reach the figure for consumption during '20—that is, part of the 198 pounds credited to 1919 was not consumed until 1920. How much this would elevate the low figure for '20 is not computable. By the same reasoning, flour consumption credited to 1917 may not have taken place until 1918. Consumption of flour may have been reduced during these years, but it is strange to see retrenchment in a cheap staple foodstuff, with use of high-priced foods retained.

Coarse Grains. Production and consumption of cereal foods prepared from corn, oats, barley and rice cannot be measured, except in the case of rice, because of the lack of collection of data at the sources. Manufacturers in these lines report business as dull in 1921. The public seems not yet to have recovered from the wheatless days of 1918, except in the South, where the use of corn and rice appears to have risen during 1920.

Other Comparisons

Dairy Products. Consumption of dairy products seems to have been normal, no matter how surveyed. The count of dairy cattle has been maintained. Through selection in breeding, the annual milk output per cow increases every year. Since 1919 prices of feeds have declined, and since 1920 costs of farm labor also. During the war we developed an abnormal export trade in condensed milk. This has fallen precipitously, though not yet to the prewar level. Exports of butter and cheese have declined, and imports have increased. The results of these changes in foreign trade seem to have been wholly absorbed in the domestic utilization of the milk supply. To a remarkable extent the prices of dairy products have been sustained since the armistice, displaying little more than seasonal variations. Dairy products have been the most remunerative of agricultural produce to the producer, and have been absorbed in undiminished volume by the consuming public. The inflexibility of milk consumption has been given another demonstration during the past two years.

Sugar. The consumption of sugar has remained entirely normal. The United States and island possessions produce about one-half of our sugar supply, and the rest is imported from Cuba. Following the release of sugar from the control of the Sugar Equalization Board in 1919, the price of sugar sky-rocketed to unheard-of altitudes. The descent was equally spectacular and distressing. For months sugar has been

The Columbia Light Six

WHEN you visit the showroom of the Columbia dealer in your city and examine the new Columbia Light Six, your first question almost certainly will be: "How is it possible to offer this automobile at so low a price?"

The Columbia Light Six represents a departure from customary methods of developing an automobile; it is a new and unusual car made possible by a new and unusual type of co-operation among nationally known *specialized* producers of motor car units.

Designed for Dependability

Columbia engineers some time ago set out to develop a lightweight six-cylinder automobile which at the same time should be sturdy, powerful, economical in operation, and thoroughly *dependable*. They did not shop for low prices; each unit selected was the best—built by a long-established, universally recognized manufacturer.

Naturally they chose a Continental "Red Seal" Motor. They specified Timken Axles. They went to Durston for the transmission. They called on Auto-Lite for electrical equipment. Borg & Beck provided the clutch, Stromberg the carburetor, Gemmer the steering gear, Harrison the radiator, Spicer the universal joints.

A Car Made Possible By Co-operation

Then the principals of these great manufacturing organizations were invited to a private showing of the new Columbia model. Their attention was called to the possibilities of this Light Six if it could be marketed for less than $1000.

They were soon convinced that many thousands of small profits would in the end outweigh a few large ones. They adjusted their prices to a basis of quantity production, cutting profits to the narrowest possible margin *without sacrificing quality of materials or workmanship*, just as Columbia had already planned to do in building the completed car.

And in this way the Columbia Light Six at $985 was made possible.

The Columbia Light Six Built To Fine Car Standards

A 50-horsepower Continental "Red Seal" Motor of the most economical high-speed type. Removable head, full-pressure lubrication, "hot-spot" manifold, counterbalanced 4-bearing crankshaft, silent chain-driven timing gears.

Road tests show speed ranging well beyond 60 miles an hour, and exceptional acceleration at ordinary driving speed.

Timken Axles, front and rear; Durston transmission, with Timken bearings; Auto-Lite starting and lighting equipment; Borg & Beck clutch; Spicer Universal Joints; Gemmer Steering Gear; Stromberg Carburetor.

Car weight, 2400 pounds, 450 pounds less than the average car of equal wheelbase—115 inches.

Steel or wood wheels optional. Tires—6-ply Fisk Cords, 31 x 4, guaranteed for a car weighing 800 pounds more.

The longest body ever built on this length wheelbase, mounted directly on the frame—as in high-priced cars—to eliminate squeaks and rattles.

Genuine leather upholstery; wide, deep-cushioned seats. Deep-drawn crown fenders of 20-gauge cold-rolled steel. Barrel headlights.

A Six at the Price of the Average Popular Four

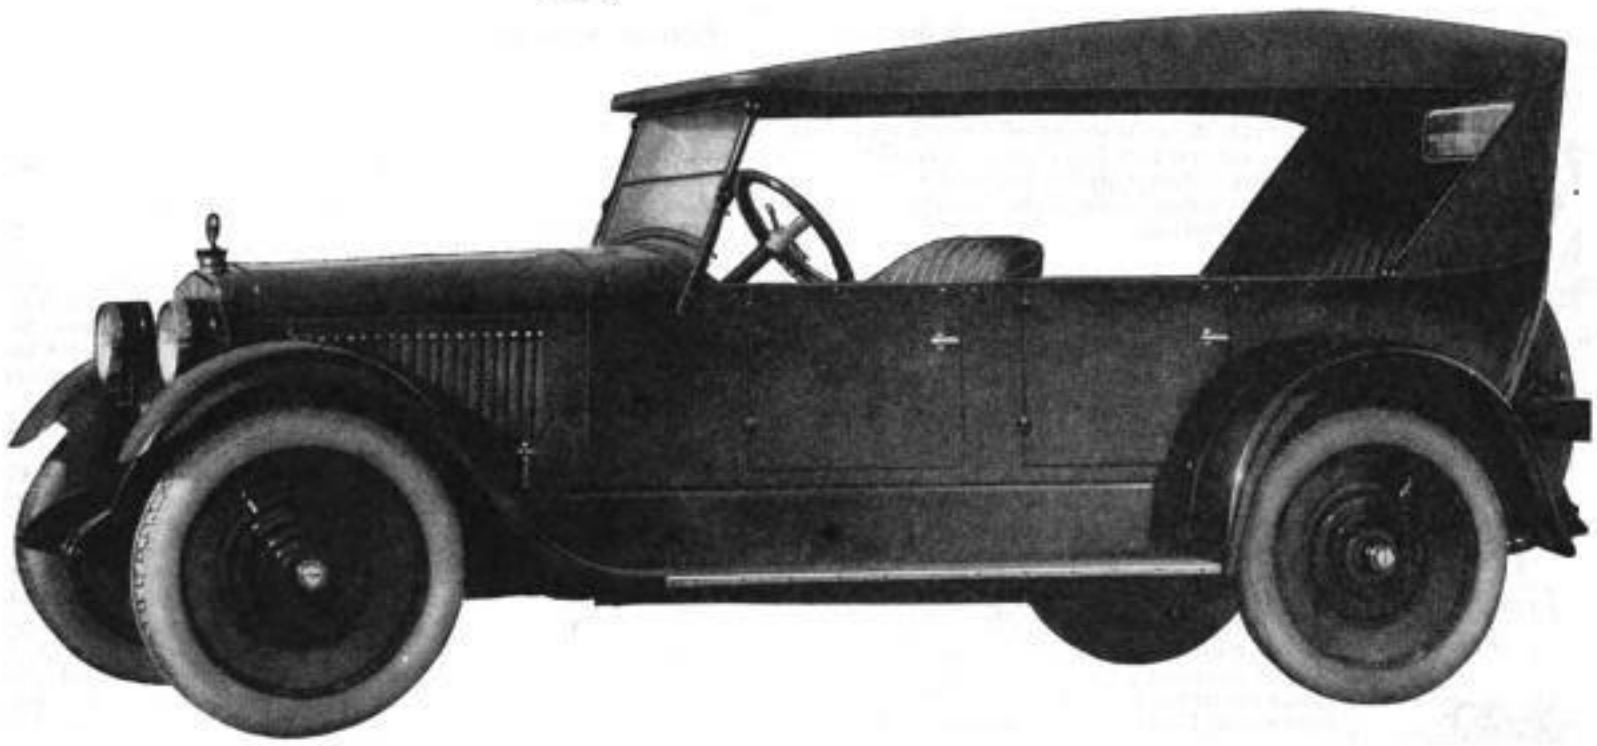
The Columbia Light Six is the first *specialized unit* Six that has ever sold for less than $1000. It is a strikingly handsome automobile—well-proportioned, roomy, powerful, sound in every part and built by the experienced Columbia manufacturing organization into a smooth-running, durable and dependable whole.

At every point throughout the entire car you will find advanced design, high quality materials and generous strength. There has been no skimping—no compromise in the interests of low price.

See and Judge for Yourself

Columbia dealers are now demonstrating the Columbia Light Six—both the Open Car at $985, f. o. b. Detroit, and the Sedan (a five-passenger four-door enclosed car, with metal back construction) at $1395, f. o. b. Detroit.

Let this be your invitation to visit our dealer in your city, to examine the Columbia Light Six, to ride in it, to drive it. Form your own judgment from the car's performance, plus the evident quality that extends to the smallest details.



Decide for yourself if there is any reason why you should pay more for a thoroughly good automobile.

Executives

Make Less Fuel Produce More Power

PLANTS throughout America's busiest industrial centers are operating boilers, furnaces and grates at less than 50% efficiency.

Many executives now realize that systematic and effective management—not cost of ton of fuel consumed—is the basis of economical power production. The findings of a countrywide investigation in the interest of these men are published in this free book. Those who have read it are making the coal pile pay a profit.

Have your secretary write for your copy.

Mild and Mellow—

Get the facts
See Page 75

(Continued from Page 89)

one of our cheapest foodstuffs, nearly approaching the prewar level in retail price. During the years '19, '20 and '21 the consumption has been almost constant. The per capita consumption of refined sugar—Willett & Gray—for the last three years in order was 87.3, 86.5 and 86.8 pounds. Disregarding the war year '18, the average per capita consumption of refined sugar in the last ten years was 86.1 pounds. Apparently sugar is our least flexible foodstuff. Clearly, also, consumption remains the same, irrespective of price and prohibition.

A comparison of curve of consumption with curve of price during the last three years is convincing in this direction. There is, however, evidence that the form of consumption has changed to some extent; there was less use of manufactured sugar—confectionery—and greater use of sugar in the home.

FRUITS AND VEGETABLES. Consumption of fruits and vegetables is difficult to measure, because it is not possible to segregate from rural production the production that enters commercial trade. In prosperous times rural production of fruit and vegetables for home consumption tends to fall, in hard times to rise. Stocks of fruits and vegetables were very uneven in 1919, some long, some short. The pack of 1920 was put up at exorbitant prices, the packers everywhere restricting their output to some extent. In 1921 the acreage of the staple vegetables grown for commercial packing in the principal states was reduced one-third.

During '21 stocks declined and the new pack was restricted. The consumption has therefore been the sum of the pack and of volume of decline in stocks. We enter the crop year '22 with stocks of packed vegetables reduced to a low point. Apparently the consumption may be regarded as having been normal with slight reductions in certain directions.

Fruits and Meats

The situation is still more complex with fruits. The Central and Eastern states suffered a killing frost during the blossom season of 1921, and the fruit crop was small. The pack was proportionately reduced. The heated term during the summer of 1921 increased the consumption of all fruits and hastened reduction of stocks. The crop and consumption of citrus fruits in 1921 were heavy. The freeze in California in February has reduced greatly the present citrus crop. From now until the new fruit crops appear, consumption of several fruits must be somewhat low for lack of supplies. The importation of bananas has risen each year since 1919. In 1919 we had a balance of exports of dried fruits of 106,000 tons; this was reversed in the following year to a balance of imports of 4000 tons; and this last year again reversed to a balance of exports of 22,000 tons. In 1919 the balance of imports of nuts was 75,000 tons; in 1920 it was 136,000 tons, and last year 106,000 tons. The fact that the importation of dried fruits and nuts was not permitted during '18 prevents us from using these figures as indications of consumption following their resumed importation. Our own crops have been uneven. By and large, there seems little indication that the consumption of fruits and nuts has displayed during the last three years any other reduction than that naturally associated with partial crop failure.

In certain lines the fancy grades seem to have been neglected. Stocks of fruits and nuts, like stocks of packed vegetables, are low.

MEATS. Estimate of consumption of meat and meat production during the last two years depends largely upon the base line employed.

Meat consumption has been falling in the United States for twenty years before the war, from practically 190 to 166 pounds.

The following table, from the data of the Department of Agriculture, gives the figures for consumption of meats, per person, per year, in pounds. The production of inspected meat and lard was 100,000,000 pounds less in '21 than in '20, but the estimated production of uninspected meat and lard was 250,000,000 pounds more in '21 than in '20. In addition, stocks of inspected meats declined in '21 by more than the difference in production of inspected meat in the two years.

YEAR	BEEF AND VEAL	PORK AND LARD	MUTTON AND LAMB
1907	83.5	102.9	6.4
1908	76.4	99.9	6.2
1909	81.6	80.3	6.7
1910	84.5	71.0	6.5
1911	79.1	88.0	7.9
1912	73.8	82.7	8.3
1913	65.1	85.0	7.6
1914	62.9	82.8	7.5
1915	58.9	92.2	6.4
1916	62.7	91.4	6.2
1917	68.6	70.7	4.7
1918	71.4	83.7	4.8
1919	65.0	80.4	5.8
1920	68.2	82.1	6.0
1921	64.9	84.3	6.3

The data for inspected slaughterings and commercial stocks are accurate. The figures for rural slaughterings and total meat production are estimates. During the period of decline of prices of livestock rural slaughterings have increased relative to inspected slaughterings. The war brought with it a restriction in meat consumption; the consumption during the last three years has tended upwards. The average per capita consumption between '07 and '16 was 167.4 lbs. During '17 and '18 it was 151.9 lbs., and remained practically unchanged during '19. In '20 it rose five lbs., and remained at about the same level in '21. A slight fall in consumption of beef and veal has been balanced by increase in consumption of pork, mutton and lamb.

Classes Most Affected

A local survey of the meat consumption of Philadelphia, Boston and New York during 1921 yields the same result as that drawn from figures for the entire country—that meat consumption was fully sustained in 1921, beef consumption having slightly fallen, consumption of pork, mutton and lamb slightly increased. But meat consumption has shown no trend to the higher figures of the prewar years. It is clear, also, that during the period of industrial depression there has been no reduction in the consumption of meat by the urban population.

Since 1918 the count of animals has fallen. Though the count of milk cows has been maintained, that of other cattle, swine and sheep has declined materially. The supply of meat available to maintain the plane of consumption since 1919 has been the expression of selling off of animals, rather than sustained positive output through efficient feeding operations, though carcass weights in 1921 were good. It is doubtful if the present count of animals can long maintain a meat supply corresponding to the consumption of 1921. This is a problem of the future. Meat stocks are low, except in mutton and lamb.

VEGETABLE OILS. Consumption of vegetable oil is difficult of measurement, because of complexity in statistics. The supply of vegetable oils—production plus net import—was high in 1919, fell about 25 per cent in 1920, and another 10 per cent in 1921, the figure for that year approximating the supply in '14–'16. Stocks in '20 remained practically at the level of '19, but in '21 were considerably reduced. So far as it is possible to trace the oils, it seems probable that decline in consumption in 1921 was confined to industrial uses, the table and kitchen consumption of edible oils being apparently little changed.

MISCELLANEOUS FOODS. Coming finally to the consumption of accessories of the diet—spices, tea, coffee, and so on, it seems clear that consumption, once restored from the war level, has proceeded within normal boundaries. Importations of coffee, tea, cocoa and spices during the last three years afford no ground for assumption of reduced consumption. The coffee crop of last year was large. It is apparently up to the American people to drink this crop; Europe cannot afford to do so.

The classes most severely reduced by decline in income were farmers, civil servants and families living on small, fixed investments. Have these maintained their standards of living? Certainly not. They may have maintained their food supply, but the fact that the per capita food consumption of the country is normal does not prove that these groups have suffered no deprivation. There is evidence of a [illegible] nature that the members of the last [illegible] groups have had to practice retrenchment in subsistence. The average income civil servants had in 1918 only 70 per [illegible] of the buying power of 1913; in 1921 [illegible] still more reduced for many groups, [illegible] bonuses lapsed. Farmers rarely [illegible] from hunger except when crops fail. The man close to the soil protects his [illegible] first, and in this he cannot be circumvented by business cycles or governments, so long as he has not been dispossessed of his [illegible]. Farmers have had less of store foods in '21 than in previous years, but they [illegible] used more home supplies. This [illegible] more home-killed meat, home-raised vegetables, farm-rendered lard, more [illegible] products; but fewer bananas from Central America, oranges from Florida and [illegible] from Maine. Fewer eggs have been [illegible] on the farm, because eggs have been [illegible] in the country store. Before the war, 40 per cent of the calories in the diet of a farmer's family were supposed to come from the place. This may have [illegible] to 50 per cent in 1921. To judge the condition of the farmer one must see his [illegible] for implements, not for groceries. The problems of the farmer—and they are difficult and serious—lie in finance, cost of operations, not in subsistence.

IN SUMMARY. The food consumption during '19, '20 and '21 was entirely [illegible] normal limits and the fluctuations [illegible] than often observed in normal years [illegible] the war. Neither war, postwar, boom nor depression seems to have demoralized disturbed food consumption. Our [illegible] subsistence was generous, there was [illegible] of leeway for retrenchment where [illegible] to be necessary. But signs of retrenchment in subsistence are difficult to discern. The family income advanced from [illegible] 1920, the outlay for food a little more kept pace, apparently, though the [illegible] outlay did not rise above 50 per cent of income. What happened during [illegible] varied with the income. For families [illegible] incomes remained high the outlay [illegible] fell to 40 per cent, or less, of the [illegible] but where the income was early [illegible] the percentage of income expended [illegible] rose, possibly above 50 per cent. The [illegible] suggest retrenchment in everything [illegible] food, shelter, light and fuel.

TOOLS OF TRADE. Consumption [illegible] of trade was high in 1919, moderate [illegible] what in 1920 and declined in 1921. [illegible] not possible to give an approximate [illegible] a weighted average of decline. Much [illegible] ment of reduced purchases of agricultural [illegible] implements is obtained from other [illegible] sources, of those of hardware and [illegible] tools from another, and so on. It is clear that stocks declined materially [illegible] every direction, and that therefore [illegible] sales afford a closer approximation [illegible] manufacturers' output. An excellent [illegible] cation of the falling off in this direction [illegible] shown in the decline of sales of repair [illegible] parts and tires of automobiles.

Meaning of Decline

CLOTHING AND HOUSE FURNISHINGS. [illegible] is not possible to separate consumption [illegible] clothing from that of household furnishings. Wool, cotton, silk, leather and other materials enter into both, and cannot directly measure decline in final consumption by falling off in productive consumption. Nor are these two sets of [illegible] to be segregated in retail sales, since retailers deal in both. Measured [illegible] there seems little question that [illegible] in consumption during 1921 was [illegible] ranging from 20 to 40 per cent [illegible] ent articles.

CONSUMPTION OF WOOL, COTTON AND [illegible]

	1919	1920
Wool (pounds)	680,648,000	574,778,000
Cotton (bales)	5,930,000	5,840,000
Hides (sole leather sides)	22,515,000	18,433,000

These declines have not the [illegible] tive meanings, because wool is largely [illegible] in clothing, while cotton and leather [illegible] also widely used in producers' goods. It [illegible] to be observed that decline in consumption of cotton occurred later than in that [illegible] wool. As in the case of wool, decline [illegible]

Down in Georgia

e "Caterpillar's" ld of usefulness is no means limited to ilding and main- ning roads. There a "Caterpillar"* of e and capacity for ry power need. On m or ranch, in the ing, oil and lumber ustries, for snow ioval and other c work—wherever ver and endurance at a premium, the terpillar"* has no competitor*

Starting with a single "Caterpillar"* Tractor in April, 1919, adding another a year later, the Board of Commissioners of Fulton County, Georgia, further emphasized their satisfaction by purchasing four more "Caterpillars"* this spring. Mr. Oscar Mills, chairman Public Works Committee, says: "We have found 'Caterpillars'* absolutely satisfactory in grading and maintaining our dirt roads, hauling rock, and moving heavy equipment—in fact, they are indispensable for all our power needs."

Fulton County's satisfaction is only typical of that of dozens of others in Georgia, where, out of 155 counties, 71 are "Caterpillar"*-equipped. More miles of good dirt and gravel roads have been built and are being maintained in Georgia by "Caterpillars"* than by any other method or machine.

Up and down the state—in county, state highway, municipal, contracting, industrial and agricultural work "Caterpillar"* Tractors, backed by efficient Holt service, have established convincing records for low-cost operation.

In *every* state, progressive counties, townships, cities and highway departments are constantly adding to their "Caterpillar"* equipment for making roads and handling public works of every kind. Continuous usage and repeat orders prove the supremacy of the "Caterpillar"* in the whole field of tractive power. Our motion pictures show the "Caterpillar"* in every phase of road work from a single maintenance job to completely motorized outfits. We will gladly arrange an exhibition at your convenience or mail copy of our booklet "Caterpillar Performance."

ng it is clear that during in the standard of liv-expenditures judged by cally not observed with el and light. Retrench-with some accessories and sundries, not with others. Marked retrenchments were observed in outlays for clothing, house furnishings and tools of trade. From the fact that prices of house furnishings were maintained higher than those of clothing it may be inferred that retrenchment was most practiced on clothing. Data are not available to indicate to what extent retrenchment in volume represented savings in the family budget.

Though the nation apparently ingested as much food as was customary the family buying was not done in the usual fashion. Buying and selling of foodstuffs in '21 were literally from hand to mouth. For everyone in the food trades, from producer through manufacturer to retailer, it was a poor year, despite the normal final volume of sales. And for the consumer it was a poor year of food supplies, despite a normal consumption. Everyone was out of his stride. It was a year of haggle. It were almost better to have eaten less and had less bother over it.

Two Striking Facts

Noteworthy were two phenomena:

In numerous directions, and particularly in the use of foodstuffs, conservation and elimination of waste have been in evidence. Savings through elimination of waste represent the residue of war lessons. I have been unable to find data on subsistence that indicate positive retrenchment in terms of calories; such slight declines in consumption as have been shown with a few commodities are reasonably explained as the result of elimination of waste and seasonal fluctuations.

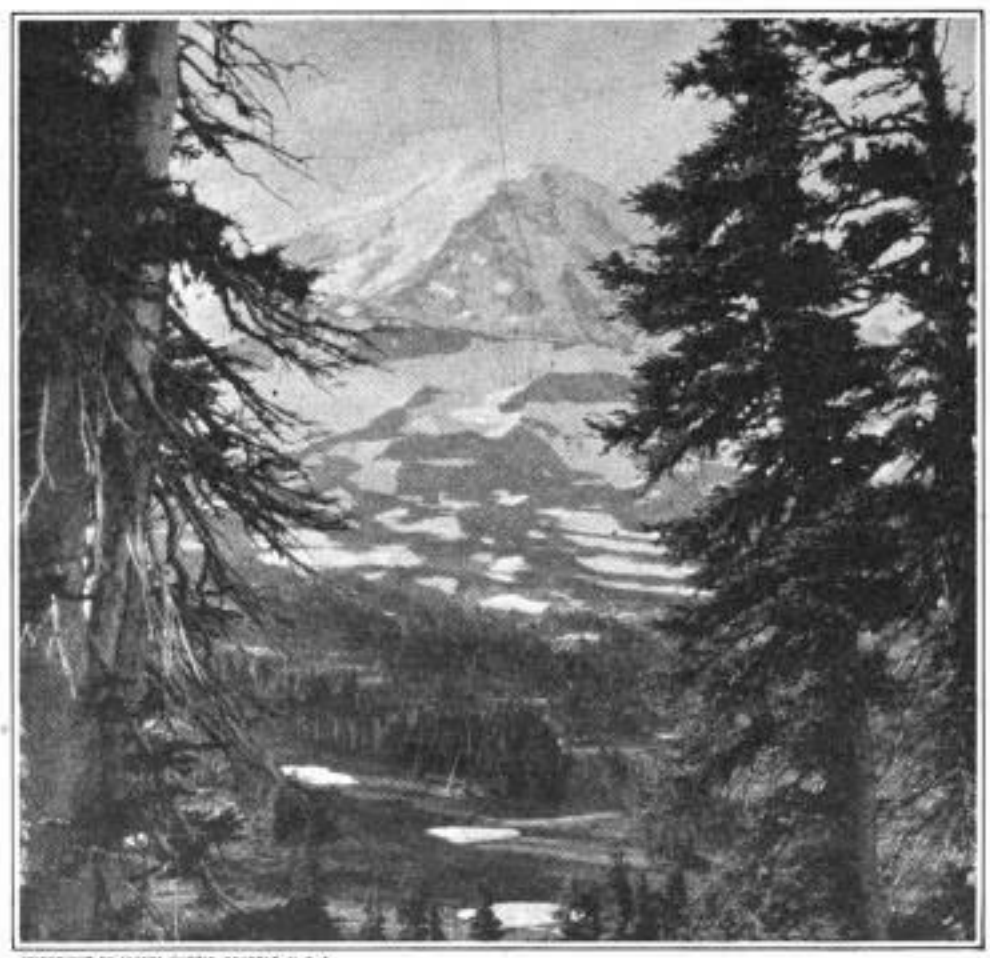
A second striking fact concerns the retention of buying power of the working classes. In the fall of 1920, when the American Relief Administration inaugurated its campaign for collection of funds for relief in Europe, state chairmen were repeatedly brought to face with local unemployment, then assuming large dimensions. Men of means were compelled to hesitate in their gifts to foreign relief, by the prospect of the necessity of heavy and prolonged relief for unemployed workers in our cities. In previous experiences—as in '14, '08 and '93—it was found that in most cities unemployment of a few weeks' duration brought families to destitution so severe as to demand relief. It was naturally anticipated that this would be the case during the winter of 1920–21. These expectations happily failed of fulfillment. When one considers the extent of unemployment in numbers and the periods of time over which unemployment and part employment have extended during the last eighteen months, the relief measures that have been found necessary have been extraordinarily limited. According to the National Bureau of Economic Research the average income of employes rose from $723 in 1913 to $1078 in 1918. From '18 to '20 wages in most lines rose further to a material extent. Since 1920 wages have declined in irregular progressions. Farm labor is now back almost to the prewar level. In other lines, as on railways, the wage scale of '20 is still in effect, while the pay of artisans has been lowered about 10 per cent.

Whether the wage curve of all employes has fallen as much as the cost index of the standard of living, is in controversy. Data are required, not polemics. In theory, it may appear sound and easy to fix a wage scale on the index number of a projected standard of living, but we are not yet sufficiently instructed in the subject. Urban workers and farmers constitute the large majority of those engaged in gainful occupations. The incomes of farmers increased up to '19 more than those of city workers, but the incomes of city workers, particularly in certain lines, were very substantially elevated. It has been frequently stated in the gazettes, on the basis of superficial observation, that the increased wages were spent as rapidly as acquired. It is now clear that this assertion was erroneous. Out of these wages substantial savings must have been retained, and these savings have constituted the partial support of unemployed urban workers. In part, unemployment of city workers has been relieved by return to the country of workers who had gone to the city in response to the wage appeal of war industries; but to a large extent the ability of unemployed or partly employed workers to carry on month after month is explained only by the possession of substantial savings from the period of higher earnings during the war.

Effect of Prohibition

There can be little doubt that prohibition has contributed materially to the savings of the working classes in cities. War prohibition, during the time of rising wages, restricted dissipation, and the money went into goods for house and family. The same effect of drink control was observed in England during the war. Prohibition during the last two years of lowered employment has restricted dissipation, and as a result the diminishing family income has procured a larger return in necessaries. The idea that the taste for alcohol seeks an outlet in confectionery or narcotics is nonsense. The impulse to waste, blocked in one direction, may seek other outlets, but, by and large, money that is not wasted is spent for necessaries or saved.

Two factors have determined the extent of retrenchment in expenditures for clothing, house furnishings and sundries as contrasted with sustained outlays for subsistence. The first is the natural inelasticity in subsistence, as contrasted with flexibility in requirements of clothing, house furnishings and sundries. In terms of calories the subsistence of a people is susceptible of retrenchment to an extent of possibly 10 per cent over a considerable period of time without observable effect on health and with merely nominal dissatisfaction. Certainly this is true of a generous diet such as ours. European experiences during the last six years have indicated that further retrenchment in subsistence is to be accomplished only with extreme difficulty and at the cost of class conflicts. Retrenchment in purchases of clothing, as demonstrated in Europe, can easily proceed to 50 per cent over a period of a year. Outlays for house furnishings can be practically eliminated for a year, except for renewals in public houses and equipment of new construction. When one contrasts the demonstrated retrenchment in clothing and house furnishings in this country during the past two years with that imposed by war on the European peoples during the past seven years, ours has been slight indeed.



Conditions in Europe

The second factor lies in the relative price declines. If one will take the curve of retail prices of foodstuffs and contrast it with the curve of retail prices of clothing and house furnishings, from the peak of the boom to the present, one will realize that an added motive for retrenchment in outlays for clothing and house furnishings has lain in the obvious retardation of price decline. The relative prices of clothing and furnishings have remained far above those of foods—furnishings being the highest. Not only was the demand for clothing and house furnishings more flexible than for subsistence but retail prices, declining less rapidly, failed to meet the expectations of consumers and buyers retreated.

The depression was the sequel of prosperity; countries that had no such boom have had no such depression. Defeat-stricken Germany and Austria have not passed through the business cycle; the almost equally stricken France and Italy have also largely escaped The neutral countries of Europe, that enjoyed first a war trade and then a boom business with the combatant countries, have passed through a cycle like ours. In many respects the cycle in those countries has been more severe than here, and complicated naturally by local circumstances. In February of this year the official figure for unemployment in Denmark was nearly 10 per cent of the population. During 1921 food prices have declined in the United Kingdom, Belgium, Switzerland, Holland, Scandinavia and France. Prices in Italy have remained almost stationary, apart from seasonal fluctuation. Food prices in Germany have risen by two-thirds above the level of the close of 1920. Prices in Austria, Poland and Russia have soared. The recorded price increases rest largely on monetary developments.

Americans should realize that the demonstrated retrenchments imposed on us in the period of depression have been moderate compared to those being sustained in Europe. In no single country of Europe is the food supply normal, judged by figures of either prewar or war period. There is unlimited food for the dollar of the tourist; that is an economic situation, not a sample of the food consumption of the natives. The majority of Europeans are still on abnormal bread. Dairy products are scarce. The meat supply is much below normal. The coarse vegetables predominate in the diet of large classes. Importations of food in large amounts are required to insure a modicum of supply. Europeans suffer penury in nearly every direction. Our complaint is not that we are lacking, but against the prices we have had to pay for what we consumed. In Europe the protest is against price and lack.

But one must be careful in drawing comparisons between costs of living here and in Europe. Our prices give promise of resuming soon their normal relations with each other. This accomplishment is essentially the result of the gold standard of currency. With depreciated currencies and consequent state subsidies, price relations suffer grotesque distortions. The rents in Germany are now 2½ per cent of the income of the working classes; before the war, 20 per cent! But what the workman may save in paper money in the direction of rent he loses many times over in other directions.

For Women
—lightweight, cool
—absorbent, elastic
—smooth-fitting
—no buttons

Shorts and Stouts in Union and Two-piece Suits.

Coolness Isn't *All* You Need in Summer Underwear

IF IT WERE, mosquito netting would make the ideal undergarment for hot weather.

Summer underwear should be absorbent. And to be really absorbent it must be *knit underwear.*

To make certain that it meets every requirement of *comfort, style* and *fit* it should be

Lawrence Tailored-Knit Underwear

Lawrence underwear is as thin and light and cool as any underwear can be, yet will absorb perspiration and protect your clothes—and protect *you* from the dangerous effects of a damp skin.

Soft as silk, porous and elastic. Made in the popular athletic union suits, sock-length suits and separate garments—and sold at *popular prices.* Every garment cut separately to pattern by hand, which means *correct size* and perfect fit.

Look for the Lawrence label. If your dealer hasn't the style you want, write us and we will see that you are supplied.

Lawrence garments come in two qualities:
1—Blue Label—combed yarn—finest quality.
2—Red Label—same durability and finish—not quite the softness.

LAWRENCE MANUFACTURING CO.
Established 1831 Lowell, Mass.

America's largest manufacturers of men's and women's light and medium weight knit underwear, from the raw cotton to the finished garment.

THE PRINT OF MY REMEMBRANCE

(Continued from Page 30)

streets, whether from Hoboken or the North River side of Manhattan, he has a ride through a front yard that prepares him for all the dump heaps of the rear, broken pavements, dirty gutters, tumbled tenements, ragged hoardings; and then through our necessitated but oppressive cañons, where the skyscrapers shut out the sun for all but a few minutes of the day. And if he happens to be a home-coming American from Paris he groans inwardly with a despair that he knows no effort of his own lifetime can lift. Having made one such round trip, I looked on Paris for a second time with a knowledge of these American features and a wish to find the elements that made the great contrast.

One principal item is sky line. The building laws of Paris fix the limit of houses definitely at six stories and twenty meters, sixty-five feet. The Mansard roof is an intelligent effort to observe the letter of this law and yet steal a few additional vertical feet under the allowance of roof. As property is valuable, the legal limit is uniformly reached; but monotony is avoided because the race of architects turned out by the Beaux-Arts, where we send our Americans to learn the rudiments of their profession, has found a variety in the unity that makes for restful beauty. Again, the poverty of Paris in its water supply seems to result in another blessing. The water in some of the mains is not potable, as they say, *pas de la source,* and the Parisian is as lavish with it in the streets and fountains as he is economical of its use in his bathtubs.

Every morning, in every block, a street cleaner turns a little rivulet through the gutter, dams it into a little lake with a bunch of burlap and with his long and homely broom of osiers sweeps it over the wooden pavement levels, washing back the débris to the run and gradually extending rivulet and lake until he has accomplished his block. The morning gutter and the sky line call attention newly to each new day.

And then this third item: Intelligent Paris recognizes and admits the eye as an organ. It is not to be more lawlessly assailed than is the ear. No man for commercial purposes shall without restriction assail the passers' attention with his blatant demand.. The twenty-four-sheet stand, the barbaric three-sheet poster do not exist, because the municipality puts a tax upon every sheet of paper that solicits its attention. Advertising space is relatively as valuable on the walls as it is in the newspapers, and so posters are artistic, of more than ephemeral value, and are in the main confined to handsome little kiosks set up at intervals for their accommodation.

A Lesson From Paris

When will America learn this value of public right? When will all the unsightly boards that confine our railway journeys to hideous alleys of proclamatory and mandatory attacks be regulated by proper assessment under state domain to things of tolerable sightliness and sources of revenue to the poor public whom they afflict? When will unoffending citizens be permitted to travel and look from their car windows on refreshing landscapes without being commanded to use Startum's Alarm Clock or Sokum's Condensed Milk? Why must there always be interposed between the ruminative individual and the stenography of his Maker the commercial persuasion of his fellow man, money mad?

To one writing for the theater Paris is always rich in suggestion. Little plays that have not the importance to get into L'Illustration, or even into the printed brochure, dramatic bits that never make their way to America, are at the small theaters on the boulevards and the back streets and in the Quartier and in Montmartre, more than half of them containing each some little suggestive, facile scene that educates and urges. When I had my Drew-Barrymore play finished I sent it over to C. F. by mail under the title of The Pug and the Parson, and under that title it was announced. But before I could get over to rehearse it Mr. Frohman had received a couple of letters from Protestant ministers protesting against the association. He had a racial reluctance to risk their pleasure, and although I stoutly stood the title, feeling that the word "par was not so sacrosanct that one might use it, his wish of course prevailed, called the play The Other Girl.

C. F. felt that it wouldn't do to put into the part of the preacher, however cause the character, though no better in the play's value or in the writing, not from its very kind compete wi character of the pugilist. He believe Barrymore, again associated with Mr. Drew, would lead those who superficially to proclaim the younger the better actor, when the facts we that in this play, as in The Mumm the Humming Bird, he had only the showy part. It was therefore deci keep Lionel as the pugilist and pu available leading man in the part th been meant for Mr. Drew. Frank ing was engaged for this, and I hav seen a manager move with more siasm to get an adequate company

Imitating Kid McCoy

I am sorry to forget the name of t in which a very beautiful girl of th had made an impression. This g Drina De Wolfe, the wife of E Wolfe's brother. There was some domestic-in-law difference that ma ladies not agreeable to each other, wish to see them both in the ca piqued Frohman's sense of humor that he set about the seemingly im task of persuading the two ladies result that the valuable co both actresses was obtained. Selen who had been a favorite New York woman when she married Edwin Royle, was induced to take a pa what more mature than those previously shown in. For a po porter, Richard Bennett was eng such excellent actors as Joseph W Jr., Ralph Delmore and Joseph together with Jessie Busley and Fielding, then one of the greatest of the vaudeville theaters, we gaged. The Criterion Theater, in were ultimately to play, was given all our rehearsals. That one shou tion this may puzzle the layman, conditions are not always pre think the rule is to the contrary majority of plays are moved about rehearsals from one theater to an occasionally into some hired ha a great advantage in rehearsing in house in which you are to oper ting always the proper tonal value physical relations that are to turbed and unrevised.

As soon as Lionel knew he wa the pugilist he hunted up Kid M passed much of his time outside t with the champion. This admir reciprocated, and when the pug McCoy came often to see his p presentment. One difference Barrymore and McCoy was that hair was as curly as Lionel's was For a period in the early run of and for all I know during all the was in it, Lionel had his hair curled each evening in order to present this international favor

I have reason to believe that jag indicated by Mr. Wheelock personated a character just reli the table where he had undergone tion under the influence of ether first time that phenomenon was in the theater. The use of sulphu as an anæsthetic dates from w since the Civil War, and we are with most of the plays produced time. In the rehearsals of th Wheelock more than once offere render his part, believing that onstrations I was asking of h exaggerated and unreal; but he h taken ether, and I'd had two pa so with the help of Mr. Frohman finally persuaded.

by hat and furs, and the like, and then—conforming to instructions—instead of merely mentally commanding the lady to look around, we in our minds definitely dramatized her doing so and focused thought and attention on the lady. In the time in which one can perhaps count ten, with a gesture of great annoyance the lady faced squarely about and glared at us.

I have referred in earlier chapters to a patron of the theater whose theories were so reassuring, Mr. Thomas B. Clarke, a connoisseur and art collector. Men who know Mr. Clarke, and know him intimately enough to call him Tom, will understand my taking any excuse, however risky, to have an hour in his company. For some reason during this winter, 1903, in New York he wanted me to meet his friend, Mr. Frederick Gebhard. As I remember, Mr. Gebhard had requested the meeting, which was to be at a very small dinner at his home, then on the eastern side of Park Avenue at about Thirty-ninth Street. I went with a fairly keen interest, wondering somewhat fatuously if Mr. Gebhard knew anything of my St. Louis newspaper reports of his visits there. As I recalled them, they were rather complimentary than otherwise, except for a hideous woodcut issued as a portrait. But a man about town would hardly invite a person to a small dinner party in order to assault him for that offense after so many years had intervened. It was a fine little dinner, arranged by an excellent chef and accompanied by good wine.

The Germ of a Play

I had last seen Mr. Gebhard in 1884, twenty years before, then wearing the title of the King of Dudes. He was now a middle-aged, reserved and serious gentleman, talking entertainingly and modestly on questions of art and literature. He was gray at the temples, decidedly modeled as to face, a little heavier as to figure, but athletic still. Over the mantel of his living room was the picture of a beautiful woman set in a large oval frame. The men of the small party regarded it with admiration.

"Where did you get it?" Clarke asked.

"You've seen that before. That's Lulu."

"Not the Eastman Johnson?"

"Yes," Gebhard answered. "I had Jones go over it for me, change the color of the hair and the eyes."

"But why?"

"Well, one doesn't go on living with a portrait of a divorced wife. I'm so damn poor I can't afford another picture for that space. I had the coloring changed, and it makes a decoration."

I knew nothing of the divorced wife, have learned nothing since, nor of the circumstances. But the attitude of the lonely man, the cynical philosophy that made that use of the canvas and gave that frank explanation impressed me. I was looking for the as-yet-undiscovered idea for a play for John Drew. I had kept the contract with Mr. Frohman when I had furnished him The Other Girl, but the Drew project to my delight was still before me. A *divorcé*, and such a definite *divorcé* as Mr. Gebhard, for a hero, with the intriguing idea of the repainted portrait, made good a starting point. The cause of the divorce must of course be a woman. The outcome of the play would be a return to the wife or a marriage with the other woman. Of those alternatives, I chose the woman. My problem was to have her the more desirable of the two; to have her innocent of any transgression and unconscious of any charge. The wife would have to be mistaken in her suspicions; the matter would have to be settled out of court. And then again my recollection of the lonely Gebhard suggested having obstacles to the second marriage. I found those obstacles in a disparity of years, in a perfunctory suitor for the girl, in an angered and belligerent father, who unlike the girl was not in ignorance of the charges, and so on. As one may surmise, with story both ways from the portrait, I had material enough.

When the play, which we called De Lancey, was finished I was in France again. John Drew had come over to visit Frohman in London, and together the two came to Paris to have lunch with me and listen to the manuscript. Our apartment at 108 Boulevard Montparnasse was over the Café du Dôme. John felt that he should have a cocktail before he climbed the four flights to the luncheon, and Frohman, who didn't take cocktails, stood with him in the little café against the bar of zinc, while

(Continued on Page 101)

From Greenland's Icy Mountains to India's Coral Strand—

ALL over the world, people *depend* on Icy-Hots to keep food and drink hot or cold in most extreme temperatures. In the tropics, refreshments keep icy-cold in Icy-Hots despite intense heat. In the Arctic, where snow never melts, hardy men swallow piping hot coffee from Icy-Hots, and keep warm and comfortable as they "mush along."

ICY-HOT
VACUUM PRODUCTS

Made in America, of American material, by American labor

"Built for Lifetime Service"

Because Icy-Hots can be depended on under all conditions and in all climates to retain the temperature of their contents, and because of their superior designs and durable construction, Icy-Hot Vacuum Products are accepted as standard throughout the world.

Icy-Hot dependability is the result of years of specialized manufacturing effort and unceasing insistence upon the utmost quality in all materials and workmanship entering into Icy-Hot production. Inflexible adherence to quality-standards, and the rigid Icy-Hot temperature-test, provide the basis for the Icy-Hot guarantee of efficiency.

The purchaser of an Icy-Hot buys a vacuum product of known and recognized worth, and assured dependability in service—and though Icy-Hot quality and value are exceptionally high, Icy-Hot prices are most interestingly low, so reasonable that every home, and every man, woman, or child can afford the particular Icy-Hots that meet individual necessities.

Every Icy-Hot carries guarantee tag showing that it has been temperature tested. Guaranteed to keep contents hot twenty-four hours or cold three days. Every Icy-Hot has name on bottom. Sold everywhere. Many styles and finishes.

PRATT & LAMBERT
VARNISH PRODUCTS

Painted by Orson Lowell. Copyright 1922, P&L

THE girl or the car? Well, perhaps both, as the car is finished with Effecto, the *original* automobile *enamel!* A car enameled with Effecto justifies the pride of possession.

You can brush Effecto on your car without trace of streaks, laps or brush marks. It levels itself and dries quickly with a smooth, lustrous gloss; more durable than the finish on most new cars.

Effecto is the *original* automobile *enamel*, the product of seventy-three years' experience in making the highest type of finishing materials for the trades and industries. It can therefore be used with utmost assurance by both amateurs and professionals.

Effecto is made in nine popular *enamel* colors: Black, Blue, Green, Red, Brown, Yellow, Gray, Cream and White; also clear Finishing Varnish and Top & Seat Dressing. Top & Seat Dressing gives upholstery and tops a new richness. It waterproofs and renews.

Send for Color Card and Names of Local Dealers

Effecto is sold by paint, hardware and accessory dealers. *Guarantee: If any Pratt & Lambert Varnish Product fails to give satisfaction, you may have your money back.*

and find the key a good deal of water went Mr. Wilson's way, but it didn't interrupt his story. He turned up his lapels like a sailorman on the bridge and held his place. We abandoned the fountain soon after that, but the Francis Wilson episode always impressed persons humorously when we told it, to explain the patch on the table where the copper pan had been, and one gentle visitor said, "Mr. Thomas, you ought to put that in a play."

When I presented this material to Dumay he said that no playwright could make more than one act of it, and it was upon his banter that I started out to show him that the material was sufficient, with its suggestion, to furnish forth a three-act comedy.

There was at East Hampton an empty box stall in the stable, with windows set so high that one couldn't look out of them. I put in only a kitchen chair and a small pine table from the village general store—not even a calendar to distract attention. My play material to start with was a suburban house, isolated by a storm on the evening of a prepared dinner. Persons once there couldn't easily leave, and only the sturdy and the heroic could arrive. Question: What is the best use to make of that set of conditions? Answer: The exploitation of a person or persons who would like to get away and can't do so. What person would be the most effective figure under such constraint? A girl!

A Frohman Dress Rehearsal

I took the proposed-and-interrupted dinner party indicated, made it in honor of the girl, a guest in the house; made the lady neighbor who was carried into the house by the coachman the girl's unidentified rival in the affection of a young man who had been temporarily cast off by the girl because of a scandal of which both he and the married lady were innocent, but which was sufficiently distorted in its first presentation. Then I drove the young man, an architect, into the house from a near-by job to telephone, unaware of the girl's presence or of the projected dinner until he arrives. With the people living in the house and the father and mother of the hostess and the jealous husband of the married lady I had people enough for a story. I cannot repeat a play, not even a plot, in these pages, but believe I have herewith given enough to indicate the sprightliness of the subject and the sufficiency of the material.

When the comedy was done, after some six weeks of rather intensive writing, we called it Mrs. Leffingwell's Boots. Frohman immediately accepted it and told me he would wire me to Paris when time and a place in the theaters were ripe for it. I came over the next midwinter, when I found the radiant C. F. with another one of his extraordinary casts. It was a way with Mr. Frohman to see unrecognized ability in a young woman and quickly give her opportunities to prove her worth to the public. Though these opportunities could be devised, it wasn't always possible to make the public accept the lady at his estimate of her. My recollection is that when the public had failed, however, C. F. was more nearly right than the general jury.

Such a girl had come under his attention at that time in the person of Fay Davis, a most intelligent actress, with a method perhaps a little too delicate if anything. It had more the quality of the miniature painter's attention to subtleties and to details than is effective in the playhouse, which responds more readily to the broader touches. Mr. Frohman had starred her in Lady Rose's Daughter, featured her in The Whitewashing of Julia and in The Rich Mrs. Repton. To my great profit and delight he found for her in the young girl I have referred to in this story of mine what he thought was a rôle worthy of her attention. And then, in order to give Miss Davis a perfect support and companionship, he assembled a cast that included these excellent players: Margaret Illington, then prominently in the public affection; Jessie Busley, one of the best of the comediennes; Dorothy Hammond, a very pretty leading woman; and that excellent actress, Annie Adams, mother of Maude. Among the men he had two leading men then as now of equal rank—William Courtenay and Vincent Serrano; also the popular Jack Barnes, English actor; Ernest Lawford, who had been featured in some Frohman productions; that excellent American comedian, Louis Payne; and that almost last of the fine old American gentleman type, the late John G. Saville. The remaining members of the company in the minor rôles were more than adequate. C. F. turned this cast over to me, with the Savoy Theater, where rehearsals would be uninterrupted. There was nobody to replace in the company, no revisions or corrections to be made in the text, and C. F. never came near us until the night of our dress rehearsal.

It will be interesting to record a typical Frohman dress rehearsal. He sometimes departed from his rule, but his custom was to have such a rehearsal with nobody in front but the author and himself. Even an assistant director or a man who had held a book and was supposed to have some interest in the setting was not allowed to come in front of the curtain. I remember such an intrusion by a perfectly justified stage manager who came into a box of the Criterion Theater when we were doing The Other Girl.

C. F. said to him, "What are you doing there?"

"I want to look at the scene, Mr. Frohman."

"We'll tell you about that," and the functionary disappeared.

Our dress rehearsal for Mrs. Leffingwell's Boots was at the Savoy. C. F. and I were alone. The presentation proceeded exactly as a first night, with every formality observed.

When the first act was over he said to me, "These people aren't acting."

"They're not?"

"No, they're living!"

It was a pretty compliment to the company, and I tried to steal some of it for the author; but that was entirely a mental process. When our last curtain fell, C. F. had it taken up again; the company was called on the stage and in a few heartening and sincere phrases he told them how highly he estimated their work. There was no need at our first performance to reverse his opinion. I like to recur in my thoughts to that engagement and to that happy family of players, and I like to write about it. Those ideal conditions are what every player dreams of when he comes into the theater and what every playwright has in mind when he sets down a line. Nothing is so health-giving and beneficial as this full, unimpeded expression and interpretation.

A Dignified Frost

In The Earl of Pawtucket, of which I have written above, D'Orsay's success was marked. When he played it well into the third year and there was only what was called the small time open to him he grew anxious for another vehicle, and felt that he could make better monetary arrangements elsewhere than he then had with La Shelle. Mr. Frohman had revised his measure of D'Orsay and now regarded him as of stellar magnitude. I was commissioned to write him a successor to Pawtucket. D'Orsay's ambition made him ask also for a more substantial purpose in the play. The first version of The Embassy Ball was, in consequence, a four-act play, mainly attempting comedy, but with a quite serious note at the end of its third act. Our first night was in New Haven. Mr. Frohman could not attend. He said he would base his opinion of the play entirely upon my telegraphic report of its reception, and not upon the notices or opinions he would get from others.

I wired him, "A dignified frost."

There is little value in going into the reasons for this result. One of them, however, has interest. The end of the third act was a well-defined conflict between a sinister interest in the play and D'Orsay, who had the heroic element. The climax of this conflict was dramatized by D'Orsay's tearing from some diplomatic record the leaf that was the vital issue. This he did under the rhetorical encouragement of the character played by that excellent comedian, Harry Harwood. D'Orsay complained that his support at the serious moment was not sufficient. There was some justice in his claim. Harwood contended that there wasn't material in his lines to evoke the applause that we expected. In my own opinion the fate of the piece was so well settled that whether Harwood was right or we were right could not affect the ultimate result. And Mr. Harwood's effectiveness along the lines of his own work as a comedian is too well known to require anybody's reënforcement.

At Hartford one night I tried on Harwood's wig, and he generously consented to my going on for his character in that performance. With the different treatment of the stump-speech material the act got the calls that it potentially held. The value of this was only my own assay of the stuff, because Harwood's association with the enterprise was worth much more than the material in question.

Frohman saw the piece in Philadelphia and was depressed. The lay reader should understand the interests at stake. To fail then was to throw an entire company out of employment in November; to give in a measure a black eye to the reputation of the star and to leave on the hands of the management an expensive production, including scenery and costumes and a fair stock of printing. Despite its feebleness as theatrical text the play had shown us that D'Orsay was more acceptable in his proper comedy work than he was as a pseudo leading man.

The Frost Thawed Out

As C. F. and I leaned over the bulkhead of the Chestnut Street Theater I recalled my experiences in rewriting the Crane plays For Money and The Governor of Kentucky and lesser work on the unsigned scripts that C. F. himself had called me in to patch or carpenter. I thought I saw my way to make a three-act comedy of what we had. I told him so. My family was in Paris. I was a bit uneasy about them. I said if he would lay off the company for four weeks that I would jump over to Paris and back, and I thought we could salvage all the investment enumerated, with the exception of the four weeks' time held in the theaters. C. F. was delighted with the proposal. D'Orsay and I took the same steamer for the other side, he going ostensibly to see some member of his family supposed to be ill. I wrote on the boat and worked rapidly in Paris.

In three weeks after leaving New York, D'Orsay and I again took a same steamer for America, where we were two in a total of five first-cabin passengers. On the boat I finished the revision. Two days after we landed we had script and parts typed and began rehearsals, with that delightful actor, Forrest Robinson, added to the cast and associated with Harwood. The three-act version of The Embassy Ball, a purely farcical attempt, was successful. We played it two years.

Paris lacks the ocean, but with this exception it has as many suburban enticements as New York, and the Parisian is as accustomed to running away from the city for a little one or two day vacation as any metropolitan that we know. To change the ideas—*changer les idées*, as they say—is with them a frequent act of mental sanitation. We made a party of some twelve or fifteen Americans, children included, who were at the pretty hamlet of Montigny sur Loing in the middle of April in 1906 on one of these adopted *vacances*. The terrace of the Hôtel Vanne Rouge has its retaining wall of stone, washed by the slow waters of the River Loing that meanders by, held almost in lakelike retardation by the *vanne*, or water gate, that accumulates them for the near-by mill. This little terrace, some fifty by fifty feet of graveled level, with its circular tables of sheet iron and weatherproof chairs, sets like a stage to the low and theatrical façade of the toy hotel, where by a fair jump from the ground one can almost catch the sill of the second story window.

On Wednesday the trippers had gone home and our American colony had the place to ourselves. A very obvious bridal couple came that evening; the young man with the French whiskers of the period, the bride in the attractive and now antiquated costume of the date, both oblivious to the strangers who were speaking English. After a little rowboat trip in the twilight the couple disappeared. We were at *café au lait* on the terrace on Thursday morning. The children at the balustrade were feeding the swans when the small diamond-paned comic-opera windows of the upper room opened and there appeared the bridegroom in a suit of lavender pajamas whose newly laundered and utterly unruffled condition invited attention.

Dr. Tom Robbins at our table said, "See those immaculate pajamas on the new groom!"

All looked and someone remarked, "Yes, a new groom sleeps clean"; an amusing line, but not so tenacious as alone to fix the Thursday morning of that nineteenth day

Stewart PRODUCTS

PRESTIGE QUALITY SERVICE SATISFACTION

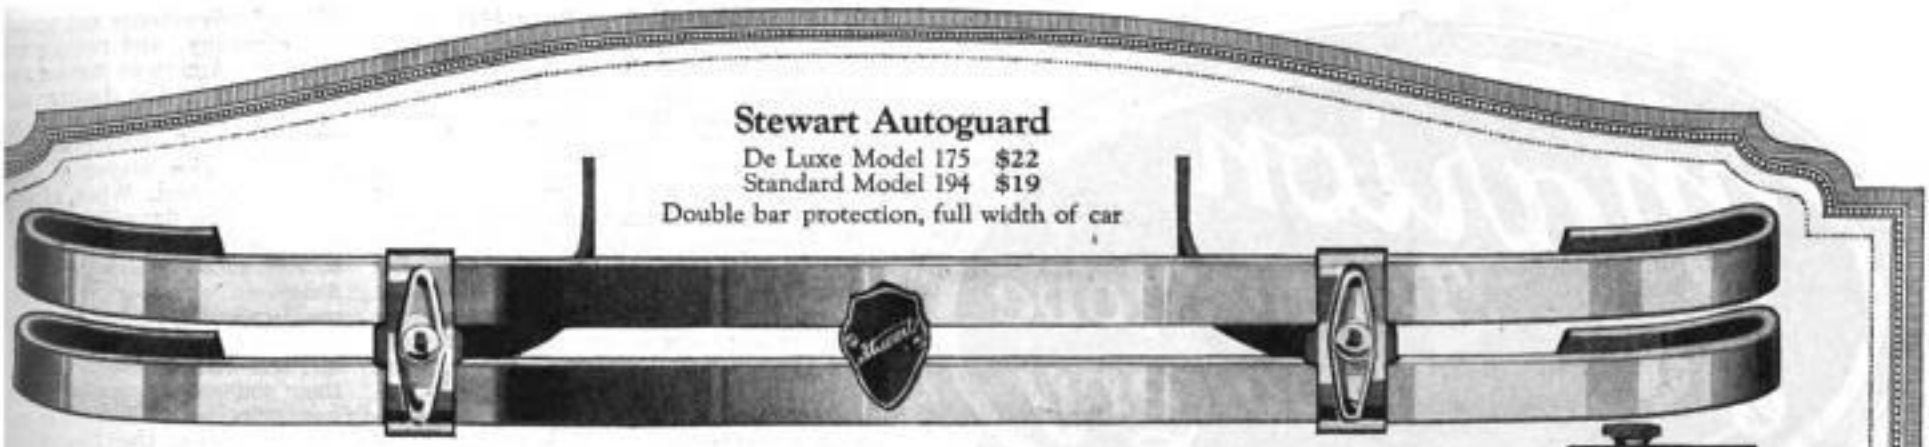
What Stewart Custombilt Products Mean to You

WHEN purchasing any automobile accessory to ask "Does Stewart make it?" is to make certain of obtaining a product possessing all the attributes named in the winged shield which marks it as a genuine Stewart Product; Prestige, Quality, Service and Satisfaction.

These qualities are of almost equal importance and all four can be secured only in Stewart Products.

For example: Service.

It is the aim of the Stewart-Warner Speedometer Corporation to keep your Stewart equipment in a state of mechanical perfection at all times. To accomplish this there has been established a chain of 86 authorized Service Stations all over the world, 53 in the United States alone, manned by expert mechanics trained in our own factory. They know Stewart Products from A to Z.



Because of this service car dealers demand Stewart equipment on the cars they sell, and the public demands it on the cars they buy.

Stewart Custombilt Products, illustrated on these pages, are sold by accessory dealers all over the world. Don't be satisfied with any substitutes.

1. Heater coils are supported every 2 inches and cannot sag.
2. Makes 2 slices of toast above coils and 2 below at same time.
3. 3-heat switch gives you high, medium or low heat at will.
4. Stove frame is pressed steel coppered, nickel-plated and highly polished.
5. Generous fiber feet protect the table top from heat or scratching.
6. Deep dish of pressed polished aluminum, full 7x7 inches. Handle cannot come off.
7. Stove is nickel-plated and highly polished, with rounded corners.
8. This second deep dish inverted over No. 6 gives you a practical small oven.
9. Aluminum cake griddle when used above heater. Also cover for deep dishes.
10. Four aluminum custard or egg cups. Also for baking muffins. (See No. 8.)
11. Aluminum broiling grill for use in deep pan below heating element.

Summertime Comfort

You can serve a complete meal from this sturdy Table Stove—not a "snack," but a substantial dinner for 3 or 4 people. For example—

—Let's prepare hot muffins, broiled chops, browned potatoes and coffee!

—put reflector (*9*) below coils. Put one deep dish (*6*) above coils. Invert other deep dish (*8*) over it. When hot put muffins into this little oven, using aluminum dishes (*10*). Allow usual time for baking

—then broil a couple of chops (lay them on *11*) below in *6*, while potatoes simmer or brown in *8* above the heater. Use *9* inverted as a cover

—finally, make coffee on the grid (*2*). Control heat with switch (*3*).

Isn't that interesting? And practical? And worth trying?

The room is not heated, as practically every bit of the heat goes into the food when you use the Marion Table Stove.

You cook right on the dining table, enjoying the meal with your family, and serve direct from the Marion Table Stove.

Most dealers will be glad to demonstrate Marion Electric Servants. If your dealer cannot supply you, use the coupon.

of April. The event that did that was the arrival of the morning paper relating the catastrophe in San Francisco, then called an earthquake, but by common consent since referred to as the fire.

One of our laughing party was Mrs. Chase, who had been a Miss Mizner, sister of Wilson and Addison Mizner, Californians. Mr. Chase was still in the States, and the reports of the devastation included territory in which the family had important financial and sentimental interests. Other Californians were in our party, with parents, brothers and sisters in the stricken city. The blow made everything else forgotten; not only those directly and personally affected but all the Americans knew their vacation was over and their stations were at the lines of quickest communication.

It is rather fine to remember the promptness with which the Americans in Paris acted at that time. The American Chamber of Commerce assembled the next morning upon a call from its president printed in the Paris New York Herald. It was a crowded meeting, attended not only by the members but by many sojourners and transients. There was some little personal information, not much; the cables were blocked. Men of prominence and power ad the company, and running true after the American manner the fir nite action by the chamber was a priation and a volunteer subsc Thousands of dollars were imm pledged. The mayor of San Fra was telegraphed. When, after a pe two or three days, the rather pro fairly self-reliant reply was receiv outside subscriptions were not need American chamber met again a money was diverted to a loan fund a to such Californians as found the in Paris with their communications their sources of supply destroyed. were principally students in the art the Sorbonne, the Beaux Arts a musical institutions. But how s spirit, how admirable that highly ne ethical capacity to respond! How its demonstration! It was, of c comparatively small reaction, bu very like the stir that went over all that sixth day in April, 1917, w resolution of Congress decided were in the war.

born with, and however truthful he is naturally ——"

"Yes?" murmured Angela sympathetically.

Arthur was glad to be interrupted by the arrival of Stoker, who walked swayingly in, bearing a plate of bread and butter in one hand, and a plate containing a cake in the other. He approached the table nervously, and set them thereon, watched by Angela.

Angela moved to the table. "Let me show you," said she, "how I like a tea table set."

"Yes'm," said Stoker.

"You will easily learn," Angela continued. "Put the cups out in the saucers so. Then group them so. But you have brought too many cups."

"Yes'm," said Stoker, glancing hopelessly round, and counting on his fingers.

Arthur scowled at him.

"The bread and butter is too thick, you know," pursued Angela very kindly.

"Yes'm," said Stoker.

Just then sounds of muffled knockings arose and penetrated to the parlor. Stoker stared uneasily around.

"What's that noise?" inquired Angela.

"The workmen," replied Arthur calmly.

"After tea you shall show me what they are doing," said Angela.

The knockings continued.

Stoker scratched his head. "Please sir," he piped, "shall I go an' ——"

"No, Stoker!" said Arthur ferociously. "You'll stay in the kitchen and come when rung for. That's all just now."

"Yes, sir," said Stoker.

"Kettle boiling?" Arthur added ferociously.

"Kettle ain't quite b'ilin', sir," replied Stoker, and he went out quickly.

"Since tea is not quite ready," said Arthur, turning to Angela with a very subtle smile had the luckless girl but known it, "I'd like to show you part of the house, beginning with the cellar."

"Beginning with the cellar?" echoed Angela.

"Yes," said Arthur. "It's really an awfully interesting cellar. 'S a matter of fact there are three cellars. Two outer ones and an inner one."

Angela shuddered. "Oh-h-h!" shivered she. "They'll be dark."

"Er—yes," assented Arthur. "I'm afraid so. But it can't be helped," he added grimly.

"You'll hold my hand if it's very dark?" cried Angela charmingly. She moved impulsively to him.

"Er—yes," said Arthur, edging to the door. "Er—I mean, yes!"

Angela followed him, with beautiful up-and-down flickerings of eyelashes. "Funny Arthur!" said she, rallying him as she passed through the door he held open for her.

It was barely half a minute later that Stoker wandered in again with a dish of jam. He looked around him and his jaw dropped. A trembling ran over his frame. He shook his head, and the jam dish fell from his hand to the table. He s his head—but received no revela gazed round again.

"I'm sure I dunno!" he said a

He heard again the muffled k Knowing what he knew they had quality. He started violently and his head.

A revelation was made to hi silent caution he sped to the cour wheeled one bicycle after another laurel bush, till all three were He returned to the fatal room.

Arthur dashed in at one door a entered by the other. He appe tinctly distrait.

"Stoker!" he cried. "Stoker!

"I've 'id 'em!" said Stoker.

"What?" cried Arthur.

"The bicycles," said Stoker

"What for?" cried Arthur.

"It seems better like," repli earnestly.

"Why?" said Arthur.

"It just seems to me better lik Stoker earnestly. He eyed hi piciously, and kept well out of

"Come here!" said Arthur.

"No, sir! Not me, sir!" repli with the stout resistance of one

"Here!" said Arthur desper say, I got a job for you to do u know where Sir William Hunter you say you can ride a bicycle?"

"Yes, sir," breathed Stoker.

"Then take one of those bicy Arthur, "and ride as fast as yo William's, and ask ——"

Even yet Arthur was not d give the twice-postponed order sound simply struck the word lips. A car drew up outside. Stoker both listened, palsied.

"Who's that?" said Arthur in whisper.

They listened. Muffled knock to run like wildfire round the h them and below them.

Lady Hunter came determin the courtyard and filled the e

"Tea, Stoker!" cried Arthur

"Yes, sir!" said Stoker in a and he ran past Arthur into the

Lady Hunter entered, gushing excitement, reproach; and, on giveness. It was quite wonderf one woman could express all mere personality.

"My dear boy!" she exclaim

A *Dead* Engine on a *Live* Street

A FEW sputtering knocks—a convulsive jerk—a sudden stop! Up with the hood—a frenzied, futile fussing with plugs and wires.

Meanwhile, streets jammed for blocks—drivers yelling—horns blowing—policeman raving!

Annoying—irritating—inconvenient—yet it all shrinks into insignificance beside the damage done to the engine by a single misfiring spark plug or a short-circuited wire.

Worn and loosened bearings, scored cylinders, piston slaps, chattering gears, loss of power and noisy, jerky operation are the inevitable results of neglecting even the smallest defects in the nerve center of the car—the ignition system.

You can protect your car and your comfort by testing the ignition system regularly. It's no longer a complicated task—it now can be done quickly, easily, cleanly by using the

Airco IGNITION GAUGE

The Watchdog of the Ignition System

Instantly spots the plug that's missing

Locates short-circuits and leaks in high-tension wires

This handy vest-pocket instrument is small enough to reach the most inaccessible part of the ignition system. Its blunt contact cap cannot slip off plug or wire while testing. Cannot get out of order—no wires to connect—no shocks—no danger.

Carry one with you in case something goes wrong on the road.

AIR REDUCTION SALES CO.

The name Airco on this ignition gauge signifies that it embodies all the high standards characteristic of the twenty-one other products of the Air Reduction Sales Company, pioneers in commercializing the elements of the air and large manufacturers of oxygen, acetylene, apparatus, etc., for the oxyacetylene welding and cutting industry. It is most logical that an instrument relying solely for its functioning on Neon—a rare gas of the air—should be built by an organization of such specialized experience.

For all internal combustion engines

Cooking Utensils and Food Flavors

When odors cling to cooking utensils, it is evident that the same metal surface which draws into its depths enough food substance to give off an odor, also takes out of the food precious elements—particularly the valuable health-giving mineral properties.

The flint-hard, glassy surface of *Nesco Royal Granite Enameled Ware* is non-porous. It cannot absorb food flavors nor food values. It does not permit odors of food to cling to its surface. It does not discolor from deposits of mineral and other food values.

Better Cooking Assured

Good cooking—tastier, better flavored, more wholesome dishes are the products of the housewife who cooks in Nesco Royal Ware. Every bit of the flavor is retained. It is unimpaired by chemicalization. Mineral elements are saved in the food when cooked in Nesco Royal Ware.

Nesco Royal Ware is food-acid-proof. The porcelain-like surface of the granite enamel prevents contact of food with metal. In the handling, cooking and preserving of fruits, it is safest to use Nesco Royal Ware. Then the original flavor and the keeping qualities of canned fruits are assured.

Prevents Contamination; Protects Health

Nesco Royal Ware can so easily be kept scrupulously clean that it insures sanitation in the preparation of food for babies. Food for invalids whose appetite must be tempted with the most delicately flavored, wholesome foods, should always be prepared in glassy surfaced Nesco Royal Ware.

◇ ◇ ◇

Proper distribution and retention of heat thru the heavy steel base makes the cooking of meat especially satisfactory in the Nesco Royal Roaster or stewing kettles.

Because Nesco Royal Ware so well resists the effects of iron and alkali in the water, and its durability is absolutely unaffected, dippers and drinking cups in Nesco Royal Ware are used everywhere. Picnickers and campers use Nesco Royal plates, bowls, and cups and saucers. They are easily cleaned, and unbreakable.

Durable Ware Has Lasting Beauty

Whether the Nesco Royal Granite Enameled Ware utensil is old or new it always looks the same. Its porcelain-like surface is just as glossy and glistening, and the lovely, harmonious colors remain as vivid and bright as on the day when the housewife first washed from the granite surface the diamond label which identifies each utensil of Nesco Royal Granite Enameled Ware.

◇ ◇ ◇

The Nesco diamond label is assurance of the high quality of material and workmanship in Nesco Royal Ware.

The label indicates that the best grade of heavy pressed steel forms its base, and that high quality, rock-hard melted granite has been flowed over and baked into its pores.

Use Only Mild Soap and Water

Water and mild soap are all that is required to clean Nesco Royal Ware. Hard scouring and polishing, which roughen and redden the housewife's hands, are entirely unnecessary. With the elimination of the use of expensive and unpleasant cleaners, comes to the housewife a saving of many hours of dishwashing drudgery.

◇ ◇ ◇

The reasonable price of Nesco Royal Ware places it well within the means of every housewife. Its economy and great durability, its assurance of years of good cooking, and relief of dishwashing drudgery, make the purchase of Nesco Royal Ware a desirable investment.

An attractive descriptive folder and a handy recipe book will be sent upon request. Address: National Enameling & Stamping Co., Advertising Dept., Sec. D, Milwaukee, Wis.

NESCO PERFECT
OIL COOK STOVE

A Real Test for Any Stove

To obtain a crisp, evenly browned piece of toast a pu intense, blue flame is required—a flame which indica by its color, perfect combustion of air and gas. The Ne Perfect Oil Cook Stove produces this perfect blue flame noto suited for making toast but for all kinds of cooking as w

NESCO ROCKWEAVE WICK
(PATENTED)

The Nesco Rockweave Wick and the famous Nesco Perfect Burner work in such perfect accord that the high blue flame which shoots up through the grate is free from the slightest taint of smoke or odor.

Such a flame bakes light, fluffy bread and cakes most temptingly delicious; roasts to a turn; fries quickly and cleanly; and boils with equal success.

Go to your hardware, house fur ing or department store and wi a practical demonstration of Nesco Perfect Oil Cook Stove. Sa yourself that the claims we made for it are true. Also see other Nesco Products—

with all those alterations and repairs without consulting a certain lady. Not a tin tack should be driven in without her consent. For after all a home is a place very sacred to a woman."

Her voice trembled emotionally.

"I wish I knew some place sacred to a man," said Arthur.

"Now listen to me, my dear," said Lady Hunter, looking at him very earnestly through her lorgnette, "listen to me, for we must discuss very carefully the whole awful situation.

"I lay awake all night thinking of it. To-day has been miserable. Lunch was tragic. None of those poor girls has spoken to the other all day. And all left the flower show on pitiful pretexts. I know something of women's hearts, Arthur, and I could guess where all those poor dears are at this very moment."

Arthur recoiled.

"What!" he exclaimed.

"Each," said Lady Hunter solemnly, "is lying on her bed, locked in her room, crying her little heart out." She sighed.

Arthur swallowed once or twice. "I darn well wish they were," he replied.

"Arthur!" said Lady Hunter, appalled. "Arthur! You brute! But," she added, "that is what all those poor girls love in you—the brute. We women ——"

Arthur kicked the sofa, interrupting her.

"I don't know what to do," he remarked.

"But that's so simple, my dear," breathed Lady Hunter.

"Simple?" repeated Arthur.

"Just do it over again," said Lady Hunter, with a proud look at her simple ingenuity.

"Just do it over again?" repeated Arthur faintly.

"And this time, dear," pursued Lady Hunter softly, "be sure to ask the one you love."

"I don't love anyone," said Arthur, at his sturdiest.

Lady Hunter fairly shrieked.

"You must!" she cried.

She began to get very angry, and tapped her toes incessantly on the floor.

"I won't!" said Arthur.

Lady Hunter grew violently agitated. "The situation," she panted, "is impossible."

"Improbable," said Arthur grimly, "but not impossible. Nothing of this kind is impossible to me. I don't love any ——"

"You shall love somebody before I leave here," said Lady Hunter breathlessly, "or I won't go!"

She recklessly delivered this ultimatum to Arthur; it was her own fault. Also the knockings went on distractingly all the time.

"What!" said Arthur. "Do you mean to tell me you won't leave here till I—I ——"

"I won't go till it's all settled," replied Lady Hunter flatly.

Arthur gave a very long musing look. After all, if one, why not two? If two, why not three? If three, why not four?"

"Ah!" said he in a quiet voice. "Then there'll be lots of time to spare, and I would like to show you the linen cupboard. Mother left a lot of linen."

"I do not care how I occupy the time, Arthur," said Lady Hunter wrathfully. "The linen cupboard by all means."

"Then come on!" said Arthur.

She rose without a qualm, save the qualms of her first anger. And when Arthur opened the door violently she walked past him at a great pace. So once more the parlor was left to the sun, and the gun, and the stuffed birds, and so on.

Stoker had been reconnoitering outside, listening in a condition of fear to the upraised voices. Now he stole across the courtyard and looked into the room. He saw only the sun, the gun, and so on. He stared round, trembling.

"'Ell and blazes!" he cried piously. Again he gazed round without hope. "I dunno," he said, quailing.

Arthur dashed in again and saw Stoker, who recoiled, and would have run away, but Arthur checked him.

"Here! Stop!" he commanded.

His unwilling accomplice drooped against the door lintel.

"You've left the chauffeur!" he whispered hoarsely. He pointed outside to where the car lolled in the sunshine.

"You go and get right in that car," said Arthur ferociously, "and tell that chauffeur to drive to Sir William Hunter's and fetch Mr. Wakefield. Mr. Wakefield! Do you hear?" (Continued on Page 109)

Use PLATE Glass ©

Get True Judgment of Corners and Distance

The more an owner uses his car, the more he needs plate glass. The active car gets the close shaves of the road, and its users reckon most with turns and distances. Plate glass in windshield or windows makes safety more certain.

It is clear, smooth and free from ridges and ravines. It hasn't any curves nor depressions. It doesn't sag like common glass. It is slipped into place—not pushed. So it doesn't break being installed. It does serve the eye truly, because it never distorts the vision.

Busy men put maps under plate glass on their desks. If they used cheaply made glass, a sideway look would instantly make a confused mass of colored inks. For windshields or windows, for safety's sake, plate glass is essential in motor car replacements.

Does 1922 look so rosy that you can afford to throw away that which these world leaders are so carefully saving?

Can you afford to use cumbersome riveting to join pieces of steel which they would weld at half the cost with a Lincoln Welder?

Can you afford to throw into the scrap heap worn or broken equipment which they would make good as new at a welding expense of a few dollars?

Can you afford to discard for minor defects castings, forgings, and stampings which could be made sound and perfect by arc welding?

Can you afford to go merrily along without *even knowing* what arc welding might do in your plant, when such firms are continually asking Lincoln Welding Engineers to advise on their problems?

A Lincoln Welding Engineer will gladly inspect your plant, study your processes and make you a complete, written report, showing whether you can use arc welding.

long now before aid arrived in the person of Cyril, who, earning his good living simply by the exercise of tact, was absolutely the man to send for.

"I say!" said Arthur. "This isn't the way to Durham, y'know."

"N-no, Mr. Arthur," said Parks.

Then she began to laugh. They looked at each other, and Arthur began to laugh, too; rather morosely perhaps, but still he laughed.

"Durham!" said little Parks. "Dud-durham!" She gurgled and gurgled.

"Er—er—would you like to sit down?" said Arthur happily.

"Thank you, Mr. Arthur," murmured Parks.

She seated herself beside the table and ran a domesticated eye over its arrangement.

Arthur fidgeted about restlessly between the table and fireplace, an eye cocked at Parks.

"You—you're looking awfully well," he hazarded.

"Thank you, Mr. Arthur," she replied, smiling. "You've never seen me before in my mufti, have you?"

Arthur fidgeted about.

"No," he said. "That—that's a cute little hat, isn't it?"

"Cute's the word, Mr. Arthur," she replied triumphantly.

Arthur gazed at Mrs. Drelincourt's sacrifice. Then his eye wandered to Angela's.

"And I say!" said he. "Silk stockings! Eh?"

"All the way up, Mr. Arthur," said little Parks with girlish rapture.

"You swept the stairs in cashmere," added Arthur, musing upon her legs.

"Oh, Mr. Arthur!" said little Parks, softly smiling. "You noticed!"

"Well, I dunno," said Arthur, musing; "at the time I didn't know I noticed, but I suppose I did."

"I always say," remarked Parks, "that every man's the same at rock bottom."

Arthur recovered his sturdiness with a jerk.

"Well," he said, "don't let's talk about your stockings." Parks pouted a little. "What's happened?"

"Everybody's very upset," she replied.

"What do they say?" asked Arthur.

The muffled knockings continued in spasms.

"Nothing, Mr. Arthur," replied Parks, glancing around her a little curiously.

"Nothing?" repeated Arthur.

"Well, how can they?" said Parks. "If nobody helps 'em—and I'm not going to," she added cryptically, "though there are some who may think otherwise—if nobody helps 'em, Mr. Arthur, they don't know what's what, or which is which, or who's who."

"But neither do I," said Arthur. "They've got me there."

Parks smiled most shrewdly. "Oh, no, Mr. Arthur! Oh, no-o-o-o! Because, you see"—she turned in her chair and leaned over the table towards him—"if Mrs. Drelincourt says it's her and knows it wasn't, for all she guesses the one it was will bring up proof; 'n' if Miss Harmony says it's her and knows it wasn't—ditto; and if the twin does ditto, why—ditto!"

When Parks had brought this out with a delicate air of finesse she sat back and regarded Arthur.

He considered rapidly, on his part.

"Why—why—then if I say nothing and everybody else says nothing I'm saved!"

"Oh," said Parks dreamily, "I wouldn't say 'saved,' 'cause, after all, you know, somebody's going to have you in the end. Must."

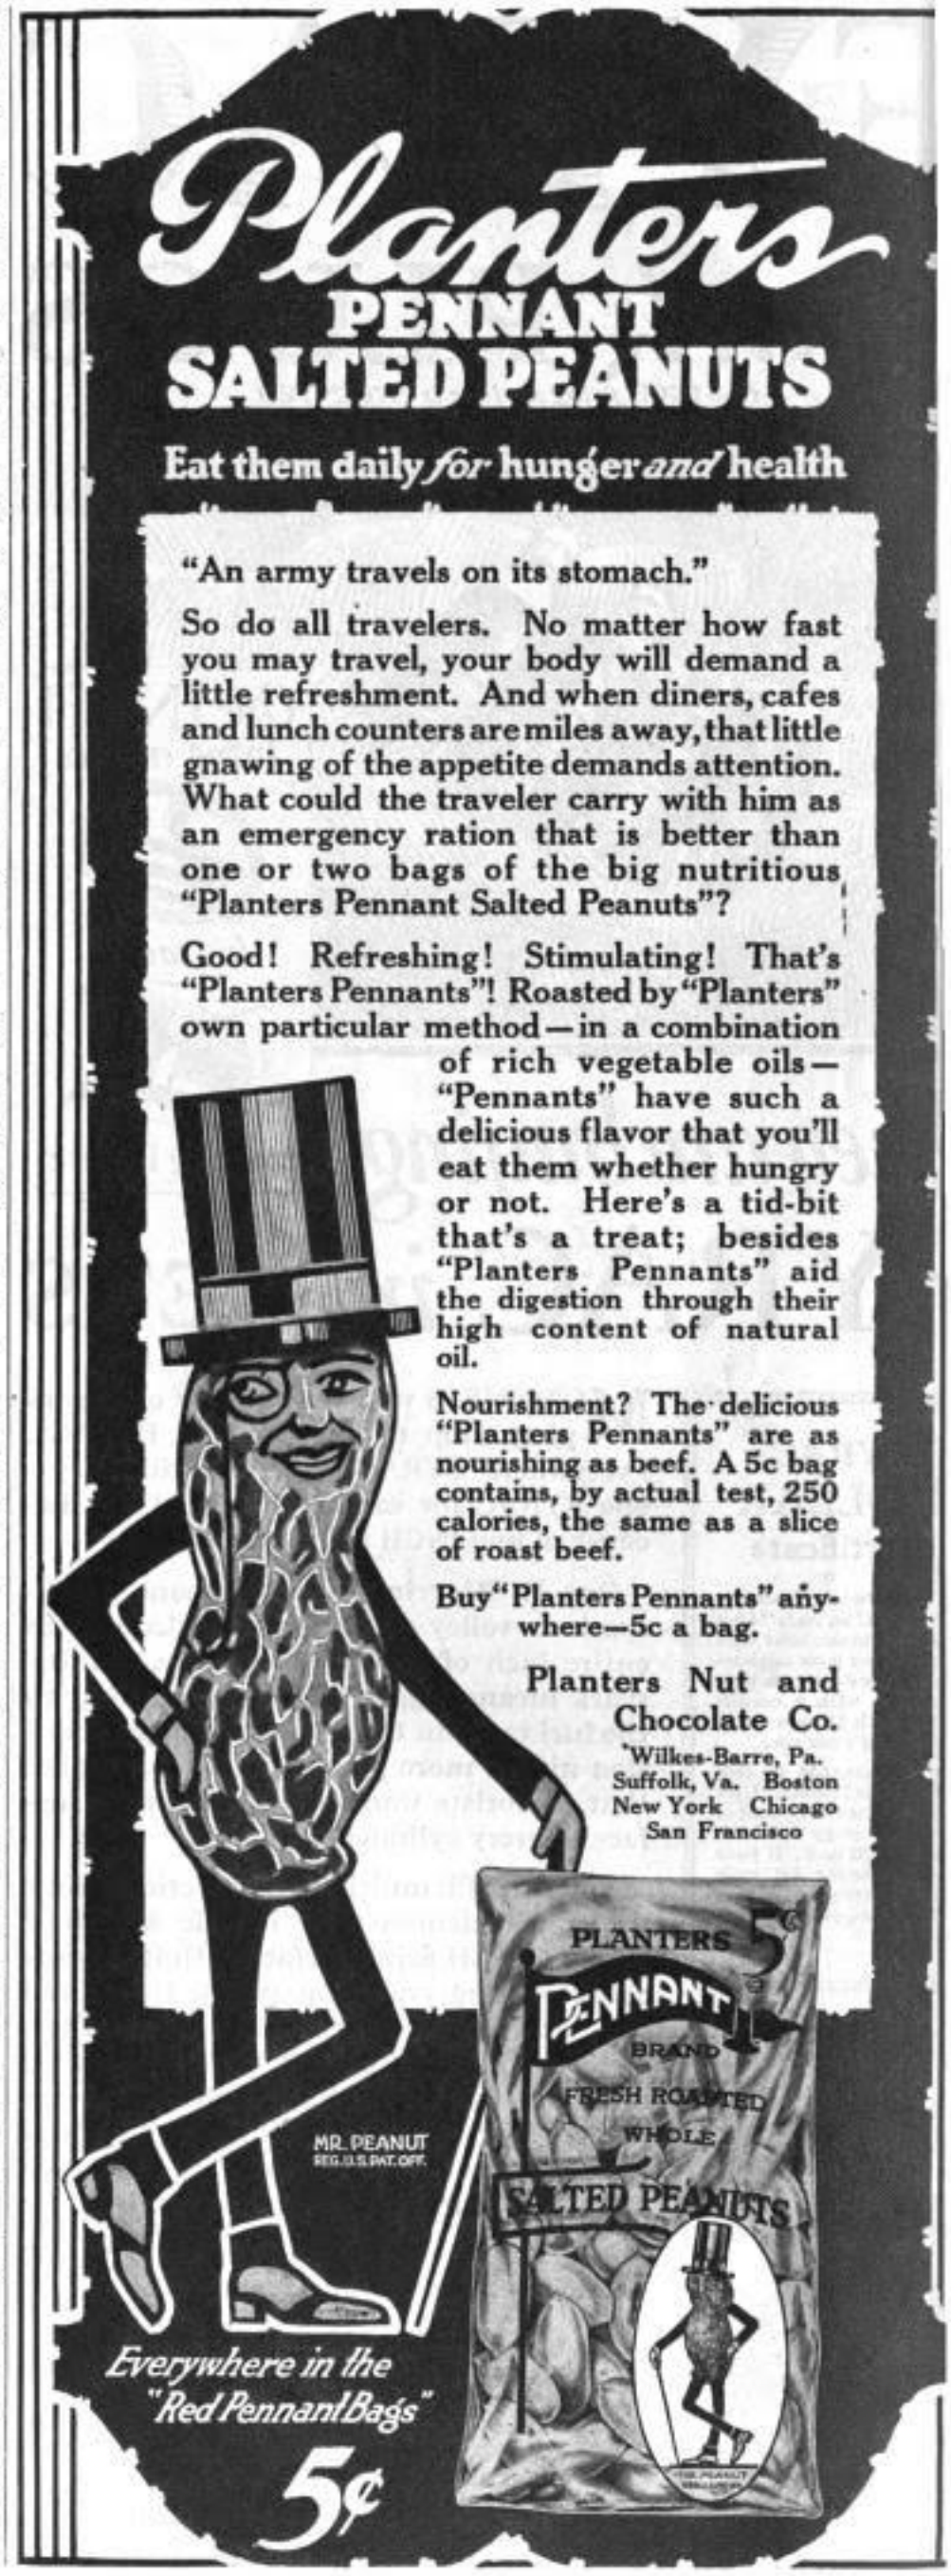
She regarded Arthur very dreamily indeed.

"It's pretty awful, isn't it?" he groaned.

"Oh, 's awful, Mr. Arthur," she agreed sympathetically.

"You seem the only one out of it," said Arthur gloomily.

Little Parks spoke very gently, although she was at heart one of those sweet maternal girls literally without mercy where the male sex is concerned.



"I don't know that I'd put it quite like that, Mr. Arthur," temporized she.

"Help!" said Arthur.

"Yes, I'm here to help you, Mr. Arthur," said little Parks, "and to save you from the other women."

"How'll you do it?" asked Arthur desperately, for it seemed as if she had brought him hope only to snatch it away again.

"You engage me as lady housekeeper," she replied.

FYRAC
Spark PLUGS

One INCH *firing surface is* PATENTED

One INCH *firing surface*

instead of

one firing POINT

They are buying FYRAC *in* SETS

FYRAC DOLLAR Certificate

In order to introduce the *"FYRAC in Sets"* idea widely throughout the country we have authorized Fyrac dealers to present you with a certificate worth $1 on a set of Fyracs for your car.

Take advantage of this offer while it lasts. Give *your* motor the benefit of Fyrac in every cylinder, and save $1 now. If your dealer cannot fill your order, write us—we'll see you are supplied on this basis.

$1

In Canada $1.25

MOTORISTS who start to buy one spark plug, stop to buy a set of FYRACS. Everywhere FYRAC is selling this way—one FYRAC for each cylinder. Why? Because of one INCH firing surface.

One INCH firing surface means multi-spark—a volley of hot blue sparks over an entire inch of stout, strong wire. Multi-spark means bigger explosion—igniting all the fuel vapor in the cylinder. Bigger explosion means more power. Is it any wonder that motorists want one INCH firing surface in every cylinder?

You can SEE multi-spark in action. Your dealer will demonstrate it. He will show you one INCH firing surface with its broadside of hissing, crackling sparks. He will tell you why YOUR motor will be smoother, sweeter-running with FYRAC in every cylinder. He will explain FYRAC'S much longer life, its freedom from gasoline-formed carbon. He knows. Ask him. See one INCH firing surface demonstrated.

Ask him, too, about the Fyrac Dollar Certificate. Go to your dealer today.

Write us for booklet, "The Right Way to use One INCH Firing Surface"

FYRAC MANUFACTURING CO., *Rockford, Ill.*

Canadian Address: CAMPBELL AGENCIES
23 Richmond Bldg., Toronto, Canada

There is a Fyrac Plug for every motor made

Arthur was staggered. He began fruitlessly to object.

"But I don't want one," said he.

"No," said Parks, sweetly but firmly; "no. But you need one. You're the kind of man that wants guarding. And if you engage me you would have nothing to fear"—she paused—"from any other female. Yes, you're the kind of man that wants looking after. You want managing for."

"Well, I've managed my own life for myself pretty well, so far, thank you," said Arthur sturdily.

"Ah," she murmured, "but when it comes to women ——"

She paused significantly.

"You're right!" said Arthur. "When it comes to women ——"

"You want helping," she continued. "You're the sort of man that wants blindfolding and then pushing hard."

Arthur started violently.

"Eh?" he cried.

Little Parks caught herself back from the edge of disaster. She knew the dangers of being premature. Yes, she was one of those sweet maternal girls who make a bee line for a man and get there. But he never sees her coming.

"I was using a figure of speech, Mr. Arthur," she said blandly. She paused. "Do I consider myself engaged?"

"Well," said Arthur, listening to the rappings all about him, "since I last saw you, Parks, things have happened which you know nothing about, and the job will be of a temporary nature only; very temporary. But I shall certainly be glad of you at present. What terms?"

"A pound a week—at present," murmured Parks.

She looked down softly; not that she was sorry for him.

"I think you're darned cheap," said Arthur with enthusiasm. "And I'm sure I hope you'll be happy 'n' comfortable, Parks."

He paused for the suitable reply which he expected, but he did not receive it.

"Parks," he added repetitively.

Little Parks looked at him. Her look was demure, but there was something in it. It fairly pulled Arthur together and riveted him.

"The situation is lady housekeeper," she replied.

Arthur started violently again. There was no doubt but that she flustered him.

"Oh—er—certainly, Miss Parks," he said lamely.

"And secretary, Mr. Arthur," she added.

"Secretary!" repeated Arthur.

"Gentlemen often have young secretaries, but not often young housekeepers," she explained.

"What a lot you know of the world, Miss Parks," said Arthur lamely.

"I suppose I can have a room, Mr. Arthur?" she continued after a pause.

"A room?" Arthur repeated. "What for?"

"To sleep in, please," said Parks very demurely.

"Oh!" said Arthur. "Oh—ah—yes, of course. The kitchen's through there." He indicated the door. "And there's a woman—er—who cooks who'll show you the bedrooms."

Little Parks sat up.

"A woman?" she exclaimed.

"Yes. But married," Arthur replied peacefully. "Teeth drawn."

"Oh! Are they?" said little Parks. "A married woman has nothing but double molars. Will you kindly ask her to take my things to my room?"

She indicated the basket holdall, and Arthur's glance followed hers.

"I brought very little," she added, "depending on a lift in the baker's cart. My big box will follow."

Arthur continued looking at the holdall. He could not exactly have explained why; but there was a subtle menace about the thing. That epergne, too, kept staring at him from the table.

"Certainly—er—Miss Parks," he answered at last.

He seized the holdall and carried it to the kitchen, while Parks remained sitting by the tea table, exercising admirable self-control over her gurgles. He returned, looking very interestedly at her, on his way back to the hearthrug.

She was the first to break the ensuing silence.

"And now," said she, looking very settled and happy, "the question is: What are you going to do?"

Recalled to realities Arthur [illegible] heavily in his father's chair. He [illegible] favorite brier from the pocket of [illegible] mentable coat.

He spoke more laconically than [illegible] possibly have felt.

"Do? Me?"

"'M," said Parks; "you: do?"

"Nothing," returned Arthur.

He filled his pipe.

"Nothing?" breathed Parks.

"No," said Arthur.

He lighted his pipe. When he [illegible] it in the right corner of his mou[illegible] infinitely better, wiser and safer.

"You can't, Mr. Arthur," urged [illegible] earnestly.

"I can," said Arthur. "I can [illegible] just as well as anyone can do [illegible] through with women, Parks—I [illegible] Parks. I'm through with 'em for [illegible]

"You know, Mr. Arthur," [illegible] with a soft voice, "there's [illegible] women."

"And women and women and [illegible] added Arthur. "You don't [illegible] me." A knock sounded just under [illegible] "Place seems full of 'em. But I'm [illegible]

Little Parks crossed her [illegible] Arthur mused once more briefly [illegible] stockings, before he exerted [illegible] and turned his eyes away.

"Oh," she said softly, "I do [illegible] you know what you're missing!"

"Here!" said Arthur. "You [illegible] ing to marry me off to anyone, [illegible]

"Certainly not, Mr. Arthur," [illegible] hastily. She smiled. "Oh, no.

"No woman on earth would [illegible] me," he added warningly, "and [illegible] you."

Parks spoke from the heart, [illegible] sigh.

"Oh, don't you worry," [illegible] girl you marry will know her [illegible]

"H'm," muttered Arthur.

"She'll have to," added Parks.

There was a pause, filled by [illegible] to which again Parks listened [illegible]

"What are those noises, Mr. [illegible] she asked at last.

"Oh, nothing! Nothing!" [illegible] "I mean, the workmen. [illegible] about them. I've got something [illegible] you." He got up hastily, listening [illegible] sound of the car bearing Cyril [illegible] but the sound came not. "I [illegible] new gun. What do you think [illegible]

Then tenderly he fetched [illegible] the corner where she leaned, and [illegible] he got his hand upon her be[illegible] moment, his troubles. He [illegible] to Parks.

"Look at her!" said he. [illegible] first; six, seven, four and [illegible] Let me describe her to you. [illegible] darling, isn't she, if ever there [illegible] He stroked the barrel with a [illegible] "This is Whitworth steel; and [illegible] here he moved his loving finger [illegible] the breech, speaking with [illegible] charcoal iron; and these lines [illegible] are gold; they move—I know [illegible] terested in this—and by their [illegible] knows at a glance if the barrel [illegible] fired. This trigger guard's blue [illegible] the stock walnut. She will last [illegible] weighs exactly six pounds [illegible] and four pennyweights. Oh," [illegible] to the gun. "Oh, you peach! [illegible] ful peach!"

After a moment little Parks [illegible]

"It seems a shameful waste [illegible] that to a gun," she remarked [illegible]

There was something [illegible] comment. Arthur returned [illegible] corner.

"Do guns cost much?" she [illegible]

"Sixty quid," said Arthur.

He stood off from the gun [illegible]

"Sixty quid!" cried Parks. [illegible] could have a lovely wedding [illegible]

Arthur turned in haste. "[illegible] echoed irascibly. "Curse [illegible] Parks! What do I want with [illegible]

"Oh, you don't want one," [illegible] replied dreamily, "but still—[illegible] things."

Arthur advanced and faced [illegible] the table.

"Now," said he sternly, "[illegible] stop—it!"

Parks met his look squarely [illegible] gazed into his.

"Just a minute," she begged [illegible] hurriedly. "Don't you think [illegible] be wonderful to have someone [illegible] longed to you; and who carved [illegible] thing you did; and loved you [illegible]

who operates a motor car, for business ure, is urged to get the facts.

Friction—the destroyer

the greatest enemy of tire life, for friction at. And heat destroys rubber.

tires. It makes them susceptible to stone easy puncturing. It lessens tire life one- in running, friction is constantly created. riction heated in gaining road hold. A e brake multiplies it.

is a constant fight, between man-com- rials and the natural element which de-

s in 100 are charged to friction—to road

Now we 84% overcome it

offer an 84% friction-proofed tire!

It embodies the experiments of years. Of consultation with world-experts. Of innumerable test processes, at which expense was disregarded.

The 100% friction-proofed tire may some day be gained. But we doubt it, for it would effect virtually everlasting service.

84% means, we believe, such tremendous road endurance that thinking men will scarcely ask for more. Hence in this new and greater Brunswick, the ultimate of today is being offered.

Standard prices

Note, too, the friction-proofed Brunswick conforms to the standard list. It is delivered to the consumer at the price of an ordinary tire.

It is a product that lives up to the traditions of the House of Brunswick, an institution known, more than 76 years, as the manufacturer of super-quality products.

See this new Brunswick—in either cord or fabric—at your nearest Brunswick dealer's. Then enjoy multiplied service—a minimum of tire trouble, and you will never go back to a lesser tire.

Friction, the primitive means of creating flame, is today the big problem in tire making; the source of road-burn, of 95 blow-outs in 100.

What 84% Friction-Proofed Means

Friction is the enemy of every tire in service—the source of 95 blow-outs in 100. By special process, Brunswick Tires are 84% friction-proofed. A new conception of tire mileage is thus effected. Service is multiplied; road troubles reduced to an amazing minimum.

The Grand Prize

EUREKA

VACUUM CLEANER

Winner of Grand Prize at Panama Pacific Exposition; at Brussels; at Milan; and Paris. Highest Award at Amsterdam

Never in all the years of our experience has any Eureka excited such favorable comment as the new 1922 model, recently announced. Almost overnight it achieved a popularity so widespread and so spontaneous as to exceed our own expectations.

The basis of this popularity is easy to understand. The performance of previous models in over 500,000 homes had securely established the Eureka's reputation; and the winning of more international grand prizes than all other cleaners combined, soundly fortified its good estate. So when 3300 dealers announced an improved, refined, and beautiful Eureka, women everywhere were eager to see what our engineers had accomplished.

What they witnessed was a literally amazing demonstration of thoroughness, speed, and supe ease in vacuum cleaning. They saw the m suction remove every trace of embedded di the thickest carpet; they saw the detachable action brush whisk away threads, lint, an clinging surface litter; they saw the surpris venience of the improved nozzle in cleaning and along base boards; they saw attachme prisingly simple and effective to use.

Though many have pronounced the new Eu hitherto unapproached achievement in vacuum design, we urge you to see it and judge for yo the effect of its refinements and improve Five minutes will suffice. Visit the n Eureka dealer today. Or write us for bo

men like dogs," said
you'll go back to him,

Arthur nodded. "Yes. There're no complications in life out there."

"Don't you think you'll leave a good deal behind you?" asked Parks, biting her lower lip feverishly.

Arthur grinned. "I hope so," he replied. He waggled the pipe in the right side of his mouth. He began to feel quite humorous about it all, now that any moment might see Cyril—with that inimitable tact on which his young life hung—to the rescue. In an access of spirits he began to sing, burlesquing a song which was to little Parks—or to any other nice girl of her ilk—sacred.

"De-earest" [sang Arthur], *"our day is o-ver!*
Ended the d-r-r-ream divine;
You must go-o bah-ck to your life [sob],
I must go-o bah-ck to mine!
H-h-how" [Arthur sobbed] *"can I live without yeow?*
How can I let yeow go-o-o?"

A scream from Parks stopped Arthur in full song. He turned and saw her with her arms on the table and her head on her arms. He recoiled, feeling terribly apprehensive again.

"Oh, dear!" wailed little Parks. "Oh, dear! Oh, dear!"

She sobbed piteously. It almost touched Arthur.

"Eh?" he said. "What's the matter now?"

"It's such—a—be-eau-tiful song," sobbed Parks. "It makes you think."

"Think what?" said Arthur.

Little Parks looked up. "Oh," trembled she, "w-w-wouldn't you re-r-really like to be with the girl who loved you, by this fireside, she with the stockin' basket and you sitting opposite talking—talking—talking? You don't kn-kn-know how nice things can be."

"No!" yelled Arthur. "Stop it!"

Parks rocked to and fro. "Well—that's that."

"Yes," said Arthur briskly. "Clearing up the dubious points nicely, aren't we? Is there anything else?"

"Well, you know," faltered Parks, "there's a sort of—sort of glamour in getting married."

"Glamour!" said Arthur, waggling his pipe enthusiastically. "Glamour! You should see our sunsets. Getting married's nothing to 'em."

Parks faltered on, weak but pursuing. "But what do you do when you feel—when you feel ——"

"When I feel?" prompted Arthur helpfully.

"Romantic," quivered Parks.

"I don't," said Arthur.

"But you might," quivered Parks stubbornly.

"I should play my banjo and sing," said Arthur. "And the dog'd howl. And we'd get rid of it that way."

"A banjo, too!" said Parks in a voice of utter despair.

Arthur nodded. "Yes, you see—I'm complete."

He was relieved to see the poor girl suddenly pull herself together.

There was desperation on her face, but it was calm.

"Well," she said, "that's that."

Arthur was glad to find her so open to reasonable conviction, and he was ready to assuage any normal curiosity.

"Anything else?" he asked.

Parks sat upright.

"Yes, Mr. Arthur."

"Out with it," said Arthur encouragingly.

Little Parks smiled with extreme sweetness.

"You once said you would repay."

"Repay whom?" said Arthur.

"Me," said Parks. "For saving you from being married."

Arthur agreed to this heartily.

"I've been thinking for some time of leaving England," said little Parks; "of emigrating to the colonies."

She turned her innocent trustful eyes up to Arthur.

"Er—er—which colony?" asked Arthur, beginning to walk about rather uneasily again.

"Australia," replied Parks softly but inflexibly.

Arthur walked a little faster.

"Er—you want to go to Australia, too?" said he.

"'M," nodded Parks. "I'm capable and strong and most domesticated. My health's good. Perhaps you could recommend me

The "Daily Dozen" builds shoulders and back muscles in which you can take pride.

Overweight? 10 minutes a day of the "Daily Dozen" to music will rid you of dangerous excess flesh.

Why be run-down, emaciated, half-alive? The "Daily Dozen" quickly builds you up.

Try the "Daily Dozen" To Music!

Ten Minutes' Fun a Day Gives You Health, Strength and Vitality—Free Record Proves It.

A GREAT and new idea—and more fun than a game! You cannot appreciate the fascination, the glow of health, the amount of "pep" you acquire from exercising to music until you have tried it!

Ten minutes a day of genuine fun will keep you fit. Walter Camp has made it possible. The famous "Daily Dozen" Exercises of this great Yale coach—exercises that reach and strengthen every muscle in your body—have been set to music on phonograph records, with Mr. Camp's special permission.

You put a record on the machine and the lively, spirited music carries you through ten minutes of the most exhilarating fun. You are swept along with a buoyancy that will amaze you. And the result of this ten minutes' fun a day is a glowing health, a glorious vitality, a springy step, a bright eye—and, in short, a whole, healthy, breathing and zestful man or woman tingling with the very glow of life.

But the famous "Daily Dozen" do not stop their wonderful work there. Far from it. If you are overweight they will reduce your waistline. If you are underweight they will put firm, sound flesh on you. They revitalize your body. They revive weak, flabby muscles and rebuild them into live, vital tissue. Thousands of men and women and boys and girls are regaining health, strength and vitality through use of the "Daily Dozen" Exercises.

The "Daily Dozen" Build Muscle

Increase your wind, develop your chest, strengthen your powers of endurance and your energy to work. Put on muscular shoulders, acquire strong stomach muscles, get a wonderful and superb physique—and enjoy yourself every minute you are doing it.

The "Daily Dozen" are set to music on large double-disc records, playable on any disc machine. In addition there are charts with 60 actual photographs illustrating every movement with clear and simple directions. On the record itself a clear voice gives you the commands, telling you exactly what to do. All you do is put a record on the machine. Inside of ten minutes you will feel a glow that is priceless in its benefits to your health. You can say good-bye to all those little ailments, and that tired, exhausted feeling.

A slender and graceful form can only come from a healthy, physical condition.

Record Free

So that you may see for yourself the wonderful benefits to your health that the famous "Daily Dozen" will give you, we will send you, absolutely *free*, a sample record containing two of the "Daily Dozen" Exercises and a chart illustrating the movements. Put it on your phonograph and follow the simple directions of the clear voice on the record. That great sensation of glowing health you feel when you have gone through these new, exhilarating and interesting exercises will amaze you.

There is no obligation. The record is yours to keep. Just enclose a quarter (or 25 cents in stamps) with the coupon, to cover charge of postage, wrapping, etc., to Health Builders, Dept. 896, Oyster Bay, N. Y.

Free Sample Record and Chart

FREE!

HEALTH BUILDERS,
Dept. 896
Oyster Bay, N. Y.

Please send me your free sample, Health Builder Record, giving two of Walter Camp's famous "Daily Dozen" Exercises, also a free chart containing actual photographs and simple directions for doing the exercises. I enclose a quarter (or 25 cents in stamps) to cover cost of packing, postage, etc. This does not obligate me in any way whatever and the sample record and the chart are mine to keep.

for a post to one of your neighbors if you are fully suited yourself."

"Eh?" said Arthur, a little fidgety. "Yes, of course. My nearest neighbor's thirty miles away."

Parks gulped and recovered.

"D-d-do they lend domestic servants horses in Australia?" she asked, losing and regaining in a breath a fine steadiness of voice.

"Oh, I expect so," said Arthur, waggling his pipe. "Do you wish to take up riding?"

"I would be obliged to," said Parks.

"Well, Miss Parks," said Arthur, "there's no doubt that I am grateful to you, and so please consider any help I can give you at your service. But I say—the expense of passage—'n' all—you have to think of that sort of thing, my dear girl, haven't you?"

Little Parks was perfectly brave.

"I've saved a bit," she answered. "I shall go steerage."

Arthur hovered from one foot to the other. "Were—er—were you thinking of going on the same boat?" he hazarded.

"Thank you for suggesting it, Mr. Arthur," answered Parks very gratefully.

"Me?" said Arthur. "Suggest? I don't. Er—don't let me influence your choice in any way. I just asked a question."

But she held on her way softly yet inflexibly.

"Perhaps when you arrange your own passage you would be kind enough to arrange mine, Mr. Arthur—me having no traveling experience."

Arthur was not clear in his own mind why he did not like the trend of this conversation, but like it he did not. However, gratitude is gratitude, or should be.

"Oh, certainly," he replied. "It's a little thing to do for you after all you've done for me."

Parks rose quietly from her chair.

"Thank you, Mr. Arthur," she murmured.

Arthur looked at this nice obliging girl standing so unobtrusively and gratefully there. He looked at the epergne she had brought him. He mused again upon her silk stockings. His mind seemed less clear and his will less dependable than usual.

"I sort of don't—don't like this steerage idea," he said obtusely. "I wonder why. Now I wonder why I don't just like it."

He pondered at her silk stockings.

"I can't think!" said she in tones of acid despair; for there are limits to every woman's forbearance.

"No, I don't like it," mused Arthur. "Still—I dare say it's not so bad nowadays. I'll come and look over at you—and I'll chuck some apples down."

For a moment Parks looked at Arthur in wrathful silence. He was still pondering at her stockings, and knew nothing. She clenched her fist impotently. She looked round for relief. Seizing a plate from the table she cast it with concentrated force upon the floor, where it lay shattered.

Arthur awoke violently.

"Ap-ples!" said little Parks very slowly between her locked teeth.

"G-g-good heavens!" stuttered Arthur, looking at the smashed plate.

Parks walked with extreme violence to the door and back again, and faced him.

"I'd like to know what some men are made of!" she gritted. "Ap-ples!"

Arthur hurried after her. "How can they be m-m-made of apples?" he stuttered. "Don't be silly."

Parks hurried away from Arthur, clenching her hands, biting her lips, and stamping. She had let go.

"Apples!" she cried, and sent [illegible] venomously off the table [illegible]

Arthur followed, confused.

"Please!" he implored.

"I'd like to know," cried Parks, [illegible] him in and out of and round [illegible] ture—"I'd like to know how [illegible] dare to say the things they say, [illegible] the things they do! And not to [illegible] they don't do! How dare they!"

"Listen," said Arthur, appalled.

"I couldn't put into respectable [illegible] what I think of you," cried Parks, [illegible] ing about violently, with Arthur [illegible] keep up.

"I say," said Arthur wildly.

"Men!" cried Parks, hurling [illegible] jug to the floor.

"Good heavens!" stuttered [illegible] "Look here ——"

"It's a pity we can't do without [illegible] continued Parks, unheeding, [illegible] can't!"

"Please!" cried Arthur.

Parks took up the sugar basin and [illegible] it to the floor.

"From the highest to the lowest," she, "just the same! From the [illegible] the youngest, all the same! Men! [illegible] 'em! I know 'em!"

"Good heavens!" shouted Arthur [illegible] side himself.

Parks stamped up and down. [illegible] had let go.

"I loathe the lot!" cried she. [illegible] 'em! There isn't a man alive worth [illegible] She snapped her fingers right [illegible] face.

"Oh, it's a pity we can't do without [illegible] And as for you, you ought to be [illegible] of yourself. All men ought to be [illegible] ashamed of themselves!"

"Oh, please!" said Arthur [illegible]

"But shame!" cried she. [illegible] feel it? No!"

She smashed plate after plate, [illegible] and Arthur had to duck to avoid [illegible] missiles.

"Apples!" she cried, stamping.

"I say!" said Arthur.

"I'll fetch my things," she cried [illegible] round at him.

"Stop!" shouted Arthur.

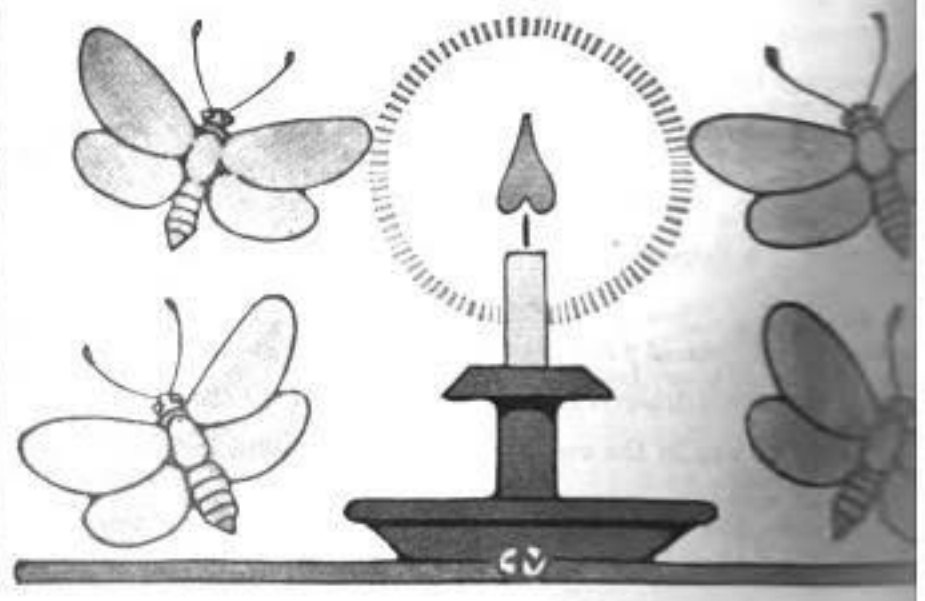
"Men!" cried Parks.

"Please! Please! Please!" [illegible] Arthur.

A perfect hurricane of [illegible] broke out above and below [illegible] if in response to the hell's [illegible] Parks was raising. And she [illegible] listen to a word he said. She [illegible] from the table.

It was light and crumbly, [illegible]

"You go to perishin' blazes!"



And she hurled the cake at [illegible] and caught him fair, and when [illegible] his eyes again she was gone.

For a short while Arthur sat [illegible] with crumbs, with his feet in [illegible] ceiving strange sensations. [illegible] head.

He felt an extraordinary [illegible] in all his veins; not unpleasantly [illegible] fully enough, his pipe still [illegible] corner of his mouth, and he took [illegible] looked at it thoughtfully. He [illegible] looked from the pipe to the [illegible] Parks had departed, and he [illegible] sat down on the edge of the [illegible] Never in his life had he been [illegible] He smiled once more.

"That's a—a lovely girl," [illegible] "That's a lovely girl!"

NO-LEAK-O Piston Rings

THE ONLY GROOVE THAT CANNOT CLOG

SAVE YOU POWER

When you "step on her" and your car lags back—POWER is being wasted somehow. It's a sure sign your gas isn't doing its work—*can't* do its work, and the cause is usually leaky piston rings.

No-Leak-O Piston Rings ***won't*** **leak.**

A specially cut groove—**the "oilSEALing" groove—found only in** No-Leak-O Piston Rings—**packs an oil film in between your piston** and cylinder walls like **"packing" in a pump.**

The oil "packing" seals **in *all* the expanding gas. Every drop** ***must*** work.

The same "film" not only **prevents oil from working *up* into your** cylinder heads to form carbon but **keeps "unburnt" gas and kero**sene from seeping ***down*** **into the crank case to weaken lubrication. No-Leak-O rings often restore power in old motors when other rings fail.**

For more gas mileage, less oil consumption, fewer repairs, longer life and more power, tell your repair man to install No-Leak-O Piston Rings in your car. They give *perfect oil control and compression in each individual ring.*

Write for interesting illustrated booklet, "The Piston Ring Problem and Its Solutions"—telling why No-Leak-O does what *no other ring can do.*

-muscled capable arm
l drew him into her capacious lap. A few moments later, when he felt he must say something appropriate to the occasion, he told her she was the first woman he had ever kissed. He wondered if she would fall for such old stuff. Apparently she did.

"I could tell that," she said comfortably. "But I'll teach you. I've had experience."

During the following weeks but one shadow darkened Finnigan's anticipations. That was the shadow of Toivo Saarenpaa. Occasionally the big Finn would come into the kitchen and stand silently admiring his statuesque cook until she ordered him out. This always seemed to amuse him, but invariably he obeyed her without argument. Helga seemed undisturbed by these visits, but in Finnigan's mind a haunting hunch grew and persisted that Saarenpaa had decided to take Helga himself, and was simply awaiting an opportune moment. By reputation he knew the persistence of the Finn. And he also knew the mentality of the man—geared to two speeds, slow and slower forward, and no reverse.

There came an afternoon early in June when Saarenpaa wandered into the kitchen—and Finnigan knew his worst fears were to be realized.

"Miss Ehlo," said Saarenpaa, "there are going to be big doings down on the bay Fourth of July. I'm going down the river now to see McPherson about the program. A big time, we always have. Logrolling, and races, and a ball game and everything. I'm going to take you with me."

Helga turned and folded her arms over her ample bosom.

"Who said so?" she asked.

"I did," said Mr. Saarenpaa.

Finnigan stopped his dishwashing and dried his hands. Watching the big Finn with a malevolent glare he sidled across the room and picked up a long carving knife. He tried the blade on his thumb. Apparently he was not satisfied with the keenness of it. He began to stroke it up and down a sharpening steel that hung suspended above the meat block.

Saarenpaa failed even to notice Finnigan. He was still gazing at Helga. To his notion she was well worth looking at. But he was beginning to resent her attitude toward him. Helga continued to return Saarenpaa's gaze. Nevertheless, she kept glancing apprehensively toward Finnigan. The moment he ceased sharpening the long knife she interposed her bulk between him and Saarenpaa.

"You'd better get t'hell out of here," she said to the Finn.

Saarenpaa grinned.

"I like to see you mad," he told her. "Some day I'm going to take it all out of you."

Finnigan's breath escaped with a long warning hiss. Helga turned on him hastily.

"You," she said sternly, "go over to the sink and wash those dishes."

Saarenpaa finished his message. He was not interested in what he considered Helga's private troubles with her flunky.

"You be ready to go with me right after breakfast on the Fourth," he told her as he turned to leave the kitchen.

Finnigan remained beside the meat block, gazing at Helga with hurt, indignant gaze.

"There now, dearie," she said soothingly, "don't be mad with me. I could see you were getting ready to do a murder, and we can't afford to spend all our money for lawyers and judges and such."

Finnigan was not immediately pacified.

"Girl, I sure like you a lot," he decided, "to let you go butting into my private quarrel like that."

Helga stooped and kissed him moistly.

"I know you do," she assured him. "And there ain't no need for you to mind what he says. Because he's going to say it, anyhow. Pretty soon now that fellow's going to try to marry me, and then you'll see what happens when a Finn meets a Finn."

"And what happens when a Finn meets a Finn," the little man declared earnestly, "isn't a circumstance to what happens when a Finn meets a Finnigan."

But later, busy with the dishwashing, his spirits began to sink.

"Slow and slower forward, and no reverse," he kept thinking gloomily; "and the big bruiser can't go any slower with her than he has been going."

A Thrifty Car for America, too

Mileage Costs Now Interest Americans as well as Europeans

THE chief concern of the European motorist is: "What will motor transportation cost me per mile, and how can I obtain the finest and most dependable service at the lowest cost?"

He is not so much interested in *first* cost, as *ultimate* cost. His living expenses are budgeted. He knows to a penny what everything costs. And he spreads it over a period of time.

He considers the average American car owner riotously extravagant.

Experts Have Agreed

It is by such study of international problems in motor transportation that the Marmon has developed into the new-day standard of combining thrift with elegance. Marmon designers have anticipated today's trend.

It is no mere coincidence that it has attained such perfect balance, such absence of vibration, such rugged construction. It is no mere coincidence that the Marmon has a simplified six-cylinder motor, such as Rolls-Royce of England, Renault of France, Mercedes of Germany, Fiat of Italy and Hispano-Suiza of Spain.

Automotive experts of international repute have agreed upon the fundamental principles which insure the finest form of transportation at the lowest cost per mile. And Marmon typifies the American attainment.

New Economies

To depart from the realm of mere claims, we have introduced "Standardized Service," a nation-wide, flat-rate system of maintenance. Every Marmon dealer now offers you known prices, lower prices and efficient handling of every job.

Thus all guess-work is removed. Thus every Marmon owner knows exactly what his car costs. He knows how economical it is to own "The Foremost Fine Car."

Only because of the inherent superiority of the car, only because of the study made of thousands of later-day Marmons, is such a daring offer possible. But it was inevitable—the outgrowth of vision and the desire upon the part of a great builder to give the public what it is rightfully entitled to: the finest form of transportation at the lowest cost per mile.

Prices Reduced

Marmon prices, recently revised downward, are:

Touring Cars $3185

Coupés $3985

Sedans $4385

Wire wheels, shock absorbers, and motometer, $190 additional

Prices f. o. b. Indianapolis, excise tax to be added.

Mail this coupon now for the most interesting booklet you have ever read on the subject of automobile maintenance economies. It shows why we are able to make this revolutionary announcement and why the Marmon is first to adopt Standardized Service. The booklet is sent free to all who ask. Simply fill out coupon and mail it.

ROYAL BLUE LINE, *Boston, Mass.*

Saarenpaa, when his little message to Helga had been delivered, went down to the boat landing and untied the company's launch. Two hours later he found Uncle Andy McPherson in the lobby of his hotel regaling a number of cronies with a detailed review of the activities of the Spruce Division.

"I made money out of the war," he was saying. "More than I had ever expected to make. I'm not denying that. And I'm not saying the railroads the Spruce Division built won't be a benefit to a lot of us timber owners here along the coast. But think of spending all those millions just getting ready to get out a little spruce for airships!" Uncle Andy snorted his disapproval. "Why," he continued, quoting the figures Finnigan had recited for his benefit several weeks earlier, "only about sixty-four board feet of spruce are used in building an average plane. Six and a half million feet would have been sufficient for a hundred thousand planes. In a month's time with my outfit I could have cut and milled that much of the finest spruce in the world."

Saarenpaa mulled over this statement for a moment. The point of criminal extravagance Uncle Andy was trying to make entirely escaped him. He was a literal-minded man, the Finn was, interested only in facts pertaining to his own vocation.

"No, you couldn't have gotten out that much lumber in a month," he contradicted stolidly. "Not with your outfit. But I guess maybe I could have with mine."

An eminent writer has said the only way to argue with an east wind is to put on an overcoat. A less eminent Missourian has said the only way to argue with a mule is to use a club. The Missourian's philosophy is the oftenest quoted in the logging camps.

Several of Uncle Andy's friends exchanged furtive glances of amusement while they waited for the good-natured old lumberman to answer. But Uncle Andy simply shrugged his shoulders and began speaking about the coming Fourth of July celebration. As they discussed the program of sports he kept studying the big Finn with speculative, rather peeved expression.

"Toivo," he said when most of the details had been arranged, "do you think you can throw my mill boss?"

"Sure," Saarenpaa said complacently. "Didn't I throw him twice within half an hour last Fourth?"

"That's right, you did," McPherson agreed. "Well, this year I'm going to give you a chance to throw him and as many more bullies as you want to. I'm going to anchor a scow out in deep water. You bring up the best of your men and I'll take the best of my men, and we'll put 'em out on the scow and let them throw each other off. The last man left on the deck will be the best man, and the best man will get a prize of two hundred and fifty dollars."

Saarenpaa considered this new matter gravely for a time. When finally he visualized the possibilities—his roughnecks engaged in hand-to-hand conflict with Uncle Andy's gang, forty or fifty huge, hairy, iron-hard loggers struggling for individual supremacy on the flat open deck of a scow anchored in deep water—he smiled in anticipation.

"I think maybe there'll be some fun," he said. "And I think maybe you can give me that two hundred and fifty dollars now if you want to. I'll need that money. Pretty soon I'm getting married, and I'll have to build a house and everything."

"I'll congratulate you when you get married," Uncle Andy said none too cordially, "and I'll give you the money when I see you the last man on the scow."

Before nightfall practically every logger along the river had heard of the battle Uncle Andy had planned, and practically every man was hoping the big Finn would fall dead before the Fourth. For Uncle Andy had announced the event would be open to all comers, each man for himself, no teamwork, no boots or other lethal weapons, and no glory or cash for the men who were thrown overboard in the struggle.

As soon as Uncle Andy learned Saarenpaa had definitely committed himself to participate in the contest he went post-haste to Portland, the nearest large city. There he hunted up a fellow lumberman of known sporting proclivities.

"I want you to find a professional wrestler for me," he said. "He must be a big fellow—two hundred and fifty pounds or more—and the meaner he is the better I'll like him."

"That'll be the toe-twister, Joe Shultzheim," the sporting lumberman declared. "Joe is so big and so mean he hasn't had a match for more than a year. And I know he needs money."

When McPherson met the notorious toe-twister he wasted no time in getting down to business. He told of the contest he was staging and of the prize he was offering.

"How much will there be in it for me?" the wrestler asked.

"Two hundred and fifty dollars for going down with me, and the two-hundred-and-fifty-dollar prize if you win it."

"I'm on," the toe-twister declared. "When do we start?"

"To-day," McPherson said. "And you'll have to work in the mill until the Fourth. My men would get sore if they found I had run in a professional, and if Saarenpaa's men should get next they would most likely gang up on you and boot you to death."

There occurred but one little slip in Uncle Andy's preparations. To make a place for the wrestler he had to shift his mill watchmen to another job. One of the toe-twister's new duties was to check out all tools taken from the storeroom.

It happened one day that Uncle Andy's mill boss, the only man along the river who had ever dared challenge Saarenpaa to physical combat, started away from the storeroom with a bundle of ax handles for a teamster who was driving out to one of the camps in the woods.

"Here, you," the wrestler yelled, "come back and sign up."

The mill boss was in too great a hurry just then to return, and one little remark led to another until the toe-twister lost his temper. By sudden assault he threw the mill boss. Then he unceremoniously dragged him to the edge of the loading wharf and dumped him into the river.

The men at the mill who saw the battle were fair judges of man power. Within twenty-four hours a rumor reached the other outfits along the river that a contender for Saarenpaa's laurels was working for Uncle Andy.

Saarenpaa heard the rumor in due time, and permitted himself a smile. Hadn't he tried his strength with every real bully from Vancouver down to California? And had he ever met a man who could worry him? He had not. So he permitted himself a smile regarding this newcomer. He was more interested and just as certain regarding the outcome of his little affair with Helga. In preparation for the time when he should propose to her he had had the company's launch overhauled and painted and polished until it looked like a new craft. He was planning the matter carefully. On the morning of the Fourth he would run the launch down to the bay himself, with Helga as his only passenger. Undoubtedly by the time they reached the bay she would see the light. Then they would enjoy the day's sports. And after he had thrown the last man off the big scow he would take the prize money and with the lady start for the big city. He had made up his mind to do the honeymoon thing right, even if the trip cost him all of the two hundred and fifty he was sure of winning.

The morning of the Fourth dawned clear and tranquil and as delightfully cool as only the mornings of the Oregon coast can be. Early in the forenoon one of the river boats came whistling up to the company wharf to take the crowd down to the bay. At the sound of the boat's siren Helga, in holiday or honeymoon attire, accompanied by the pessimistic but loyal Finnigan, left the kitchen.

"Now mind," she cautioned as they approached the wharf, "it's bound to come. And don't you butt in. I won't need no help."

Saarenpaa, watching for the lady, rose and knocked the ashes from his pipe, then stretched himself like a contented well-fed grizzly—a blond and blue-eyed grizzly. Helga went to him, seeking the encounter. To Saarenpaa this betokened a proper spirit. Taking her arm he led her ceremoniously but hastily to the launch. He hoped she wouldn't start anything before the crowd.

"Untie us," he flung over his shoulder at Finnigan.

Finnigan obeyed reluctantly. But he obeyed. Hadn't the lady told him it was bound to come and that he shouldn't interfere? He untied the line and cast it in a neat coil on the glistening deck. As he did so he decided impulsively he would go aboard and if necessary defend the [illegible] with his life. He would let no Fa[illegible] anything over on a Finnigan.

Saarenpaa, unaware that the [illegible] figured in the situation, eliminated [illegible] a factor, temporarily at least, by [illegible] brawny hand against the wharf and [illegible] careless shove propelling the [illegible] hundred feet out into the river.

Finnigan turned dejectedly [illegible] the cookhouse. Out of deference [illegible] lady's opinions he had left his fists [illegible] Now he knew the affair had become a matter of brain power versus brawn, and could think fluently without proper implement? Later, on board the boat [illegible] the celebration, he found a number who were quickening their mental processes in a similar manner.

The other sporting events of the day—the foot races, the ball game, the wrestling matches and the log-rolling—were mere preliminaries, formalities permitted by the tolerant good humor of the crowd. The real interest was centered on a flat-bottomed scow, open and unrailed, that lay at anchor on the placid water of the bay a hundred yards from the shore.

Promptly at two that afternoon Uncle Andy stepped into a rowboat and pushed off from the shore a few yards so as to attract the attention of the crowd as much as he could make himself heard by the conditions of the contest.

"Every man for himself," he said. "Boots, axes and peaveys are barred. Any men teaming up will be disqualified. Two boats will stand by to pick up the casualties. And the last man on deck will be awarded the prize money—two hundred and fifty dollars."

Immediately there was a rush for the water, and soon the big scow was alive with eager men. Some were attired in bathing suits; the rest wore overalls and nothing else. All were barefooted. The more impetuous ones, conserving their energy, and those who could not swim were out in motor boats. McPherson had expected forty to fifty men to enter the contest, but word of the proposed test and of the prize offered had brought bullies from as far north as British Columbia and as far south as California. Over one hundred huskies, more eager for a trial of strength than expectant of the prize, made their way out to the scow and there, impatient for the signal to start the fray, milled and jostled and praised one another.

The toe-twister, waiting until the crowd became clamorous for action, came staggering down to the beach. At the last moment he had insisted upon making a professional attire of his calling. He had staged his appearance so as to receive a full measure of applause. The crowd was more prone to applaud. With silent admiration the mighty frame of the man, the bulging and rolling muscles, the great and splendid limbs. But they did not [illegible] and the toe-twister, suddenly [illegible] to scowl.

Just before he stepped [illegible] boat Uncle Andy whispered [illegible]

"The big white fellow on the [illegible] of the scow is your man. When [illegible] him, throw him so hard he'll [illegible]

"He'll spatter," the toe-twister [illegible] ised.

As the boat put off from the [illegible] voice hailed him:

"Fellow, I want to know your name?"

The wrestler's sullen scowl [illegible] instant.

"Joe," he answered, [illegible] ical smile.

Then another voice [illegible] putting my winter's wa[illegible]

Again Joe smiled, this [illegible] of almost human appre[illegible]

Saarenpaa, a Colossus, [illegible] stood in his corner watching [illegible] And he watched without [illegible] indifference. The day already [illegible] spoiled for Saarenpaa. [illegible] livid scratches across one cheek where Helga had caressed him. [illegible] way down the river, he had let [illegible] drift long enough to prepare [illegible] was a suggestion of [illegible] one eye. That was where [illegible] fist had connected when he [illegible] to accept a betrothal kiss. [illegible] big Finn was beginning to [illegible] the treatment he had received [illegible] he had minded her finger [illegible]

had six teeth pulled this morning"

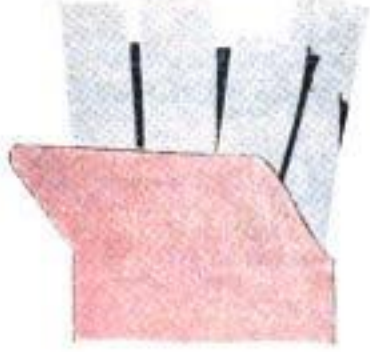
SIX precious teeth he has lost forever! Six teeth that would still be in his gums—firm, white teeth, good to look at—had he taken proper care of them.

Don't let your teeth go that way. Don't ignore the fact that decay begins long before you feel a twinge of pain or see any evidence of your teeth being destroyed.

"Acid-Mouth," a condition that causes teeth to decay rapidly, is eating away at your teeth night and day. One by one they will decay—and some day you also may be saying, "I had six teeth pulled this morning"—unless you start at once to check "Acid-Mouth."

Begin using Pebeco today. Pebeco is the tooth paste that counteracts "Acid-Mouth" by stimulating the flow of normal alkaline saliva, which is nature's own wash for teeth, mouth, and gums, and the most effective means of neutralizing mouth acids.

You'll like Pebeco, for in addition to checking acidity, Pebeco keeps the teeth clean and firm, and gives to the mouth a gratifying sense of cleanliness.



To the last squeeze, Pebeco rolls out creamy.

LEHN & FINK, INC.
635 Greenwich Street, New York

Ask your Druggist for the Pebeco Tooth Brush
It cleans every part of every tooth

Canadian Agents: Harold F. Ritchie & Co., Limited, 10 McCaul Street, Toronto

How to tell if you have "Acid-Mouth"

First, send for Litmus Test Papers and big trial tube of Pebeco

Then moisten a blue Litmus Test Paper on your tongue. If it turns pink, it indicates an acid condition of the mouth. Brush your teeth with Pebeco and make another test. The paper will not change color, thus demonstrating that Pebeco counteracts "Acid-Mouth."

Fill in the coupon now, enclose ten cents and mail to us at once. The Litmus Test Papers and big trial tube of Pebeco will be sent you immediately.

LEHN & FINK, INC.
635 Greenwich Street, New York

Enclosed find 10 cents, for which please send me your Litmus Test Papers and large Trial Tube of Pebeco.

all in one continuous mighty
straightened up with the
ss across his shoulders and had heaved him viciously toward the edge of the scow. Two innocents who struggled in the path of the hurtling body went overboard with the mill boss.

Joe had gone out to the scow intending to save himself for a conclusive bout with the Finn, but he liked to splatter 'em, and his easy victory over the mill boss was as blood to a man-eater. With head lowered between powerful shoulders he went into action. His technic did not vary. An outstretched hand was all he looked for. He would grab that outstretched hand in a grip of steel, duck under the outstretched arm, grab a leg hold, straighten up with the body of his antagonist across his shoulders, and then heave. He aimed so his victim would hit the edge of the scow before going into the water. Man after man followed the mill boss overboard, and the crowd on shore screamed itself hoarse with delight.

Joe disposed of five men in this manner, then stopped for a moment's rest; stopped and remembered he had better save his strength for his last victim, the big white Finn.

Slow and slower forward, and no reverse! That was Saarenpaa. But even a slow mind can sometimes solve a trick if the trick be repeated often enough. Saarenpaa, watching the toe-twister, began gently flexing his muscles. The time came when but two gladiators besides the toe-twister and Saarenpaa remained on the scow. Two other gladiators—and Finnigan. But Finnigan did not count. He might have been a schoolboy out of bounds, a hitching cleat, a nothing, so small and colorless a figure he made. The two men in the center of the deck, gouging, butting, kicking, fought a glorious battle from a logger's viewpoint. But one of them finally slipped and fell. The other, grabbing the fallen man by the feet, pulled him to the edge of the scow and with a final effort dumped him over.

Saarenpaa had grown impatient during the last moments of the fray, and without thought of affording amusement to the crowd walked over to where the exhausted conqueror stood laboring for breath. With a gentle push of his big palm he shoved the man into the briny deep after his own victim. The thing was done so easily, with so little display of effort, that the crowd was boisterously tickled.

Saarenpaa went back to his corner and waited. In the center of the deck the toe-twister waited.

"Come on, y' big Swede," he invited.

Then someone on the shore shouted a warning.

"Make it snappy—the tide has turned."

To Joe, inland bred, the flow and ebb of the tides meant nothing. But Saarenpaa cast a hasty glance seaward. Rolling swiftly, evenly, irresistibly into the gate of the bay came the first white-crested wave of the returning tide. The big Finn realized there would be no opportunity for strategy once the scow was at the mercy of those choppy white-capped waves. With a rush he went into action. The wrestler moved forward to meet him. Saarenpaa came with his left hand extended, and Joe grinned. He grabbed that huge paw, ducked under the extended arm, grabbed the reliable old leg hold and straightened up. To those on shore the action seemed all one swift continuous simple movement from the instant he grabbed Saarenpaa's hand until the Finn's body lay across the knotted straining muscles of his shoulders. But for even a trained giant like the toe-twister it was no simple matter to swing aloft the weight of a man like Saarenpaa. Joe did not pause when the body lay across his shoulders. Mean to the last, he intended to spatter the Finn. He stooped somewhat as he was completing his herculean effort, leaned forward, and with a final gigantic heave released his antagonist's body. In that same instant Saarenpaa's great right hand—a hand that could bend a silver dollar in its terrible grip—flashed downward and closed round the wrestler's back-thrust ankle. Joe never knew quite what happened, except that his leg was suddenly jerked from under him and that the force of his own tremendous effort threw him face forward upon the deck.

Until that moment no man had realized how swift in action the Finn could be. Anchored solidly to the wrestler's ankle, the force of the throw spun him in a half circle through the air. But he landed upon his feet—landed on his feet and rebounded in the air and came down like a man-killing horse with his knees grinding into the fallen wrestler's back. Then he buried his fingers in the corded muscles of the man's neck and thigh, and with incredible strength lifted the still struggling toe-twister at arms' length above his head and advanced to the edge of the scow. As the scow rose abruptly skyward on the crest of the first wave he flung the body into the white teeth of the inrushing tide.

For a moment the crowd remained silent. The thing had been too swift, too stupendous for immediate shouting or applause. Then before the people could begin to express their appreciation Finnigan raced up across the tilting deck. Until that moment Finnigan had had no plan of combat. But he knew that what goes up must come down. Even as he reached the center of the deck the scow began to dip downward into the trough. Saarenpaa, watching for the wrestler, balancing easily with the downward-plunging deck, exhaled hugely when he saw the toe-twister come bobbing to the surface. At that instant Finnigan charged. Silently the little man launched his flying attack—a wildcat giving battle to a grizzly.

With a dull plop the end of the scow where the big Finn stood slapped into the bottom of the trough between the waves. With a dull grunt Finnigan, knees, head and elbows bunched, slapped into the broad unsuspecting back of Toivo Saarenpaa. With a dull bellow of astonishment Mr. Saarenpaa slapped into the crest of the next wave.

On the shore the crowd gasped. Then came the high-pitched voice of a small boy: "Golly, what a belly buster that guy took!"

Somebody snickered. The snicker was followed by a choking giggle. Then the gale broke. A crowd likes its comedy.

Finnigan waited until the round blond head of the Finn disappeared under water. Then he turned toward the shore. With one hand held gracefully over his heart and with the other raised aloft in the approved attitude of the gladiator triumphant, he accepted the plaudits of the multitude. But he maintained a discreet watch over his shoulder, and when Mr. Saarenpaa reappeared, spouting salt water and Finnish oaths, he dived promptly toward the shore and began to swim. He reached the beach, and seeing he was not pursued, swaggered out of the water and approached Uncle Andy.

"The last man on deck," he said, and held out his hand suggestively.

Uncle Andy, still red faced and shaking with laughter, counted out the prize money.

"It's brains that wins, Mr. Finnigan," he said by way of congratulation. "It's brains that wins, even in a rough-house with the roughnecks." This was for the benefit of the bystanders. Then he leaned down and whispered in the little man's ear. "You'll be looking for a new job after this stunt," he said. "Come down and see me and I'll find a place for you."

Mr. Finnigan was equally secretive, confidential.

"It's not a job I'll be wanting," he whispered. "But when you have time I'll want to dicker with you for the lease of that hotel of yours. And mind, I'll be talking mostly cash."

Then he glanced along the beach. One glance was sufficient. Helga towered head and shoulders above the other women gathered there. With arms akimbo he swaggered over to where she stood.

"Here, old lady," he said, "here's a bit of change to put into the family sock."

Helga accepted the money as her due, and tucked it away in her hand bag.

"Now, dearie," she said solicitously, "you'd better hurry and get into some dry clothes."

Finnigan smiled tolerantly.

"Huh!" he said. "A logger, a regular river guy, don't feel natural unless his legs is wet."

Helga nodded, but, nevertheless, she took his arm in her capable hand and piloted him toward the dressing room that had been erected along the wharf. As soon as they had passed the outer circle of the crowd Finnigan rose on tiptoe.

"Say," he confided, "I'd better hold out fifteen of that roll. I'll be wanting to buy a bottle to pass among my friends."

"Wouldn't a pint be enough?" she suggested.

"Woman," he said coldly, "gimme fifteen, I said."

A look of resignation registered in Helga's adoring blue orbs.

"Just as you say, dearie," she answered.

DISAPPEARING PROPELLER BOAT
WATERFORD MODELS

You Want to be There

You can now enjoy all the pleasures of water motoring at low cost with absolute safety

Just the boat for recreation, hunting and fishing. Disappearing Propeller automatically raises into housing, keeping Propeller from injury, and boat glides over submerged obstacles like a skiff. Compact 3 H. P. Maxim-silenced engine. So simple a child can run it.

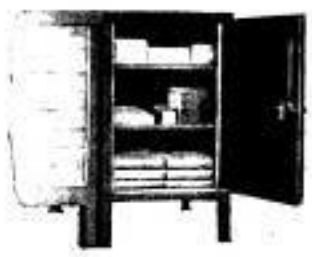
Canton, Ohio

Branch Warehouses: Boston, Philadelphia, St. Louis, Minneapolis, Los Angeles, New York, Chicago, Kansas City, San Francisco, Dallas, Roanoke, Jacksonville

Berloy Products: Roofing, Spouting, Reinforcing Plates, Floor Cores, Metal Shingles, Foundry Flasks, Culverts and those illustrated below

BERLOY

Berloy Products are fabricated either from anti-corrosive Toncan Metal or Open Hearth Steel made by the United Alloy Steel Corporation, Canton, Ohio



Reg. U.S. Pat. Off.
BERLOY

STEEL PRODUCTS—the pride of veterans in the craft—exemplify the character, experience and service of lives devoted to constructive progress and excellence

Ribplex Metal Lath
Prevents cracks, stops fire. Flattened strands firmly grip plaster, stucco, concrete

BERLOY

Desk Cabinet
Protects private papers against meddling. Also for tools, medicine, etc.

BERLOY

Steel Bins, Shelving
For Factory stockrooms, Stores, Garages, etc. Saves 25% floor space. Adjustable

BERLOY

Metal Lumber
Joists and studs of pressed steel, cut to fit. Unburnable. Strong, light, and everlasting

BERLOY

Metal Ceilings
Permanent. Can't burn, crack or fall. Designs of simple beauty; clear in detail

BERLOY

Steel Transfer Cases
Safeguard old correspondence. Drawers operate on four anti-friction rollers

BERLOY

THE BARONS OF THE NIMBLE PACK

(Continued from Page 13)

I knew that there was a ship in sight as soon as I squinted him coming forward. That's the way he started his conversation if he couldn't find another.

"Have you seen the ship?" he says. They were all sitting right under the alleyway porthole where I was standing. "It is a big Cunarder; she is on the starboard side."

So they all walked round to see the Imperator go by. They call her the Berengaria now, and she's a wonderful ship to see.

Of course that started the conversation, and then Jerry came strolling carelessly by and it was a case of "Meet my friend, Mr. Macbean—an old Scottish family."

Jerry was angling for Danton, I could hear that, but Mr. Danton said he seldom played bridge or poker.

"And then I play such a modest game that it isn't worth the trouble," he says.

"Oh, say!" says Jerry, pained. "We only play ten cents a hundred."

But he didn't get Danton. Instead he found Ralph. Ralph knew all about bridge. When he came back before the lunch bugle went he had won eighty-five dollars.

"Danger?" he says when Miss Eileen talked about playing cards with strangers. "You can't sharp at bridge; and besides, they are friends of that big tobacco man."

Can't sharp at bridge! I could have laughed. It's got poker lashed to the mast from the sharper's point of view. They needn't stack the cards. They've only to signal what top cards they're holding, to overcall their hands—if they are partnering the victim—or to revoke, and it's picking up money with all the chance of winning honestly thrown in.

Two nights off Sandy Hook they pulled Mr. Ralph into poker. He knew all about poker. They got him between tea and dinner, and the first I knew about it was when Miss Eileen's bell rang and I went in to find Mr. Ralph lying on the bed sobbing his heart out.

"Will you please fetch Mr. Danton, steward!" she says, and she was terrified.

I guessed what it was all about when I saw the revolver on the floor. He couldn't even commit suicide without going to her and telling her how well he could do it.

I picked it up and shoved it in my pocket. If there's one thing we don't want on board a ship it's a suicide of that kind.

I found Mr. Danton; he was dressing for dinner, and he came as he was.

I'm not a listener, and curiosity was never a vice of mine. But in a manner of speaking I could not help hearing, especially as I was rubbing up the paint work in the alleyway. Well, I could have rubbed it up in the morning, but I felt like doing it just then.

"He's lost every farthing we have," says Miss Eileen in a low voice.

"Lost it—how?"

"He has been playing cards with Mr. Macbean," she says. She was very quiet and very steady. There was nothing weak or timid about her then. Mr. Danton didn't say a word for a long time, and when he did he was talking to young Ralph.

"See here, my young friend, you're not going to mend matters by blubbing. I'll go see that—what's his name, Macbean? Perhaps I can persuade him to give you some of the money back."

That sort of roused Ralph and he started talking about debts of honor, and how no gentleman could ask another gentleman for money he had lost at cards.

"I forbid you to see Mr. Macbean," he says. "I lost my money fairly. They couldn't have cheated me without my knowing—I'm not a fool."

And so on and so forth.

Danton and the girl went out on deck and I saw them leaning over the rail together, so close, and her arm slipped through his, that I guessed she wasn't likely to starve in New York City.

In our mess we had had rabbit pie dinner—at least, every member of the but me. I never did care for rabbit, when it was fresh; and these rabbits out of the freezer. I mention the rab because they gave me an opportunity seeing Act Two, so to speak. The steward sent for me whilst the passe were at dinner.

"Finished your work?" he said.

"Yes, sir," said I.

"Then go forward to the smoking and report to the barman; Billing mate are down with ptomaine poiso Did you notice anything funny about rabbit pie?"

It appears that the whole mess was with this ptomaine poisoning—you s with a "p"—and as I'd had a pr from the chief of the first vacancy smoking room I got the duty for that

It was about nine o'clock when the ple began to drift back from dinner almost the first man in was Whiskers ing very distinguished, as the Frenc in his black eyeglass and broad ribbon.

Jerry came in later and I saw th having a long conversation. When up to them to take Jerry his coffee, laughing.

"I'm very sorry, Mr. Danton," he "but I don't know what I can wouldn't have played with the poor I thought he couldn't afford to lose looked at Whiskers with a twinkle eye. "The best thing you can do," he "is to get into a little game and wi all that he lost; my luck's turned worse."

"I haven't played poker for years Mr. Danton, "and although I can afford to lose than Mr. Stanhope, care to play."

Well, Jerry kidded him along and see Danton was weakening. He polishing his eyeglass nervously, an with Jerry's kidding and the fact tha a lot of people had gathered rou were listening, he seemed to get m more rattled, until at last they ha

The gang gathered round and the an outsider just to make the six a the game a genuine appearance. O Danton won at first. Couldn't do The way they let him take money that they were out for a killing.

Then he lost. He bet up to two th dollars—they had dealt him a pat-fl and on the show-down was beaten b fours. That made him look down h and count the bills that were left.

He won a little jack pot after th when they handed him the cards I saw by the signs that the ru had commenced. I've seen plenty play, I've known the gangs for ye watched 'em at practice. It was t before my eye was educated up to pack changed in full view of the a

Quick? That's not the word. O gang picks up the pack from the t hands it across. You may never ta eye from it, but between the mom cards are picked up and the mome reach the dealer the old pack has be eted, and a new pack, beautifully has been put in its place. The ol I saw happen was Jerry lift the c frown as if he'd forgotten somethi next instant they were in Danton but it wasn't the same pack!

Danton seemed nervous.

"Is it my deal?" he asked.

"Your deal, sir," says Jerry, "a time I'm going to bet; if I've a pair of fours I'll bet. The ga livening up."

I looked over Danton's ha didn't see anything except the ten monds. But he drew no cards. I did Jerry.

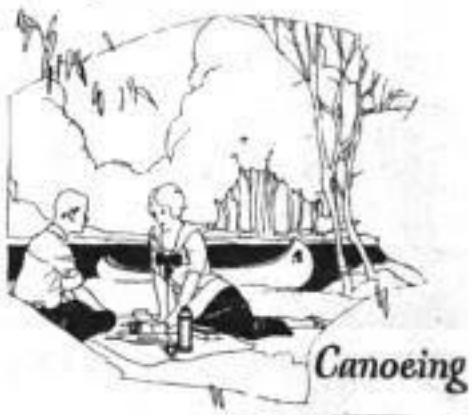
Why be thirsty these Thermos *days?*

Span the dry stretches with a cool, satisfying draught from your Thermos



Campers

Workmen

Canoeing

Sea Shore

Travel

WHIZZING cross-country over dust-swept roads—jogging it on the hot, open highways—fishing, boating, climbing—wherever the summer takes you, why go thirsty these days of Thermos convenience?

A compact Thermos, stowed away in your machine, packed snugly in your knapsack, or tossed within arm's reach in the bottom of your boat—is like an oasis to the parched throat.

Two Thermos bottles, in fact, assure the ideal outing. One, brimful with piping hot coffee to cap the sandwiches. The other, filled with cool lemonade or just clear, refreshing water to prevent the tedium of thirsty stretches.

Your own self-service

Your Thermos combines convenience and economy.

The total expenses—*on one day's outing*—for bad coffee, thirst-quenching drinks and incidental wayside lunches, prepared without consideration for your likes and desires, would more than cover the outlay for two Thermos bottles to accompany the tasty home-packed lunch.

There is even a saving every time you make tea, coffee, etc., for your Thermos—only one-half the quantity of tea leaves or ground coffee is required to secure the desired full strength and flavor, and one-fifth the sugar. The temperature, highly maintained for hours, dissolves every molecule of tea, coffee, sugar, etc., so that the lesser quantities are ample.

Get a Genuine "Thermos"

Make sure you get a genuine "Thermos." Turn the bottle up to see that it is marked "THERMOS" on the bottom.

Failure to take this precaution may lead you to purchase an inferior make. Leakage, unsanitary features, fragility, are characteristics of many cheap, foreign bottles now offered indiscriminately.

You can buy the genuine "Thermos" and know that you are getting the original standard make, equipped with every modern improvement—hygienic—non-leaking, and made for the hardest battering.

Get the genuine "Thermos" at all good stores as low as $1.25 each. Desk and dining room tray sets at $5.00. Exquisite art decorated sets ideal for gift purposes up to $85.00.

(Continued from Page 122)

And then the fun started. The first man to call made it a thousand dollars—it's funny how they always bet in dollars on the outward voyage and in pounds on the homeward trip.

The next man raised him five hundred; Jerry put it up to two thousand. The next man made it twenty-five hundred. It was three thousand when it came to Danton.

"I'll see that," says he.

But the man on his left raised it five hundred. It was four thousand when it came to Danton again, one man having chucked in his cards; he was the mug they'd brought in to make the sixth.

"I'll see that," says Danton.

But they weren't letting him see anything, and it was six thousand dollars when it came to Danton's turn to speak. He was more nervous than ever.

"Six thousand is a lot," he said doubtfully, "but I've got a real good hand and I don't like to go away."

He put his hand in his pocket and pulled out a roll of bills and counted them.

"I'm playing with strangers," says Danton, "and without wishing to cast any reflections I'd like to be sure that I am not betting against words."

Jerry planked down a wad of money. He must have had a very successful voyage home. And of course the other members of the gang did the same. There was a bigger crowd round the table than I've seen since Monty Benson, the millionaire, played Isaac Hardfelt piquet for a hundred a point—and that's going back a few voyages.

"Do you make a limit?" asked Danton.

"No limit—raise by thousands if you like. Double stake when it gets to ten thousand."

"Well, I'll see six thousand," said Danton with a sigh.

"Seven," said the next man.

"Eight," said Jerry.

"Nine."

"Ten."

It came to Danton again.

"Twenty," says he.

The next man went away, and I think Jerry either funked or else—and this was more likely—he thought that twenty thousand dollars was about Danton's bank roll.

"I'll see that twenty thousand," he said. "I've got a straight flush, king high."

Danton put down his cards: ace, king, queen, knave and ten of diamonds; unbeatable.

I never saw any man look as Jerry looked. If the ship had suddenly straddled an iceberg he couldn't have been more dazed.

"A straight flush—ace high?" says he. He couldn't believe his eyes.

"That's so," said Danton, and began to gather up the money.

Then Jerry laughed.

"Let's face all the cards on the table," he says. "I have an idea that I threw away the ten of diamonds when I drew."

"See Here, My Young Friend, You're Not Going to Mend Matters by Blubbing. I'll Go See That—What's His Name, Macbean?"

As he didn't draw cards at all, I thought Danton would mention the fact. But they faced the cards and they were all there. Not one too many, not a single card duplicated.

"Let's deal again," said Jerry, breathing through his nose.

"I don't think I'll play any more," said Mr. Danton, and stuffed the money into his pocket. "I will give you your revenge to-morrow, gentlemen."

But the next day he was not well enough to do anything but walk with Miss Eileen and her brother. Jerry trailed him all over the ship and was outside the smoking room biting his nails and waiting for Danton when he came up from dinner.

I didn't see that night's play, partly because the regular smoking-room steward was back on duty and partly because it was the night before we got into New York—we passed Fire Island at one o'clock in the morning, though I wasn't aware of the fact.

From what I heard later Mr. Danton won about ten thousand.

But as I say, I'm not quite sure about what happened that night. At one o'clock every steward was paraded, and the purser and head steward and second officer were trying to discover who was the man who had gone into Col. John Widdicombe's suite whilst he was promenading the deck with a little English widow that he was crazy about, and pinched a pearl necklace that he was taking back to his wife. The pearls had gone, and the colonel's presentation watch and a gold cigar case.

That sort of thing often happens just before a ship arrives in port. The thieves wait until the last moment, because it gives very little time to make a thorough search.

Luckily it wasn't in my section. It appeared that the colonel had drawn the pearls from the purser overnight, so that he needn't bother him in the morning. T what he said. My own idea a th wanted to show 'em off to the widow

We had the same old search, wi same old result. At Ellis Island the morning half a dozen men from the C Office came aboard, but they found ing.

I carried Mr. Danton's grip and Eileen's portmanteau to the custom we got alongside, and Jerry Marten one of his crowd followed me.

There was a detective on duty at t of the gangway, and Mr. Danton w the first party, st and said thing to tective. I spoke for seconds, enough t us up.

The inferno VEEDOL resists

How a tissue-thin oil film insures power, mileage and economy

A RAGING inferno is let loose with every explosion in the combustion chambers of your engine. Hot shots of flame strike the piston head at 1000 degrees intensity. The cylinder and piston walls endure temperatures of 300 to 400 degrees.

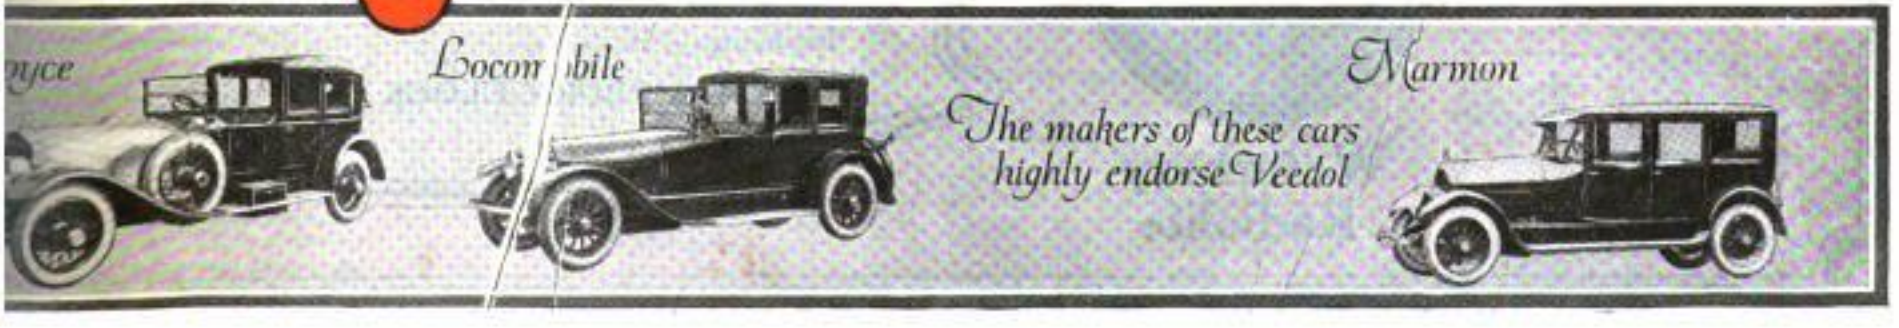
The herculean power unleashed by this inferno drives your car ahead. The deadly heat of this inferno accounts for over 50% of the motors that go to repair shops.

Deadly heat and friction must be mastered, and this gigantic task is the special job of the tissue-thin film of Veedol that functions between the pistons and cylinder walls.

This thin film by sheer strength keeps the flying metal surfaces apart. It forms and holds tight—the piston seal; for upon it depend full power and long mileage on gasoline and oil. Finally, it retains its lubricating value in the incessant fight against friction and repair bills.

Veedol is a Pennsylvania base oil refined *more* than other oils by the famous Faulkner process. This gives Veedol that *extra* heat-resisting quality so necessary to the perfect lubrication and economical operation of your car.

There are Veedol oils and greases for every type of automotive equipment. In buying Veedol consult the Veedol charts and select the Veedol lubricants especially designated for your car. Use these and no others.



Send for booklet "101 Economies"

Yankee Radiolite

Waterbury Radiolite

The Utmost in Value

THE thing that has set Ingersoll apart from every other watch ever made hasn't been merely low price.

No, the thing that has distinguished Ingersoll has been the fact that it is possible to make a watch so remarkably reliable, so sturdy, so honestly good-looking and yet sell it for so little money.

How is it done?

The answer is three-fold. First, it is in knowing how. The men who make Ingersolls have been making them for thirty years.

Second, quantity production. When you buy your Ingersoll, you get the saving that comes from making thousands of watches every working day in the year.

And third, the Ingersoll ideal: "Giving all we can for what we get instead of getting all we can for what we give."

You can find an Ingersoll that in style, size and price exactly fits your needs. Your dealer will show you the complete line.

ANNOUNCEMENT

By an arrangement completed on March 31st, the Ingersoll assets were purchased by the Waterbury Clock Company. Thus Ingersolls are now marketed directly by the manufacturers, who have made Ingersolls from the beginning.

"I'm glad you spoke of it," replied Sattherwaite. "My data are about complete. I've had a talk with Mathews."

"Did he tell you why he has blown up?"

"Yes."

"Huh?" The manager's eyes were wide with surprise.

"It's a girl. She will and she won't. However, I've offered to find a solution for his troubles, and I think you'll get some better playing out of him on the rest of the trip."

"Damn these skirts," scowled Heenan. "How did you get him to talk?"

"It was easy enough. He was just looking for an opportunity to share his perplexities. However, Mr. Heenan, please regard this as confidential. It would never do for the men to know about Mathews and his girl."

"I get you. You think you can straighten him out?"

"I think I have—for the present."

Sattherwaite drew a memorandum book from his pocket and for the next hour read to the manager matter relating to his observations at the training camps and among the Blue Sox. Heenan did little but nod.

"Of course," explained Ephraim, "the work is not yet complete."

"You sure have the lads sized up," said the manager, a sort of dazed admiration in his eyes. "That physical analysis of yours is a hot sketch."

"Psychic," corrected Sattherwaite.

III

MATHEWS rode to the ball park with Ephraim the next afternoon. "Heenan is sending you back at the Bruins to-day, at my suggestion," said Sattherwaite. "What are you going to do?"

"Give 'em the trimming of their life!" snapped back the southpaw. "I'll show them if my arm's gone."

"Good," applauded the psychoanalyst. "That's the way I like to hear you talk. Everything's going to work out fine, Dan."

"Have you thought up anything?" eagerly.

"Not yet, but I'll guarantee to set your mind at rest soon after we get home."

During the game Sattherwaite sat in the player's pit, watching every movement on the field through the thick lenses. Occasionally he jotted down a note.

Mathews was pitching masterly ball. The Bruins were well-nigh helpless. His fast ones sang by their belated bats while they lurched forward and twisted back in vain efforts to connect with his sharp-breaking curves. Heenan glanced once or twice at Sattherwaite, but Eph was too intent on his field observations to note the strange look of respect in the manager's eyes.

In the ninth inning, with the Blue Sox one run to the good, the Bruins managed, after one out, to get two men on bases through field errors. The next player struck out readily enough. A short passed ball advanced the runners to second and third bases, and Stacey, the heaviest hitter in the leagues, came to bat.

"Mathews will flop him all right," muttered Heenan. "That boy has sure got 'em to-day."

Sattherwaite shook his head dubiously.

"No; I would suggest that you take him out and send in Frazier."

"What!" gasped the manager. "That rookie! You're crazy. Besides, he's cold."

"Nevertheless, I wish you would do what I ask."

Without another word Heenan sprang from the dugout and ordered Mathews in. The pitcher, dazed with surprise, did not move at first, but on a second signal from the boss weaved slowly toward the bench with a puzzled scowl. The astonishment of Frazier, who was sitting against the fence some distance away, when gestured toward the box, was even more profound than that of Mathews. It was evident, too, that Stacey was at a loss, not to mention the rest of the players and the crowd.

After a few preliminary tosses Frazier pitched one to the batting behemoth. The throw was so wild that the catcher was compelled to leap high into the air to stop it with the top of his mitt.

Heenan growled something toward Sattherwaite, but Ephraim was smiling blandly. The rookie's next pitch was high and wide, but Stacey swung and missed. The next one he fouled into the bleachers. The fourth throw, high and wide also, the batter missed by a foot.

"Just as I thought," remarked the psychoanalyst.

"How did you dope that one?" queried Heenan on the way to the clubhouse. "I would have figured that Stacey could have killed anything that that kid had. Frazier hasn't a thing in the world, as a matter of fact, and besides, he's as wild as a loon. I was figuring on letting him go this week."

"He isn't much of a pitcher," agreed Sattherwaite, "and he is hardly worth keeping, but he has served usefully in a laboratory experiment. The test I made is hardly in the field of psychoanalysis, but this early in the season one may properly take a risk."

"That's all right, but ——"

"Stacey," resumed Ephraim, "has what is known as a mind of slow adjustability. I made it a point to study him closely at Jacksonville last month. You will recall that each of the four times he faced Mathews he continued to get better. It is true he made no hits, but it is also true that he was beginning to gauge the throws more accurately. Of course, there is no way of knowing, but the probabilities were strongly in favor of his making a hit in the ninth inning."

"Law of averages, huh? But why Frazier? Thompson and Allee were warm."

"Frazier," explained the scientist, "is perhaps the poorest pitcher you have, but in this particular instance he was the most desirable for the reason that he does everything in the box that Mathews doesn't. They represent perfect extremes. Mathews is a left-hander, Frazier a right-hander. Mathews is quite tall and slim, Frazier exceedingly short and squat. Where Dan has a normal tendency to throw low, fast and inside and is noted for his control, Frazier pitches slowly, high and outside and has little control. Their movements in the box, too, are at wide variance. It would take an unusually agile mind to adjust itself to the two styles in a few moments. Stacey has anything but that. He was mentally set for Mathews, and he was still set for Mathews when the game was over."

"I see," said Heenan slowly.

"However," went on Sattherwaite, "I wouldn't advise you to make use of Frazier against Stacey again. After facing him about three times he would probably break down all the fences in the circuit."

"You're there, boy!" admiringly. "This is about the first time that I have been able to follow you all the way, but when that kid went in cold I ——"

"Ah, yes," interrupted Eph. "I didn't explain that. His coldness was a point in his favor too. I wanted him to pitch as naturally as possible. Had he been warmed up he might have been amenable to the catcher's signals. It was essential that he throw them high, wide and wild, his normal gait. It was quite obvious that with men on second and third and two out Stacey wouldn't try to walk. His mind was made up to hit at all costs. That clear?"

"I make you."

"One of the things that I can't understand about the so-called smart managers," continued Sattherwaite, "is their insistence on keeping a pitcher in the box until he is knocked out. A little observation, it would seem to me, would permit them to anticipate the breaking point. Why carry six or eight pitchers of varying forms of delivery, stature, and the like, without making use of them psychologically?"

"We ain't on to them complexes, kid."

"There is no question of complexes involved. By the way, Mr. Heenan, I want to ask you about Morton. I see by the official figures that he bats in the neighborhood of .260. Can you find out for me—are the figures available—as to where he does his best hitting—at home or on the road?"

"That's easy. He's a .300 swatter on the road. Come on in. We can get the dope in the office."

Heenan obtained a baseball guide that went in for exhaustive statistics, and thumbed the pages.

"Here," he said, handing the book to Sattherwaite. "Here's the dope on last season. Look it over for yourself. What's the big idea?"

Ephraim studied the figures.

"I see," he said at length. "He apparently does well everywhere except at home and in the Lizards' park."

EVERSHARP

REG. U. S. PAT. OFF.

The definite name for definite quality

The name EVERSHARP is on the pencil. It marks the product of The Wahl Company—the maker of the first and only mechanical pencil to be nationally accepted. Millions are in use. All who buy EVERSHARP today deliberately select it as the best that can be bought. No other pencil can be like EVERSHARP; the exclusive tip in which the lead cannot slip keeps EVERSHARP supreme in writing efficiency. Durable metals, fashioned with precision, make EVERSHARP everlasting.

Buy your EVERSHARP *by name*. Look for the name on the pencil. Many beautiful styles in gold, silver and enamel. Priced from 65c to $65. Enough lead to write 250,000 words comes with every EVERSHARP. A complete refill—a red top box of extra leads and an eraser—costs but fifteen cents.

EVERSHARP is matched in efficiency and design by Wahl Pen, with the famous all-metal barrel that holds more ink; factory tailored to fit your hand. These perfect writing companions are sold everywhere.

of the Tigers. In view of the
hitting of Heenan's crew had
d the pitching, with the ex-
thews, rather indifferent, the
triumph was distinctly one of Sattherwaite's methods, as the manager somewhat dazedly admitted.

Heenan's strange tactics in shifting about players, taking out pitchers at the most extraordinary times, and removing batters in the middle of their sessions at the plate puzzled seven managers, hundreds of thousands of fans and the Blue Sox players themselves, but Sattherwaite, Randall and Heenan kept their secret. The newspapers speculated, joshed and admired, but never found out.

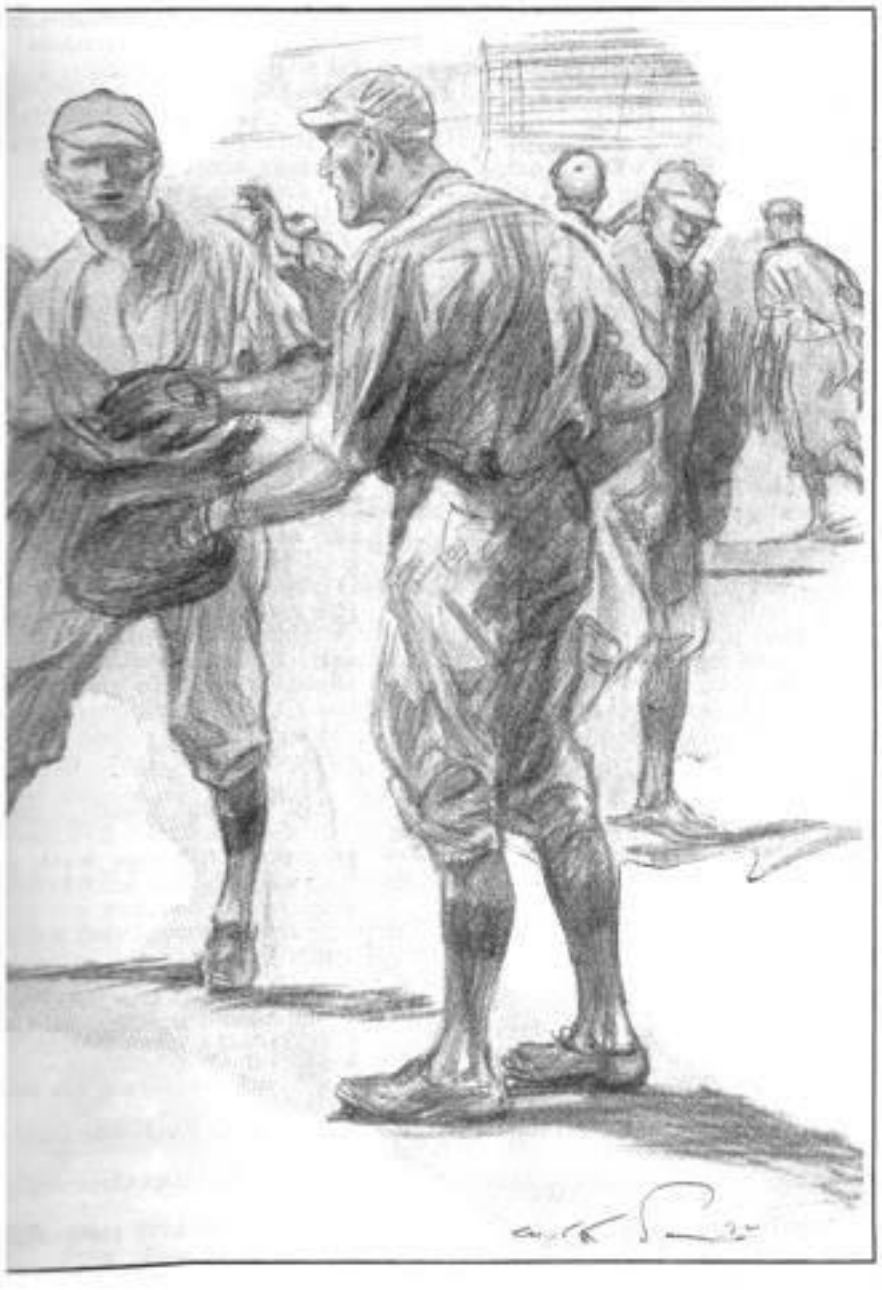
An example of Ephraim's amazing gift was furnished in one of the games with the Lizards. In the sixth inning Heenan sent in Garland, a heavy-swatting bench warmer, to pinch-hit for the pitcher. He fanned on three plate cutters.

"It's my fault," said Sattherwaite. "I should have known that red would have had the effect of destroying the coördination between his eye and brain."

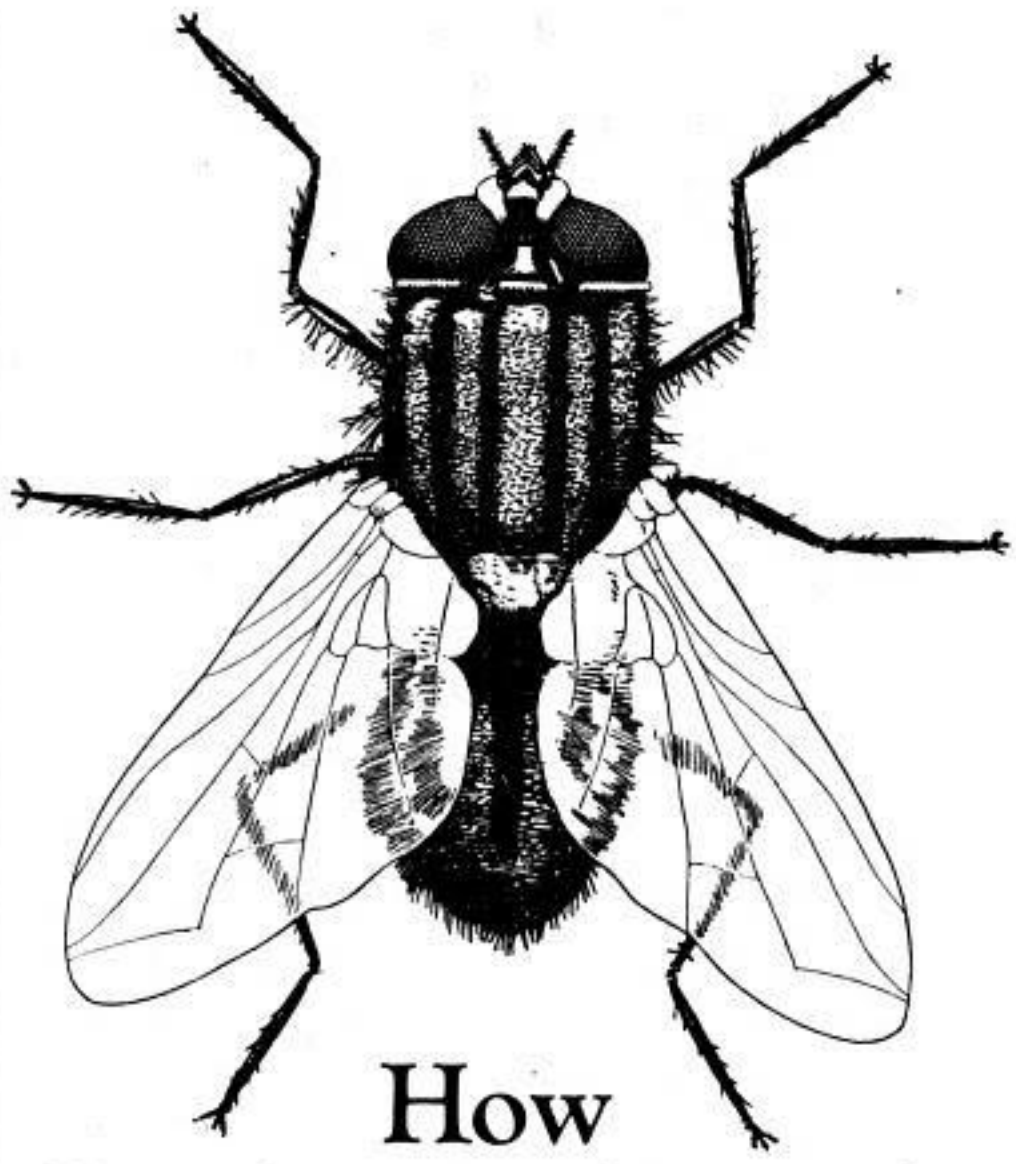
"Red?" spluttered the manager. "You mean yellow, don't you?"

"Quite the contrary," was the calm reply. "His reactions to yellow are quite favorable. You must understand, Mr. Heenan, that colors have a marked effect on the human mind. You instinctively shy away from certain tints without exactly knowing why, while others attract you."

"The long green, for example, eh?"



"Green may, in your case," gravely went on Ephraim. "Red, however, is particularly bad for Garland. The color is associated with a most disagreeable event in his life, yet it has a strange and baleful fascination for him. You have probably noticed his neckties and shirts. You ——"



"Yeh," laughed Heenan, "I've even seen him ragging with that redhead flapper at the hotel. Say, what's all this about? Where does the red come in, anyhow?"

"You saw Harlan's red undersleeves, didn't you? Garland couldn't keep his eyes from that bit of color at the pitcher's wrists. Instead of watching the ball he was gazing, half-hypnotized, at the edge of the sleeve. You may have noticed that he swung late at every pitch. That isn't his normal fault, you know. In fact, I have heard you talk often of his promptness in meeting the ball."

Heenan shook his head in puzzlement.

"Gosh, boy, this trick stuff of yours has sure got me going."

How

Druggists are making profits out of *dead flies*

A new chemical discovery now checks the house-fly menace and the mosquito pest.

Thanks to a non-poisonous product called Flyosan, flies can now be killed by the roomful, and homes freed of mosquitoes in a very few moments. It is absolutely harmless to man.

Flyosan is a liquid sprayed into the air of any room with an ordinary garden sprayer. It has been offered in increasing quantities to the public through drug stores, department and hardware stores for the past two seasons. Letters from hundreds of users speak of it as "remarkable," "instantaneous," "astonishing," "easy to use," "odor is pleasantly aromatic."

Sales are fast gathering momentum.

Last summer, the use of Flyosan increased 369% over the previous season. At present, the Flyosan Laboratories are running day and night.

To Druggists:

If you wish to add to the reputation of your establishment by tying up—to your own profit—with the national fly-killing movement, we suggest that you stock Flyosan early. Wholesale prices quoted on request.

Flyosan is used regularly by the U. S. Army and Navy, by leading hospitals, by steamship companies, and by public institutions throughout the country.

Druggists, department stores and hardware dealers who wish to make quick profits on a sensational new product which is sweeping the country will do well to get in touch with us at once. Address:

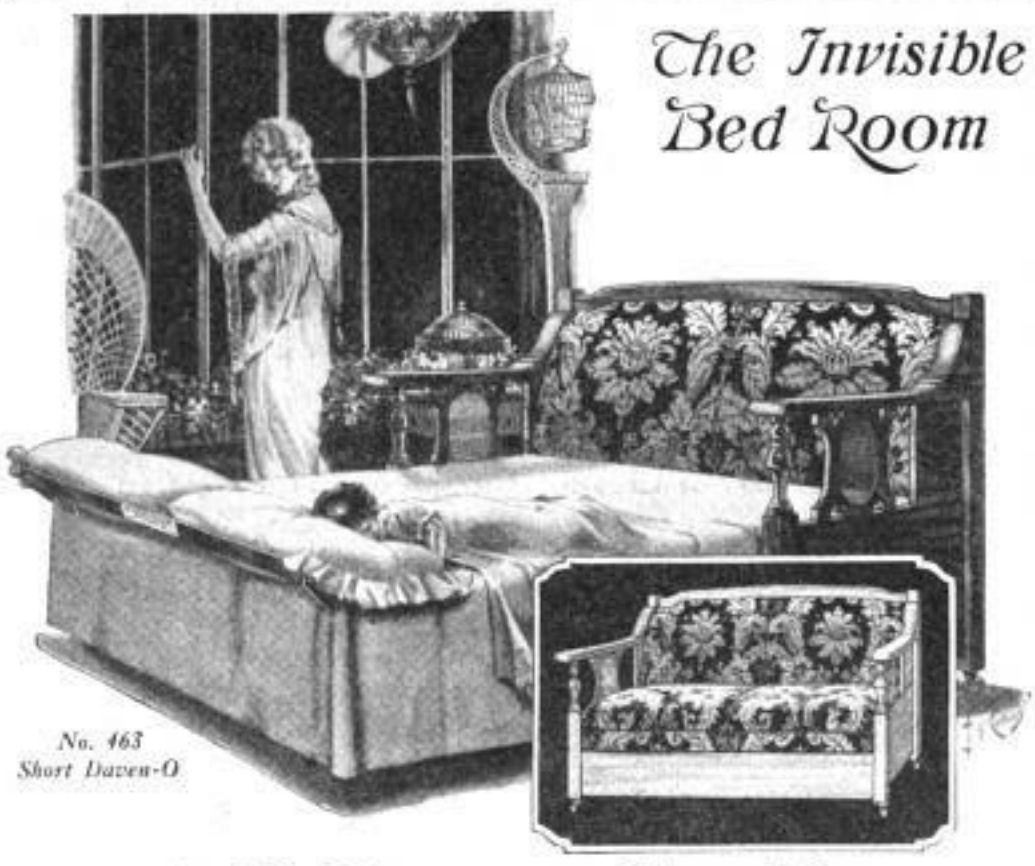
A good battery costs the least

THOUGH Westinghouse Batteries are "oversize" and in every way looked upon as the ultimate in battery engineering, they are not relatively high in price. But their biggest economy is in the performance you get—in the extra capacity, longer life, and in the satisfaction derived from knowing you've a battery that is *dependable*.



Westinghouse Batteries are clearly warranted under a guarantee definitely supported by the great organization which has given the world the air brake, automatic signals, and made other notable contributions to inventive science. No matter where you purchase your Westinghouse Battery, any Westinghouse Battery Service Station will undertake, without question, the fulfillment of any of the provisions of the Guarantee.

WESTINGHOUSE UNION BATTERY CO., Swissvale, Pa.

WESTINGHOUSE BATTERIES are of one quality—the best Westinghouse can build. And, 1,800 Westinghouse Battery Service Stations are ready to offer you WESTINGHOUSE ATTENTION—a new standard of service for the battery you now have regardless of make.

Free your radio set from battery troubles by using WESTINGHOUSE RADIO BATTERIES "A" and "B"

"Garland," went on Eph, "is a great pinch-hitter. Try him again to-morrow if you have a chance."

The manager found the opportunity in the eighth inning of the next game. With two on, Garland hit the first ball pitched so far over the fence that it dropped into the middle of the next block. The undersleeves of the pitcher, however, were white.

Since his talk with Mathews, Sattherwaite had spent a great deal of his time with the pitcher.

"Have you thought up anything yet?" the southpaw was constantly asking.

"Not yet," was the evasive reply. "Wait till we get home; but no matter what suggestions I may be able to make, you've got to make up your mind to force the issue. You've got to have the matter disposed of one way or another. She either loves you enough to marry you or she doesn't. If she does, marry her; if she doesn't, forget her. Your future is too brilliant to be jeopardized by worry over a hopeless situation."

On the night the team arrived home Ephraim repeated the same advice. Mathews was silent and nervous.

"Were you ever in love?" he blurted out at length.

"No," was the reply; "but if I were I would know what to do. I would wait for or build up a psychological moment ——"

"A what?"

"A psychological moment. Too bad you haven't studied psychology."

"What's that?"

"It's the study of the mind. It enables one to know just what a person will do under certain circumstances and, what is more important in your case, it permits one so to work upon the mind of a subject as to make it favorable to the reactions you desire."

"You can make 'em do what you want?"

"In a measure."

"Have you ever studied it?" eagerly.

"A bit," was Sattherwaite's modest reply.

"Listen, Eph; how would it be for you to come out to the house with me some evening and when the—what did you call the moment? You know, the ——"

"The psychological moment."

"Yeh. When that comes," hurried on Mathews, "why, you give me the office and beat it."

"All well enough," smiled Sattherwaite, "but psychological moments are impatient affairs. They don't wait around. By the time I gave you the sign and departed the young lady might undergo a dozen mental reactions. I'll tell you what I will do, though. If you'll take me calling some evening I'll make a study of the girl and I will doubtless be able to give you some information that will help."

"Will you? That's fine. I know you've got a big-league brain, and I guess I'm a dumb-bell when it comes to women."

"So are we all of us. However, I'll be glad to go with you."

Just how glad, Mathews didn't know, any more than he knew that Sattherwaite had already invited himself to call on the girl of the picture.

"How will to-morrow night do?" asked Mathews.

"Just as you say."

"Now that we're back in town," said Heenan to Sattherwaite a bit later, "is Mathews going dippy over that skirt again?"

"Well, I ——"

"Are you going to be able to keep him in line? If he blows again we're through. The Tigers have just bought Swanson from the Lizards, and that boy sure has the Indian sign on our lads. That was a pretty wabbly game Dan pulled yesterday. Looks like he's slipping again. Had that dopy look he used to have."

"I think everything will work out all right," assured Ephraim. "He has virtually agreed to force a showdown from her. The only thing that bothers him is uncertainty. Even if she rejects him he'll be all right after a few days."

"What is she?" asked Heenan; "a chorus lady or a pearl diver?"

"Neither. I don't know her, of course. I've seen her picture, however. To-morrow night I'm going calling with Dan."

"Looker?"

"Wondrous," was the reply.

"Huh!" Under Heenan's quizzical gaze Sattherwaite reddened. Mumbling something he walked away, just as Randall the young owner made his appearance.

"How's the outguesser?" was his first question.

"Boss, that boy's got something."

"Something?" laughed the [illegible] got everything—the whole [illegible] universe."

"Where did you run into him?"

"At college. He was a beat[illegible] tell by the way the prof [illegible] what he was going to lecture [illegible] though, that boy can outg[illegible] This psychoanalysis is great [illegible]

"It must be," agreed H[illegible] know what he has done with Mat[illegible] He's saved our bacon. He's [illegible] player out of Morse too. He's [illegible] bum and turned him into a gr[illegible] He'll top .300 this year."

"How did he do it?"

"I don't know. Sattherwa[illegible] secrets from me, but he might [illegible] He and the hard words in the [illegible] are too pally. Fixing up Morse [illegible] something to do with correcting [illegible] er——"

"Erroneous mental impulses!"

"Yeh."

"Sattherwaite will win a pe[illegible] Heenan."

"Maybe, unless some of the [illegible] grab a complex kid. There are [illegible] where he came from, ain't there?"

"The woods are full of psy[illegible] agreed Randall; "but Eph is the [illegible] know who combines abstract [illegible] the human mind with a com[illegible] of baseball."

"Not a ladies' man, is he?"

"I laugh," said the young [illegible]

AT 8:30 Tuesday evening Sat[illegible] and Mathews presented [illegible] the home of Esther Haven. [illegible] had told the truth, but only a small [illegible] of it. It had given a true [illegible] laughing eyes, abundant [illegible] had said nothing of the [illegible] cheeks and the rich luscious[illegible] crushed-strawberry lips.

While Mathews sat silent and [illegible] Esther chatted brightly with [illegible] The sprightliness and intelligence [illegible] versation completed the [illegible] fection. It developed that she [illegible] the pitcher since childhood. A [illegible] before she had returned from [illegible] finishing school. Psychoanalyze [illegible] her. Shortly after eleven o'clock [illegible] departed.

"I guess none of them psychic [illegible] ments showed up," said Mathews.

"Eh?" Then Ephraim laughed.

"With me in the room? It takes two and a moon. I imagine [illegible] velop them in this case."

"Did you find out anything?"

"Hasn't she wonderful features?" Ephraim absently.

"You didn't have to go to [illegible] that out, did you?"

They walked along silently.

"To tell the truth," said [illegible] slowly after a spell, "from what I was able to observe, Miss Haven [illegible] regard you rather in the light [illegible] than a lover. Of course you can't after one superficial examination [illegible] your permission I will call [illegible] week—alone. You understand [illegible] undivided attention I can ——"

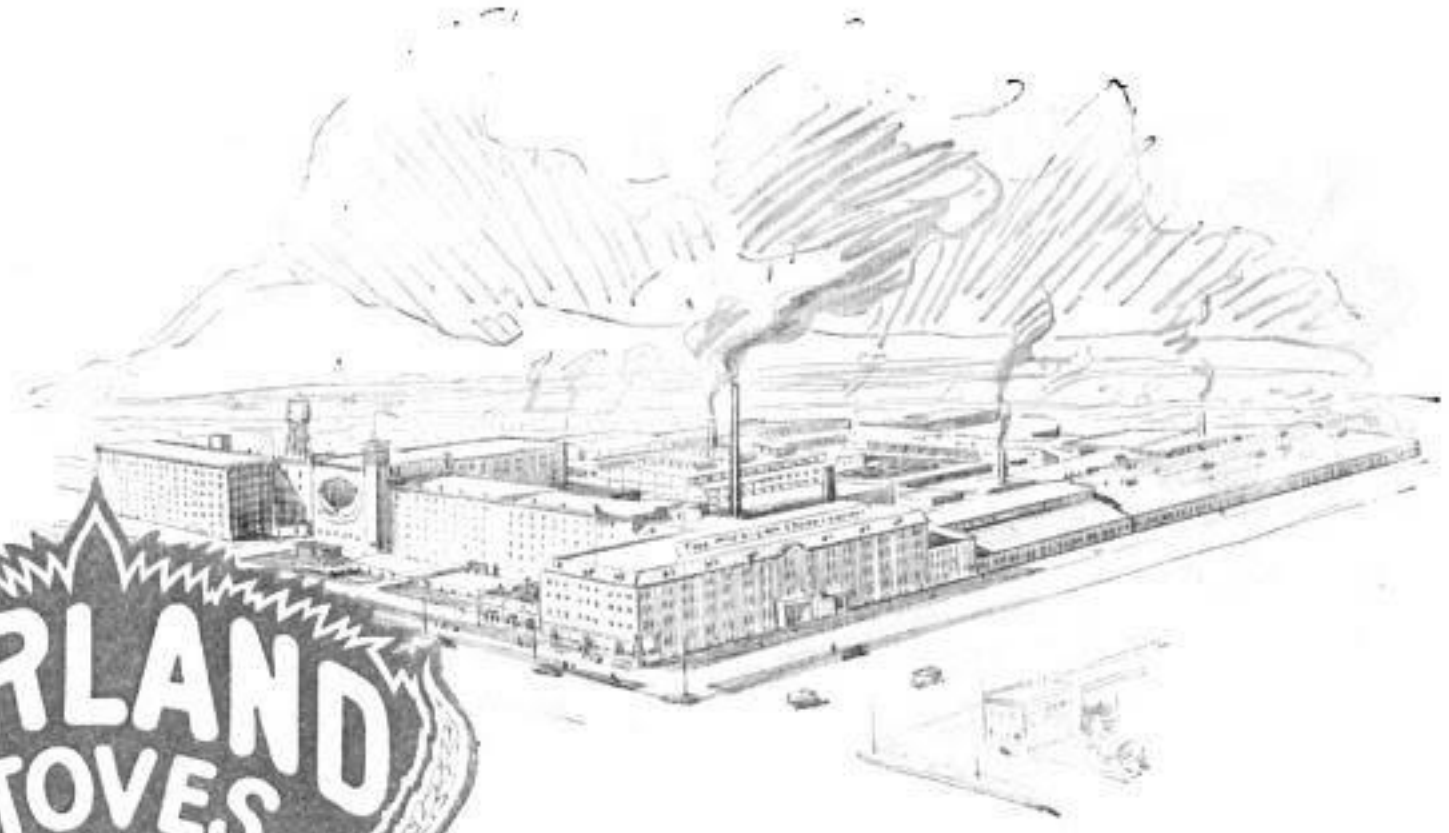
"All right," cut in the pitcher.

The next day a succession of [illegible] row with a couple of walks [illegible] good measure sent Mathews to [illegible] in the second inning. Sattherwaite [illegible] Heenan plainly worried.

"Damn these skirts," snarled the manager. "Can't you do anything [illegible] blows we lose the pennant [illegible] you got some trick stuff you can [illegible] out her favorite color and let [illegible] Straighten out her mental [illegible] you? Or his."

"I'll do what I can," said [illegible]

It wasn't much. Mathews [illegible] grew more helpless with each [illegible] Two weeks later, on the eve [illegible] team was to depart on its [illegible] trip, Heenan received a note [illegible] waite. It read:



I have solved the Mathews [illegible] would not marry him, and refuse [illegible] her to remain a vexation to [illegible] her myself. We leave for [illegible] Don't pitch Mathews for six [illegible]

Heenan looked up, to find [illegible] office.

"Where's Sattherwaite?" [illegible] owner.

"Out," said the manager [illegible] ing."

BRAKES!

HOW OFTEN IN 3 BLOCKS MUST YOU USE THEM?

LAST year there were 600,000 motor accidents, and 65% of them happened at less than 15 miles per hour. 390,000 accidents might have been avoided if brakes had held.

How often in three blocks do you avoid accidents? How often do you use your brakes? Do you know what lining is on them?

Brake efficiency is almost entirely determined by brake lining. And brake efficiency plus brake reliability means Thermoid Brake Lining.

The chart below shows you how quickly your car should stop with proper Thermoid equipment.

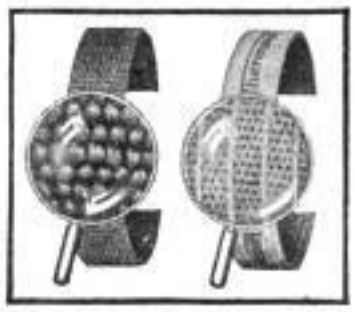
Ordinary woven lining is unreliable. It wears unevenly. It may fail unexpectedly. It grabs and slips after the first few hundred miles. You can never trust it in a tight place where a quick stop means safety.

Thermoid has 40% more material

Thermoid brake lining has 40% more actual material than woven lining. That extra material means not only safety but extra wear. Thermoid retains its gripping power until it is worn paper thin. Thermoid Brake Lining is, thru hydraulic pressure of 2,000 pounds and the exclusive grapnalizing process, made light and compact, and oil, water and gasoline proof. It will not absorb liquid, nor swell and cause a grabbing brake.

Fifty of the leading car and truck manufacturers have endorsed Thermoid Brake Lining by using it as Standard Equipment.

Don't take any more chances. Go into your garage or service station today. Have your brakes tested and if they need relining, insist on Thermoid.



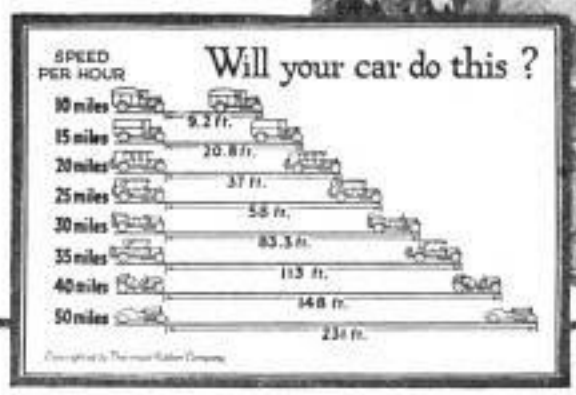
Write for our free book, "The Dangers of Faulty Brakes." It's a complete presentation of brakes and their importance.

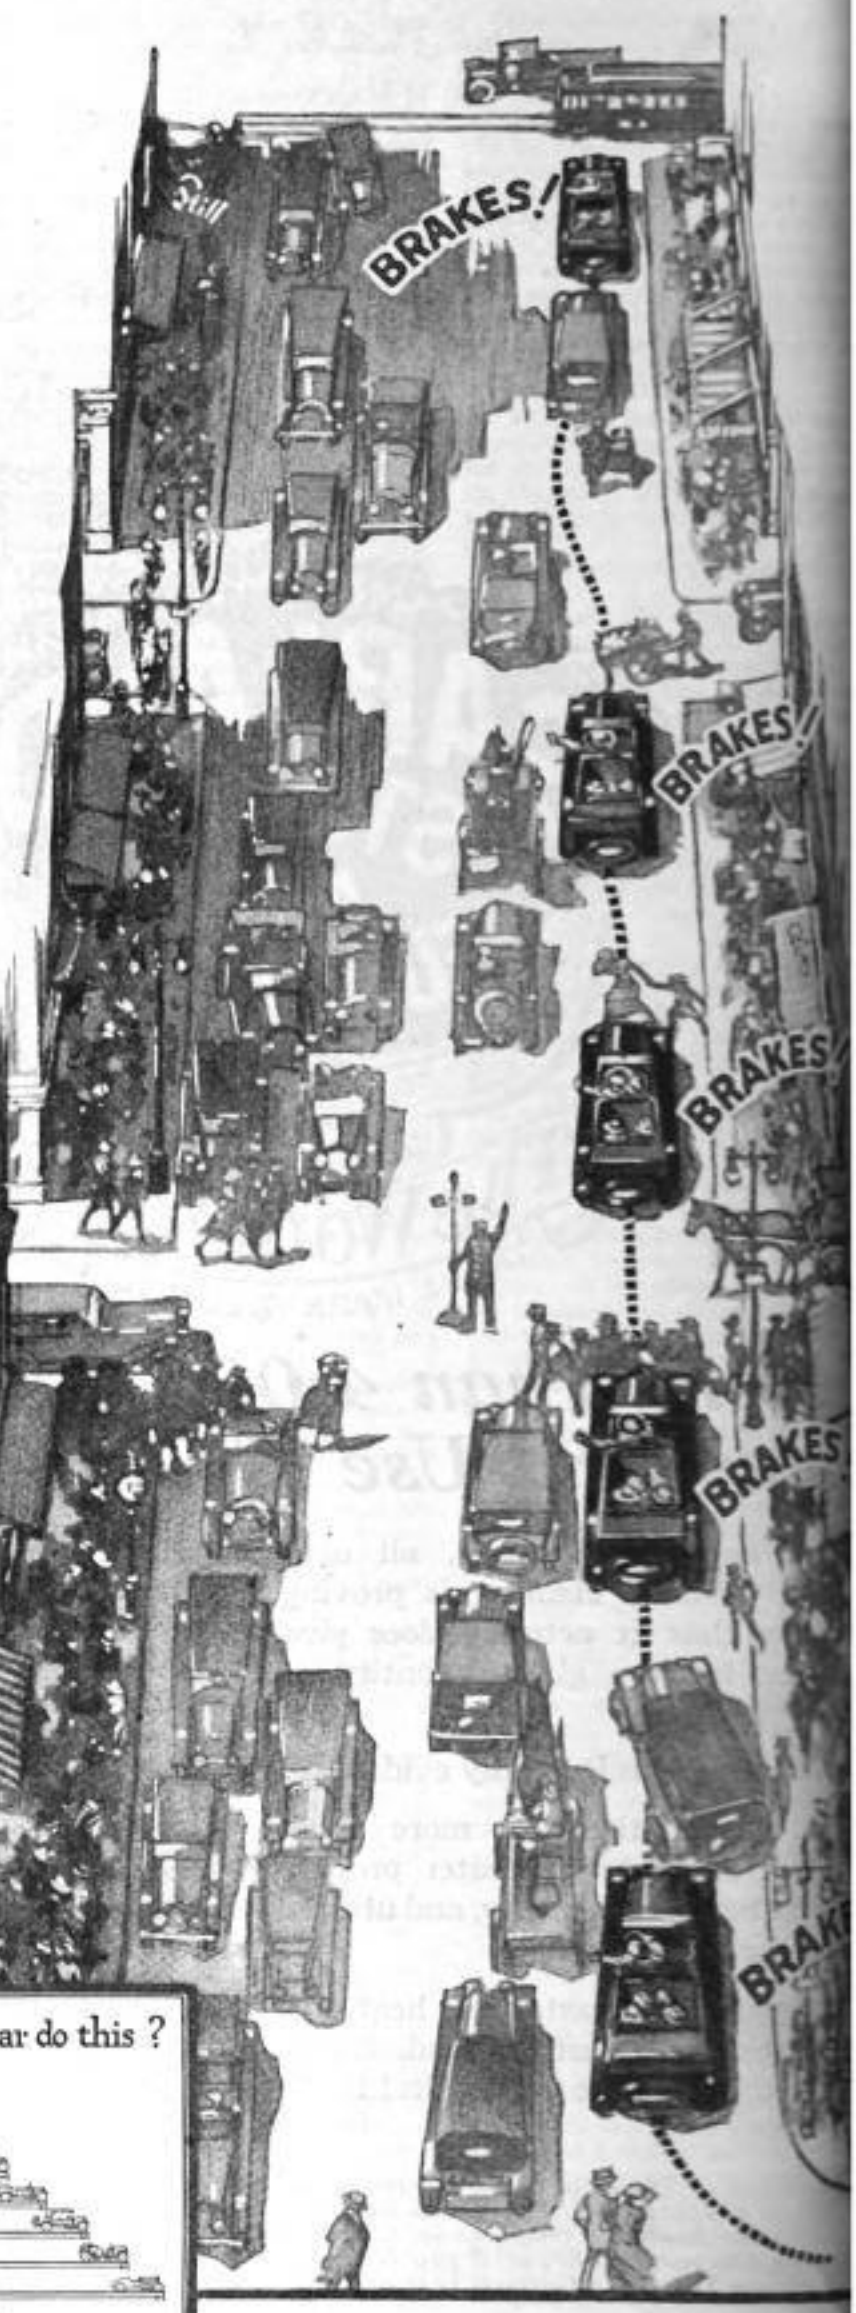
Ordinary woven lining

Notice the loosely woven texture.

Wears down quickly and unevenly.

Loses its gripping power as it wears.





Thermoid Brake Lining

Hydraulic compressed.

Notice the compact texture.

Wears down slowly. Gives uniform gripping surface until worn wafer thin.

said aloud.

"And, Tim—be very careful. Neither he nor the woman with him must see you or suspect that you are following them until you make the arrest."

"Shure I know, sorr. What'll I do wid the woman?"

"Nothing except identify her. You know her. That's why I want you to make the arrest."

"I know her, sorr?" The sergeant's eyelids narrowed suddenly as the plot began to thicken. "Who might she be?"

"She might be anybody," said the hawk. "She is—my wife."

"Holy Mary!" The sergeant's weather-stained, tanned-leather countenance became a wine color. "You don't mane ——"

"I mean the dirty little waif that I lifted out of the slime and guarded and cared for and married—last Thursday."

"Not Miss Betty?"

"That's what you called her."

"That's been grown up and goin' to school and all, under our eyes?"

"Yes," said the hawk, as pale as the stammering sergeant was red. "She went to school. I'll tell you what she learned: She learned to treat the man who sent her there like a leper because he wasn't as young as he had been. She learned to skip out with the first young beast she came across, when I caught him making love to her."

The red had left the sergeant's face. His eyes again narrowed.

"It ain't thrue."

The hawk rose, astounded, menacing, to his feet.

"What's that?"

But the sergeant faced him across the desk. "You may think it's thrue, sorr, but there's some mistake. If she's wint, as you say, 'tis for no harm. 'Twill be out av the innicence av her—her bein' kep' wid niver a look at a lad.

"I'll bet these shtripes I was twinty years gettin'—I'll bet me life on it."

The hawk relaxed. "You'd lose both. You have your orders. Carry them out."

"Can I say wan word, sorr?"

"Make it short."

The sergeant tapped the order for arrest with a blunt forefinger.

"Ye've got a charge of desartion here. 'Tis plain why you let the officer go clear to Tientsin. He seems a foine, upstandin' boy, but he's nothin' to me—the coort-martial can decide about him. But if I arrist him at Tientsin and"—the sergeant gulped—"well, you know who happens to be wid him—it'll be the rooination of her, sorr, th' everlastin' rooination."

The hawk noticeably brightened.

"Quite right, Tim," he said briskly. "Back to the gutter she goes, where she belongs."

"An' ye mane that, sorr?" Tim inquired.

He got a look for a reply. It was enough.

"Well, then, what about yerself, sorr? Think of your reputation. Your name will be in the mouths of all, from the ranks to the Sicretary of War."

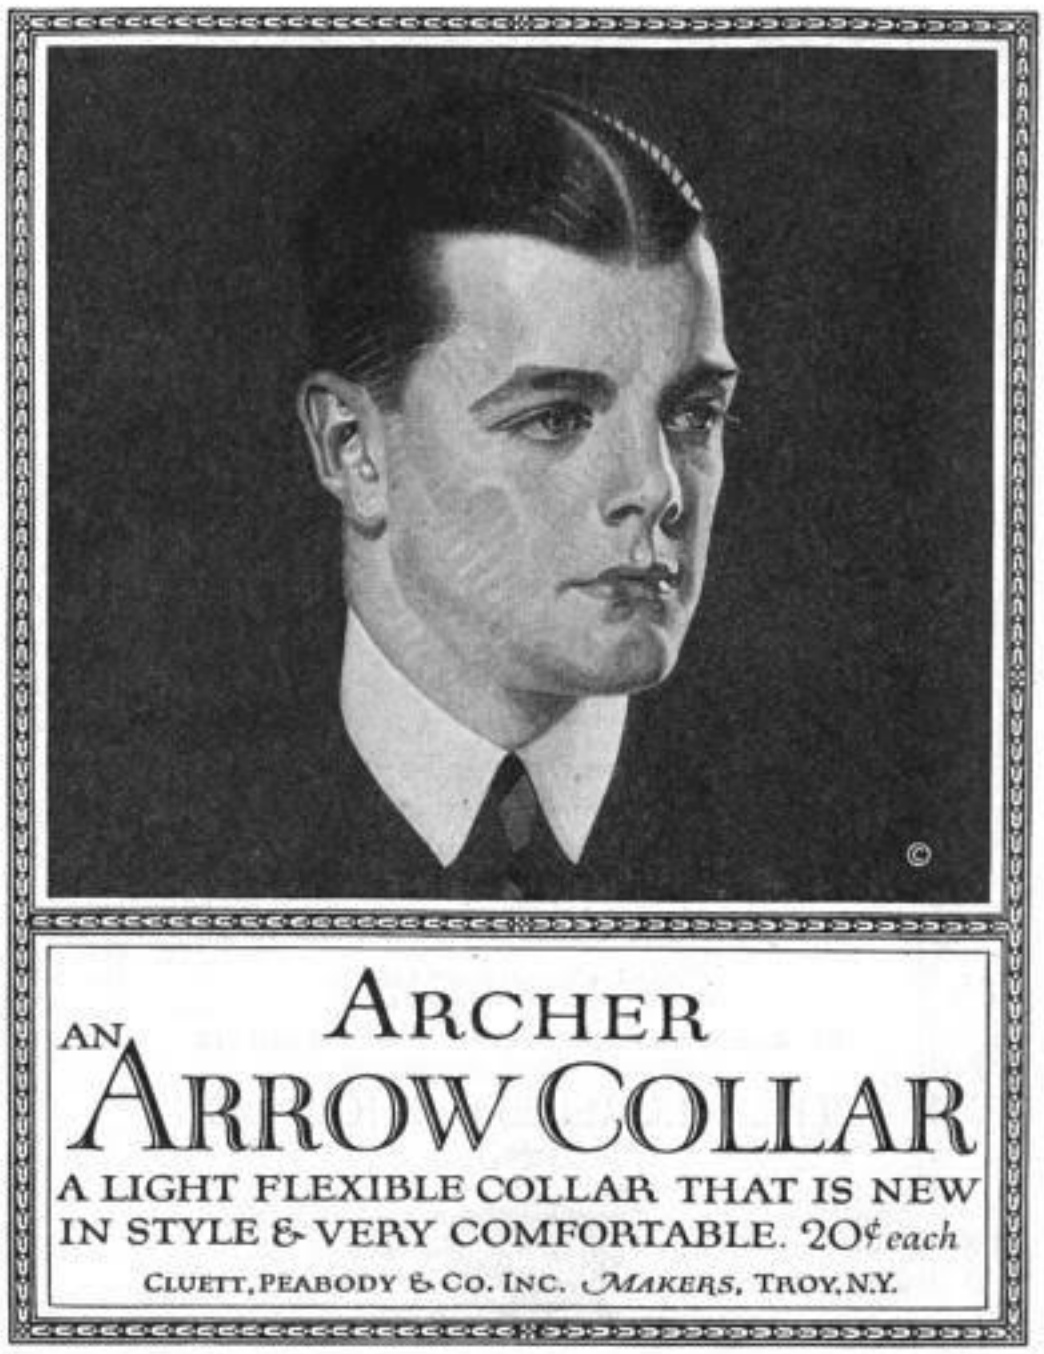
The hawk smiled, or rather his lips stretched sufficiently to show two rows of surprisingly good white teeth.

"My reputation," he repeated softly. He leaned over the desk, his smile gone, the veins at his temples standing out like cords. "Tim, I'd give my life—what she's left of it—to see her in hell."

The sergeant was beyond his depths. He knew that now, and acknowledged it.

"I'm nothin' but a noncom. I ain't got the gift of words. Won't ye git an officer frind to advise ye? Give me his name and I'll have him here in a whisk. Colonel Blair now ——"

"Sergeant!"



"Yis, sorr."

"You have your orders for the arrest of Lieutenant Lee at Tientsin, and the identification of whoever may be with him. Carry them out."

"But, sorr ——"

"One more word and your stripes come off!"

The old marine jammed on his hat, stiffened to attention, and saluted. For a few moments he had been Timothy Regan, the man; he was now Sergeant Regan, who clearly understood his orders and would carry them out though the heavens fell. He wheeled and made for the door. A tall figure appeared noiselessly in the doorway directly in his path. It was one of the

FOR THE MAN The Florsheim SHOE WHO CARES

WHEN you build or remodel make sure of having walls and ceilings that won't crumble, crack, or warp, that keep out dampness, cold and heat, and that withstand hard knocks—by using

Trade **CompoBoard** *Mark*

The Wood Core Wall Board

Does not require panel strips. The best decoration for Compo-Board is wall paper, burlap, canvas, leatherette, etc. Can also be painted or kalsomined. Compo-Board Filler is especially prepared for filling cracks and nail heads.

In no other wall board can you get all the advantages of Compo-Board. Be sure to get the genuine—look for the wood core.

FREE—interesting booklet showing many uses.

The Compo-Board Company
4303 Lyndale Ave. No. Minneapolis, Minn.

servants, a Chink, on whom a little of the bitterness within him could be vented.

"Out of me way, hathen!"

He glared into the servant's eyes for an instant, his face thrust forward into an impassive yellow countenance. He saw the flicker of a hand. The eyes of the servant became dark wells that merged and widened.

In a flash they were a huge black cavern into which Tim Regan plunged headlong, down—down into darkness.

In the darkness a voice spoke, a quiet and soothing voice, like soft bells chiming:

"Remain here, soldier; you know not where to go."

Another voice, a loud harsh voice: "Ty Ming, have you gone crazy?" And then, "Tim! What the hell's the matter with you? Knock him down, sergeant!"

"Tim!" Why, he was Tim. "Knock him down, sergeant!" That was a command. Commands must be obeyed. He drew back his fist.

The soft voice spoke again:

"Your arm, soldier."

He realized suddenly that something had happened to his arm. The fall down the dark hole must have done it. It did not pain him, but when he seized it with his left hand he found it numb and useless. In his surprise he exclaimed aloud.

"God help me. It's broke." He must get to the infirmary with his broken arm at once, he thought, and took a step to do so, but the soft voice spoke:

"Soon it will mend; stay here and—rest."

He sank quite gently into a deeper and more silent darkness.

The hawk stared at the motionless, glazed-eyed sergeant of marines, still clasping his arm, then at the undisturbed face of the Number One boy. He spoke at last in a dry whisper:

"What are you trying to do?"

"I am trying to bring peace to this house," said the Number One boy.

The hawk was moving toward the door.

"I'll bring peace to you with a firing squad!"

"One moment." The voice was no longer bell-like. The hawk turned at its trumpet tone. It went on more softly, "Reflect! The rifles of your guard will bring me peace. But you?" The voice deepened and became a note of doom: "You will be left in darkness and in torment."

"Torment," repeated the hawk softly.

He stared at the strange Chinaman who had for some reason supplanted Ty Ming that evening. What was the reason? He had hypnotized Tim like a flash. An astonishing trick. And why had it been done? Why were his own heartstrings still vibrating at the words of an Oriental fakir? What the devil was it all about anyway? His curiosity was stronger than his anger for a moment.

"No more tricks now. They don't impress me. You are not a servant. Who are you?"

"I am the servant of the Lord Buddha. My name is Chang Foo Low."

"The lama! Impossible! Why should you be masquerading in my house?"

"The maiden who was called your wife has served my master in his temple. You would destroy her earthly happiness. That is an error. I have been sent to prevent it."

The hawk's curiosity was consumed in a fresh fire of rage.

"The damned temple business again, eh! Well, great prophet, Master of Souls, no Chinese fakir can creep into my home to pry and listen and tell me what to do." He returned to the desk and went on less sneeringly, "My reports show that you tried to preserve order in Peking during the recent trouble. That is why I give you one minute to get out of here before I call the guard."

"Give me ten minutes, Excellency."

"What for—to watch you take rabbits out of a hat?"

"Have you, then, all the wisdom of the ages?"

"No," admitted the hawk, "but I have common sense."

A smile played like a faint light across the face of Chang Foo Low. His voice when he spoke was more than gentle:

"You have been crushed and broken by the wheel of life, despite your common sense. That order you have given to"—his faint smile returned for an instant as his glance took in the motionless sergeant of marines— "the soldier who waits, will bind you tighter to the wheel." Again came the deeper note in the voice: "Let me help you find the knot you [illegible] before you can be free."

"I've got no time to listen to [illegible] hocus-pocus."

"Ten minutes is all I ask—ten [illegible] taken from eternity."

"Eternity!" exploded the hawk. "Get out!"

"I am a lone Chinese, surrounded your soldiers. What have you to [illegible]

"Fear?" repeated the hawk. It [illegible] turn to smile. "Do you think I am [illegible] of you? Do you think you can hypn[illegible] me the way you did that fool [illegible] there? Go ahead; start your show [illegible] see how far you'll get with it."

"First take back that order," [illegible] Chang calmly.

"Well, not exactly."

"It can remain here on the [illegible] soldier can wait outside. It [illegible] you can call him to enforce it [illegible] desire."

The hawk thought this over for [illegible] stant.

"Very well," he decided. "[illegible] going to palm it?"

The Chinaman did not reply. He [illegible] to the helpless sergeant. There was [illegible] click of thumb against palm.

"So ends your rest, soldier."

The old marine shook his grizzled [illegible] like a dog emerging from water. [illegible] of understanding was scarcely [illegible] before he had started for the door.

"Tim," said the hawk. The [illegible] halted, turned and saluted. "Let [illegible] that order."

"You revoke it, sorr?"

The hawk crushed the hope. "[illegible] Wait outside for exactly ten minutes [illegible] come in. Do you understand?"

The sergeant returned the order [illegible] at his watch, glanced at the [illegible] face of Chang. "Ten minutes; [illegible] He saluted and withdrew.

The hawk seated himself at the [illegible] laid the order upon it. He [illegible] drawer into which he had plunged [illegible] some little time before. On the [illegible] occasion the hand was not empty [illegible] came from the drawer.

"Here is the order," he said, [illegible] is ——" He laid the revolver [illegible] "And nothing will happen to [illegible] Now what?" He looked up into [illegible] unfathomable eyes of Chang Foo [illegible]

"First—with your permission [illegible] lency—the lights." A long yellow [illegible] rose and waved once at the bronze [illegible] the desk. In doing so it passed [illegible] intent gaze of the hawk.

The lamp flickered and went [illegible]

"A pretty trick," said the hawk, [illegible] strangely set on the tranquil face [illegible] "How's it done?"

Again the hand waved. The [illegible] standing lamp in a far corner [illegible] faint blue flame and expired.

There were no other lights in [illegible] but only a dimness followed. [illegible] moon was by now high in the [illegible] its rays were streaming through [illegible] way from the garden, and through [illegible] window, to bathe the room [illegible] light.

The source of that light, the [illegible] called with satisfaction, was [illegible] earth. It was in the unassailable [illegible] thousands of miles away. He [illegible] a little. Of course the lamp had [illegible] trick, but he was unable to accept [illegible] and he could not account for a [illegible] ing that the air of the room was [illegible] heavy, that it was filling with [illegible] greenish-colored mist. His hand [illegible] his revolver and lifted it from the [illegible] the feel of it he threw off his [illegible] easiness and laughed his hand [illegible]

"I have you covered, China [illegible] still have—the moon."

"Ah, yes." The words were [illegible] "The moon."

The hawk did not press the trigger [illegible] revolver. He simply congratulated [illegible] sat, for the moonlight was somehow [illegible] room like smoke at the mouth of [illegible] drawing chimney, leaving him [illegible] profound, the most impenetrable [illegible] he had ever known.

He had enough. Tricks or no [illegible] had enough. He would have [illegible] blindly, madly from the room [illegible] found that the darkness was like [illegible] cast which had been poured [illegible] mold of his body, binding [illegible] to an absolute rigidity. His nerves [illegible] could barely feel it in his arm [illegible] lying on the desk. There [illegible]

ALEMITE

High pressure lubricating system

Cut-away section of Alemite Lubricating Spring Cover showing spring encased.

Showing Alemite Spring Cover Installation

KEEPING automobile repair bills down is purely a matter of proper lubrication. That is why the Alemite High Pressure Lubricating System which puts lubricant into bearings under 500 pounds' pressure) is the best investment a car owner can make.

To have your car completely Alemite-equipped you should have the Alemite Lubricating Spring Cover. This cover encases the springs in a flexible armor of lead-coated, non-rusting steel.

Noiseless, neat in appearance, it retains the lubricant, excludes water, dirt and grit, prolongs the life of springs and adds greatly to the resiliency and easy-riding qualities of your car.

As illustrated above each cover is packed with lubricant by means of the Alemite Compressor and Hose.

Once installed, the Alemite Lubricating Spring Cover becomes a permanent part of the car. It will pay for itself many times over in the added pleasure it gives and in the wear and tear which it prevents.

NOTE: This is the only all-metal spring cover on the market. It is not affected by grease, grit or water. Mail coupon for full details.

The Corbin Unit Lock with the keyhole in the knob is Good Hardw

WITH the Corbin Unit Lock, there is no groping in the dark—no guessing at the probable distance of the keyhole from the knob. As you grasp the knob, the keyhole comes to meet you.

There is no better lock for a door than the Corbin Unit Lock. It is Good Hardware. The first ones made have been in service for more than twenty years and show no signs of wearing out.

The Corbin Unit Lock is, as the name implies, a complete unit. Lock, screwless knobs and escutcheons leave the factory in one assembly, a single unit ready to be applied to the door. This lock, in appropriate designs, is finding its deserved place on front and other outside doors of residences. In the opinion of architects and contractors, it is *the lock* for hollow metal doors.

When *you* build, don't overlook the security, the simplicity, the strength, the smooth dependable action and unequaled convenience of the Corbin Unit Lock. The host of friends this lock has won is evidence of a growing appreciation of the idea that *good buildings deserve good hardware.*

It is impossible to apply this lock in such a way that it will not work its best. The carpenter cuts a slot in the door, inserts the lock and drives the screws through the escutcheons. He can put on five to eight Corbin Unit Locks in the time it takes to put on one of any other kind of lock.

Write for literature describing the Corbin Unit Lock "with the keyhole in the knob" and for local Corbin dealer's name

loved Gilbert Warren the held by his young wife, ice. Look, then, upon her

reen panel another face man's face, with softly ar and joyous. The hawk at dark hair braided into alling on each side of the a net of silk and pearls. was fuller, more mature, under its long-sleeved, orange velvet robe, but in the eyes, after all, was the most startling difference, so shining they were, so unwistful, so unafraid. The hawk's stiff lips tried to form a name:

"Betty!"

"Beauty and joy are hers," said the great voice. "Joy in her husband's love; joy in the knowledge of the fruit of their union, for in that body of the past were two souls, the soul of Constance Warren and the soul of an unborn child."

The figure with its softly shining woman's eyes was gone. Another figure grew slowly in its place.

"Among the disappointed wooers of that mother-to-be was the young and haughty Baron Hubert of Audley."

In the green lighted panel a steel basinet presently gleamed. Below that a face looked out, a face of early manhood, but already it was forbidding, cruel, with the fierce eyes of a bird of prey. Below the face was a close-fitting coat of chain mail. At the waist was a linked belt of iron and leather from which hung scabbard and broadsword.

"Fierce as a hawk," the voice went on, "restless as a stag; hard as the armor upon his breast. So speaks the countenance of a man whose soul casts out meekness and charity and gives itself to error. As he looked five centuries ago, so looks his face to-day."

The man in armor, with his weapon of the past, melted away. His living counterpart, bound in an armor of darkness, his modern weapon in his helpless hand, remained.

"Now I, Gautama Buddha, loving truth as I do God, tear the veil from past events so that earthbound eyes can see. Look, then, into the manor house of Gilbert Warren as it stood under the moon of heaven five hundred years ago."

The panel of light lengthened and widened. A dim high-ceilinged room stole into being. It was a bedroom, a phantom bedroom of the past. Within it the phantom figure of the Lady Constance Warren, if that was her name, sat before a dressing table on which were two tall lighted tapers. She was braiding a thick strand of her long dark hair. Her lips moved in silent phantom song.

Presently she finished with her hair, but not with her song, for as she tossed the braid over her shoulder and glanced into the mirror her lips still moved, smiling as they moved. The little song of the Lady Constance pleased her much. And the words of the small song now led her straight across the room to a small oaken chest, which she unlocked with a brass key. The chest contained a wonderful and secret treasure which no eyes but her own might look upon. Into the chest she gazed, hanging all breathless above it. Presently she dared to thrust her miser hand within, to touch, to fondle, yea even to bring into view a bit of the treasure. It was a shirt of closely knitted—ah, so closely knitted—lamb's wool, a ridiculous shirt that could be measured only in inches, a silly garment for a woman grown to hold against her breast and press her lips upon. These things that foolish phantom lady straightway did.

Presently, with the chest safe locked again, she knelt on a hassock before it and lifted her eyes to the wall above, where hung in agony a slender Christ with thorns upon His brow. And now again the lips of Lady Constance moved, though not in song. So, dropping her eyes now and then to the chest below the nail-pierced feet, she accomplished a divided adoration.

Her prayer finished, she rose and went to a tall window and threw the lattice wide. Outside the window was a small balcony with a stone balustrade. Standing on the balcony she gazed for a moment at the moon, half hidden by flying silver clouds. Returning to the room she threw back the covers on the high canopy bed and turned to the two candles on the dresser. She had raised a snuffer to the first of these when she paused, listening. The snuffer fell to the top of the dresser and then to the floor, as the hand that held it went to her throat. For an instant she stood immovable, her eyes widening, the ivory of her face gone pale. So might a woman stand who hears blows, curses, screams, and the grating clash of swords in the dead of night.

She was speeding toward a door when it flew open and the lord of the house appeared. His look was dazed, his face bewildered; he still clutched the parchment

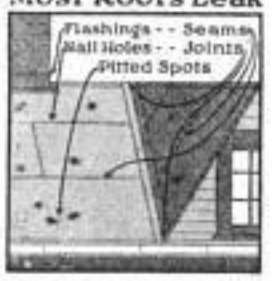
SONNEBORN PRODUCTS

The National Roof Protector

Use It On Your Worst Roof First!

Your old badly worn roof need not be pulled off. It furnishes an ideal base for Stormtight, which will make it as good as new—leakproof for many years.

Every new roof of tin, paper, composition or canvas needs the national roof protector Stormtight to *keep* it leakproof.



Stormtight

FOR USE ON ANY ROOF IN ANY WEATHER

Stops Leaks BEFORE They Start

Don't wait for trouble. Don't depend on the thin *film* of roof paint which soon cracks and so is too expensive. Protect your roof with a thick, impervious, durable onepiece *covering* of Stormtight without seams or nail holes where the leaks usually start. Its price is moderate—its use always saves money.

The Points Where Most Roofs Leak

For residences, outhouses, garages, factories, etc. **You can brush it on,** or your dealer will apply it.

Buy of your dealer in all quantities—large or small. Sold for years to the largest factories and institutions and now sold to householders also.

Write for "Leakproof Roofs" and testimonials covering many years.

The Madera-Silent Closet

Consult the plumber MORE in regard to sanitation and you'll need the doctor LESS

This message in the interest of the plumbing contractor is published by a firm that has devoted the energies of three generations to the development of sanitary fixtures for the home—

MADDOCK

THOMAS MADDOCK'S SONS CO., TRENTON, N. J., U. S. A.

he had been reading. Then the parchment, like the candle snuffer, fell to the floor, the arm of the phantom lord went about his phantom lady, for another door bulged, split and burst open, and there poured into the room, silent as shadows, a phantom crowd of men-at-arms. In their midst was a knight in a coat of chain mail with a basinet on his head.

For a moment he stood among his men-at-arms, his gleaming eyes fastened on the lady, a grim smile on his thin lips. At last he spoke. At his words the face of the lady went paler still, and the arm of her lord tightened for an instant about her waist before he tore a dagger from its sheath and swung her behind him.

The phantom in mail slowly drew his sword. He smiled again at the phantom in worn black velvet who held a pitiful dagger in his hand. The dagger met the links of mail once and only once before the sword flashed up and down.

The Lady Constance looked at the body of her lord lying at her feet, then fell on her knees beside it. A white hand flashed out to the dagger on the floor, the dagger rose swiftly and as swiftly plunged toward the ivory column of her throat.

The phantom, with the bloody sword, sprang forward like a panther. The deflected point of the dagger tore a thin red gash down the side of her slender neck. He forced the dagger from her hand and lifted her to her feet, then crushed her, bleeding, in his arms and bore her from the room. The men-at-arms followed through the broken, splintered door.

And now in that phantom room was a prone figure in worn dark velvet, stained with red. It lay moveless, huddled before a well-locked chest. No mortal eyes would ever gaze again within that chest; no hands would touch the treasure it contained, for through the broken door a cloud of smoke began to roll—smoke and the glare of flames.

The pale green panel died away. The pressing darkness held. The great voice, silent for a time, boomed forth again.

"So perished the body of Gilbert Warren at the hands of the murderer and ravisher, Hubert of Audley. So was destroyed the honor of his wife, and later, her life, and the life within her life. Now I, Gautama Buddha, servant of the one God who created all things, the laws of the flesh and the laws of the spirit, do proclaim: That the laws of the spirit were enforced upon the soul of Hubert of Audley, who committed grave error. This was and is the law: The soul of Hubert of Audley has been, and will remain, bound to the wheel of life, until through sacrifice it atones. The souls of the victims of his error shall be spared the journey through the seven spheres; being so spared they shall serve for that time on the earth plane, that the sacrifice may be made and their destinies fulfilled. Now I, Gautama Buddha, being of the spirit, do proclaim: That the laws of the spirit will be enforced against the soul of Hubert of Audley for a hundred hundred centuries if the sacrifice be not made. I have spoken."

The lips in the deathlike mask of Chang Foo Low ceased to move. The green oval in which it was suspended dimmed slowly into darkness.

There was a faint click.

The hawk was staring across a lamplit desk into a calm, untroubled face. His hand, resting on the desk, held a heavy service revolver. Close beside the hand was an order for the arrest of Lieutenant James Lee. The order glimmered white in the lamplight. So did the hand holding the revolver, but the face of the hawk was whiter than either of these.

"Hypnotism, Your Excellency," suggested Chang Foo Low.

"Yes," said the hawk. He [illegible] hand from the desk, dropped the [illegible] into his pocket, and slowly rose. "[illegible] notism, of course." He picked up the [illegible] from the desk and tore it carefully [illegible] pieces.

"Why do you do that, Excellency?"

The hawk stared at the bits of [illegible] the desk for an instant. At last he [illegible] up.

"Because I remembered," he said [illegible] whisper. "Chinaman, Chinaman. [illegible] came back."

"Ah," said Chang Foo Low softly.

"I must find them," muttered the [illegible]

"You need not seek them, Excellency; they will soon be here."

"You are sure?" asked the hawk.

"I am sure," said Chang.

"Tin minutes are up, sorr."

It was Tim. The hawk had [illegible] Tim. Ten minutes! Ten years—[illegible] turies seemed to have passed. He [illegible] and walked to the door leading to the [illegible] ing quarters, and paused.

"Sergeant?"

"Yis, sorr."

"You are too late."

The hawk turned to the door. It [illegible] and closed.

The troubled sergeant drew [illegible] watch and examined it.

"It's on the dot, I am." He [illegible] the sound of a voice coming from [illegible] den.

"Wait out here, please."

"Miss Betty!" It was a cry.

"Yes, Tim," she said as she [illegible] walked slowly past him, her eyes [illegible] the face of the Number One boy.

The Number One boy snapped [illegible] with a faint click.

Her face lost its strained expression.

"Now I know what brought me," she said. "I felt you calling, father; did you send for me? Why are you [illegible]

He did not reply. She had opened [illegible] lips to question him again when a report closed them and turned her [illegible] marble.

As Tim sprang toward one door, gun in hand, came in another—through which the moonlight was [illegible] ing. He saw first a tall old Chinaman, then the girl of his dreams, white [illegible] ened, but unharmed.

"I thought it was you," he said [illegible] fired?"

She only looked at him, while [illegible] was the old Chinaman who spoke.

"Put up your weapon, young [illegible] Your black hour is past."

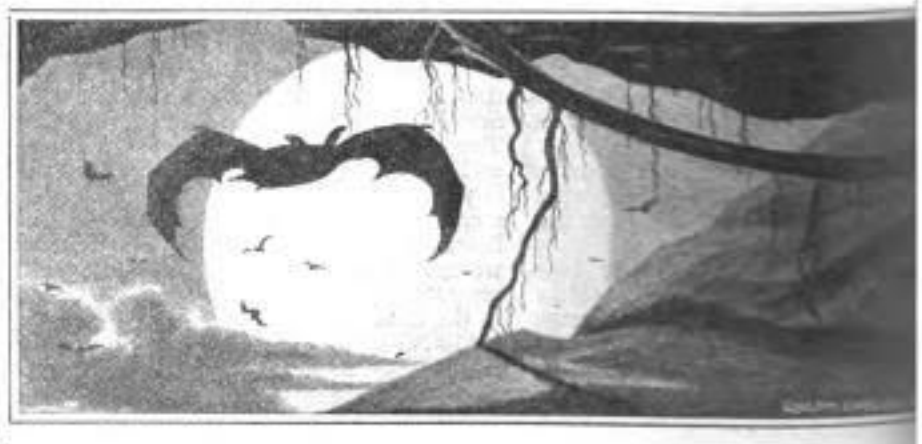
Jimmy obeyed mechanically and [illegible] peared, walking on tiptoes, and [illegible] back over his shoulder. It was [illegible] someone sleeping in the room that [illegible] came must not be disturbed.

"Miss Betty! Miss Betty!"

"Oh, what is it, Tim?"

The old sergeant saw the commanding officer, came to attention, and gave a salute.

"Sorr, I have to report that [illegible] Bradley is dead."



"Dead?" repeated Jimmy.

"By his own hand. Yis, sorr."

The girl of Jimmy's dreams [illegible] slightly and crumpled into a [illegible] Jimmy did not move toward her. [illegible] moment he was aware of just [illegible] in that room—that room with [illegible] ancient inscrutable China, mystic [illegible] whelming the things of a newer, [illegible] certain civilization. As he stared [illegible] abiding tranquillity of the face [illegible] Foo Low the somber eyes were lifted. The lips moved in [illegible] speech.

"Just is the wheel."

(THE END)

STANDARD EIGHT

The Car with Airplane Lubrication

OVER 500 MILES PER QUART OF OIL

AIRPLANE lubrication—an exclusive Standard feature—marks one of the greatest forward strides in motor car engineering. Economy of oil, yes—but more important are years of life added to the motor—its guarantee of velvet smoothness—its assurance of increased power, greater gasoline economy, clean, cool oil, and the consequent avoidance of carbon.

Ride in the new Standard Eight. Drive six or sixty miles an hour, or faster if you wish. Note the absence of a "point of vibration." Pistons, rods, shafts, fly wheel and all reciprocating parts are scientifically balanced.

Visit any Standard sales room. Your instant impression is a motor car marvelously designed and beautifully finished. But of even greater consequence is *that which is back of the car*—the resources of its makers, their ability to build well and to merchandise successfully.

The immense Standard plants, with almost limitless resources and unbounded manufacturing facilities, afford the quality-car purchaser a guarantee and a safeguard for his investment. All vital units—motor, transmission, axles, frame, springs, bodies, etc.—are manufactured, from the ore to the finished product, in Standard plants.

This economic advantage is directly reflected in the selling price of the Standard Eight.

Open models, with equipment, twenty-one hundred and fifty to twenty-five hundred dollars. Closed models, twenty-seven hundred and fifty to thirty-three hundred and fifty dollars. All prices F. O. B. factory, war tax not included.

THE STANDARD MOTOR CAR CO., PITTSBURGH, PA.

We invite correspondence with responsible distributors and dealers.

A MIRROR OF PLEASANT LIVING

IT is as natural for Mother to place her shimmering, white bathroom next in importance to her living room as for Father to place it next in importance to his cellar and the new furnace.

The bathroom of a home is the silent, intimate mirror of that home's family life—its ideals and self-respect.

The pride, the pleasure, which comes in showing a guest—whether friend of long ago, or stranger—the built-in "Viceroy" tub and shower, row of crispy, folded linen, pedestal lavatory and the mirrored cabinet.

It is as much as to say, "This is our own, our true idea of pleasant living—enjoy it with us."

If yours is a home with but one bathroom instead of one for each bedchamber—

And if this bathroom is semi-modern; that is, with old-time tub, marble-top wash-basin, and whistling plumbing—

Now is the time to enjoy the happiness and convenient comfort of a modern bathroom—

For the cost is less than you realize—

And the space needed, as little as five by six feet, is practically taking an ordinary sized closet and building it over, at a small expense. That is all there is to it.

There is a Kohler plumber a short ways from you; in fact, at the other end of the telephone. He will be glad to study out an estimate of the small cost required to install a Kohler bathroom in your home.

Why not talk with him today? You will find him a splendid source of information on all matters which have to do with sanitation in the home. Possibly he has some suggestions which may bring an improvement in the kitchen.

Kohler "Viceroy" Built-in Bath
Recess Pattern

Every piece of Kohler Enameled Plumbing Ware is exclusively distinguished for (1) the beautiful, snowy whiteness of its durable enamel (2) the uniformity of this whiteness in every fixture (3) the name "Kohler" in dainty blue letters inconspicuously but permanently fused into the enamel for your protection

business of the investor or ," was the quick reply. f common knowledge that peculators lose in the long speculative public is con- . This is certainly not to ecause the great majority extensive operations in erest irresponsible rumor, ould not spend so much wn business without the l extensive inquiry. The al stock operators, men who make a real business of it and who make their living that way instead of losing in speculation what they have made in business, usually profess a scorn for anyone's opinion and a passionate desire for facts.

Now it must be admitted that there are times when all tips make good, even in their crudest and most extravagant form. This gives the advisers, students, analysts and all the rest of the purveyors of market information a tremendous reputation. But the public does not seem to recognize that at such times it could make money in the market just as well without as with any information. Tips abound in a big bull market and sinister rumors are almost as frequent when the whole trend is downwards. But in point of fact, information of any sort is superfluous and unnecessary at such a time. The speculator merely rides with the tide, but does not seem to know it.

A Curious Explanation

Ignorance and foolhardiness are no handicap when currents are flowing fast. Indeed they are a great asset. A newspaper reporter once took a tip to a great financier when the market was boiling. "I want to tell you, however," said the journalist, "that that piece of information came from the biggest fool I know."

"That's just the kind I want," was the reply.

At the beginning of a bull market a member of a banking firm, who had previously been the manager of several industrial corporations, laid the plans for an important merger of automobile companies which was consummated in due time. One day he received a call from a cheap faking sort of tipster, who said he was able to give the banker the real reason for the advance in the stock of an automobile company in which the banker was a director. This company was to go into the merger, but the tipster did not know that any merger was even contemplated.

"It is this way," said the tipster: "A very rich man bought one of your cars and found it unsatisfactory. He was so annoyed that he sold the stock short until the company, finding out about it, gave him a new car. This pleased him so that he began buying the stock, and that is the reason why it is going up."

Yet if the tipster's customers had bought the stock when it was rising they might have made as much on the basis of this absurd rigmarole as the banker or his friends in possession of the facts would have made.

"I have had really good inside information only half a dozen times in my life," said this banker, "and then my interpretation and action upon it were about 95 per cent wrong, so where does the difference come in, anyhow?"

Wall Street does not lack altogether a sense of humor, and knows how to make fun of itself at times. There has never been a bull market that did not produce a crop of stories concerning the ludicrous ignorance of speculators, and in many cases of their brokers. When all stocks were going up several years ago a favorite type of such stories had to do with the speculator who bought Allis-Chalmers because he liked the Chalmers car, unaware, of course, that the Allis-Chalmers Company makes heavy engines, mining and other machinery, and not automobiles at all. But Allis-Chalmers also went up, so it made no difference.

More recently a man who had been in Wall Street for more than fifteen years expressed the opinion that in view of the radio developments all the low-priced electrical stocks were a good buy, and named among others the Habirshaw Electric, then selling at slightly more than two dollars a share. But this company manufactures cables and wire and has no connection with radio. On another recent occasion all the oil stocks began to move up, among them one by the name of Barnsdall. Two brokers were heard discussing the question of whether this was a movie or a chain-store company.

When stocks are rising or falling the speculator does not have to know anything; all he needs is a commitment on the right side. But his ignorance and rashness almost

What Every Boy Should Know

It is part of the American tradition that every boy should know how to handle a gun and shoot straight. It is an important part of his training that will make him alert and self-reliant.

Millions of American men got their first lessons in marksmanship with the harmless Daisy Air Rifle—safe, because it shoots with compressed air instead of powder. For over thirty years it has furnished fun and education for American boys.

Different Daisy models range in price from $1.00 to $5.00. Ask any hardware or sporting goods dealer.

always keep him at it too long. He continues to act on blindfold rumors or on the even more effective tips in the form of continued upward spurts. Then the tide begins to recede without his knowing it, and he is left high and dry.

It is only in the rarest instances that operators are able to pick or note the change in the main stream or tide. This is only another way of saying that the majority of stock speculators are bullish at the top and bearish at the bottom. To be otherwise is almost humanly impossible for most persons, and that is why nearly everyone loses.

A common saying is that in the long run values and prices come together. But patience and pocketbooks are short-lived. People often buy the right thing at the wrong time and get tired of lugging it along. Brokers have a saying that early information will break anybody. This may seem puzzling at first glance, but is explained by a financier who is a director in several important corporations in this way:

"There is such a thing as having one's information too early. We know here months ahead regarding the dividend action of certain railroads. We make our commitments in the market accordingly, and then there is no action. The market lags and we often sell out at a loss. I am a director in the —— Railroad and know what dividend will be declared next month, but I may make more money by waiting until after it is announced than if I buy it now. No one really knows when to buy."

A broker said that he had bought the stock of a chemical company months ago on advance information of a new process, and after holding it for many weeks sold it in disgust, the upward movement beginning the day after he sold. The most active speculator of the day was quoted not long ago as saying:

"First find the line of least resistance. Don't buck the current. Make your play and then sit down and wait. It is a case of patience, patience and then more patience."

Twisted Information

Real inside information may become garbled at times as it is passed from mouth to mouth. On a very stormy Christmas night or perhaps it was Sunday night following a Christmas that fell on Saturday, more than ten years ago, the writer, who was then financial editor of a New York City newspaper, was called out of bed to the telephone just after twelve. He still remembers the snow coming in through the window and falling on his bare feet as he stood at the instrument. A voice from a distance informed him that the Rock Island company had bought the Lehigh Valley Railroad and would declare a 10 per cent dividend on its own stock from the rich assets of the Lehigh Valley. The writer went back to bed disgusted with this apparently open attempt to rig the market.

The next morning at the opening of the market Rock Island stock shot up from 50⅝ to 81 in less than five minutes, falling back to 50 in almost as short a time. The authorities of the Stock Exchange upon investigation suspended the broker who had executed the orders, but was, of course, unable to reach the wealthy principal who had put them in.

Rock Island stock never paid a 10 per cent dividend, and, indeed, the company before long went into receivership.

But the same plunging capitalist who was supposed to be responsible for the strange gyrations in Rock Island had been buying, so it was learned only a few days later, into Lehigh Valley also, and a year or two later the Lehigh Valley did actually increase its dividend to 10 per cent. There certainly was inside information in that particular tip, but anyone who had followed it literally would have lost his shirt.

Indeed, a fundamental difficulty with the following of tips or market information of any sort is that so much of it is put out originally for purposes of deception by interested persons. Macaulay in his famous account of the first great speculative craze said that "monstrous fables were circulated for the purpose of raising or depressing the price of shares." The statement is just as true to-day. No investor or speculator should take anyone else's advice, no matter what position the person holds, unless it appeals to his own judgment and intelligence.

Part of the great mass of information and misinformation concerning stocks arises in a perfectly innocent and [illegible] way. Anyone who buys or is contemplating buying a stock thinks for the time at least that he has shown good judgment and wanting to impress other people his wisdom imparts the information them. But there is much that cannot explained in quite so harmless a manner.

"When I first came down here I think all this talk about the 'interests making and unmaking the market dishing the common people was all bunk' said a man associated with capitalistic interests of the first magnitude. "Naturally course, some of it is bunk. Confidence to be right and major currents can be bucked with safety. But you have to very close to this game to realize how manipulation is going on whenever conditions favor. Even people very high the financial world cannot discover the most careful inquiry who is behind various stock movements and operations. I recently asked a Wall Street banker dent whom I know intimately to get facts for me, but he could get no further than I."

Uncertainties of Oil

"Now take what we will call by illustration the Texas-Mountain Company. There are some big people in they certainly struck it rich. They paying off their bonds rapidly and earning several million dollars a But geologists say they have only three to three months to go, and then be exhausted. Yet they are planning declare a big dividend, having engaged famous manipulator, James R. Keene run the pool, and perhaps they will for listing on the Stock Exchange. a big following for this stock worked up and, of course, the insiders distributing it rapidly. It is expected down to five dollars a share from present price as anything can be. The pool is so powerful that no one dares the stock short, for the pool can to almost any figure—70, say—and the inevitable crash comes.

"Then there is the Blank Oil. I think Blank himself, who made his own cattle business, was all right he discovered a little oil under and got in touch with Wall looked it up and found what a field that is, and then I discovered put out nearly a million shares which they expected to run up the movement was on, tips were thick and fast that the price was I was getting ready to sell short for a dead certainty that it was a sale, when the exhaustion of the me to it, and the stock has now few dollars a share, where it belongs.

"You know the old Wall Street Daniel Drew, who was engaged tribute a block of stock. He told of his church that it was a good but that the information was and must not be passed on. Of course, the rector told everybody congregation, and Drew had unloading.

"When the rector complained he was sorry but it had been judgment and the stock was not he thought it was."

There is no substantial end this old story of Daniel Drew. modern market riggers use distribute their wares; but that boosted by the aid of rumors lated by pools in order to get any bull market or the least one, admits of not the slightest Rich capitalists, just like the bucket-shop suckers, get stung ness conditions change and quickly follows prosperity. The ference is that some of the wait and afford to hire unload their stocks when more favor.

At the time of this writing the stock market has had a tinuous rise for some weeks past. sound reasons probably in a tion from an overdone pessimism improved business conditions have also been artificial efforts of a powerful group of make a market for the stock company which they and bought and had seen fall purchase price. MADE AT SHIRLEY, MASSACHUSETTS

IN THE space of a few generations we have traveled far from the self-sufficiency with which each family spun its own yarn, made its own soap, and wove its own cloth.

Today we each give a specialized service to the community, and depend on manufacturers, merchants, professional men and specialists for every kind of service or commodity we may need.

In line with this progress, the service of the modern funeral director not only includes the obvious duties of the undertaker but extends itself to some sixty or seventy details that require from a half minute's to a half day's time.

The fact that about forty of the sixty services are performed so unobtrusively that family and friends scarcely realize that they have to be done indicates the skill, sympathy, and completeness with which they are accomplished.

company is an important factor in its industry, but what value the stock has is problematical. One set of financiers say they honestly believe the stock was and is worth 50 or 60, and another group as well informed described the whole gigantic operation as a second-story job. Time alone will tell.

There are all degrees of construction, charitable and otherwise, to be put upon manipulated market operations. But always there are tips, the regular old game of spreading the glad tidings of good news in order to get out from under. Even where banking syndicates put out conservative bonds there are certain tricks to the trade. It does not pay to allow bonds to sink at once to their natural market level. Investors may be easily frightened. The idea is to keep the price only a fraction above the original issuing figure, about one-quarter of one per cent. It would not do to put the price too high, for that would lead many investors to sell.

One-quarter of one per cent is hardly more than the commission the holder would have to pay for selling, and it is considered safe therefore to keep the price up by that much. Usually it is only the closing price for the day that is manipulated, for that is the price the investor usually notices. I imagine a careful study of the activities of the great banking and investment firms at five minutes to three o'clock in the afternoon would often disclose some rapid telephoning to various associated firms for the purpose of establishing a strong closing price.

From this we go clear to the other extreme of manipulation, the giving of actually false information or the sending in to brokerage houses of fake orders. The laws of New York State prohibit the giving of false tips or the circulation of false rumors or information of any kind designed to affect market prices. There are at least two sections of the Penal Law, Sections 926 and 952, which cover very fully the giving of false information intended to elevate or depress the price of stocks and bonds. Under one of these sections it has been held a crime knowingly to circulate a false rumor that a receiver is about to be appointed for a corporation.

Effects of Manipulation

Though there have been several cases where persons who sought to depress the price of stocks have been prosecuted, I personally have never heard of anyone being indicted for seeking to raise prices. Most pool and manipulative operations could be brought under the law only with great difficulty, because usually the information given out is not actually false, even though its intention is to affect the price of stocks. Indeed, such operations have been defended as a form of advertising, as judicious preparation of the market or as a method of bringing securities to the public's attention. It is a form of wire pulling, "The fine art of buying and selling stocks to the best advantage," which is defended as being legitimate as long as it does not carry prices too far from true values.

Often the actual information given out, though true enough in itself, is only a partial truth, and the stock is being distributed by insiders because conditions as a whole are unfavorable. Then there are cases no doubt where the information is perfectly legitimate and the pools and syndicates are themselves acting in good faith toward the public. But financial and business conditions change so rapidly that they are unable to carry out their plans of corporate development, and are obliged in order to save their own skins to get out from under as fast as possible.

It sometimes seems as if a great amount of time were wasted in analyzing the values of stocks. On the basis of statistical studies a stock may appear to be worth this or that figure, but such analysis can go up to the point where manipulation begins, and no further. What advantage to the investor and speculator are the studies of a thin pale-faced Harvard or Columbia Ph.D. in economics, surrounded by his manuals, maps and Interstate Commerce Commission statistics, if a great banking house has secretly employed James R. Sharp to place buying orders for thirty thousand shares through ten different brokerage houses, and selling orders for twenty thousand shares through ten other houses?

As said before, intrinsic values and prices almost always approach each other in the long run. But the run may be so interminably long, the mills of the gods grind so slowly before James R. Sharp his kind have finished and true values restored, that thousands of speculators investors as well, may have sold out disgust and at a loss.

But do not jump too hastily to the conclusion, reader, that the interests use their time in bilking the poor outsider. They do, more or less, but also they are constantly doing one another and themselves. A man reputed to be worth or twenty million dollars was very extensively, and apparently himself, not long ago in the market time he, single-handed, conducted movement in a low-priced but railroad stock. At that time he was to be trading through a well-known of excellent connections and high ing. Through them he was carrying thirty thousand shares of the the price kept rising the members firm themselves became more and cited and finally put all their own customers into the stock.

The speculator who had start movement did not actually tell to buy. But his actions spoke louder words. Everyone connected with became enthusiastic over the Meanwhile, of course, wholly unknown them, he was selling an even larger through other firms and using ment he had created for purposes tribution.

Pool Operations

Indeed, the legal history of the New York is filled with litigation how pool managers and partners out on one another. Wall Street has had the feeling that capitalists are two great classes—those whose terest in life is the construction ment of industry, and those who greatest joy in the manipulation market place. In the last analysis value of a stock usually depends which group the managers of a belong to. One of Wall Street's descriptions of the stock-market is that "For a nickel he would on which his grandmother was to

It is a fact to which attention called that manipulative operations mors, alleged inside and confidential mation and tips seem to play slight part in the market prices of of the largest corporate issues. This was not true perhaps in the of the United States Steel Corporation if it exists to-day it is so skillfully as to defy ordinary detection. This would seem to be true of companies Standard Oil and the American Telephone and Telegraph.

Lest the reader imagine that companies are being unduly favored hasten to add that the average man would not ascribe this concern unearthly virtue on the part of directors and bankers of these Perhaps these gentlemen are this way, but it is also true that the are so large that pools can them.

The Steel and Telephone companies have half a billion dollars of their stock, and the operations of a bear or of a bold pool would be in ocean. If anyone succeeded in boosting these stocks far above value he would bring out such to ruin him.

Then, too, these corporations that there is very little mystery their affairs. Speculation thrives upon mystery, and, of course, and pool operations languish where no mystery. If easily available concerning a company's affairs exhaustive and authoritative its point entirely. After looking ports of the Steel and Telephone the average speculator would silly dealing in hints, guesses and The Standard Oil Company spread forth its affairs in such is quick to deny rumors and apprehensions.

It would be a mistake, however pose that all artificial operations are harmful or are undertaken worthy motives. In a few cases been organized to keep up stocks largely because the been induced to buy at a

One young reporter earning hardly more than twenty dollars a week began to gamble at the beginning of a big bull market. His story is vividly told by an older newspaper man.

"He was always saying, 'Buy yourself some Blank.' 'Oh,' was my reply. We old-timers never would bite, but the suckers bought and made a lot of money. Finally he gave up his job, bought himself a big limousine with a chauffeur to go up and down town in. Then he got into Bunkem Tire and cleared at least three hundred thousand dollars and perhaps more before the crash came. He had an office of his own with his name on the door, with strings of curb brokers going in and out, and his desk covered with comparison sheets and a battery of telephones. Then he put his money into another stock just when the big decline started and lost it all."

Mr. Harriman's Announcement

A newspaperman who had never felt the lure of speculation and had never taken part in it, although for many years in active touch with the Wall Street markets, was once relating an experience to a financier as keen and able as he is conservative:

"Early on a hot August afternoon in 1906 we all learned that E. H. Harriman was to give out an announcement. We filed into the board room and sat down around the directors' table only a couple of moments after the last of the directors had left. Then Harriman himself came in and eying us sharply sat at the head of the table. Without more ado he told us that the directors had just voted to begin dividends at the rate of 5 per cent on Southern Pacific stock and to increase the rate from 6 to 10 per cent on Union Pacific. The news bureau and evening paper men rushed out as soon as Harriman would let them leave the room, but, of course, the morning paper men were in no such hurry. I remember as distinctly as if it had happened yesterday how hot it was in the corridor of the old Equitable Building as the Herald man and I slowly sauntered out toward Nassau Street.

"'Why, I wonder if Union Pacific stock won't go up on that announcement,' I remarked as the thought struck me for the first time.

"'Perhaps it will,' said the other man.

"But that was the last I thought of it for several hours. What a fool I was not to run into a brokerage office and buy myself some Union Pacific! For by that time the next afternoon it was selling nearly 20 points higher."

"No, you were not foolish," said the financier after listening quietly. "Do you realize that if you had the temperament that would have led you into a broker's office that afternoon it would have taken you there a dozen other times on what would have proved to have been mistakes? I once heard one capitalist complain to another that he never got any good information from him. 'Well,' said the man addressed, 'you can have everything in my strong box to-day for what I paid for it, and I will be well satisfied.'"

In conclusion, there is no more significant fact to point to than the censorship that the New York Stock Exchange exercises over the advertising of its members. It opposes any advertising that attempts to sway the judgment of customers by more or less positive predictions regarding future prices. That this censorship is carried out so completely as to include every piece of literature published or letters written by members is contended by no one. It is said that this would be physically impossible.

The London Stock Exchange is even stricter, brokers being prohibited from advertising altogether or from addressing anyone but their own customers. Very little provision is made by members of the London Stock Exchange for customers' rooms, for blackboards and other similar means of inducing ill-advised speculation. These bare facts regarding the policies adopted by the two greatest stock exchanges in the world point more conclusively than all the rest of this article to the danger involved in the purchase of stocks on tips and rumors by the average speculator. The authorities of the world's two leading stock exchanges, from the experience of a hundred years, know that it can't be done.

CHICAGO NEW YORK

"My Wild Irish Rose" is an adaptation of Dion Boucicault's great stage success, "The Shaughraun" (the ne'er-do-well). The plot deals with Ireland during its early struggles. Pathos, tragedy and comedy are blended to just the right degree. Produced with an all-star cast.

"My Wild Irish Rose" is a triumph of adaptation from one of the sweetest Irish stories of all time. A great picture.

"It breathes the love that Dion Boucicault would have put into it had he had the screen."

"The most delightful Irish story of the period, magnificently done."

"An emotional thrill in every scene."

"A new beauty given to this 40-year success by Vitagraph's reverent treatment."

"A picture that portrays the Ireland of that period faithfully. All that Boucicault lacked to make his great story greater was the screen—and Vitagraph.

"My Wild Irish Rose" will be shown at your favorite theatre soon. Watch for it.

THE LANGUAGE OF THE ANGEL

(Continued from Page 5)

own mind. Should he lie? He had lied many a time to get donations; lied with a clear conscience, cheated, almost stolen money to keep things going. And Chic always fell for one particular lie—hunger. He was something of an epicure. It dated way back. Hunger. He had never forgotten those days. Who could? And sly old Mudgett knew that all he had to say was: "Chic, I've scrimped and scraped, haunted the public markets, bargained, beat down and begged; but it's come to necessities. The milk bill isn't paid. Food. Just slip into the dormitory, second floor, some night after supper, and hear them—crying." And he could visualize those well-fed hands guiding a pen over a large pink check—four figures. He had no compunction about lying, none in the least. It wasn't that. He started in.

"Chic, I've scrimped ——"

But there old Mudgett stopped. Something he had never felt before stopped him; an invisible yet physical force. And something put a thought in his head: "Well now, what kind of a heaven is this you're going to build—founded on a lie? Fine foundation for heaven—lies!"

"I've scrimped and scraped, Chic—and, well—they have plenty to eat," said Mudgett. "I want money for something else."

Immediately Chic became intensely hard-hearted—his natural self. He pushed the calendar away from him across the glass-topped desk with an impatient gesture. "Not a cent! Do you think I can build whole blocks of houses? That's what you want it for—that monument to yourself! Think I'm going to build monuments to Thomas A. Mudgett! Not a sou marquee! Imagine! A pauper from whom the Government is taking half his income building a monument to Tom Mudgett! That's too thick, Tom. Not a cent."

"It isn't for the new home," said old Mudgett. But here his new morality slipped a cog. "Money," said he, "for necessary repairs. I got to have the fourth floor fixed up." Again his morality slipped—an entire set of cogs this time. "We—we're overcrowded. Say, Chic, suppose—just suppose a certain foundling home had been overcrowded thirty-seven years ago this August."

"Cut it out!" snapped the broker. "You're blackmailing!"

"Just suppose ——" repeated Mudgett shamelessly.

"Not a cent! Income tax. I haven't got a cent, I tell you."

Mudgett shrewdly read the thoughts back of the sudden pallor of the man behind the desk, and with hardly any effort at all the intensely practical head and shoulders of the home triumphed over all inconvenient moral qualms.

"Chic, couldn't you cheat the Government a little in your tax return? Just a little?"

"Cheat our Government! I—me!" barked the broker. "How can you be so damned naïve?" He threw back his head and choked with mirth. "Cheat the Government a little! A—a little! Tom, you old—you—you —— Bless your—your pure and innocent heart, I'd give a check in five figures if I had a heart as crooked and—and pure as yours. I'd ——" He pulled his desk drawer out against his ample stomach and extracting a large check book jabbed the cork-handled pen into the ink. "A hundred dollars a word. That's what I'm going to give you for that. A hundred dollars a word. Count the words: 'Chic — couldn't — you — cheat — the — Government—a—little—in—your—tax—return? Just—a—little?'"

"Fifteen words," said Mudgett solemnly.

"Fifteen hundred dollars," said Chic. He started to write, but his stomach, shoulders and hand were shaking so mirthfully he had to give it up. "For charity," he managed to enunciate between grunts. "For charity! I—Tom, you don't mind—I got to tell this in the Street. Too good to keep. For charity! A cheat-the-Government-a-little charity!" He scratched his name to the check and coming around his desk pounded old Mudgett on the shoulder as the latter made for the door. "Keep it up, Tom. Cheat, lie, steal, blow up the U. S. Treasury; but feed those kids."

Mudgett turned at the door. "I say now, if you knew what this check is going to be used for you wouldn't laugh. You'd be too happy to laugh. I'm going to build a kind of heaven on the fourth floor [illegible] No humbugging: the real thing. [illegible] blue walls and—maybe a little [illegible] ming—you know, like heaven might look."

III

AS THOMAS A. MUDGETT [illegible] from the bowels of the earth [illegible] eighth Street a hoydenish March [illegible] lifted his derby and sailed it into the [illegible] Mudgett made a grab, missed, [illegible] stood balancing on the edge of the [illegible] transfixed by the sight of his hat [illegible] the feet of a dray horse. The horse [illegible] his forefoot with fetlocks hanging [illegible] great hoof. Mudgett said a short [illegible] The hoof seemed to hesitate, fling [illegible] then step over the derby; and to [illegible] this remarkable miracle the horse [illegible] the derby with its hind foot and Mudgett reaching down picked up his hat [illegible] gutter.

"Well now, well now!" said Mudgett, astonished and delighted.

He wiped the gutter water off as [illegible] could, straightened the brim, which [illegible] slightly broken, and entered the [illegible] Shackelton, Buck & Garvey.

Shackelton, Buck & Garvey were [illegible] architects who during the past few [illegible] had made and altered plans for the [illegible] foundling home. Mudgett was [illegible] However, Mr. Buck maintained: "[illegible] Mudgett's all right. Penurious, [illegible] he's all right. Don't mind him at [illegible] of understand him. Figure it out [illegible] Mudgett got his first peep at life [illegible] the bars of a crib in a foundling home [illegible] his first glimpse of the sky in the [illegible] was polishing. He's driving at [illegible] worth while—that new foundling [illegible] The way he hangs on—scrapes, [illegible] lies! His tenacity—not half bad."

This was the golden-hearted [illegible] Buck had of seeing humanity. He [illegible] the brilliant member of the firm—[illegible] ton was that, Garvey the dynamic [illegible] the humanitarian. Good combination [illegible] fine successful firm: Shackelton, Buck & Garvey, architects.

But as old Mudgett knew well, [illegible] Shackelton, Buck & Garvey were [illegible] renovation work. They did palaces [illegible] ings, theaters, churches, courthouses [illegible] a cathedral, it is true, but around [illegible] of Mr. Buck's office were large water [illegible] graphs of twelve of the finest in Europe [illegible] haps this was significant—an artist's [illegible] ambition of Mr. Buck, humanitarian.

Mudgett had paused at the door [illegible] Mr. Buck's office, holding his derby [illegible] under his left arm. He pulled [illegible] then without further delay commenced [illegible] sing his sparrowlike song.

"Just a little piece of work [illegible] building, Mr. Buck. Cheap. Must [illegible] Glass across the front—light, sunshine [illegible] Cheap."

"All three—light, sunshine and [illegible] free," Mr. Buck reminded him [illegible]

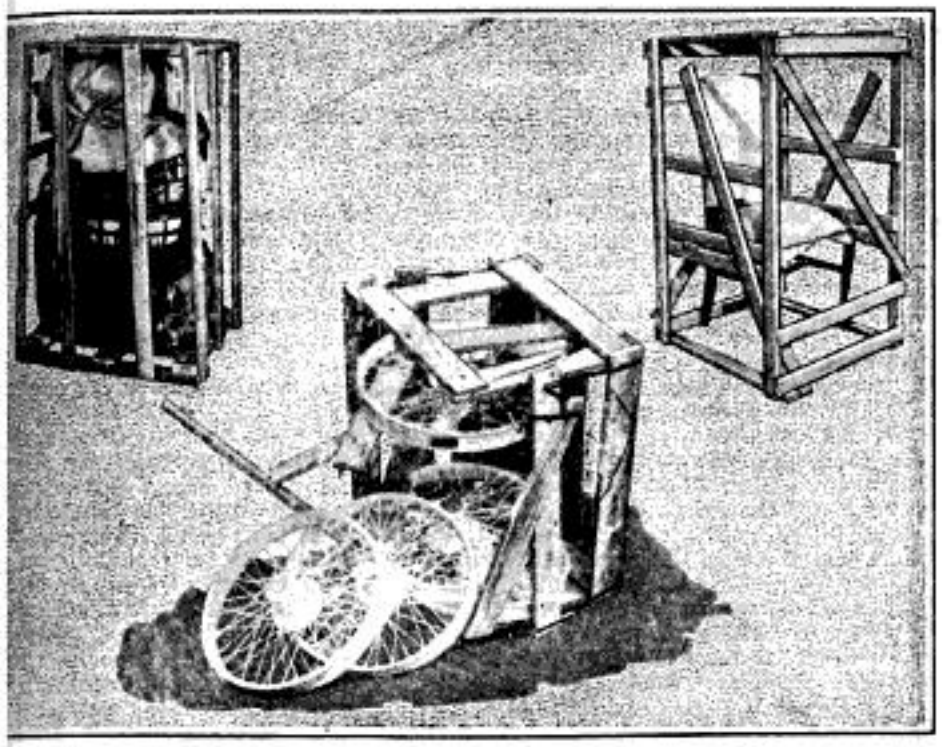
"Must have them," insisted Mudgett [illegible]

He seated himself, knees agape [illegible] of Mr. Buck's desk, and went [illegible] Extraordinary the things Mudgett [illegible] One huge room reaching all the [illegible] the front of the old brick building [illegible] the babies; antechamber; the [illegible] proof walls. Portholes high up [illegible] large room and the antechamber [illegible] were other things: One nurse's [illegible] bath. Yes, he wanted that. Nurse [illegible] and bath. And, he had almost [illegible] a small dietary kitchen. Must [illegible] kitchen. Complete plant, cut off [illegible] rest of the house. He reached [illegible] nermost pocket of his vest and [illegible] intensely practical and somewhat [illegible] tious manner pulled forth a [illegible] smoothed it out on Mr. Buck's [illegible]

"I've got to have enough out [illegible] furniture and furnishings."

Mr. Buck glanced at the check [illegible] good-humoredly. He made a few [illegible] tions, sent for a young man [illegible] figures, and handed them to Mudgett.

Mudgett, refusing to believe [illegible] looked close, then glanced [illegible] broken derby and cleared his throat [illegible]



"I haven't got that much. I [illegible]

The intensely humane architect [illegible] his shrewd crestfallen client [illegible] this for, Mudgett—the fourth? [illegible] are you going to use it for?" Over [illegible]

Old Mudgett prepared to [illegible] utter a lie, opened his mouth, and [illegible]

"WHEN traffic again reaches a normal quantity much freight will go to pieces in transit by reason of insufficient packing unless a very material improvement in packing is effected."

The above paragraph from the report of a division freight agent of one of the leading railroads of the country will suggest to many business men the importance of checking up on their present methods of packing their goods for shipment.

• • • •

At the left are shown a few specimens of faulty crates—by no means exceptional instances. You will find scores of such crates at any freight terminal, anytime. They help pile up the claims for damaged freight which every year mount into millions of dollars.

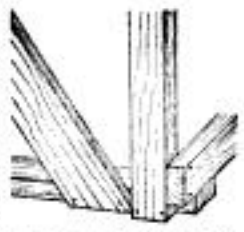
• • • •

The services of a Weyerhaeuser crating engineer are available to any shipper who thinks that his packing methods might be improved.

Does the Proper Packing of Goods Pay?

ASK any jobber or retail merchant what he thinks about the value f proper packing.

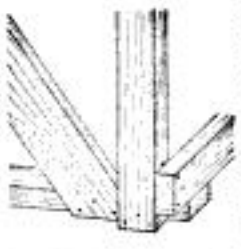
The chances are he will name ıose shippers whose products ways arrive in good condition—ady for immediate use or sale. o needless repair costs; no damge claims and allowances to haggle er; no lost parts to replace.



He will probably tell you that this one reason why he likes to do ısiness with them.

HIPPERS in all lines are find- ing that proper packing makes ling easier. The elimination of mage claims and allowances eeds collections and increases ofits. Very frequently, too, they ve found it possible, through scific crate design, to reduce, maially, their packing costs.

One large manufacturer has ed 28% in lumber on one crate, % on another, and more than % on a third. His total savings lumber and shipping weight ount to over ten thousand dol- a year. And in each instance redesigned crate has proved re efficient than the one formerly d.



roper crate construction is no longer a matter of guesswork. The engineering principles upon which it is based are now thoroughly established by the experience, observation and experiments of the U. S. Forest Products Laboratory, the railroads and many large shippers as well.

In the same manner that merchandise is being designed, tested, redesigned and tried out, so, too, are the crates which are to carry these goods being designed and built to meet successfully the hazards of transportation at a minimum cost.

THESE illustrations show how a few important details of construction can increase the strength of a crate. In the upper picture note that the frame members are held by two nails driven in a row, while in the other, three nails are used and they are staggered. Greater holding power is thus obtained and the danger of splitting is materially reduced.

The double mitre on the diagonal brace shown below also gives a bearing against the upright frame member, thus transmitting any thrust it might receive directly to the frame of the crate rather than to its fastenings, as would be the case above.

The proper size, thickness and kind of lumber, and the size and spacing of nails, will vary with the requirements of each individual crate. The strength of a crate can often be increased when necessary without increasing the amount of lumber used.

The Weyerhaeuser organization has for years been at work on this problem—collecting and analyzing the facts, so that every foot of lumber it sells for crating purposes will deliver 100% service and at the same time effect the greatest saving for the shipper.

As a result, this organization now offers to the industrial user of crating lumber the services of a practical crating engineer. Without cost to you we will send this man to your plant, to check up your crates, and with the co-operation of your shipping department to redesign your shipping containers to fit in each case the products to be packed.

Lumber is the standard material for shipping containers. For this purpose, this organization offers to factory and industrial buyers, from its fifteen distributing points, ten different kinds of lumber of uniform quality and in quantities adequate to any shipper's needs.

A BOOKLET, "Better Crating," which outlines the principles of crate construction and explains the personal service of Weyerhaeuser engineers, will be sent on request to manufacturers who use crating lumber.

Weyerhaeuser Forest Products are distributed through the established trade channels by the Weyerhaeuser Sales Company, Spokane, Washington, with branch offices at 208 So. La Salle Street, Chicago; 1015 Lexington Bldg., Baltimore; and 4th and Roberts Sts., St. Paul; and with representatives throughout the country.

(Continued from Page 146)

The invisible force he had felt in the Broad Street office took hold of him again, making him inarticulate. He gazed down at his dilapidated derby, still wet and streaked with gutter water. He hadn't been able to tell Chic that the foundlings were hungry. What was coming over him? It was expedient, necessary to lie a little now and then. He argued with himself—he had lied, after all, to Chic, told him exactly what he wanted to tell Mr. Buck right now: "Overcrowded—the home's overcrowded, no more room." All he had to do was to repeat this in order to touch the humanitarian heart of Mr. Buck. He glanced shrewdly at the clear, spectacled eyes of the architect. Again he opened his mouth, just as something whispered inside him: "Heaven built upon a foundation of lies."

Old Mudgett trembled with the battle going on inside of him. "No," he gulped against his most intensely practical judgment, "there's room enough, but ——" His derby rolled to the floor unnoticed; he leaned his wide flat chest hard against the walnut desk. "I know you'll keep all I'm going to tell you a secret until—until the experiment's finished. You won't say anything." And he told Mr. Buck his master idea.

Before Mudgett had finished Buck had risen, looked with unseeing eyes at the sepia prints of cathedrals, sat down again and leaned his elbows on his desk—ejaculating now and again: "Interesting! Say, Mudgett, it is an idea! Why hasn't somebody done this before? Interesting!

"Now look here." This was when Mudgett had finished and was reaching uncertainly to recover his derby. "To put it squarely, you want the fourth floor, front, to look as much like heaven as possible, don't you?"

"Yes," admitted Mudgett. "I didn't say so, but that was in my mind. They come from heaven. You believe that, don't you? I say, Mr. Buck, you believe that, don't you?"

Mr. Buck did not commit himself. "As much like heaven as possible."

"Yes, yes." Mudgett glanced at the architect a little suspiciously. "But remember—cheap."

Buck laughed. "Leave it to me."

"You'll fix it up—cheap?" The beads of sweat were standing out on the thin bridge of his nose. "Azure-blue walls and ceiling?"

"Azure blue," repeated Buck.

"Light, sunshine, air?"

"Glass across the entire front, facing the south," declared the architect. "All the south side will be fixed so it can be thrown open."

But even in his ecstasy old Mudgett couldn't refrain from singing his sparrow song: "You'll do it cheap? And you won't forget the listening apparatus and—the portholes? I got to see and hear, keep records, be out of sight."

"Leave it to me," insisted Mr. Buck. "Nothing will be left undone. Interesting." He studied his shrewd, penurious patron with a whimsical gaze. "More interesting, I think," said he deliberately, "than you realize. Anything else?"

Mudgett pulled his elongated ear, fumbled with his derby, arose and leaned over Mr. Buck's desk. "Just one other thing. Gold trimmings—real eighteen-carat gold-leaf trimmings. I'll pay for it," he gulped. "Just a little somewhere around the walls—gold leaf."

Buck continued to scrutinize him. "It's going to be interesting," said he softly to himself. "Why the gold trimmings?"

"Well now—well," faltered poor old Mudgett, "it used to be sort of my idea of heaven—a touch of gold somewhere."

"I understand," said Buck, and pushed a carefully creased bit of paper toward his patron. "Don't forget to take this. Use it for furniture. You'll need all of it."

Mudgett stared incredulously. Slowly his talons closed on the fifteen-hundred-dollar check. "You mean you'll bill me for the work?"

"No," said Mr. Buck. "I'm going to build this heaven for your foundlings without charge."

Mudgett hung there, gaping, then put the check in his innermost pocket, moved toward the door, fumbled with his derby. "I say now, I'd like to pay for that gold leaf myself."

Buck did not move for a long moment after the door had closed; merely gazed at the sepia print of Notre Dame on the wall facing his desk.

"Interesting," he said finally to t "to see what this experiment is goin to old Mudgett himself."

IV

TO ALL outward appearances M spent the remaining part of the noon holding tight to his derby, and still to his check. He allowed himself blown in the direction of East Ei there, on First Avenue and Avenue in the side streets and alleys, he ha beat down and begged in one secon store after another—but bought no gle article of furniture. At the moment in each bargain, after a and dickering until the secondha was shouting hoarsely and waving like windmills in a tornado, old would end the negotiations by pu ear and saying, "Well now, put th Maybe I'll come back to-morrow he would depart abruptly, leav astounded merchant gasping and

His lips sang his sparrow song: cheap, cheap"; but his cavern was heavy. Hadn't he a check pocket? Wasn't Mr. Buck going the fourth floor, free? Then what matter? Mudgett couldn't answer question; merely stalked into secondhand store and started th all over again with the same purchases.

At Thirty-sixth Street a youn shabby coat brushed by, stoppe corner, opened a solid-looking and switched on the arc light glanced up at the sky. Dusk h over the city. Lights were in the Streams of people were crowding streets. Suddenly he wanted t at the foundling home. He m Subway station, but walking wa He walked.

w, what's the matter with dhand thing in heaven!" ate white-enameled cribs inst the wall.
er silenced all sound from me. High in the wall of were five peepholes as nd made of crystal-clear at the side of each hung a listening apparatus by means of which the slightest whisper in heaven could be heard.

The room of Miss Bax was neat and nurselike. Finished in soft gray, it matched her eyes; and relieved by a warmer color, a shade of rose, it matched something concealed, no doubt, beneath her level gaze. Adjoining was her own, her very own bath; and near the bed a little instrument, like those in the anteroom, brought the voices of the angels within reach of her dreams.

How can one mention the dietary kitchen, a complete plant, in connection with these celestial things?

Heaven was locked and barred—at the foot of the stairs leading up to the fourth floor; and again, the door of the front room itself. A chatelaine with keys hung from the matron's slender waist, another set of keys was deep in the baggy pockets of old Mudgett's breeches.

In short, with only one exception, heaven was complete. It lacked nothing—save the angels. Not a foundling came to the home in May. Mudgett paced his office and railed at Miss Bax as if it were her fault. "Another day has passed and you haven't a baby on the fourth floor; not one."

Climbing the three flights old Mudgett would peep in through the portholes at the cool, immaculate room with its seven empty cribs and azure walls, test the listening apparatus, enter heaven itself, walk gingerly across the soft cloudlike flooring, turn on the water in the bath, try all the faucets, hot and cold.

Then opening the huge windows he would lean his forehead against the copper screening, stare out at the uncompleted building across the narrow street and lose himself in gloomy thoughts.

"Not one; not an angel in heaven."

Wasn't May a propitious month for the abandoning of babies in the vestibules of rich men's homes, in the dressing rooms of Pullmans, in the hushed naves of churches? Wasn't it? He visualized a cathedral, a ponderous pile that had required a hundred years in the building; he thought of the cathedral's vast amazement at finding upon its immutable stone steps a tiny, squirming infant. Curious thoughts came to Mudgett in this spacious, cool, heavenly room, but not a single frantic telephone call came from private home or police station. Not one. The fourth floor, front, held out its arms, its sunlight, its silence, its gold leaf and open plumbing, but the lure of its all-comprising heavenliness was to no avail.

More and more shadowy became old Mudgett.

Then came the fifth of June—just an ordinary June day: sunlight, lazy shadows and green leaves. At the time Mudgett was downtown hanging like a vulture over a public market. Loaded down he returned through the park, paused to watch the children roller-skating, and arrived at the home late in the afternoon.

Miss Bax met him at the door. He was perplexed by something unusual in her tranquil eyes. The bundles slipped from his gaunt arms.

"I say now—you don't mean a baby has come?"

She nodded her head and started to warn him of something; but Mudgett had rushed past her.

Up the narrow winding stair old Mudgett leaped. He unlocked doors with a trembling hand, pulled himself together before entering the anteroom, tiptoed in, and glued his eye to a peephole.

The first crib was occupied. Mudgett was transfixed by the sight of that bit of humanity waving diminutive fists above the smallest of white pillows. He wiped his incredulous eyes, strove to clear his vision.

"I say now ——"

But there was no mistake about it—the first angel in heaven was black as the ace of spades.

Mechanically old Mudgett placed the listening apparatus to his elongated ear. He could hear a noise; not a cry, but a gurgle. Delighted, he fumbled for the pencil attached to a shelf, just the right height, on which was a roll of writing paper. Again he listened. "Ya-ya-ya." Mudgett transcribed, wrote down: "Ya-ya-ya, ya-ya-he, goo-o-o-o, ya-he."

"I say now, what does it mean?"

He hung there until dusk came through the great south windows. Miss Bax entered the anteroom noiselessly. Mudgett felt she was back of him, beckoned her, placed the apparatus to her ear, whispered: "It's talking! Listen!"

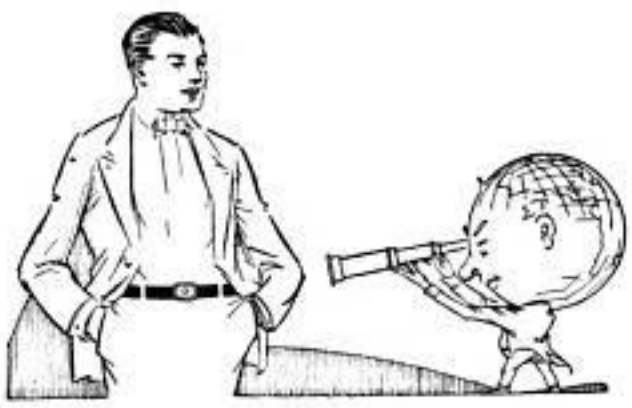
ROGERS
"Pacemaker $40." WARDROBE TRUNKS

This Condition is Dangerous

RUN-OVER heels are the forerunners of serious foot troubles. This condition known as *heel distortion* is caused by the ankle and heel bones being forced out of line under the weight of the body.

This twisting causes a strain and interferes with the proper functioning of the foot. Sooner or later some part of the foot structure gives way.



This condition can be corrected by placing in the shoe a pliable leather device so formed as to counteract the abnormal tendencies of your foot. By this Wizard Lightfoot System fallen arches, callouses, leaning heels and other foot troubles are successfully corrected without pain or discomfort. Relief is immediate.

The most progressive shoe dealers employ one or more experts who have studied the subject and know how to correct foot troubles by the Wizard Lightfoot System. Ask your dealer if he can provide you with this service. If not, phone Tel-U-Where Bureau or write us and we will tell you where you can get relief.

Wizard Lightfoot Co., 1765 Locust St., St. Louis, Mo.

ALLEN'S FOOT-EASE

Shake ALLEN'S FOOT-EASE into your Shoes and Sprinkle it in the foot-bath

Takes the friction from the shoe, freshens the feet, makes walking a delight

The
Antiseptic, Healing powder
for shoes that pinch and for tired, aching, swollen feet, corns, bunions, blisters and callouses.
1,500,000 pounds of powder for the feet were used by our Army and Navy during the war.
In a Pinch, use ALLEN'S FOOT-EASE

He plucked her by the sleeve, whispered excitedly, "Boy or girl?"

"Boy," whispered the little matron.

Presently he drew Miss Bax through the shadows of the anteroom out into the hall.

"Are you terribly disappointed?" she asked.

"Disappointed?" echoed Mudgett vaguely.

"That the first angel is black?"

"I say, couldn't we call him—brown?"

"No," said the little matron. "He's black."

"Well, if you insist we'll enter it that way. Let's go down and make the entry."

Miss Bax had duties in connection with the first angel. She joined Mudgett presently in his office. He was leaning over a huge book.

"Date: June 5th," wrote he. "Date of birth." He glanced questioningly over his shoulder.

"Approximately, June first," she informed him.

Mudgett made the entry. "Color." He squirmed a little. "Black," insisted Miss Bax. Obediently he wrote "Black." "Sex: Male. Father and mother: Unknown. Found." Again he glanced over his shoulder. Where had the first angel come from? Miss Bax looked at him uncompromisingly. "Amsterdam Avenue near One Hundred and Fourteenth Street; the back yard of a grocery store." Old Mudgett mumbled something.

"What did you say, Mr. Mudgett?"

"I said, white or black, they all come from the same place." Nevertheless he wrote at her dictation.

"Now," said Mudgett, "his name?"

"His name?" echoed Miss Bax.

Mudgett pulled his left ear, cleared his throat, but did not meet her eyes.

"It's natural," said he, "it's logical that the first thing they say is of course their name. That's logical, isn't it, Miss Bax?" She did not commit herself, nor did she protest.

Mudgett made the entry "Name: Ya-he," and closed the book.

"There are two things," Miss Bax pronounced determinedly. "First, that veil. I can't wear it. It gets in the way. He grabbed it five times while I was bathing him."

Mudgett wheeled around in his [illegible] chair, faced her. "Who grabbed it?"

"That little black imp—Ya-he. [illegible] wear it."

The man rose up, hung over her [illegible] eningly—the manner he used to [illegible] the men in the markets and [illegible] stores. "You must, you must!"

She was unperturbed. "I won't."

Mudgett fumbled for his ear, sat [illegible] dejectedly in his chair. "I've set my [illegible] on it. Not a human voice, not a [illegible] face for two years. It's the experience [illegible] There was not the least sign of softness on the part of Miss Bax. An altogether [illegible] idea popped into Mudgett's head. "I've always believed," said he, "I've always maintained to myself, ever since [illegible] remember, that nurses should wear [illegible] You understand? I say now, you understand? A veil to reduce the chance of contagion, breathing germs."

"Do you suppose I have germs, Mudgett?"

"Well, now—I didn't mean that."

"I won't wear a veil. It isn't practical."

"If you won't," said Mudgett [illegible] "I know you won't." He [illegible] lessly over his secondhand desk, [illegible] head between his hands.

Miss Bax reached her hands [illegible] him, almost touched him. "[illegible] could tuck it in. I'll try tucking [illegible]

Then there was the second [illegible] pose the building should catch [illegible] fourth floor locked and barred."

"I say now, the home is [illegible]"

"No, it isn't, Mr. Mudgett [illegible] tively isn't fireproof."

"But the new home will be," [illegible] Mudgett stoutly.

She disregarded this. "There [illegible] place to leave the keys."

"I'll always be in when you [illegible] decided Mudgett. "I'll take them after them."

"You—taking care of [illegible]"

"But I say now, why not?"

And for the first time in [illegible] the lovely little matron smiled.

"Will you wear a veil?" she [illegible]

Old Mudgett changed the [illegible]

That Slim Gray Pamphlet

t!" exclaimed the Chief Draftsman, "it can't be finished
n days."

e," explained the Consulting Engineer to the famous sugar
ho had called in person to demand greater speed, "we
ork on the Refinery plans and put every draftsman onto
Cuban job of yours."

nen! That's your look-out, not mine," declared the Presi-
. "Both plants must be modernized before the new crop
Every tenth of a cent a pound in production cost means
a day."

ne everything possible. You can't get the trained drafts-
d—"

a don't need college professors to figure a few hangers,"
'resident. "Didn't you answer my wire ten days ago and
all ready but hangers'?"

aring types and dimensions of 10,000 hangers is some
he Chief Draftsman.

ve the plans brought in so he can see what it means,"
nsulting Engineer.

ites later a keen looking youth laid a roll of tracings on
d with them a sheaf of neatly written pages. "Here's
angers on that job," he said hesitatingly.

angers!"—"Where did you get it?"—"Who worked it
hat kind of hangers?"

cs—like—really looks like a complete schedule," said the
Engineer as he turned the sheets headed—Pipe Rings—Wall Coil Hangers—Saddle Hangers—Pipe Rolls. "Who did this?"

"I did," said the boy nervously. "Took them right out of a slim gray pamphlet."

"Pamphlet—what pamphlet?"

"Why, the hanger book."

"There's no book you can get this kind of data from," said the Chief Draftsman, turning to the Consulting Engineer. "It's a matter of careful calculation by experienced men."

"Just a minute, gentlemen," interrupted the sugar magnate. "Boy, you mean a volume—not a pamphlet. Where did you get it?"

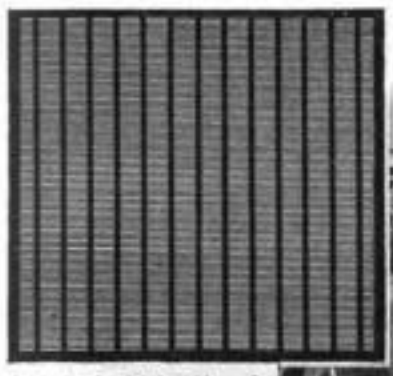
"I got it out of the Chief's waste basket," he replied, drawing the slim gray pamphlet from his pocket and handing it to his questioner.

"My waste basket?" exclaimed the Chief Draftsman.

"Excuse me again, gentlemen," interrupted the sugar magnate. "I'm overdue at my office. Please 'phone me in half an hour if this lad's schedule checks with your plans. I'll bet a hundred to one it does. Companies like Grinnell don't print booklets like this unless they've got something valuable to say. Good morning."

* * * *

Half an hour later the Consulting Engineer told him over the 'phone the figures checked and that blueprints and specifications would be issued for bids the next day, and added, "We are specifying Grinnell Adjustable Hangers. Their use should cut the time of installing two weeks."



Cut out the coupon. Send it in today. Or simply write and ask for the Hanger Booklet. Address Grinnell Company, Inc., 302 W. Exchange St., Providence, R. I.

This is the Philco Slotted Rubber Retainer

In any battery the power producing active material tends to slough off the plates as the battery grows older. The slots in the Philco Retainer are so narrow that active material cannot freely pass through them, but is retained on the plates for a much longer life.

Winter will never come again—

IN the balmy air of early summer, it is hard to believe in winter—

Hard to believe that there are such things as cold, stiff, hard starting motors, long nights with the headlights draining your battery hour after hour, weeks of heavy snow that keep your car idle and your battery without a freshening charge.

Winter will never come again! You scoff at the battery man who urges, "Think of next winter."

All right, then, let us forget winter. Buy a battery that will surely stand up *in the summer*—a battery that is able to endure overcharging on long trips, that will work faithfully in the blistering heat of a shadeless August noon.

It takes just as big a battery—and just as good a battery—to stand hot weather overcharging as to insure reliable cold weather starting.

The Philco Retainer Battery—guaranteed for two years—will stand more overcharging than any other type—

1. Because it is oversize.
2. Because of its non-buckling, Diamond Grid plates.
3. Because of its quarter-sawed, hard wood separators.
4. Because of its Philco Retainers, which hold the active material on the plates even under severe overcharging.

Because of its proved summer merits, the Philco Retainer Battery is the type you should buy for use during the next few months; and, even at the risk of being far sighted, you might bear in mind that it is an excellent battery for winter as well.

Because, you know, winter might come again this year.

When he suddenly takes to soap-and-water—

Your boy!

For all too short a while he will be in your home.

There comes a time in every boy's life when his dislike for washing suddenly disappears, and for mysterious reasons he begins to scrub.

While he is still with you, encourage this cleanliness. "So great is the effect of cleanliness upon man that it extends even to his moral character."

Give him plenty of Ivory Soap for his face and hands. He can wash a dozen times a day with Ivory and his skin will still be soft and smooth.

Give him Ivory for his bath—it lathers so richly, it rinses off so quickly and "It floats!" It is pure and mild; white and fragrant, too.

In all these seven different ways, Ivory is a manly, friendly, fine soap for boys.

Whenever soap comes into contact with the skin—use Ivory.

he Reminiscences of a Stock Operator—By Edwin Lefèvre

arket was so weak that you could see the customers counting their dead . Presently they would enter upon the second stage of the most tragic eeping in the world—the translating of paper losses into actual ations. But the first step came harder, because stock-market gamesters pe with all their might. Clerks walked about the room almost on tiptoe ilty—as though the fatal bull tips had come from them and a reckoning d. But if you had asked one of the customers about the weather outside answered that it was not yet three o'clock.

were posting the quotations on the board, slipping the green cards into tful little snaps. They told the battle's story in mournful numbers, the ! The falling fractions were shots striking below the water line, and the ith its phantom freight of hearts' desires, was sinking. Paper profits! s!

!

as the speculative favorites that crumbled, like Siam Oil or Acme Motors. the picture became that of a Satanic torchbearer racing down an ricks, setting fire to one after another. And how they blazed!

Up in smoke!

The quotation boys had to hustle like mad now. You could see that the ticker was leaving them behind. Some of the stocks began to break whole points at a time. Once the man by the ticker yelled "T. M. 51! 50½! ¼! 49!" and then, as though all their heads had been pulled by one string, everybody turned to look at a sharp-nosed, thin-lipped chap with tortoise-shell goggles. Then they all looked away, as though it were indecent to watch his face. He was long five thousand shares of that stock, and had often laughed at them for piking.

It brought back the old days to me so that I could have sworn I heard once more the exultant yells of the winning bears in the board room. And I saw again a seething mass of winners and losers—winners pushing their luck, and losers bent on not losing any more than they could help—help at the top of their voices.

AWAKE AND HUNGRY

Digitized by Google

A carnival of audible greed! Fear straight from six hundred throats! I remembered the Northern Pacific panic of 1901, when I had heard and seen ——

"It reminds me of old times, Bill," I told the head of the firm.

He was sticking close to me, I suspect, so that nobody would be ill-bred enough to ask him embarrassing questions—for instance, whether he thought the break had gone far enough. But he shook his head.

"Times have changed," he muttered absently, as though this were the first time in years that the ticker had relapsed into ancient vices.

What had happened was that after a dull, drooping market for a few weeks the bulls had begun to tell themselves that the worst was over. The little daily bleeding of the past fortnight, they hoped, would obviate the need of total amputation. Then—the crash! Unexpected, as always, by those who having expected to win had forgotten everything else.

I took another look at the customers. I saw men young and old and middle-aged, short and tall, thin and fat—and all of them strangers to me. Not one of the dozens who had traded in that office when I had an account there a few years before was left. And yet these, their successors, were curiously familiar. It was the eyes. They all had the dazed, hurt look of men who dread to admit that they are wrong.

A parasitical office man, extremely well dressed, as all salesmen of bunk naturally feel they must be to hold their jobs, was circulating about the room, skillfully registering both condolence and resignation. It was really too bad, but you had to expect sudden showers in April! Of course it was a beastly shame it should pour on the holiday that you had planned to go to the links. He did it very well. Practice!

One of the customers was moved to speech. He asked with a cheerfulness that anyone could see was sheer bravado, "Say, Fred, what's the news?"

"No news," answered the omniscient Fred, who in balmier weather always began his remarks with "I hear."

Lawrence Livingston's Raid

PERHAPS the customer remembered this habit, for he asked, "What do you hear?"

"Nothing," answered Fred. The customer frowned. Fred, who was paid by the firm to abstain from silence, went on: "The less you hear the better. It's all bear lies anyhow. If you listen you'll hear nothing but calamities." He paused. Then slowly, impressively: "I'm a bull on the country. You can't make me believe that in twenty-four hours the soil of the farms has become barren, the springs have dried up and the sun has gone on a strike. No matter how hard I look I can't see any change in the crops or in the steel trade or in ——"

"There must be a reason for this break!" the customer was goaded into interrupting.

"Reason?" echoed Fred scornfully. But the customer's face made him add quickly: "I'll get in touch with Jameson and find out what they say over on the board." And he left.

Some of the other customers had listened to the colloquy apathetically. They were beyond the rescuing stage. Only a miracle would help them; and they had fatigued themselves praying for one.

The office man, Fred, came back.

"Of course!" he announced from the threshold. "I knew it! I said so!"

The customers resentfully watched him advance to the best oratorical position in the room—beside the frantic stock ticker. If he knew and had said so they had not heard him; and so they had not sold out before the break; and so he was to blame for it.

"Lawrence Livingston is raiding the market!" he cried proudly.

The years fell off my shoulders. I was again young and enthusiastic, and life smiled on me, even in Wall Street. I laughed for sheer happiness.

Fred turned quickly, a frown on his face. Remembering that I was a friend of the boss and therefore a potential customer, he unfrowned. But he could not help turning a brick red. The customers stared at me; it was the first laughter heard that day in that office.

My friend, tolerant by temperament and tactful by profession, turned and asked me affectionately, "What bit you?"

"The vanished past!" I answered cheerfully.

The customers politely looked away; only a man who already owes his brokers laughs when they call for more margin.

"That's a little more obscure than usual. I guess I am getting too old for your epigrams," said my friend.

"And I am getting younger every minute, listening to Fred's," I assured him.

My friend, by reason of his calling, always played safe where his customers were concerned. He scented unpleasant observations on my hobby—which is that no man can consistently beat the game—and he intelligently forestalled the danger of anyone else overhearing me by smiling benevolently and remarking, "Come along, my boy!"

I followed him into his private office and closed the sound-proof door. He motioned me to a chair. I took it. He looked resigned.

"I am not going to scold you for letting your customers overstay the bull market," I assured him.

"No, but I suspect you are going to speak a piece on the stupidity of professional men in Wall Street. I haven't got a soap box for you, as I heard Robert W. Chambers say they supply you with at your cryptlike club, but I'll bite. Why did you laugh?"

"When your young man Fred, whose job seems to be to keep the customers from thinking, announced so positively that the slump was a bear raid by Lawrence Livingston I felt that I was in Wall Street in the late '90's or early 1900's, when I was conducting my Wall Street column in one of the afternoon papers."

"But Livingston wasn't operating then," protested my friend, who not only is literal minded but is also one of the most useful governors of the New York Stock Exchange.

"He's always been in Wall Street," I said.

He looked so puzzled and then so perturbed that I hastened to explain:

"He isn't a stock operator, he's a stock excuse—only his name has changed slightly. It used to be Jim Keene; and before that, Charley Woerishoffer; and before that, Daniel Drew. You commission men early discovered that what the average sucker—that is, what your average customer—wants is not reasons but excuses—excuses for his trading, for his taking unbusinesslike chances in another man's game, for the inevitable misbehavior of the market at an inconvenient time, for his own imbecility and that of his broker. Any explanation except the truth will do to account for the obvious—when the obvious happens to be that the customer is an ass. He loses his money, but gives you commissions. So, when the end of the bull market comes and the profits are not taken the commission brokers have to excuse themselves for not calling the turn."

"Say!" interjected my friend. "You know it's no use to tell your customers to get out. You might as well save your breath, and let the old mule kick them."

"I have no fault to find with that," I said. "What I object to is the habit of telling the public that some big operator is raiding the market whenever the natural slumps come along to prove that the bull market is over. Do you wonder I laughed when Fred said Larry Livingston was raiding the market?"

"What makes you so sure that Larry Livingston was not raiding the market?" My friend used the excruciatingly polite tone of voice that humorless people use to squelch friends. It's bloodless.

But I answered with a grateful smile, "Common sense makes me sure. This is a bear market, and too many weaklings are still long of stocks. The break is too violent and painful to be relished by men whose margins are nearing exhaustion. It is, nevertheless, legitimate—that is, logical. Merely to suspect Livingston of selling stocks in bulk at this level is a blood insult to him. You talk as though he were a room trader in the old days gunning for stoploss orders. Why in blazes don't you tell your customers the truth?"

"Do you know Livingston?" asked my poor friend.

I was willing that he should derive what [illegible] could from my ignorance, so I said "I do not."

And sure enough, he smiled!

"I thought so!" he said. "You may not think that [illegible] has changed since you quit it fifteen years ago, but I [illegible] that it certainly has."

"Hang it, man, I write a yearly article to prove [illegible] hasn't," I protested. "I've done it for years."

"Yes, yes, I know. And they make me laugh [illegible] doubtless meant my articles.

"Where are they wrong?" I asked him, not [illegible] naciously.

"The principle is wrong. You pick out the [illegible] never change ——"

"I pick out stockbrokers, their customers, the [illegible] ogy of all speculators everywhere, the theory [illegible] tion, the amazing short-sightedness of the Stock [illegible] governors, and the fact that the unbeatable game [illegible] speculation remains as unbeatable as it ever [illegible] customer, without whom there would be no [illegible] brokers, to-day is smooth shaven, and sixty years [illegible] wore a beard or an imperial. But he comes to Wall [illegible] on the same errand and quits loser, just as he [illegible] And if you are a fair sample, I'll say that the [illegible] brokers have not changed either. What have you [illegible] say to that?"

"Only this: That I know Larry Livingston [illegible] the market."

"And how do you know that?"

"I know it!" And he smiled most sapiently [illegible] as though I were a customer.

"Are you one of his principal brokers?"

"No, but his brokers have been big sellers."

Who Was Wall Street's Biggest Plunger?

"IT'S a persistent delusion of men like you that [illegible] operator's buying and selling can always be [illegible] In Governor Flower's time everybody knew when [illegible] buying because he wished it known. But nobody [illegible] when he was selling. Can't you imagine what [illegible] when people like you thought they knew what [illegible] doing?"

"Livingston's selling, all right," insisted my friend [illegible] ing my look he added, "I can tell."

"Well, if you can tell, he must be an ass," I told [illegible] true friend. "And I've heard he has quite a [illegible] you'd call it."

"He has. That is why I know he is back of [illegible] He is the biggest plunger Wall Street ever saw."

"There you go again!" I couldn't help [illegible] "Nobody really and truly is the biggest plunger Wall Street ever saw. Whoever happens to be [illegible] the moment becomes the legendary hero of [illegible] I remember hearing somebody remark that Charley [illegible] ishoffer was the biggest plunger of all. Deacon [illegible] who in his prime was himself no piker, was [illegible] declared very impressively that James R. Keene [illegible] an equal in Wall Street for magnitude of [illegible] brilliancy of execution. Then old man Smith [illegible] Forty-niner, chipped in to say that all these [illegible] were shoestringers alongside of Anthony Morton [illegible] hero of the Chancellorsville rise—in 1864. I [illegible] And he mentioned Henry Keep, who was known [illegible] the Silent; and Bill Travers, who after [illegible] Siamese Twins a long time turned to P. T. [illegible] asked gravely: 'B-b-brothers, I s-suppose [illegible] two Jeromes, Addison and Leonard, and [illegible] never even heard of, who had been Napoleons [illegible] in their day."

"I know. But the country is richer now [illegible] are on a proportionate scale," he said pityingly.

"Well," I reminded him, "it isn't so very [illegible] one of the famous Chicago crowd told me that [illegible] player of the bunch, bigger than John W. Gates [illegible] was Loyal Smith, who lived and died unknown [illegible] you brokers. But no reliable figures were [illegible]

"By This Time Next Year We'll All be as Lank as Ironing Boards. I've Seen Some of the French Things"

Miss Laura Belle. Last night—last night I was intending to call, and had walked up that way, when I heard you singing and knew you had returned. I would not intrude on your first night at home."

"Father said you'd been coming—he says you're a good listener. He was pleased to have you. Did you like my song—last night, Mr. Baines? It's one that's all the rage now." She regarded him innocently, but tiny flares of mischief were lit in her dark, long-lashed eyes.

"It was beautiful—beautiful! You have a most melodious voice, if I may say so, Miss Laura Belle."

The flares of mischief widened ever so little. "Come in some evening," she said, "and I'll sing it to you. It's called Darling, Kiss My Eyelids Down."

With a little nod of dismissal she floated on up the green-tunneled street, her white ruffles burgeoning about her like the petals of a rose blown by summer winds. Aaron Baines turned dizzy at the sight, and the recollection of the words of the song: "Darling, Kiss My Eyelids Down!" He blushed and wriggled, in an ecstasy of embarrassment and delighted discomfort. Slowly he turned back to the parsonage and entered the bare room known as his study, where, on an uncompromising plain deal desk, lay the pages of his sermon for the next Sunday morning. He was to preach on the need for fellowship and unity, taking his text from Ephesians, fourth chapter, fifth verse: "One Lord, one faith, one baptism." Subtly by this sermon he meant to weld some mounting differences in the choir, where Miss Teeny Spalding, the veteran alto, was conducting a feud with the organist, little Miss Mamie Pride, who, though young, was spunky, and had declared that she wouldn't drag the hymns for any old woman with a mustache that ever lived. Also, there was dissension in the Ladies' Aid; Mrs. Elihu Staley holding views on basket socials quite diverse from those of Mrs. Wesley Higgins and Mrs. John Richardson. To all these warring elements Aaron Baines was addressing himself through this sermon, warning them of the dangers of dissension, and describing in stern detail how unbecoming it was to the humble Christian heart.

But now the square sheets of white paper danced before his eyes, taking a tantalizing likeness to the worldly flounces of Laura Belle Walker's dress. And Laura Belle Walker was an Episcopalian, and therefore neither of his faith nor of his baptism.

He had made notes for appropriate hymns: Blest be the Tie That Binds, as a matter of course; and Giver of Peace and Unity; he hoped Miss Teeny and Miss Mamie wouldn't glare at each other while they were singing it. The third hymn he was not quite sure about. Should it be How Sweet, How Heavenly is the Sight or Blest be the Dear Uniting Love? Perhaps the latter was a little too much like Blest be the Tie That Binds. He tried to consider them, looking up each in turn in his hymnal. Even as he did so the memory of Darling, Kiss My Eyelids Down, murmured in Laura Belle's soft cool voice, flicked across his nerves and turned him blind to the needs of religious decision. Involuntary words came to his lips: "Behold, thou art fair, my love. . . . Thy lips are like a thread of scarlet, and thy speech is comely. . . . Honey and milk are under thy tongue. . . ." He started guiltily as the door opened.

It was his aunt, Mrs. Hallett, a widow of advanced years and querulous wrinkles, who had been snatched away from the cozy fireside of her favorite daughter's home to serve as housekeeper and companion to her nephew until such time as he should marry. It was an event she longed to hasten. Unavoidably she went at it the wrong way.

"Mrs. Staley's sent over a lovely twin-mountain cake," she said. "Miss Eve made it. She's got a wonderful hand for cake."

"Aunt Lucretia," said Aaron patiently, "I do wish you wouldn't interrupt me when I'm at my sermon. It's very kind of Mrs. Staley and Miss Eve, but you could have told me just as well at dinnertime. And anyway, I care very little for cake."

"I'd like to know since when," complained Mrs. Hallett. "You ate most of that raisin loaf we had last week, and

Digitized by Google

it was heavy. I simply can't teach that girl to make cake. Oh, these darkies—they're so stupid."

This was her continual grievance, and Aaron sighed as it appeared. He could not say to her, as he wished, that if Mrs. Staley wouldn't send so much of Miss Eve's cooking over for his enjoyment, and so determinedly throw Eve into his society, his life would be much more carefree. Miss Eve was a nice girl, a very nice girl; and Elihu Staley, her father, was a deacon in the church, and liberal; but beside Laura Belle Walker's dark beauty and assured, sophisticated way Eve's childlike fairness was inevitably blotted out.

After a few more words as to the inadequacy of negro help Mrs. Hallett withdrew, leaving Aaron with his sermon. His left ear burned and tingled. He rubbed it absently. Was it a sign someone was talking about him?

Laura Belle Walker had progressed only a little way farther down the street when a girl darted out from behind a hedge of flowering quince, exclaimed with pleasure, and seizing Laura Belle gave her a couple of hearty kisses.

"Lovely thing—I'm so glad you're back! Come up on the porch and visit a while!"

"Eve—dear!" They kissed again and, arms entwined, paced up the walk and found informal seats on the Staley porch steps, Laura Belle above, Eve perched adoringly below.

"Oh, Laura Belle, that hat! And listen—is it true that crinolines are out?"

Laura Belle nodded solemnly. "By this time next year we'll all be as lank as ironing boards. I've seen some of the French things—you wouldn't believe how funny they look. And I've learnt the sweetest new quilling, for a sack, or in points on an underskirt! Would you like to try on my hat?" She took it off carelessly, and Eve received it with reverent finger tips. "Not that way—a little farther forward—your chignon isn't quite high enough. But it's most becoming. You ought to have one like it, only with a blue ribbon to match your eyes."

"Please Don't Look as if I'd Slapped You. I'm Only Doing What is Best for You"

Eve had run into the hall to see herself in the mirror of the hatrack. She came out smiling. "I'd adore to have one, but pa'd never let me wear the daisies. He says it's sinful to imitate the Lord's handiwork."

"Oh, pooh!" Laura Belle's perfect underlip registered scorn. "Your father's notions! Well, it would do nicely just with the ribbon; streamers, too, of course. Come over to-morrow and we'll talk about it."

"Tell me some more about clothes," begged Eve. "Of course you've got a lot that's new. This dress is a dream. What's the stuff?"

"Crêpe *maretz*. It has too many ruffles to be elegant, but I so love ruffles I coûldn't resist them. I really haven't much—a white alpaca with an underskirt of purple silk, a morning dress of figured muslin with straps of Cluny and sulphur yellow ribbons run under, a *gaze de chambery* satin-striped in blue. You must see that! And I traveled home in one of the new spotted winsey suits, Bismarck brown, the skirt so short it shows my ankles! I felt downright bold in it, but it's the fashion. It has a loose sack, and long hanging sleeves. A little brown Neapolitan hat with metallic acorns and oak leaves goes with it."

Eve Staley became wistfully envious. "Oh, to be you, Laura Belle! You have such stylish things; you go up North and see the sights and get acquainted with new people. I've never been farther than Baltimore in my life."

Laura Belle gave a sigh and a half pout. "And I'd rather stay at home with father and Toothpick and cross old Aunt Zilly. And of course Ashby. Heavens, if Ashby could only get his mortgage paid off! He's so proud he won't ask me to marry him till he does."

"How—how can you talk about it—like that?" Eve was blushing for her. But the color in Laura Belle's smooth cheek did not waver.

"If I didn't talk about it like that I'd cry my eyes out—and red eyes are hideous. Well, forget Ashby. What about the young reverend—hmh? How's he coming on?" It was at that moment that Aaron Baines' left ear began to burn.

"Laura Belle, he's just gorgeous! He preaches the most eloquent, moving sermons! Everyone likes him so much. Weren't you—weren't you talking to him down street—just now?"

"Then you were peeping from behind the hedge! I thought so. We simply said how d'ye do. And I thanked him for going to see father while I was away. He said he'd heard me singing last night and since I was feeling rather wicked I asked him if he liked the song—and told him its name. You should have seen his face. Eve—I was singing Darling, Kiss My Eyelids Down!" She trilled with laughter, laughter that she could not check, even at Eve's shocked surprise.

"Oh, Laura Belle! What did he say?"

"He blushed, just like you're doing. He's a goose!"

"He isn't!"

Laura Belle clapped her hands. "So the wind's in that quarter! You'd make a perfect wife for a minister, Eve."

"Don't—don't! How can you!" Eve pressed her palms over burning, scarlet, telltale cheeks. "It's—it's immodest."

Laura Belle became grave. "But you do care about him—I can see that."

Eve's childlike eyes turned to her trustfully. She whispered, "I wouldn't tell another soul in the world—but—oh, I do like him—I do! Only—he doesn't care a thing about me. He's as stiff as a poker with me, and all the other girls, just the same. And mother pushes me at him—I get so ashamed. Laura Belle, what do the girls up North do when—when they like a man—and he doesn't even look around at them?"

Laura Belle rose, swinging her wide hat by its flying streamers, her smile belying the seriousness of her voice. "They run after him and make him look. Oh, Eve, if a woman's clever enough she can get any man she wants! Yes, she can. I know it. The man has nothing to say about it."

"I can't. I wish I could. You've had so many beaux—show me, Laura Belle."

But Laura Belle was already trailing down the walk. "If the chance comes you'll know what to do and need no

showing. Besides, I have to use my cleverness to get Ashby. He's most pig-headed—in some ways he's a perfect fool. That's why I love him." Her delicious laughter lightened the summer air. "Come over soon and see my toilettes. And I'll sing all the new songs for you. I've got to go down to the grocery and get some sugar for Zilly, so she can make sugar-dumplings for dinner."

The Reverend Aaron Baines' left ear now ceased to burn. But he was left in the foreground of Eve's thoughts. She sat, hugging her knees, watching Laura Belle's swaying white figure flecked and dappled by the golden shafts of sunlight that managed to filter through the leafy guard of the ancient maples. Presently that energetic matron, her mother, appeared at the front door.

"Wasn't that Laura Belle's voice I heard? I have come out, but I was right in the midst of putting new ticking in the spareroom pillows. I'm all over feathers yet."

"Yes, it was Laura Belle—she's back yesterday. I'm going up to see her new dresses. Ma, she had a lovely hat—but it's got flowers on it. D'you suppose pa would mind if I got one like it? It looked so pretty on me. So stylish."

Mrs. Staley pursed her lips. She wholly sided with Eve, but she belonged to a generation to whom Paul's admonishment of "Wives, obey your husbands" was not addressed in jest. "I'm afraid he would. You know how he does go on over things like that, and—I don't know—I sort of think Mr. Baines feels the same way. You set your heart on it." She hastily changed the subject. "How is Laura Belle, and how's she looking? In all kindness, I don't see why she doesn't get a rich husband up North that she's been going long enough to pay anybody, and she's a real tease. She's shoving along in age, too. She'll be twenty-five come her next birthday."

"She says she wants to stay with Ashby. She said it right out."

"For all sakes!" Mrs. Staley threw up her amazed hands. "What's she got to do with Ashby Walker? Poor as poverty; and the last of his down to skin and bone, as you might say, and with his mother's temper—and all the Ashby positions like red pepper and vinegar. He's not much to look at, either; so dark and glum. Maybe she was just fooling."

"I don't think so."

"It's a queer way for a girl to talk, fooling or not. She's had plenty of real nice young men after her, and it's not a case of last chance. Eve—I sent a loaf of cake over to the parsonage."

"Mother—I wish you wouldn't." But secretly glad.

"There's nothing in a little neighborly attention. Don't be silly." Mrs. Staley divined the satisfaction beneath Eve's protest. "If you'll press the lace on my new lawn I'll run it in for you this afternoon."

"All right. But before we decide about the lace I want to see Laura Belle's things. She always has such ideas."

"That'll be nice. Lottie Richardson's having a new dress. I'd like yours to be different."

They went within, moved by the common sound competition. If Lottie Richardson was to have a new dress, and the Richardsons' pew farther up the aisle than the Staleys', then Eve must obtain distinction. Without a spoken word they knew each other's thoughts.

At the same moment it occurred to young Mrs. Walker that if Miss Walker was going downtown when she left she would inevitably have to come uptown again. She hurried to the window and was distressed to find that she could see only the shortest distance in either direction, so that it would be practically impossible to detect the young lady in time enough for him to get down and traverse the front porch and walk to intercept her. Vague plans floated through his mind. What if he put on his hat and went up toward the Walker house? What had he done last night? But no, he must not be seen to act aimlessly, and it would be hard to simulate purpose. Besides, there was the danger of meeting members of his flock—an almost certain danger, since Methodists figured greatly in the majority in the little town.

not see him as anything but the tow-headed
d left to her care by her dying sister. All
lder than he, had petted and babied the little
he had never quite outgrown that sheltered,
ldhood. For all he tried to be grave and impressive in this, his first charge, he was aware at times of an amiable indulgence among the older members of his church. But he raged against it, not knowing that he unconsciously provoked it.

For in spite of his years at the seminary, and his ordination, in spite of his unquestioned serious purpose and his sincere goodness, in spite of a certain compelling power in pulpit oratory, power that was based on conviction and honesty—he was still a boy in heart, in character. Life had been easy for him. He had had none of the hard knocks, the bitter emotions that mature, that slay youth. He was innocent about women, and shy with them, which caused the older ones to long to mother him and the younger to long to marry him. Girls made him uneasy, and so he was, even as Eve had told Laura Belle, uniformly stiff in his manner with them. Secretly he had rich, vivid dreams of a rare and beautiful woman, to whom he could offer a heart's devotion and from whom he would receive a melting, adoring, playful tenderness. None of the pleasant pretty girls who crowded his Sunday school and listened so attentively to his sermons fulfilled this dream. But Laura Belle Walker—ah, she was different!

He had met her when he had first come to Arborville. Very shortly after, she had gone away on one of her periodical visits to those unknown magical Northern relatives. She had made a profound impression on him at first, and her image had been a fastness for his imagination, blurring and obscuring the other nearer figures, making it easy for him to ignore their innocent, bold importunings. Now she was home again, and lovelier, more compelling than ever. He had seen her and talked to her, and she had been amiable, though a little careless of him, and he was not blind to the fact that she had not hesitated to flout, though not unkindly, his cloth, in asking him to hear that warmly titled song. He was not quite sure whether he was happy or miserable. It was his first, his very first love affair, and he was thrown into a strange disorder by it.

While he ate a generous slice of Eve Staley's twin-mountain cake he was still intent on Laura Belle, and he wondered avidly what she had thought of him. He was afraid he had seemed not at his best this morning. Had he been too awkward—too confused? He remembered that he had taken off his hat and stood with it in his hand, a pleasant Southern custom he had observed and gladly adopted when he had first come to Arborville, for it expressed some of his reverence toward women—in the abstract, that is. But it expressed so little of his reverence for Miss Laura Belle! What had she thought of him? If he only could know! What was there behind her smiling, impersonal regard? Surely, a need so imperative as his, an interest so profound, an affection so burning—he admitted those daring words to his description of his state—must awaken some slight response from her. But she had been inscrutable. Properly maidenly of her, no doubt, but not very satisfactory.

He would have been wounded to the quick and abased in woe if he could have known that Laura Belle thought of him not at all, save casually as Eve Staley's certain prey. Laura Belle was thinking entirely of another man. Her first question on reaching home had been "Father, is Ashby coming to supper on Friday night?"

To which Major Walker had somewhat testily replied, "Ashby always comes to supper on Friday nights. I have received no notification of any change in his accustomed habit."

And Laura Belle had said no more, only reflected that it was a long time until Friday. She contemplated taking the major's hack and riding out to see Ashby, as she did occasionally, but on second thought she decided to remain at home, unpack her trunks and freshen her wardrobe so that when he did appear she might be irresistible.

She directed Zilly to have mock terrapin, hot beaten biscuits and peach shortcake for Friday night supper; Ashby's careless bachelor establishment was not strong in the cuisine. Likewise Laura Belle resolved that she herself would mix the toddy that night, and raid the major's best bourbon for the purpose.

Before Friday arrived Eve Staley came, intent on fashion. Laura Belle took out everything, and the two girls sat in her great airy bedroom with its bare whitewashed walls and old rosewood furniture and discussed styles with animation. Eve tried on the dresses that appealed to her, cut the pattern of a sleeve, made a rubbing of an eyelet edging, drew her delicate brows together over the folds in the new quilling. Laura Belle directed and

JOAN OF ARC SMITH

"Men Have Rebelled Before," She Says, "Under the Lash! And Even Under the Leadership of a Weak Woman"

ILLUSTRATED BY W. H. D. KOERNER

By George Kibbe Turner

INVESTIGATORS, male and female, said the fat foreman, all up and down—investigating, advising, helping the worker. There's fewer than there was back in the war, yet plenty still; and never will this feller I'm telling you of—this Brawny Bill Wolfert, the big fellow worker—forget the last one who came investigating just here this spring; that one with the bobbed blond hair, without no name—and what she done to him.

He was up here in New England at the time, organizing one of them radical cotton-mill strikes, when they come to him at strike headquarters and says one more of those social-investigation parties had blown in. For he always had them come to him—the local union—to handle all stuff like that.

"Young or old?" he asks them.

"Young," they says.

"Aha!" he says. For of course they are mostly all that—these investigators and advisers—under twenty-five anyway, just lately out from some school or college.

"All female?" says Bill, giving them that steady glare he had. "Or just two-thirds of them?"

"There's but just one man amongst them, and him an advanced retired minister," they tell him.

"Take them down," says Brawny Bill, "by Bloody Bridge and The Row and Turtle's Misery. You know!"

"Sure!"

"Only hold back," he says, "on The Row till the wops' dinnertime, and they can see them lapping up the macaroni and the little devilfish, or some other starvation sloppy mess."

"Sure!" they says. "We'll see to that."

"And don't forget the bloodstains of the Syrian at the Bridge," he says; "nor the tenements at the Misery that the board of health condemned and the sheeny got the injunction keeping open."

"Don't worry," they says. "We'll show it all to them."

"See you do," he says. "Don't forget. Feed it to them raw," he says.

"The rawer it is the quicker they snatch it from your hand. For that's what they're here for—investigating. The more they take away the more they give them that hire them for their money."

"Sure!" they says.

"And don't be afraid what you feed them neither, for they'll never know the difference."

"Sure!" they says. "We've had them here before," and went off with them, down to Turtle's Misery, and showed them the dumps with the water in the cellar and the blinds lopping off.

"Is it possible?" says the advanced retired minister.

"It's not only possible but it's there before your face," says the thin one with the brown face and the tight mouth. "You see it, don't you?"

"It makes my blood boil—boil!" says the one with the blond bobbed hair—the big fine-looking one that I was telling you of.

And then up they come to The Row at dinnertime, when the Dagos are in messing with their loose and crawly food.

"Hi, Tony!" says the union boys to the wop, hollering. "The squid he good, hey—like the roast beef?"

"Ah, what you do," says the wop, spreading his hands, "when you got no work?"

"Is it possible?" says the advanced retired minister. They called him that, the boys claimed, because he got advanced ideas on labor, and then went and married a rich woman and retired. "Do human creatures subsist on such food?"

"I told you what to expect," says the thin brown one with the peckish nose, "didn't I?"

"You did. I see you did," he says, bowing slow and thoughtful.

"But what will we do about it?" says the big fine-looking blond one with the bobbed hair. "That's what I want to know. For it makes my blood run cold."

And then they took them on to the Bridge, and showed them the brown spots on the walk and side.

"You can see for yourself," they says, "what they done to him!"

"This will need some explaining!" says the thin brown one, poking them with her finger—"some explaining!"

"Was it true he thought this striker—this Syrian—was drawing a knife on him?" says the advanced minister.

"Not a word! Not a word!" they says to him. "I guess you must have seen that in the newspapers!"

"Exactly where I did see it—exactly!" he says.

"We're trying to tell you the truth," they says; "not a pack of lies like the papers. We just let you see it for yourself."

"I warned you; I told you what to expect," says the brown-faced one with the bitter taste to her words. "And they call this civilization!" she says.

"I'm shaken—definitely shaken by this!" says the advanced retired minister.

"It's time we all were," says the lively blond one. "And get up and do some fighting over it. We'll be around for some days," she says to the boys [illegible] showing them. "We're going to [illegible] and probe this to the bottom."

"To the muddy bottom!" says [illegible] brown one.

"Sure! Come round any time," [illegible] them. "You ain't seen the half [illegible] round and we'll show you what you won't see in [illegible] newspapers. We'll show you the bare, naked truth," [illegible] says.

And then they went round back to Brawny Bill's quarters.

"You fed it to them raw, huh?" he says.

"Sure! We gave them the truth," they says.

"And they gulped it down just like I told you!"

"Sure!"

"Aw, what good does it do?" says one of them, "that trouble—for them things! What good [illegible] after they swallow it?"

"They spread the truth," says Bill.

"The bunk, you mean!" says the man who was on the outs with Bill. "Who'd believe them?"

"Who'd think anybody'd believe all the bunk talists jam into their hand-fed press," he says. "[illegible] eat that up all over, don't they? What do they [illegible] it—the public—one way or the other! It's the [illegible] with us," he says—"with these investigators [illegible] to investigate—that's how they make their [illegible] we want to have them, and spread the truth—[illegible]

"Ah, what do they know about it—them [illegible] porters, either one! How can they, with the [illegible] give to it?"

"What do you care," says Bill, "so long [illegible] spreading the truth for us? And to-morrow [illegible] them more of it to spread," he says. "We'll [illegible] right, don't fret!"

So to-morrow, in the morning, they came [illegible] told him that one of them was there wanting [illegible] personally.

"Should I give her the time?" says Brawny Bill; [illegible] is she?"

"She's the one with the bobbed hair we were [illegible] of," they says. "We didn't get her name."

"What is she—the usual?" he says.

"Not by no means," they says. "She's not [illegible] sloppy sisterhood," they says. "She combs her [illegible] carries clean pocket handkerchiefs. She's a [illegible] She's a looker. You'll want to see her, Bill," [illegible] for he had quite a reputation with the women.

"Show her in. I'll tend to her case," says Bill, [illegible] and stood waiting, stiff and staring and hard [illegible] she came in and shook hands, her color high and [illegible] shining. And she hit him so hard from the [illegible] sat there all the morning filling her up with [illegible] wages and statistics and war stuff—that red [illegible] blue soldier dope.

"Can I—can I stand and work with you and fight with you," she says, "shoulder to shoulder—starting now? For economic justice? Will you let me?"

"Let you? Sure!" says Bill, still and ugly. "Come on! The more the merrier! The more fighters the more justice!" he says. For he seen he had her going.

"I'll do it!" she says, springing up and staring at him hard, her breast heaving.

"I didn't get your name when you come in," says Bill after a minute or two.

"No," she says. "I didn't give it to you—that's why!"

"Oh!" says Bill.

"For I'm not giving it out—yet. Not my real name—for certain reasons. For I don't want certain persons—or a certain person anyway—to know I'm here," she says.

"That's all right. I understand. We've all got a right to our own name—if we want to hold it back," he says, looking hard and experienced. "I ought to know that, if anybody, after the way mine's been used."

And then when she was gone he sent some of the boys to find out from the others who were there investigating with her what it was. For, now he'd seen her, he was more than willing to have her around.

"She can fight shoulder to shoulder with me all she wants to," he says. For he was, like I said, an old hand with the women. Being separated so long from his wife, he was like a bachelor, and he knew a looker when he seen one.

But the others in the investigators couldn't help him neither.

"We don't know who she is. She just came and asked if she could join our party and we said yes, she could," says the brown investigator with the scalding tongue.

"She's a mystery," says the advanced retired minister. "She has so far refused to divulge her actual name to anyone. So we merely call her Miss Smith."

"All right," says Bill. "Let it go at that. Leave her case to me. She put the miss in mystery—and I'll pick it out maybe."

For now she'd come to him and told him she'd made up her mind she'd stay right there and fight with them.

"For that motto you gave to me. For economic justice—for man, woman and child!" she says, looking at him all flushed up and excited.

"You couldn't have no better, that's sure. It's been my motto from a boy, and always will be," says Brawny Bill, looking back at her stern and hard and indifferent, the way he did at them when they got that way.

So then on the third day the other investigators had done their investigating and gone, having got the thing all settled in their heads. But she stayed right along—to keep on with the strikers. And right away she wanted to get out and get started.

"Let me speak to them," she says. "Just tell them how I feel and how we're all going to get economic justice for all, high and low, man, woman and child!"

"Right for you!" he says. "Start after it!"

For he had had them before, and he knew how the newspapers yelled and pleaded for them, to get stuff with women in—hot, throbbing stuff with women in—from the selling of the first national bond tied with a blue ribbon down to shooting strikers. And he'd had all kinds of women agitators and investigators around in the radical movement—advertising—and he knew their worth. But this one surprised him at the first go-off, showing up in the meeting on the common with a blood-red dress on, and going after the mill owners and their wages and the lack of justice and the threatening of the militia.

"Let them beware! Let them watch their step!" she says. "How they send these militia against these men here—these workers! They're mostly ex-soldiers, and they can fight. They have shown that. All they need is a leader who'll do the same, and they'll have that. They'll have that," she says, her face more and more red and rosy and excited. "For if no one else will lead them I will! I'm not afraid! I'm out for economic justice for man, woman and child! And no one can scare me down!"

The reporters were walking up and running around by this time, pleading with Brawny Bill and the others to tell them who it was so they could put it on the wire right away.

"You'll have to ask her," says Bill, short and ugly. "I don't know. She won't tell me her name. And if she had, I probably wouldn't tell you," he says, insulting them the way he always did the newspapers, yet drawing them on so much the more by doing it.

So they waited and went up to her, crowding around.

"My name?" she says. "I can't give it to you. It's a secret—for now anyhow!"

"Oh, come on—do!" says the newspaper boys. "Give us something we can call you anyhow."

"Call me what you want," she says, tossing back her mop of bobbing hair like a football player and looking fine and big and handsome and careless. "Call me what you want. Call me Joan of Arc, why don't you?" she says, laughing. "She was out leading, fighting the soldiers, and maybe I will before this is through and we get our justice.

THE BLOODHOUND

By Arthur Train

ILLUSTRATED BY ARTHUR WILLIAM BROWN

Holding the Professional Criminals of America So That the Jury Could Plainly Read the Title, He Opened the Book

"NEXT!" The dejected file of prisoners beneath the glaring windows stiffened and limped forward. There were twelve of them—the same number as the minor prophets, the apostles, the tribes of Israel and the officers of King Solomon—a bullet-headed negro in a red sweater, charged with vivisection during a crap game, bringing up the rear. The line bumped along beside the iron grating like a caterpillar, those behind butting forward those in front, turned the corner by the jury box and disgorged two prisoners before the bar of judgment. It was the first Monday in January—pleading day.

"Next!" repeated Phelan, the court captain, standing inside the rail, to McNamara, his whipper-in. "Lively now!"

McNamara turned to the head of the line.

"You two there! Step up here!"

Mr. Dougherty, the tiny, bald-headed clerk with the big mustaches that made him look like an animated mushroom, picked up the indictments on the top of the blue pile in front of him.

"Patrick Mooney and Daniel Mulligan," he intoned, as if officiating at the high altar of the cathedral, "you are jointly indicted for the crime of burglary in the third degree, grand larceny in the first degree, assault in the first degree, receiving stolen goods and carrying concealed weapons. How say you? Do you plead guilty or not guilty?"

Neither of the two made reply.

"Have you counsel?" sang Dougherty.

"Got a lawyer?" interpreted Captain Phelan.

There was a slight bustle on one of the nearer benches as a heavily built man with sideburns came forward.

"I appear for both defendants, Your Honor," said he. "They plead not guilty. Will Your Honor set the case down for the twenty-first for trial?"

The judge nodded and made a note, and the stout lawyer turned away, about to resume his seat.

"Next!" shouted Phelan to the world at large. "Next!"

The taller of the two prisoners—a plug-ugly—wheeled from the rail and started on the return trip. The other did not stir. He was a much smaller man, hardly five feet six, and of a different make altogether. He might have been your plumber, or electrician, or the grocer's clerk who takes your order at the side door; and though his demeanor was more timid than any of these it was, nevertheless, defiant—some spark of courage, or at least resolution, still surviving after his year in Sing Sing.

"Judge—Your Honor," he said huskily, twisting his cap in his hands—"this man don't represent me. I haven't got any lawyer."

Old Judge Watkins peered down from the dais at him over his reading glasses. He then looked after the retreating attorney.

"How's this, Mr. Hogan?" he asked. "I thought you said that you appeared for both defendants."

The attorney paused with a half smile.

"So I did, judge."

"The prisoner Mooney says you do not represent him."

"They're indicted together—for the same offense, committed at the same time. The defendant Mulligan's sister came to my office yesterday and retained me for both of 'em."

"Judge—Your Honor," repeated the man at the bar of justice stubbornly, "I don't know this lawyer and I don't know this man I'm indicted with. I never saw him before that night. I'm innocent, and I want a separate trial with my own lawyer."

Captain Phelan hoisted a blue shoulder and grinned at Mr. Dougherty. It was the old game—the old grandstand play—of seizing this opportunity to make a vigorous denial of guilt in the presence of the panel of jurors, newly assembled in court for a month's service, in the hope that by so doing one might avoid going on the stand later at one's trial, and so escape the disagreeable necessity of submitting to cross-examination upon one's record and earlier history.

"I only got out of prison Saturday, Your Honor," continued the prisoner Mooney, "after serving fourteen months—with an allowance off for good behavior. I'm in no hurry to get back either, believe me! Sunday night I was walking home, and this defendant, Mulligan, here, came along with a bag and began talking to me. Just then a bull jumped out and drew his gun on us. Clubbed me, into the bargain! See that lump on my forehead? He rapped for his side partner and they yanked us up to headquarters, and when they found out I'd been in stir they said I was due for another bit. Then the first cop said he found a gun on me. It's a plant, judge, I didn't have one. What would I want with a gun, judge? What I want is a chance to earn an honest living!"

He made his plea doggedly, yet with obvious hopelessness, for he no longer had any faith in "the course of justice."

Judge Watkins, sent down from Utica by his friend the governor to hold a special criminal trial term and so relieve the congestion in the Tombs Prison, beckoned to Mr. Dougherty, who elevated himself upon his glossy little tiptoes and held a whispered colloquy with His Honor across the edge of the dais. Behind the prisoner on the first row of benches a homely girl in a gray shawl, her broad

ithout consideration to the former or sympa-
latter. He had no bowels or mercies. To
od he astutely made use of a veneer of appar-
of naïve enthusiasm, that often made him
s merely a blunt, well-meaning blunderer.
s no guile of serpent he did not possess, no
his teeth.
Bloodhound, as he was called, was a more
ure in the Criminal Courts Building than
ney John Henry Peckham himself, who was
ve it so, since he shared the widespread be-
had to be a crook in every law office, whether public or private. In fact, he found O'Brien more than a mere convenience, particularly because he could always count upon him for a conviction in any difficult case. As he used to say to his confidential friends: "If the Bloodhound hasn't got the necessary evidence—he goes and gets it!"

Hence, because O'Brien was absolutely an asset and a valuable political go-between, the Hon. John Henry Peckham smothered his personal dislike for the dog and encouraged it to lick his hand. He also was forced to put up with his noise, and his overbearing and swashbuckling ways. For outside the court room—as well also, to be accurate, sometimes inside it—Billy the Bloodhound was a swaggering, blustering sort of legal bravo, wherever he went preceded, surrounded and followed by a cohort of sycophants, clerks, process servers, police officers on special detail, and admirers, who ran his errands, carried his books, bag and papers, bought his theater tickets, did his telephoning, acclaimed his coming and did him lip service, much as we may imagine some Roman senator of the same type to have been accompanied by his bodyguard of lictors who shoved the crowd aside at his approach. All this to Billy the Bloodhound was as the breath of his life, and he played the part, bellowing down the corridors, shouting from the elevators, kicking his slaves in the shins and then handing them out cigars, whispering out of the corner of his mouth about "the big fellow" and "the one next," with so effective an air of mystery that he had everybody buffaloed, and the crowd all swore among themselves and to him that he was the greatest little man on earth.

"Oh, Sir," She Begged, "Don't Let Them Frame Him!"

He was thickset, bullet-headed, with closely cropped reddish hair and freckly sandy skin, and his short aquiline nose and square chin would have made the features of a cigar-store Indian—alas, poor redskin, he deserves an apology!—seem filled with the milk of human kindness.

Everybody feared and kowtowed to him. People who wanted favors of Peckham went first to placate O'Brien, who was supposed to have the boss in his pocket; cops and detectives sought to have him handle their cases; judges were apt to try to conciliate him as a coming man politically, and as possibly the next district attorney. Whenever a star case, a *cause célèbre*, or any matter attracting public attention came into the office, O'Brien sent to the chief clerk for the papers, and grabbed it. He had even been known to send for the papers in a case already assigned to another assistant, and grab that too. He gave out interviews to the papers, assumed the office of "acting district attorney" whenever Peckham absented himself, and likewise frequently when the latter was there, and constituted himself pretty much the whole show.

If one stood for him he wasn't so bad, and if he hadn't been a crook he might easily have been a power for good instead of a power for evil. It was not easy to overestimate that power, for he was the grand vizier of the most powerful public office-holder in the United States, not even excepting the President himself. He could make or break a cop or blast the reputation of any man in the community at will. This the Honorable William Francis O'Brien!

Alas "the law's delay, the insolence of office, and the spurns that patient merit of the unworthy takes"! What price beside him, poor old Ephraim Tutt?

But wait! There is life in the old dog yet—old Tutt, we mean! So far Billy the Bloodhound has but opened the door and entered the court room, and Mr. Tutt has but turned to gaze at him. Let us reserve our lamentations until we see what will happen when they meet. Will not the gods lend courage and strength to the kindly old lawyer, who never yet did aught but good, although mayhap he may have done it in queer ways? And who never retired wholly vanquished from the field of honorable battle?

So, heralds, your fanfares! And summon all to the lists to behold the contest between the Bloodhound and the knight of the stovepipe hat. Blow, bugles, blow! Set the echoes of the forum ringing for the legal joust! Court officers, bawl your best, with "Oyez! Oyez!" and "Hear ye! Hear ye!" pound the railings and shout the honest burghers out of their hats and into their seats, make them move up and on, close the windows, lock the door so that none may escape, and let all who have business in our honorable court now with due deference draw near, give your attention and let Mr. Tutt be heard!

III

BILLY THE BLOODHOUND strutted into the inclosure in front of the dais, bowed to the judge and preened himself before the gaping crowd—the little czar, the Pooh-Bah, the high-cockalorum of the Sessions—as the old lawyer was in the act of consulting his new client. Something about Mr. Tutt inspired Paddy Mooney with instant confidence, and while the court waited he hastily explained to him the circumstances surrounding his arrest. He had no witnesses, he said; he was being framed and he wanted to be tried at once. O'Brien swaggered to the bar.

"Well," he inquired roughly, "how do you plead? What are you going to do? You can't talk there forever."

Mr. Tutt smiled with the old-time courtesy he invoked when in his most dangerous mood.

"I am sorry to have unduly delayed the proceedings, Mr. O'Brien. We plead not guilty, and we ask an immediate trial."

It was at this moment that the devil, in the shape of Delaney the cop, leaned over the rail and plucked the Bloodhound's sleeve.

"S-st, Mr. O'Brien! Put the screws on him and he'll plead guilty. We've got him cold. Here's the gun I took off him—loaded."

He shoved the revolver into O'Brien's hand, and the latter, always willing to oblige, slipped it into his pocket.

"Has he got a record?" he asked sideways.

"Sure! Just out of stir. Caught him with a valise full of stuff he took out of a cigar store. He's an old-timer—Gas House Gang. If he won't plead, stick him right on trial. It's a pipe! A conviction sure!"

The Bloodhound nodded.

"Leave him to me! Here, you!"—addressing Mooney and Mr. Tutt together and as one—"plead guilty and I'll give you attempted grand in the second."

Mr. Tutt gravely shook his head.

J. POINDEXTER, COLORE

By IRVIN S. COBB

ILLUSTRATED BY F. R. GRUGER

Then He Says to Me How Would I Like to Take a Trip to New York City? I Thinks He Must be Funning

MY NAME is J. Poindexter. But the full name is Jefferson Exodus Poindexter, Colored. But most always in general I has been known as Jeff, for short. The Jefferson part is for a white family which my folks worked for them one time before I was born, and the Exodus is because my mammy craved I should be named after somebody out of the Bible. How I comes to write this is this way:

It seems like my experiences here in New York is liable to be such that one of my white gentleman friends he says to me I should take pen in hand and write them out just the way they happen and at the time they is happening, or right soon afterwards, whilst the memory of them is clear in my brain; and then he'll see if he can't get them printed somewheres, which on top of the other things which I now is will make me an author, with money coming in steady. He says to me he will fix up the spelling wherever needed and attend to the punctuating; but all the rest of it will be my own just like I puts it down. I reads and writes very well, but someway I never learned to puncture. So the places where it is necessary to be punctual to make good sense and keep everything regular and make the talk sound natural is his doings, and also some of the spelling. But everything else is mine and I asks credit.

My coming to New York, in the first place, is sort of a sudden thing which starts here about a month before the present time. I has been working for Judge Priest for going on sixteen years, and is expecting to go on working for him as long as we can get along together all right, which it seems like from appearances that ought to be always. But after he gives up being circuit judge on account of him getting along so in age he gets sort of fretful, by reason of not having much to do any more and most of his own friends having died off on him. When the state begins going Republican about once in so often he says to me, kind of half joking, he's a great mind to pull up stakes and move off and go live somewheres else. But pretty soon after that the whole country goes dry, and then he says to me there just naturally ain't no fitten place left for him to go to without he leaves the United States.

The old boss man he broods a right smart over this going-dry business. Being a judge and all, he's always been a great hand for upholding the law. But this here is one law which he cannot uphold and yet go on taking of his sweetening drams steady the same as he's been used to doing all his life. And from the statements which he lets fall from time to time I gleans that he can't hardly make up his mind which one of the two of them—law or liquor—he's going to favor the most when the pinch comes and the supply in the dine-room cupboard begins running low. Every time he starts off for a little trip somewheres and has to tote a bottle along in his hip pocket instead of being able to walk into a grocery and refresh himself over the bar like he's been doing for mighty nigh sixty years, I hears him speaking mumbling* words to himself. I hears him saying it's come to a pretty pass when a Kentucky gentleman has either got to compromise with his conscience or play a low-down trick on his appetite. Off and on, it certainly does pester him mightily.

But just about the middle of the present summer he gets a letter from his married niece, her which used to be Miss Sally Fanny Priest but is now married to a Yankee gentleman named Fairchild and living in Denver, Colorado. Miss Sally Fanny is the closest kinfolks the old judge has got left in the world, and she ups and writes to him and invites him to come on out there where she lives and stay a spell with them and then toward winter go along with her to a place called Bermuda, which, it seems like from what she says in the letter, Bermuda is one of these here localities where you still can keep on having a toddy when you feels like it, without breaking the law. So he studies about it a while and then he says to me one night he believes he'll go, which he does along about four weeks ago, leaving me behind to sort of look out for the home place out on Clay Street.

My wages goes on the same as if he was there, and I has but little to do; but the place seems mighty lonesome to me without the old boss man pottering round doing this and that and the other thing. I certainly does miss seeing the sight of him. Every time I walks through the front part of the house, and it all empty and closed up and smelling kind of musted, and sees his old umbrella hanging on the front-hall hatrack, where he forgot and left it there the day he went away, I gets a kind of a low feeling in my mind. It's like having the toothache in a place where there ain't no tooth to have it in.

And I keeps on thinking about the [illegible] when he'd be setting out on the front [illegible] night time come on, with some of them [illegible] friends of his dropping in on him, and me [illegible] ing them drinks from the sideboard, and [illegible] laughing [illegible] smoking [illegible] ing and [illegible] on; or else [illegible] talking [illegible] the Civil [illegible] war and [illegible] tle of Shi[illegible] all. But [illegible] them [illegible] and [illegible] the old [illegible] away [illegible] in Denver [illegible] rado, [illegible] and [illegible] mile [illegible] and also [illegible] can [illegible] comes [illegible] walk [illegible] front [illegible] dark [illegible] dids [illegible] silver-[illegible] and all [illegible] when [illegible] the [illegible] goes [illegible] of them [illegible] neq[illegible] chimn[illegible] "W[illegible] w[illegible] whose [illegible] took [illegible] fare [illegible] em[illegible] while [illegible] ways [illegible] ain't [illegible] soon [illegible] be [illegible] while [illegible] lived in by people you [illegible] have now gone entirely [illegible]

So after about two weeks [illegible] I gets so restless I feels like I [illegible] very much longer without [illegible] someway. So one Sunday [illegible] two o'clock in the evening I'm going on past [illegible] gentleman by the name of Mr. Dallas Pullam [illegible] he comes out on his front porch and calls [illegible] tells me to come on in there 'cause he wants [illegible] about something. So I crosses over from the [illegible] the street and walks up to the porch steps and [illegible] hat and asks him how he is getting along and [illegible] ain't got no complaint; and he asks me how [illegible] along my own self, and I tells him just [illegible] so-and-so, and then he says to me how would [illegible] a trip to New York City? I thinks he must [illegible] But I says to him, I says, "How come New [illegible] Dallas?"

So he tells me that here lately he's been [illegible] smart about going to New York and staying [illegible] on a sort of a vacation like, and if he likes [illegible] settle there and go into business. He says [illegible] made up his mind to take some likely [illegible] with him for to be his body servant and [illegible] clothes and things and everything, and he [illegible] maybe I might be the one to fill the bill; and [illegible] to me, "How about it, Jeff? Want to go along [illegible] town the once-over or not?"

I sees then he is not funning but is making [illegible] business proposition. I thanks him and says [illegible] I has ever had the crave to follow traveling [illegible] and that I likewise has often heard New York [illegible] very pleasant place to go to, by them which [illegible] and also a place where something or other is [illegible] of the time. But I says to him I'm afraid [illegible] account I'm under obligations to Judge Priest [illegible] of us having been together so long and him [illegible] in complete utter charge of the house. He [illegible] he thinks maybe he can attend to that part [illegible] he says he'll write a letter to the judge [illegible]

*Note by Jeff's amanuensis: In the part of the Union from which Jeff hails, and among his race, the word "mumbling" denotes complaint, peevishness, a querulous utterance.

e kind of a white gentleman that's this here
ear a new necktie or a fancy vest about three
and then he'll get tired of it and pass it on to
hat comes along. Moreover, him and me is
he same size, and I knows full well in advance
just from looking at him that Sunday evening standing there on his porch that the very suit of clothes which he's got on then will fit me without practically no alterations. It's a checked suit, too, and mighty catchy to the eye. So right off I tells him if Judge Priest gives his free will and consent I'll certainly be down at the depot when that old engine whistle blows for to get aboard for New York City. Which he then asks me for Miss Sally Fanny's address and promises he'll write out there that very night to find out can I go.

It's curious how news does travel round in a place that's the right size for everybody in it to know everybody else's business. Before night it has done leaked out somehow that I is seriously considering accepting going to New York with young Mr. Dallas Pulliam, and by next morning, lo and behold, if it ain't all over town! Wherever I goes pretty near everybody I meets, whites and blacks alike, asks me how about it and allows I'm powerful lucky to get such a chance. Mostly, in times gone by, when my race goes North they heads for Chicago, Illinois, or maybe Detroit, Michigan, or Indianapolis, Indiana. No sooner do they get there than they begins writing back saying that up North is the only fitten place for colored folks to be at; wages high, times easy and white folks calling you mister and everything pleasant like that. They writes that there is not no Jim Crow cars nor separate seats for colored at the moving pictures nor nothing like that. But I has taken notice that after a while most of 'em quits writing back and starts coming back. Some stays but more returns, and is verging on shouting happy when they crosses the Ohio River coming in. From what I hears some of 'em say after they gets home and has got a full meal of vittles inside of them, and so is got more time to talk, I has made up my mind that so far as my own color is concerned, the main difference from the South is this: Up North they calls you mister, but they don't feed you!

Still, New York City ain't Chicago, Illinois, nor yet it ain't Detroit, Michigan; and besides, working for Mr. Dallas Pulliam, I won't have to be worrying about when does I eat next. Still, even so, I says to myself that it won't be no harm to inquire round, now that the word is done leaked out anyhow, and learn something more than what little I knows about New York City. But it seems like, outside of some few white folks, there is not nobody I knows who's ever been there, excusing a few head of draft boys which went there enduring of the early part of the war; and they wouldn't scarcely count, neither, on account of them just passing through and not staying over only a short time whilst waiting for the boat to start. Howsomever, they tells me, one and all, that from what they did see of it they is willing to recommend it very highly.

One or two of the white gentlemen which I is well acquainted with, they tells me the same too. Mr. Jere Fairleigh, he takes me into his law office when I meets him on the street and speaks to him about it; and he gets a book all about New York down off of one of his shelves and he reads to me where the book says that in New York there is more of these here Germans than there is in any German city except one, and more Russians than there is in any Russia city except none, and more Italians than there is in any Italy city except one, and more Hungarians than there is in any Hungry city at all, and so on and so forth. I says to him, I says:

"Mr. Jere, it seem lak they is mo' of ever' nation in New York then whut they is anywhares else. But they does not 'pear to be nothin' said 'bout 'Merikins. How come, suh?"

He says he reckons there's so few of them there that the man which wrote the book didn't figure it was worth while putting them in. Still, he says I'll probably run into somebody once in a while which speaks the United States language.

"Most every policeman does," he says. "I understand it's the law that they have to be able to speak it before they'll let 'em go on the force, so as they can understand the foreigners that come over from the mainland of North America to visit in New York."

The way he looks—so sort of serious—when he says that, I can't tell if he's in earnest or not. I judges, though, that he's just having his fumdiddles with me. And then he goes on and tells me that the biggest of everything and the tallest and the richest and the grandest is found there,

He's Very Cheering in His Ways, Telling Mr. Dallas That He Must be Good Friends With Mr. Bellows and the Three Ladies

SOME MISCHIEF STILL

By Hugh MacNair Kahler

ILLUSTRATED BY GEORGE E. WOLFE

AS HE inserted his latchkey and scuffed his muddied shoes on the rubber doormat, Mr. Weldon mechanically arranged his features in that expression which his thirty-two years of matrimony had demonstrated to be infallibly provocative. If he came in wearing the look of a repository of inviolable confidences he could be certain of an audience actively and singly attentive, of a cross-examination that gave him the center of the stage. Otherwise, even such news as he bore on this occasion would fall flatly on ears only perfunctorily heedful. He came in almost furtively, as one who would prefer to avoid notice.

In the doorway of the room denominated as the library, he paused to inspect approvingly the erect and energetic woman who wrote at the old secretary. He had never lost that proprietary pride in Carrie. There were force and decision and adequacy in the very scratch of her pen. She did not look up, but she saw him, he perceived, with the back of her head.

"You're late again, Arthur. And just look at your shoes!"

Her pen sped on. Mr. Weldon dropped an apprehensive glance at his feet, and was reassured. That was just habit; he hadn't tracked in any of the mud from Phil's back yard. He coughed with intention. If he didn't answer she'd look around presently, and rise to the bait of his guilty countenance. He observed that the pen slowed, hesitated. Carrie turned sharply, her shrewd, alert eyes instantly accusing.

"You're trying to make me think that you know something I don't," she declared. "Are you ready for supper? It's been waiting."

Mr. Weldon preserved a bold front. "All right. Come on, then."

She prolonged her inspection. He could see her succumb to that infallible look, see her eyes turn wistful, like a little girl's. His conscience pricked him feebly. It was a shame to tease Carrie—she detested being in the dark about anything.

She surrendered just as he was on the point of volunteering his sensation. As she adjusted her napkin she narrowed her eyes.

"You've been at Shirley's, Arthur. What's she up to now?"

He paused to pay a pleased mental tribute to her penetration. Sharp as they made 'em, Carrie.

"Chickens." He liked the eloquent brevity of that. As he saw his wife's blank bewilderment he was distinctly aware of a kind of gratitude toward his daughter-in-law. Poor, dear Shirley! After all, it wasn't her fault that she'd been spoiled.

"Chickens!" Carrie's tone conveyed the suggestion that, prepared for almost any other revelation, this one had taken even her in an unguarded quarter. "You don't mean that she's going to keep ——"

He nodded, buttering a biscuit. "She's subscribed to a correspondence course in it; you start with two hens and a rooster and surprise your husband by paying off the mortgage and buying a marble clock for the parlor. Showed me a photograph of the woman who did it—and the clock too."

Carrie inhaled audibly and eloquently. "Couldn't you talk her out of it? She—she surely hasn't really begun?"

Mr. Weldon chuckled. "Oh, no! Shirley never really begins, does she?"

The delicate irony of the reply brought a visible and delightful consternation to Carrie's look. He decided not to wait for detailed interrogation. There was no doubt at all about Carrie's attention. He could afford to be generous with his news now.

"Just as Lief Stay Here for Supper," He Declared. "Just 's Lief 's Not, Carrie"

"Found her standing over Abednego—out behind the garage, building a coop out of the piano box. Right spang in the middle of the asparagus bed too. You ought to have seen it!"

He wagged his head reminiscently.

"I was there this afternoon too; and she didn't say a word of any such ——" Carrie's lips tightened. "She wouldn't, of course. I'd have put my foot down on any hare-brained nonsense like that in short order, and she knows it. Chickens! In a piano box! And that lovely house!" Her tone changed. "Did you hear about the four-poster?"

Mr. Weldon hurriedly slurred his negative. Furniture was apt to lead to detailed description and narrative. "Don't worry about the piano-box part of it; I fixed that all right. If she's bound to fool with chickens she'll do it right, anyway. I made her see that a first-class plant would be more apt to pay." He winked. "You can't make Shirley drop an idea, but you can most generally get her to let you help, if you're canny. We're going to build a nice up-to-date chicken run—together."

He winked again, almost anxiously this time, as he observed the symptoms of preoccupation in his wife's eyebrows.

"She was going to put that beautiful four-poster in the spare room; just because that fool Lyddy told her about old Martha Sprowl dying in it! She told me that her guests wouldn't know, and that she did! I declare I almost lose my patience with that child sometimes! After I spent four years wheedling that bed out of Martha—a perfect Hepplewhite, you remember, Arthur."

"About that chicken scheme," said Mr. Weldon, clinging to an ebbing hopefulness; "I'm going to keep an eye on it so that she can't lose too much or worry Phil with it. I got Brewer up and we figured on a ——"

"She was going to have frankfurters for lunch. I came in just in time to stop that, when I was there this morning. After I'd told her how dangerous they are too."

Mr. Weldon sighed. He would have enjoyed telling Carrie about the chicken house and the wire runs. And he thought wistfully of those frankfurters which Phil had almost had for lunch. couldn't convince Carrie that weren't necessarily poisonous.

"I was afraid the minute I ber," Carrie "You know said to you, day, Arthur. pretty and she but—there be a law against ing children was spoiled, dear! You'd believe that so sweet and could have stubborn four-poster! know what come of I didn't ——"

"Stood me about the house too," Weldon, "Perfectly make it piano box, the woman in the it. Good thing for spare the time to One mess after didn't."

"It's mean to this way." Carrie "After all, she's devoted to Phil. deal. And she'll she's just a baby, still."

"We can see that she doesn't get into any Mr. Weldon reflected. "It isn't as if I business. I can keep an eye on this as easy as not. If I was still running different." He brightened. "Brewer's idea for that house, Carrie. He says ——"

"She's never had anything to do Carrie, "and she's been taught thing she wants to play with if Remember what she told us wagon till her father could you expect of a girl can do is to let her don't do her any more ways keep an eye need one. Lyddy for a month!"

Mr. Weldon clicked his tongue his teeth.

"It's lucky we've got time peated. "She'd have bed if I hadn't "Brewer told me the plans, Carrie. swapped horses, the other good and ——"

"And the one that was mother," said Mrs. told me that story She subsided meditative. Funny that and never told He chuckled over it; enough to be clearly as Carrie did.

"I've got it!" knew I'd living room. that's had a Mr. Weldon nodded. pieces to accept after three chicken as his pushed dismaying he thought.

the most won-der-ful secret to tell you!"
isper floated on a little laughing undertone,
sweet and smooth, that always made Mr.
k, absurdly, of cream.

He strove to rally a wavering common sense. She had announced the chicken project in exactly this fashion, he remembered.

"What are you up to this time?" In spite of an honest endeavor it sounded indulgent, almost approving. He struggled against his grin. Shirley laughed softly, excitedly.

"I'm not up to it—I'm in it! I kept it all to myself until I got the deeds. And you're the very first and only person I've told."

"Deeds?" The word had an ominous sound. Deeds could only mean real estate, and buying property was, in Mr. Weldon's code, the most entirely solemn form that human business could assume. He felt his jaw muscles slacken and his brows lift. "Deeds—what deeds?"

Again Shirley laughed. "The deeds to that darling little lodge—at the turn in the road over there." She released one lapel in order to point. "At least I've always called it a lodge."

"You mean Ham Calhoun's shanty?"

Mr. Weldon was aghast. That tumbledown relic that Ham Calhoun had been trying to sell ever since it got too rickety for storing corn!

If she'd actually bought that ——

"Yes; I wanted it the first time I saw it, and now I've got it! I had to wait till my dividends came in."

"Ham Calhoun's shanty!" Mr. Weldon heard in his voice the thickened diction of one who talks across the border of a troubled sleep. "What on earth did you want it for, Shirley?"

She twisted her face into an absurd counterfeit of a scowl.

"Oh, dear, I did hope you wouldn't say that! I hate to have people ask me why I want things—as if wanting was a crime that could only be excused by ex-extenuating circumstances! Why should I think up some tiresome sensible reason for wanting what I want? I know I want it, don't I? And isn't that all that matters?"

A dim relief expanded in Mr. Weldon's troubled spirit. After all, it wasn't so bad as it might have been. She couldn't have paid very much for that shack, at the worst of it, and as long as it wasn't just a preface to another of her notions ——

"Something in that, when you look at it," he conceded. "I only meant to ask what you aimed to do with it; thought you bought it to—to use, some way."

Shirley beamed on him. "Oh, I see! I thought you were just—just criticizing. But you weren't; and you guessed that I—or haven't you guessed what I'm going to do with it?"

Mr. Weldon felt the jaw muscles relax again. He managed to shake his head. Shirley seized his lapels.

"I'm going to start a wayside inn! Of course I'll have to fix the house up first, but I know—I just know it's going to be a perfectly gorgeous success. There's ever so much travel on that road; even now, when summer hasn't started, there are heaps and heaps of cars going by. And there's no place in Grimfield except that horrible Battle House and the awful Greek restaurant."

"A—a wayside inn?" Mr. Weldon contemplated the announcement stonily. This girl, who couldn't be trusted to wash a dish without Carrie's eye on her! He must plant his foot firmly and finally on this project; if she ever tried any such crazy scheme —— Shirley, who could be brow-beaten into abject submission by that sullen yellow wench Lyddy, every time Carrie turned her back! He examined his vocabulary for fit words.

"Now, Shirley—let's talk this thing over, you and me, before you go setting your heart on it." He observed symptoms of a pout and a quiver of Shirley's sensitive lower lip, and panic woke in him. "Don't you go get a notion that I'm against you, because I'm not. Didn't I back you up on this chicken business, when they all thought it was crazy? No, sir; I'm on your side, same as always. But it's Phil I'm thinking about. Strikes me you're forgetting that he needs a lot of your time."

"I'm not forgetting! As if I could! But Phil's away all day; and I'd always be at home when he was."

"That's so, of course." He felt that it was diplomatic to agree with her as much as possible. "That's absolutely right, Shirley; but how about the house? Who's going to run it if you go and get a restaurant on your hands?"

Shirley gurgled joyously. "You're so funny! You just ask mother about my housekeeping! She's too sweet to tell me, but she knows. I've tried and tried to learn, but

FROM McKINLEY TO HARDIN

Personal Recollections of Our Presidents

By H. H. KOHLSAAT

Joseph McKenna

IX

MELVILLE E. STONE, general manager of the Associated Press in 1896, was present during the conference of the McKinley managers in the Southern Hotel, June 12, 1896, when the gold-standard plank was written.

Mr. Stone, in his interesting book, Fifty Years a Journalist, writes as follows:

The "Major," as we called McKinley in those days, was a friend. Four or five days before the St. Louis Convention he had asked me to come to his home at Canton, and I went there. We sat for a long afternoon on the porch of his cottage. He had received at the hands of Mr. Robert W. Patterson, managing editor of the Chicago Tribune, a proposed plank for the platform to be adopted at the St. Louis Convention. It referred to the monetary question and declared in a modified way for bimetallism. I was president of the Globe National Bank of Chicago at the time, and he did me the honour to ask my view of Patterson's proposal. I promptly told him that there was no such thing as bimetallism possible. I used the well-known illustration of the yardstick, and assured him that two yardsticks of different length could not be. In truth, Major McKinley had no settled opinion in respect of the matter, and he said he was convinced that the financial question would, after all, not be the issue of the coming campaign. I challenged this view, and, having in mind some things that had happened, said that neither he nor the National Convention could determine the issue, and that the people would in the end do this. Finally, he told me that Charles Emory Smith was drafting the platform, and he asked me to see him in St. Louis and try to settle the matter.

The thing that had happened, and which forced me to believe that the silver question and not the tariff was to be the issue, was the action of the Peoria Convention of the Democratic Party in Illinois, which had already been held. The controlling force in that convention was a very astute politician, Governor John P. Altgeld of Chicago. He had thrust the issue of bimetallism into the Peoria Convention and secured the passage of a resolution declaring for a 16-to-1 standard. But for the fact that he was born in Germany, and therefore ineligible to the office of President of the United States, it is not unlikely that he would have been the national Democratic candidate that year.

The story of the adoption of the gold-standard plank at the Republican National Convention has frequently been told, yet not always accurately. When I arrived in St. Louis I found a good deal of confusion. I was called into a conference of Major McKinley's friends. Those present were H. H. Kohlsaat, editor of the Chicago Times-Herald; ex-Governor W. R. Merriam of Minnesota; the Hon. Myron T. Herrick of Ohio; Senator Redfield Proctor of Vermont; the Hon. Henry C. Payne of Milwaukee, and Mark Hanna. As manager for the McKinley force Mr. Hanna found himself in a difficult position. Several Western states were earnestly for free-silver coinage. Mr. Hanna, therefore, while personally a gold-standard man, was unwilling to take the responsibility of actively participating in the fight against a declaration for bimetallism. After repeated conferences a resolution committing the Republican Party to the gold standard was agreed to.

The most urgent and uncompromising advocate of a gold plank was Mr. Kohlsaat. My only part in the framing of the plank was to write in the word "inviolable" in the pledge to "maintain (inviolable) the obligations of the United States at the existing standard."

After the wording of the resolution had been finally agreed upon it was necessary to submit it to Major McKinley. A long-distance telephone line between the Southern Hotel in St. Louis and the McKinley cottage in Canton had been established, and Mr. Hanna and I went to the St. Louis end of the wire in the basement of the hotel to read the plank to the waiting candidate at Canton. It was a new experience for Mr. Hanna, and he could not make himself heard. I therefore read the resolution. Major McKinley asked if that had been fully agreed upon by his friends, to which I replied that it had. Reluctantly he acquiesced in it, but asked if it was not possible to introduce a modifying phrase pledging the Republican Party to promote an international agreement for the free coinage of silver. In obedience to this suggestion such a phrase was introduced, and the plank was later adopted by the Convention.

Mr. McKinley's campaign, carried on from his cottage at Canton, was a remarkable one. Although he had never given the financial question very serious consideration, and certainly had no adequate conception of the business when nominated, he delivered speech after speech of such cogency as to command the attention and admiration of every student of finance.

X

IN 1912 Horace White, editor of the New York Evening Post, wrote he was clearing up his papers at eighty, and was returning to me the following letter I wrote July 1, 1896, ten days after the convention, as he thought it would be interesting after sixteen years:

July 1, 1896.

HORACE WHITE, ESQ.,
The Evening Post,
N. Y. City.

My dear Mr. White: I have just read the enclosed article taken from the Evening Post of Monday, June 29th. I do not know Mr. Angell and never heard of him, but he is evidently a friend of Mr. Herrick and the plank was probably sent to him by Mr. Herrick. The article is correct in every way, excepting that Senator Lodge saw the plank as you have it printed on the Monday morning. He said it suited him perfectly with the one exception that he would strike out the two words "and unlimited." He thought that the plank would be stronger if it read "we are opposed to the free coinage of silver." He said that was all the change he would make and asked me for a copy of the plank.

ver and paper money and that nothing but gold

On Friday in the conference the plank read "existing standard should be maintained." This of the earnest appeals of men from the states Of course the gold standard could not win from those states was lost; consequently great weight. There were seven in the thought it was perhaps unnecessary to slap middle western states in the face by inserting contrary to their wishes. I took the position ardice not to put the word "gold" in because the words "existing standard" meant and better have a straight-out fight and avoid ence lasted five hours and at the end of that put in as you see it in this original copy.

Our mutual friend Mr. M. E. Stone change which reads "to the extent only as can be maintained" and also for the word last line you will see that the word "standard "at the present standard, the standard of nations of the earth." much money was spent, and, I believe, legitimately. There was no purchase of votes.

The silver mine owners contributed a huge sum to the campaign and paid for the circulation of a book called Coin, written by a man named Harvey. It was written simply and quoted treasury figures which to many were unanswerable. I paid Harvey to write a column a day, reserving the right to print a parallel column in reply. Prof. J. Laurence Laughlin, professor of political economy in the University of Chicago, answered Harvey's arguments daily. After the articles had been running less than a week Harvey came to see me and asked who was answering him. He was told Professor Laughlin. He declined to go on with his contract.

Governor Altgeld delivered a speech in the Auditorium; the house was packed. I read his speech while he was delivering it. He made such a strong argument I telephoned Professor Laughlin to come to the office. After reading Altgeld's effort he said, "If the governor's figures of the condition of the treasury were correct the speech is unanswerable, but he has deliberately lied and given false figures."

The Times-Herald printed the speech in full, but put Professor Laughlin's short statement in a box at the head of the column. A few days later I met Altgeld in a street car. He said, "Kohlsaat, that was a dirty trick you played on me."

The gold-standard people organized parades all over the country. Toward the end of October heads of business houses, bank presidents and men of large affairs, Democrats and Republicans, tramped miles through the streets, followed by their employes. As Election Day drew near business was paralyzed—the banks declined to make loans, fear took possession of the business community. Every voter was called upon to go to the polls.

Election night the streets near the newspaper offices were packed. When the returns at midnight indicated McKinley's election the clubs and hotels were filled with excited men. There was no prohibition. Volstead was unknown.

Long after midnight in a certain Chicago club one of the world's greatest merchants started the old boyhood game follow-the-leader. He was joined by bank presidents, merchants, Chicago's foremost men; they went over sofas, chairs, tables, upstairs and downstairs, and wound up with dancing in one another's arms.

A little after midnight I rang up McKinley in Canton. His nephew, James McKinley, answered the phone. I asked him to let me speak to the President-Elect. After some minutes' wait young McKinley said, "I found Uncle Will in his mother's room. The old lady is kneeling beside the bed with one arm around the governor and the other around Aunt Ida, praying. All I heard was, 'O God, keep him humble.'"

XII

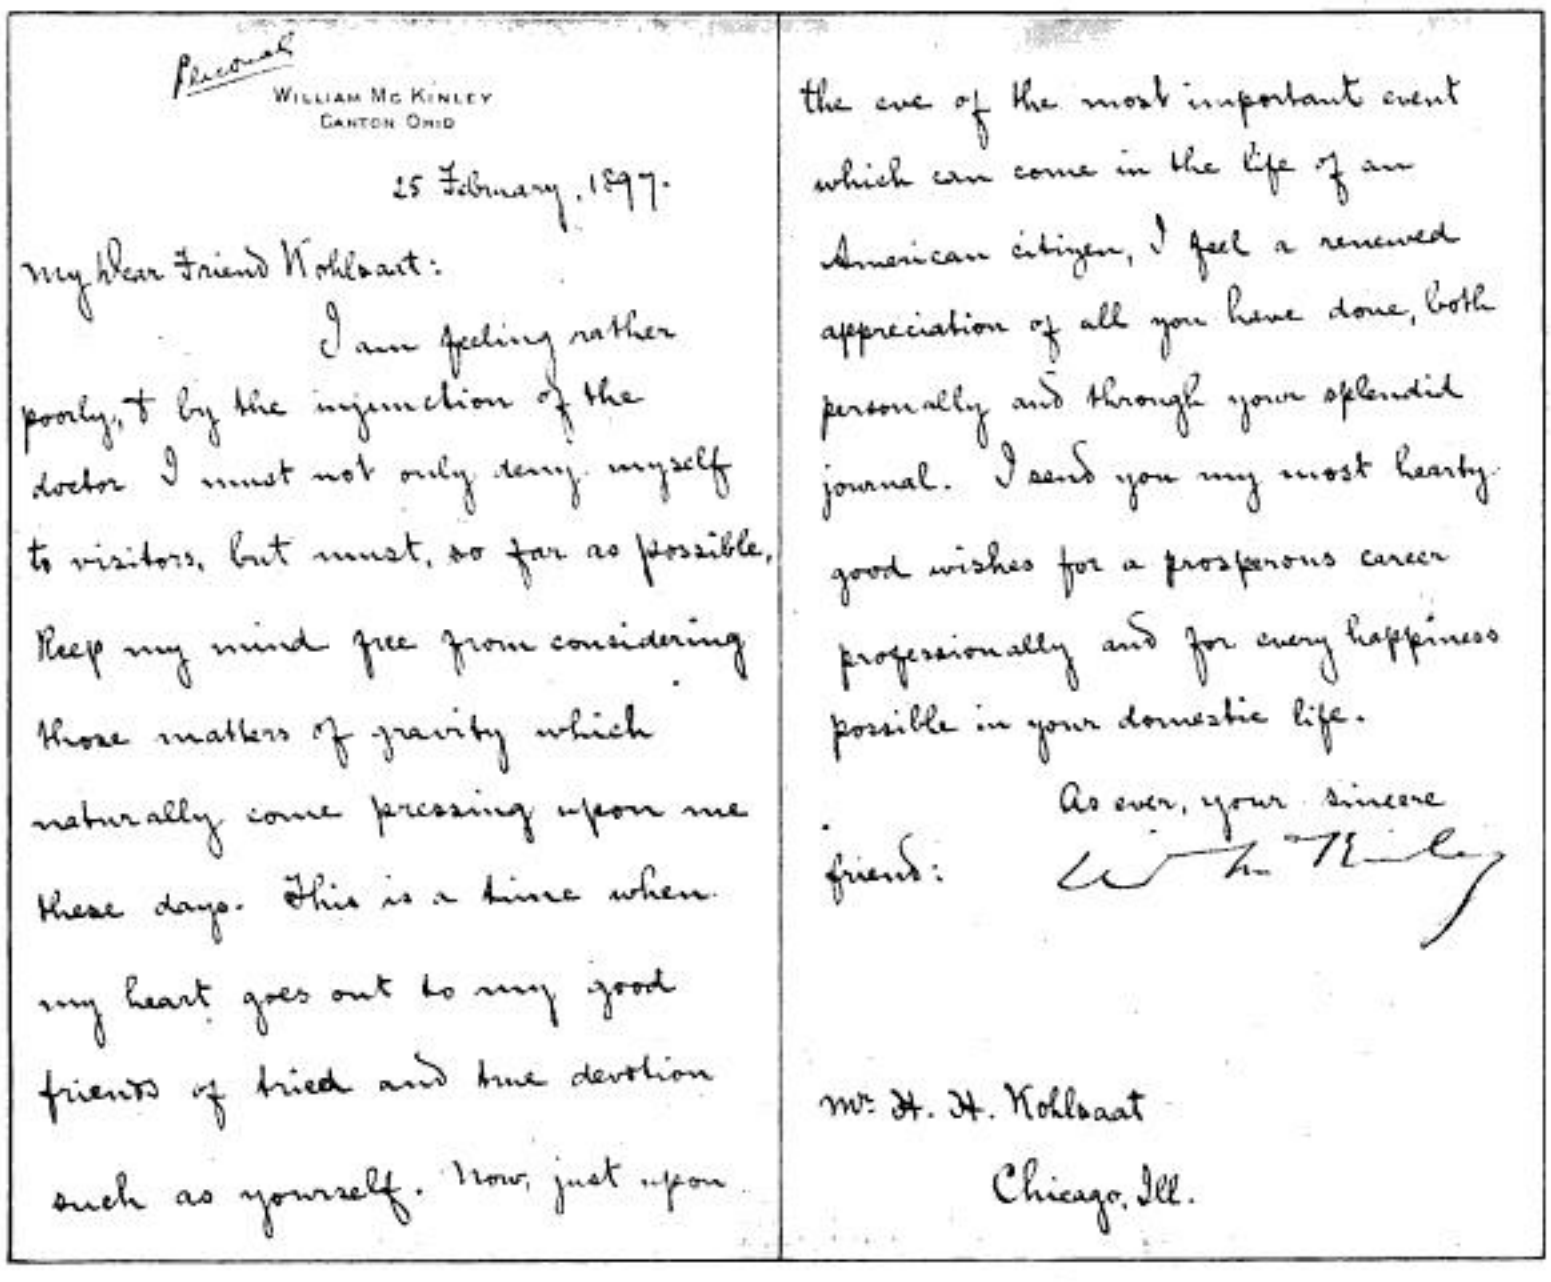
TWO weeks after nomination at St. Louis the notification committee went to Canton and addressed McKinley on the porch of his modest two-story cottage. His acceptance speech reassured the country, as he stood squarely on the gold platform. About ten days later I was on a Pennsylvania train going from New York to Canton and met Mr. Hobart, the vice-presidential nominee. He was going to read his acceptance speech to McKinley before receiving his notification committee.

After breakfast in the McKinley home we went to an attic room. It was bare of furniture with the exception of a plain pine table and one chair. Mr. Hobart occupied the chair. McKinley and I sat on the edge of the table dangling our legs. As Hobart read his letter of acceptance we both made suggestions. McKinley ripped it to pieces; so it bore little resemblance when he returned to New York to the letter he brought to Canton.

The next few weeks Canton was the center of attraction to the newspaper correspondents. Mr. Hanna, Mr. Herrick, Col. John Hay and other close friends were weekly visitors. McKinley was very solicitous as to who should be Secretary of the Treasury. It is not generally known that Mark Hanna wanted that portfolio, but McKinley hesitated, first, because it would look too much like paying a political debt; and second, chiefly because he did not think Hanna had the training necessary. He said to me, "I don't think Mark knows enough about governmental finance to fill the position."

Nelson Dingley, of Maine, author of the Dingley Bill, was offered and accepted the post of Secretary of the Treasury. Along about the end of January, 1897, McKinley rang me up one Saturday night in my home and told me he had received a letter from Dingley saying his doctor had told him if he took the treasury post he would not live two years, and his family insisted that he give it up. He asked to be released. McKinley said, "That knocks my cabinet into a cocked hat; I was building it around the Secretary of the Treasury." The papers published the news of Dingley's declination the next morning.

It occurred to me that Lyman J. Gage would be an ideal man for the place. He was president of the First National Bank of Chicago, a gold Democrat, and well known to the bankers of the entire country. I called on him Sunday afternoon and suggested it to him. He shook his head and said, "I have no political ambition."



I answered: "That is just why you should take the place, if offered. The country is nervous over the money question, and faith in the man to be at the head of the treasury is vital. McKinley knows nothing of finance, he has been weak on the silver question, and confidence is of supreme importance, especially at this critical period." But he was obdurate.

That night our neighbor, O. W. Potter, gave a dinner to Sol Smith Russell, the comedian, and his wife. My wife and I were invited; so were Mr. and Mrs. Gage. I took Mrs. Gage out to dinner and told her of my visit to her husband that afternoon. She was greatly interested as I drew a picture of a cabinet officer's social position. Before we separated I had a friend at court.

Next morning Mr. Gage and I walked to business together. I urged him to reconsider.

He said, "Why should I give up a perfectly easy job

(Continued on Page 130)

WILLIAM MC KINLEY
CANTON OHIO

25 February, 1897.

My dear Friend Kohlsaat:

I am feeling rather poorly, & by the injunction of the doctor I must not only deny myself to visitors, but must, so far as possible, keep my mind free from considering those matters of gravity which naturally come pressing upon me these days. This is a time when my heart goes out to my good friends of tried and true devotion such as yourself. Now, just upon the eve of the most important event which can come in the life of an American citizen, I feel a renewed appreciation of all you have done, both personally and through your splendid journal. I send you my most hearty good wishes for a prosperous career professionally and for every happiness possible in your domestic life.

As ever, your sincere friend: Wm McKinley

The Language of the Angels

They Became Interested in the Scientific Arrangement and Apparatus of the Anteroom

By Tristram Tupper

ILLUSTRATED BY C. D. WILLIAMS

VI

THE Black Angel was the sole occupant of the heaven atop the foundling home throughout June. But July was fruitful in babies. Two girls came to keep Ya-he company. Their names, La-la-la-la—abridged La-la—and Goo, were derived from the sound each persisted in. They cried very little. Then came a howling male, a great fellow who should have been ashamed of himself, for he said nothing save in protest; and was dubbed by Miss Bax the White Crow. He made a noise like that, and therefore, officially, his name was Caw-caw. The fifth angel, a late July entrant, pronounced his name Gar-r-r. Then it was that the little matron, a close student of such matters, determined their respective nationalities.

Ya-he was unmistakably African; La-la was French; Goo, a Puritan from New England; Caw-caw, a Norseman; while Gar-r-r, with his Semitic features, was a young merchant prince from the ghetto.

In August came the sixth angel, weighing exactly four and a quarter pounds. She could sit comfortably in a teacup and would have been lost in a quart measure. Such a tiny thing! Yet she had difficulty slipping through the door to heaven. Old Mudgett pondered whether he would allow her to enter, but could find not a single imperfection. A wonderful miniature. Her heart couldn't have been larger than the ruby in a finger ring, and her wide eyes were priceless emeralds.

Miss Bax hung over this latest arrival in a way which might have indicated a good deal, had not the little matron herself told old Mudgett way back in March that she disliked babies tremendously.

What Did He Mean by Taking One of the Babies Out of its Crib? The Dove, at That!

"I'm afraid we better put her on the third floor," decided Mudgett. "Get an incubator or something for her."

"Nonsense!" said Miss Bax, gazing up with eyes that, if one might believe one's senses, were quite liquid and soft. "She's going on the fourth floor. She's mine." And that settled it.

Mudgett was secretly delighted. The difficulty was to decide upon a name. Though delicate the instrument at his elongated ear, Mudgett could not hear the slightest noise issuing from the sixth crib. But Miss Bax, with veil tucked in as she leaned over the little mite, could hear the most delicious sound: "Coo-oo-oo." She named her the Dove.

The seventh was a swart Italian, hardly less of a bruiser than Caw-caw. Yo-o was his name, and his voice would have filled the Metropolitan Opera House.

All cribs were now occupied. Miss Bax moved efficiently and noiselessly through the intricacies of each day's routine; Mudgett peered through a peephole, the listening instrument to his ear. The greatest linguistic experiment of the ages was launched. And, take note, the door of this heaven atop the foundling home was securely locked against the outside world. No possibility of contamination; no, none whatsoever.

Also, listen to poor old Mudgett boasting: "I say now, there'll be something to show at the end of the first year!"

Autumn: Heaven has increased amazingly in avoirdupois. Ya-he, the Black Angel, and Caw-caw, the White Crow, are vying with each other to break the bathroom scales. Gar-r-r, the Merchant Prince, without taking any thought at all, has added a cubit to his stature.

Early Winter: La-la breaks all records of the home by exhibiting a tooth at five months!

December: The shy, pallid light of dawn creeps in through the windows. The seven white-enameled cribs are silent, the angels still are sleeping—Ya-he with his arms across his ebony face, Goo with her nose buried in her pillow, knees doubled under her, the Dove with one exquisite foot sticking through the bars of her crib, Yo-o with his mouth wide open. All are sound asleep. All are unconscious that this is their first Christmas.

Old Mudgett in the darkness before dawn has slipped into his ridiculous bathrobe, pulled on baggy breeches and crept like a shadow to the fourth floor. He waits in the darkness, with eye at a peephole, to see the break of day a silent sermon—peace on earth. His thought concerns the little matron.

"I say now, how could she miss this? How could she sleep through their first Christmas morning?" A thought pops into his curious mind, something about the parents of these foundlings, something about mothers. "What will they think when they wake Christmas morning?"

The light grows stronger. He strains his eye at the peephole. Something unusual about heaven on this morning bores into his consciousness, something that changes the appearance of the room, gives it a brighter look, something about the cribs. He blinks his eyes. "I say now!" Over each of the angels is a new eiderdown. He is sure the quilts weren't there last night. Who preceded him? "I say now, they cost something! Down covered down quilts. Seven of them. Miss Bax! Miss Bax and her salary." Old Mudgett becomes thoughtful. He remembers that the little matron has been saving to get a fur coat to keep her warm on her walks through the park. "I say now!" And the sun begins to shine.

VII

THE fourth floor front presented an amazing sight in March of that first year. Heaven was crowded to fours. The angels had sprouted no wings, it is true, but discovered that their knees and stomachs were useful institutes. Their language, too, so Mudgett maintained, was growing apace.

June was the first anniversary of the great experiment. Late in the afternoon of the first day month old Mudgett climbed to the fourth floor carrying a square package the size of a million dollars another package no longer than his middle finger. Instead of going to the anteroom he proceeded down to the dietary kitchen, where Miss Bax found him painfully at the strings that bound the package. For a moment the little matron offered a pair of scissors. The cutting of a string, according to old Mudgett's code, was a crime against economy. He continued to fumble with the knots.

"There," said he presently, and his voice was loud and determined. Miss Bax regarded him curiously. He met her glance, then looked away. "There!" less boldly, and frowned down at the larger package.

Miss Bax said nothing, merely looked on, curious.

"Do you know what day this is?" asked Mudgett.

"June first. Tuesday."

"Its—I mean the significance of this day?"

"No." She hadn't an idea.

ble" and
ng them.

But more thrilling than any of these was that first of all baby words—"goo"; something that pleased them, a sound indicating pleasure—"good." No mistake about it, "goo" meant "good," and "good" was a derivative of the Anglo-Saxon "God." Trace it back! "Goo" meant "God," and "goo" meant "good." Take note! That was the first thing that a baby said, the first thing that every baby says: "Goo-goo." That was the message they brought with them: "God is good."

Pages of this fascinating language of the angels old Mudgett had scribed in his secret book; and the babies were just beginning to talk!

On a day in that June, Mudgett paced the anteroom. He was never more excited. Now and again Miss Bax slipped out of heaven and handed him a sheet of paper on which were a few figures. Old Mudgett would seize this, pore over it, then transcribe the figures on a large chart. Heaven was being weighed and measured—each angel. The great experiment had proved an enormous success, not alone in words but also in pounds and inches.

Caw-caw, with Scandinavian ancestry, had outstripped them all. What a tremendous giant he was, how powerful, how magnificent. This infant viking stood thirty-four inches in his bare feet, and weighed thirty pounds! The Dove was still the smallest angel. She was delicately and beautifully formed. Her gym weight was exactly sixteen and three-quarter pounds. Miss Bax tried to squeeze it to seventeen by leaving the heart-shaped locket around the Dove's neck, but to no avail. Her height was twenty-one inches, a fraction over the height a baby should boast at birth; her little chest was a perfect fourteen, five and a half inches smaller than Caw-caw's.

The aggregate weight of the seven angels was one hundred and fifty-six pounds. Old Mudgett was beside himself with delight. The records for ten years showed the average gain of babies at the home during the first year was twelve and a half pounds. On the fourth floor it had been fifteen and a half pounds.

"Doesn't that prove it? I say now, doesn't that prove that perfect quiet, no visitors, the elimination of all contaminating influences is the right and only method?"

He might have added a word about the care Miss Bax had given these fortunate babies, but that did not occur to his absorbed mind. The little matron had not left the fourth floor for an entire year save only to tramp for an hour and a half, rain or shine, each afternoon down to Central Park, and around the winding paths and back to the foundling home.

VIII

THE first bolt of a whimsical Providence struck the fourth floor that August. It was late in the month. Miss Bax appeared noiselessly in Mudgett's office.

When he glanced around she said but one word—"Measles."

Heaven had the measles. Each angel had it in turn. Not all at once; that would be too much to ask, even of heaven. As soon as one angel became convalescent another began to scratch. It stretched over a period of three months, during which old Mudgett took up his abode with a cot in the anteroom. He moved through a fog.

"I say now, how could it have happened—measles? Miss Bax, you haven't been anywhere except to the park; there isn't a sign of it downstairs; I haven't even been inside the front room. How—I say now, how could it have happened?" Poor old Mudgett! He was wholly nonplused.

"Perhaps it came in through the windows," suggested the little matron, almost as mystified as Mudgett. "You can't keep the world out. You just can't keep it out. The world is sure to creep in—over or under. A Chinese wall wouldn't keep it out."

"I'm going to keep it out! I say now, I'm going to keep it out!" Poor old Mudgett, wholly befogged.

La-la was the first. She was carried to the little gray-and-rose-tinted room in order to segregate her from the rest of the babies. Six days later Goo began to cough and sneeze. Her brown eyes became weepish. Mudgett, ludicrous in his abbreviated bathrobe with a veil over his face, solemnly maintained that Goo merely had a cold in the head. Shortly the red spots appeared on Goo's face and neck. Caw-caw was the next to fall. The others followed. Only, in Ya-he's case the red spots were not discernible in the pigment of his ebony skin.

Another shift was now made. Miss Bax's room being overcrowded was fumigated and the babies with measles and those who had passed through the ordeal were moved back into the front room and the remaining angels moved into the small bedroom. But all precautions failed; the epidemic went through heaven, end to end.

Mudgett was marooned on the fourth floor with the clear-visioned, efficient Miss Bax. He was too absorbed, however, to note her lovely hair, like Egyptian dusk, her ivory complexion and large, unsmiling gray eyes. Also, it may be presumed that the exquisite little matron was far too busy to give old Mudgett a thought. He hung like a great shadow over the tiny cribs, he paced the anteroom at night, he pried into the food Miss Bax was preparing in the kitchen. "I say now, what's that?" No matter where the little matron was working or what she was doing, he was always there and always in the way.

"Don't you think you better get a rest for a day or two, Mr. Mudgett?" she suggested. "Don't you think you better go back to your own room?"

"Why, no. I say now, I couldn't let you do all this work by yourself. Don't you want me up here?"

"Yes. Of course I want you up here."

She made no further protest, merely went about efficiently doing everything. Many were her extra steps moving out of the way and walking around poor, befogged old Mudgett.

The Saxton Woman Made a Grab for One of the Flying Babies. Miss Bax Ran to the Child. "You Mustn't! Don't You Dare!"

Digitized by Google

TRUST EMILY—A Farce Comedy

By MAY EDGINTON

ILLUSTRATED BY MAY WILSON PRESTON

VIII

ARTHUR NETHERBY at length roused himself from the pleasant reverie into which he had fallen, sitting on the table with his boots in the milk, and began to look about him. He enjoyed the sensations of a man who has just awaked from a particularly lovely and luscious dream.

"A lovely girl!" he was still muttering. "A lovely girl!"

But exerting his strength of mind he tried to think of others than Emily Parks; and to brush the crumbs from his person.

He had never had opportunity of realizing before how pervasive is soft icing. He gazed around him at the débris of the tea table. The room looked a wreck. And under his feet Angela still hammered.

"A broom!" Arthur muttered to himself. He went to the kitchen door, opened it a few inches, put his hand round and called, "A broom!"

"Eh, sir?" said Mrs. Stoker, thinly from a distance. "What kind of a ——"

"Don't talk to me, woman!" yelled Arthur. "I don't allow it! Give me any broom!"

A broom was pushed into his hand by invisible agency. Arthur shut the door and commenced to sweep up the place. He collected everything into a heap, and wondered where to put it. He realized for the first time that when you have swept a room, that is not all; something must be done with the litter. But after he had swept it this way and that for a while, wondering on the proper corner to hide it in, he had a brain wave. "The fireplace!" he muttered. He pushed the stuff there, and placed the fire screen before it, just as that sound for which he had been anxiously listening for what seemed hours broke upon his attention. The Hunters' car swooped up to the gate and stopped just outside the courtyard.

Arthur leaned on his broom and wiped his brow.

Cyril stepped from the car and wandered into the courtyard in his most dilettante fashion, as if his errand had no urgency at all. He looked languorously at the milk cans, and entered, but was arrested by the sight of Arthur leaning upon his broom.

"Wakefield!" said Arthur. "Good man!"

"What's all this?" said Cyril, pausing distressfully, for from Arthur's attitude it appeared that there might be some work to be done.

"Come in!" said Arthur.

"Put that away, then," replied Cyril.

Arthur placed the broom neatly in a corner alongside the gun.

"I say," he said, pausing.

Cyril came forward, looked around, and saw the sofa.

"Say it!" he replied resignedly. He lay down gently upon the sofa, but was much dissatisfied with its springing.

Arthur began to stammer.

"H-h-has it ever struck you," he began, "how-how-how darned-darned wonderful she is?"

"Who?" said Cyril resignedly.

Arthur stammered.

"Little Parks," he replied.

Cyril fanned himself with his hat. "You may as well ask me if I'm in possession of my eyesight," he said exhaustedly. "That girl—eyes—and hair—and ankles. Can you beat 'em?"

Arthur stammered a bit more.

"She has—a—a sort of little way with her," he said hesitatingly.

He began to smile again without knowing that he was doing it.

"As old Steers said to me," added Cyril confidentially, "she'll go far if she isn't stopped."

"I don't want her to go any further," said Arthur, suddenly becoming truculent.

"No further at all."

Cyril held up his hand for quiet attention.

"Your appreciations of life, old man," he began, "you've got 'em somehow pitiably wrong ——"

Arthur held up his hand. It was larger and more determined than Cyril's.

"She's here!" he said sublimely.

"What!" cried Cyril.

Arthur nodded, unaware that he was smiling.

"Give me a piece of bread and butter," said Cyril.

The bread and butter had escaped the storm and still graced the table, so Arthur handed it to him. Cyril took a slice critically.

"I don't know how you do it, Netherby," he said, biting into it, "I don't know how—you—do—it."

"I don't do it," said Arthur. "It happens. Look here ——"

A really terrific volume of knockings and muffled voices now rose, as if all the poor prisoners had been gathering strength for a last onslaught.

Cyril started.

"What's that?" he said.

"That?" said Arthur. "That's what I sent for you for. That's your little bit—your job."

The knockings continued.

"Sometimes," Steers Went On Murmuring Delicately, "They Cry Because They're So 'Appy"

"I'm damned if I do another stroke of work day," said Cyril pettishly.

Arthur approached him and stood menacing over the sofa.

"You will!"

"Look here," said Cyril tranquilly, ... interest in the commotion subsiding, "you ... murder me, Netherby; but work I will not. ... from platform by sweaty son of ... said you wanted me; brought ... explanation; see you sweeping ... it's all so foolish." He closed ... "The flower show was very ... added. "Can't you have ... stopped?"

Before Arthur could answer ... door burst violently open, and ... entered wildly, if reluctantly ... by his wife, who pushed ... behind. "What's this!" ... very sternly ... upon the ...

"I can't ... sir," moaned ... "She won't ... no longer ... out!"

Mrs. ... looked ... husband ...

"Let ... she panted. ... women, ... Not worth ...

Cyril ... and regard ... Stokers with ... and amazement ... monocle ... well in ...

"Shut ... Stoker, get ... Stoker ... bump with ... of his ... handiest ... ain't a ...

"We're ... we were ... we?" continued ... intrepid ...

"Certainly ... are not all ... said Cyril ...

"Let ... cried Mrs. ...

She stamped and ground her teeth at Arthur ... kept behind her husband, for all that.

"For the love of Mike, sir," moaned Stoker, ... out!"

Very slowly Arthur fumbled in the pocket ... deplorable coat, and extracted three keys. He ... them to Stoker without a word. Cyril watched ... ceeding with a critical detachment and ease. ... Arthur's calm was assumed. Arthur was also ... Stokers turned and scuttled hastily out, followed ... malignant gaze.

"Who are 'they'?" said Cyril patiently.

Arthur looked at him. He turned and walked ... the door at the back, and stood looking blindly ... milk cans. Very slowly he pulled out his tobacco ... menced to refill his pipe. Every gesture of his was ... with real interest by Cyril, and each gesture ... fraught with foreboding. Arthur filled and lit ... pipe. No word was spoken. Cyril sat, fairly burst ... the subtle mystery of Arthur. He came back and ... gingerly in his poor father's chair. Everything ... did, indeed, was done very gingerly. And still ... silent.

Suddenly the door on the left opened ... Angela ran in, sobbing.

Her frock, her hands, her face—were filthy.

"Angela!" cried Cyril, galvanized to life.

He sprang up and approached her.

"You here!" wailed Angela, sobbing.

"And you!" cried Cyril.

"Where is he?" wailed Angela.

Arthur spoke quietly from the armchair.

"Here," he said, smoking.

Angela saw him.

"Oh! oh! oh!" she gasped. "You brute! ... could you?"

"At-at-attic," sobbed Gwen, "full of dust and dirt—and furniture—pitch dark—and ——" She was unable to go on.

"Oh, this is too pitiful!" said Cyril feelingly.

Mrs. Drelincourt then moved round and treated Angela, on the sofa, to a prolonged survey.

"And you, dear," she remarked—"were you in the attic too? You look like it."

Much as she hated this most feline woman Angela had not strength of mind to save herself from another lapse into weeping.

"She was in the cellar," replied Cyril feelingly.

Mrs. Drelincourt moved lazily nearer Arthur. She got between everyone and Arthur.

He held tight to the arms of the chair which had helped him with her before.

"Horrid practical jokes you play," said she lazily to him. "Naughty boy you are, aren't you?"

She then seated herself opposite Arthur, on the other side of the fireplace, as calmly as possible.

"Jokes!" cried Arthur bitterly.

"Our little tea party *à deux* seems to have been frustrated," said Mrs. Drelincourt cooingly. She gave the twins a look full of malice.

"You are behaving abominably!" said Angela in a low tense voice.

"I, dear?" murmured Mrs. Drelincourt, affecting surprise.

Before this could develop into a fracas, however, the door on the left was thrown open once more, and Lady Hunter tottered in, tearfully. She was in a sad condition of great heat.

The first person she saw was Cyril, standing in the center of the room, trying to help everybody.

She tottered to him and fell on his shoulder.

"Cy-ril!" she breathed.

"Oh, my dear lady!" said Cyril, embarrassed, and staggering. "My dear lady! Oh, this is too awfully pitiful!"

Lady Hunter leaned on Cyril, while Angela regarded with an angry sneer the touching tableau that they made.

"Where is he?" demanded Lady Hunter.

"She Can and Will Sit Just Like Other People," Said Arthur. "Sit, Cook." "Ow! Thank You, Mr. Arthur," Repeated Cook

Arthur again spoke with the perfect calm of the ultimate despair:

"Here."

"You p-p-pushed me into the l-linen cupboard," said Lady Hunter in a broken voice. "You cave man!"

Cyril was terribly anxious to be rid of her, especially in the presence of Angela.

"Dear lady," said he, "recriminations will not help us. Rest. Sit down."

He pushed her firmly down beside Angela on the sofa and stood tactfully behind them both. Angela and Lady Hunter looked at each other. Lady Hunter's hat was on one side, and Angela was wholly deplorable.

Gwen sobbed intermittently.

Mrs. Drelincourt—very cleverly—preserved her attitude of amusement, opposite Arthur.

Arthur regarded this disposition. He held his head.

"Don't let 'em settle down, Wakefield," he said brutally. "Don't let 'em settle down. Take 'em away."

Lady Hunter screamed.

"Tea!" she cried violently.

She began beating her toes on the floor, a habit which Cyril knew and dreaded. She always let go thoroughly when she beat her toes on the floor.

"Certainly," he said soothingly. "Tea. By all means. Tea at once, Netherby. I'm surprised at you."

Arthur was beyond protests. He extended a hand and pulled the bell rope.

"I shall never be surprised again," he remarked.

Stoker crept in.

"Fetch my secretary," said Arthur. "I mean, my housekeeper."

While he had been sitting there he had thought of little Parks upstairs, fetching her things. He wondered if it were faintly possible she had not fetched them yet.

"The last lady, sir?" bleated Stoker.

"Yes," said Arthur.

And with the prospect of little Parks he heartened himself, and got up, and stood on his own hearth, like a man.

Stoker crept out.

Mrs. Drelincourt broke the ensuing silence.

"The last lady!" quoted she in an unusually high key.

"A secretary!" screamed Lady Hunter, beating her toes incessantly on the floor.

"You said a housekeeper," said Gwen brokenly to Arthur.

Angela spoke brokenly from the sofa: "He said a secretary."

Arthur stood among them, a sheep for the shearing.

"Well," said he, "if she wasn't so young she'd be a housekeeper, but when they're so young it's better for them to be secretaries."

Cyril gazed at him, aghast. "Does the man know what he's doing?" he thought. "Or saying?"

"Who's 'them'?" screamed Lady Hunter.

"Housekeepers," said Arthur.

"You said secretaries," said Angela.

"I don't know how you do it, Netherby," murmured Cyril, appalled. "I don't know how you do it."

Arthur replied with that extremity of calm which has been noted before: "I don't do it. It happens."

"Yes; but look here," said Cyril hopelessly. "Attempt some explanation, Netherby. Just attempt it."

THE PIONEER FAMILY

By George F. Parker

ILLUSTRATED BY FRANK STICK

THE one constant unrelieved worker in the pioneer family was the woman. To whatever class she belonged, the tale of toil was never-ending. Whether wife or daughter of the doctor, the storekeeper, the farmer, the mechanic or the laborer, her devotion to the industry of the time was incessant. Husband or son might get some respite; she had little or none. If one order of her work declined, there was always something to take its place. Her home required unremitting attention. Her house, however small, or however it, like her family, might grow with the passing years, as the center of this home, always had its list of insatiate demands, few of them for herself, almost wholly for others. Until her children passed out of infancy, it was impossible for her to procure any steady or regular help. From the time her daughters were eight years old, now and then she could save herself a step, though seldom a thought. Her boys were, perhaps, more useful to her than to the father, until at ten or eleven they were drawn off to the more exacting outdoor exertion to which destiny called them. Even then they generally relieved her in what Isabella Bird Bishop had properly termed the difficult art of milking cows; but if this relief came, if, as a business matter, she could turn over marketing to her husband, those concessions were accompanied by an increase in the purely household duties incident to her expanding family and larger house.

She Recognized That She Had a Mission in Life

Indeed prosperity, however much it increased, brought little relief. It involved new and heavier responsibilities, not only round about her but also in church, charity, and in service and anxieties for those nearest her. It rather added to her burdens than eased them, as within the whole period no effective outside help became available. While the necessities of her home remained, its amenities made encroachments, which, though gradual, were irresistible. She must have homemade carpets and rugs; more attention had to be given to curtains; the demands for wardrobe increased; hospitality, with its exacting duties, pressed upon her as she carried out the determined policy of the true pioneer in seeking to make life more attractive for her children than it had been for herself. Even her larder, always plentifully supplied, was gradually enlarged as new or strange tastes were adopted—tastes that pressed from every direction. To these, in line with the demands of the thing called progress, she was always attentive.

The impression is often emphasized, in these modern days, that this woman and her husband were mere drudges, without ambition or outlook, like the average peasant; but they knew better, and she especially recognized that she had a mission in life and that she must do her part with devotion, intelligence and energy. That she did these things well her life work attests. She builded better than she knew. If many of these early housekeepers were so particular that a spring cleaning might have suggested the painting of the rose; if they were often credited with having scrubbed themselves into heaven—they were only perpetuating, unbroken, the traditions of their type.

The Historic Comforter—a Long Home-Knit Neck Wrap

Simple Weddings

WEDDINGS in the pioneer life were almost as simple, as devoid of ceremony, as in the days when marriage by capture was the prevailing mode. In the days of religious rigidity, when the dance was still a signal that the fires of hell had been relighted, there was but little chance for this form of gayety. Most marriage ceremonies were performed at the bride's home by the squire or the preacher. There was no temptation to have a church wedding, mainly for the reason that churches were seldom found, schoolhouses, which stood in their stead, never being used for purely social events. Wedding journeys and formal honeymoons had not come down in the social descent; so that the couple went at once to a new home and began life with as little regard as possible to friends or the public. In the evening intimate friends would drop in—music being absent or forbidden—to make an uncertain amount of noise with tin pans and any other available instruments of torture fitted for making night hideous, until the doors, when opened, disclosed a prepared treat while merry-making in its permitted forms went on. Among the more dignified sort it was prearranged and understood, and had the qualities of their kind. It took the place of the time-honored wedding breakfast and its successor, the genteel rice and slipper throwing; but like other social customs it had its series of imitations, rough and rude. It was the time-honored charivari. In its descent it was maintained, in their dialect, as shivaree, and often became a boisterous display of coarseness little, if at all, above the dignity of a mob; generally friendly, but sometimes drawing the rowdies of the neighborhood, and ending not infrequently in fights, shooting or bodily injuries.

That open, conscious bargaining of material things in marriage which has become one of the saddening features of modern life in old societies was almost wholly absent; and yet no bride of spirit and independence would have thought herself entitled to marry unless she could bring to the partnership the proper trousseau, significant in all times, and the supplies of bed and table linen, jams, jellies, pickles, dried fruits and other articles the produce and proof of her skill. She thus stepped out of her parental home equipped, so far as her resources would permit, to take her place as the head of a family. Her new life was an expansion, often a modest copy of that she was leaving. On one day she was pursuing her household functions in her mother's home; next morning she took up automatically the same duties in her own. Almost universally she was young, because the girl unmarried at twenty looked upon herself, and was dismissed by her [illegible] as a recruit in the army of old-maidhood. [illegible] girl, however deficient may have been her [illegible] judged by modern standards, was as well trained [illegible] matronly duties as if she were ten years older, her [illegible] having been an uninterrupted lesson. If ever [illegible] be a real woman she had already reached this [illegible]

The wedding present had not yet become a [illegible] of extortion or the outward expression of [illegible] The useless silver, the impossible books, the [illegible] ware or china, no two pieces akin or of the same [illegible] each staring the other out of countenance, did not [illegible] a bride in ragged Falstaffian array, to tax her [illegible] for storage or her pocket for return payment [illegible] coming years. What was needed and could be [illegible] without pressure was bought, and the new home, [illegible] small and humble, started on its way without [illegible] either real or invisible, upon its land or [illegible] Now and again there was an heirloom [illegible] of a piece of solid silver or fine glass or [illegible] had successfully made the long journey [illegible] in more settled surroundings, perhaps [illegible] the seas; but in the majority of families [illegible] cles were unknown. If possessed they were [illegible] away somewhere along with the wedding [illegible] the fine black silk dress—the proper, inevitable session of every woman.

Houses were for use, not showrooms [illegible] brac. As prosperity came, and with it [illegible] vived tastes, the house of [illegible] woman, like that of a [illegible] sonality anywhere, adapted [illegible] new conditions, so far as [illegible] amenities were concerned. [illegible] period when even sacrosanct [illegible] sels were still plain it was [illegible] that individual household [illegible] have either [illegible] ability to [illegible] mature display [illegible] the old-time [illegible] ture, adapted [illegible] cessive urge [illegible] occupied by [illegible] was of the best [illegible] necessity and [illegible] were the [illegible] sites, luxury [illegible] gratification [illegible] tastes biding their time. The form of the [illegible] used throughout all the periods of civilization [illegible] covery—probably about the time that the [illegible] doned his primitive habits—upon whose introduction [illegible] cry of the conservatives of the day was double [illegible] were made before knives," had little changed [illegible]

The Old, Old Servant Problem

GREAT progress had been registered when [illegible] with three tines succeeded that with only [illegible] the fork itself was comparatively an innovation [illegible] had, fairly early in his wanderings, a choice in the [illegible] matter. If he could not get spoons made of [illegible] German silver of the day, or a similar amalgam [illegible] his ancestors, he must be content with steel [illegible] according to the time or place in which he [illegible] It was seldom that, outside an inheritance, [illegible] or even see a piece of real pewter, that showed [illegible] being of a cheap imitation order.

The problem of the domestic servant—always [illegible] the help or the hired girl—was almost as serious [illegible] early times in Massachusetts when vain attempts [illegible] made to institute a selective draft among [illegible] Virginia and the Southern colonies there was [illegible] from this difficult condition owing to the existence [illegible] tion of slavery, both white and black. But by the [illegible] pioneer came upon the scene the sentiment against [illegible] tude had become strong, while the much-abused [illegible] tice system which had supplied the bound [illegible] gradually came to complete failure owing [illegible] material and a broadening human spirit. It was [illegible] to utilize the assistance of aunts, cousins, sisters [illegible] relatives, who were often relieved from their [illegible] fate by the demand for wives, accentuated by the [illegible] disparity between the sexes.

There was no fixed class from which such help [illegible] drawn. The element that furnished the hired [illegible] men was not available. It was all very well [illegible] go into any other man's field, but for the wife [illegible] order to enter somebody's kitchen was [illegible] often she could scarcely be induced to [illegible] The inducements offered in wages were [illegible]

In the extreme …ere was also relief when the larger boys made dormitories of haymows. The beds were of the old-fashioned feather variety, the material being slowly gathered from the home-bred flocks of ducks and geese or from the wild fowl that fell as victims to the man's gun, great care being taken to separate, for use in pillows, the down from the feathers. These articles were a source of great pride in the housewife, and it was a sign of low caste if chicken feathers were used. The beds were wide, generally one old-fashioned four-poster in the main room being capable of accommodating, in addition to the father and mother, one, sometimes two or three, of the smaller children. Underneath would be shifted during the day, to be withdrawn at night, the inevitable trundle-bed, a space saver flexible as to accommodations.

The cradle was generally full, while the older children would be bestowed in a garret with sufficient openings to utilize the heat from the great fireplace. Blankets were dear and scarce, their place being taken by quilts made from cast-off garments, these bedcoverings being the fruit of many a jolly quilting bee. These were supplemented with heavy comforters and sometimes with coverlets in some fancy pattern. Only a single sheet was used, and if a blanket chanced to be a fortunate possession it was placed immediately over the body, its warmth being welcome.

When hot weather came the feather beds were retired to packing boxes in the barn and their places were taken by separate bedticks filled with the choicest of cat straw taken from a special stack carefully preserved for this purpose. Often the straw bed took on the character of a mattress, and with the surmounting feather mountain, retirement for the night suggested an athlete's leap or a ladder as a means of approach. The modern mattress was unknown, while the stringing of a bedcord so that it would have both solidity and flexibility when the beds were placed upon it was almost entitled to rank as a work of art, a strong and skilled neighbor often being called in as an aid.

The Pioneer Woman Was Not Devoid Either of Taste or the Desire to Adorn Herself

To the male mind the making of such a bed was always among the insoluble mysteries of life. When the house expanded into one of several rooms, the parlor, which was a sort of holy of holies, and the best bedroom, a pompous looking structure, combined to attest the universal hospitality of the time. When company did actually come this latter room was duly aired; otherwise it remained there unused, in the minds of the children a thing of awe, an exciter of wonder about its mission in the world.

The methods of living, so far as food and its preparation were concerned—not only so far as these related to the pioneer, but all along the line of our colonial and general development—have been subject to much misrepresentation during recent years, chiefly due to the ignorance or the deliberate misrepresentation of the sensational novelist of a later day. These writers, dealing with the part of the population far below the average in prosperity, outlook and social standing, have carried the impression that the living was limited mainly to salt pork, the most indigestible of saleratus biscuit, the worst of coffee or tea, the coarsest of sugar and salt, and sweets beneath contempt. In other words, the pioneer has been put down as a lank, half-starved human being, the dweller in a vast outdoor slum. Of course, the writers or travelers who prompted this idea little knew the lavishness, verging upon waste and extravagance; the nervous care devoted by the housewife to cooking; the regard for wholesomeness; the knowledge of dainties; or the amount and variety of food that day by day loaded the table in an average family of industry with its resulting prosperity.

Such a Child Became an Interested Spectator Long Before it Was Fairly Out of its First Order of Clothes

Food the Prime Necessity

OUTSIDE the tests fixed by character—those that circled round the coveted position incident to good citizenship—the first question asked about a husband was, "Is he a good provider?" and about a wife, "Is she a good cook?" These reflected, with accuracy, the standards of the community.

In the provision of food the first concern of the pioneer was to make sure that it could be obtained. On the way through the wilderness the prudent mover would not settle in a place so remote that it did not afford a supply of fresh meat. If at first he had to rely upon his faithful rifle he would only live within the areas where deer, wild turkey, wild geese and ducks, prairie chickens, quail, squirrels and rabbits were found in sufficient numbers to afford him an assured reward without having to range over so wide an area that he could not meet the wants of his family without undue loss of time from his regular work. He did not hunt merely for sport—in this respect he was still the primitive man. Nor did he hunt in companies—the game he had to get was too wary for this—hence the contemptuous proverb, applied to all the operations of life, about hunting ducks with a brass band. Naturally a modern battue—in which game is shot to satisfy an instinct for killing, or for association with fellows, or for vanity and show—was unknown.

The pioneer's hunting was as much a part of the business of life as planting or grinding corn or milking a cow or raising hogs or cattle.

The true frontiersman was not much of a fisherman, and when he indulged in it he fished as he hunted—for use, not for recreation. The streams that he crossed or along which he lived were not generally remarkable either for the quantity or the quality of the finny life they contained; besides, fishing was altogether too slow a thing for him to follow. It did not yield an adequate return in the way of food to justify the expenditure

PHILADELPHIA, JUNE 10, 1922

Our Runaway River

EXAMINATION of the conditions that made possible the recent devastating floods that took heavy toll in life and property the length of the Mississippi Basin, from Cairo to the Delta country, affords as clear a case of cause and effect as is often to be found. The wonder is not that thousands of square miles of fertile territory, spotted with densely populated towns, were at the mercy of the runaway river, but that men should have ever closed their eyes to the obvious fact that the recurrence of such disasters is inevitable as long as water runs downhill and causative factors remain unchanged.

If a conspiracy of malevolent engineering experts had been formed forty years ago for the express purpose of so treating the Mississippi Valley as to make recurrent flood and disaster a moral certainty the conspirators could have scarcely brought about a set of conditions more favorable to their project than that which now exists.

The surest known way to produce floods is to see that all rainfall runs downhill over steep surfaces without having an opportunity to sink into the soil. This is most effectively accomplished by cutting down every hillside forest and removing all porous forest carpet, such as moss, mold and decayed leafage, that might check or absorb the smallest trickles of rainfall. Flood every rill and runnel with the rains of spring, and the creeks and rivers will take care of themselves. This is just what has been done—not through the plotting of foreign enemies, but by honest, ball-playing Americans whose hands are never raised against their native land except when they go into a forest with an ax or commit themselves to the feeding of a pet sawmill. Eventually they learn the evils of reckless deforestation, but not until their timber has become joists and shingles or sad, smoking ruins.

Downstream in the Mississippi Delta country there are those who appear to entertain the theory that the way to prevent a boiler explosion is to clamp down the safety valve as they did in the palmy days of river racing; for acting by analogy they have closed the river's natural outlets to the sea without creating artificial outlets to relieve the resulting strain. The consequences are precisely what might have been expected.

Flood, like taxation, is most effectively controlled at its source. Plow furrows in Wisconsin or Missouri can hold back tiny streams which, if allowed to march down into Louisiana, gathering reënforcements at every bend in the river, would form a torrent that the stoutest levee cannot withstand. Levees are all very well as far as they go and as long as they stay; but when the big river is on the rampage man-made walls are as futile as he who would bind behemoth with a hank of baby ribbon.

Inasmuch as the broad valley of the Mississippi yields nearly ninety per cent of the iron, coal, food and cotton produced in the United States, it would seem as if economic as well as humanitarian considerations dictated the immediate study and the early solution—in practice, and not on paper only—of the very vital problem here presented.

President Harding has already expressed lively interest in the definite and clean-cut remedial program proposed by the experts of the New Orleans Association of Commerce. In addition to a more adequate system of levees and controlled outlets below the Red River, these proposals outline a comprehensive system of source-stream control. The simplest recommendation is that of general contour plowing—that is to say, plowing hillsides round and round, so each furrow will be a miniature dam that will hold back the thin trickle of water until it can sink into the ground. Reforestation on a large scale, by correcting in part the blunders of the past and by restoring natural conditions, would reduce the strain upon protective engineering work. Diversion dams in the Upper Missouri and works in the Ohio and its tributaries, such as those reported by the Pittsburgh Flood Control Committee, for retarding and averaging the run-off, would prove of incalculable benefit; and great basins for the retention of excess flood waters would proportionably take the stress from protective works below.

There is no mystery about the methods to be employed. The questions are: Will Congress take the matter in hand and authorize the necessary work and expenditure? Will it initiate a well-considered comprehensive engineering project, or will its appropriations be parceled out to meet political exigencies?

We have long vaunted ourselves that the East and the Middle West are finished country; that they have all the railway facilities they need, that their streams have been bridged, that their roads are good and transportation is generally easy; but the boast will not ring true until the Mississippi drainage system has been put in its place with valid assurance that, except for minor outbreaks, it will stay there for all time.

Substitutes for Men

WITH the death a few months ago at the age of seventy-eight of a modest and self-effacing but brilliant and fearless journalist, the newspapers with which he had been associated pointed out how the eventual downfall of the corrupt Tweed Ring in New York City politics had been largely due to this one man's masterly handling of the opening assault a full half century before. Only a few weeks later Dr. Charles H. Parkhurst, the clergyman whose crusading efforts did so much to defeat another corrupt political ring a generation later, reached his eightieth birthday. In speaking of the crime wave which has disturbed the metropolis for several years he said:

"It is true that he"—the police commissioner—"has summoned to his aid an enormous multiplicity and variety of instrumentalities, but we ought to be discriminating enough to understand that the power of an executive does not reside in the machinery that he sets in operation but resides in the man's own interior genius of command—as when the Almighty said 'Let there be light, and there was light.' That is executive power. All else is the simulation of power, and so evidently counterfeit as to be ineffective.

"I learned that lesson twenty-five years ago in my two years' conflict with the Tammany superintendent of police, Thomas Byrnes. If he wanted a thing done he said 'Let it be done'; if he wanted every rum shop and disorderly house in the city to suspend operations he simply said 'Close up'; and they were all closed up and remained so till he said 'Open up.'"

Every now and then we are told by someone whose positiveness is equaled only by his lack of historical perspective that all the old-time leaders have gone and mass or group action is the dominant force of the day. "The great editors, preachers, business men and st have passed away," says one exponent of the "We don't think of Rockefeller in oil or of Ca steel. We just think of great companies and

But common everyday experience proves tha statement is untrue. Just because prominent industry or reform or journalism are passing eighty or thereabouts, why necessarily jump t clusion that the work of the world is being carried only by companies, syndicates, masses and gro old conspicuous leaders are always passing wh are in process of development. The importance of and the group is not belittled merely because a piece of work, no real achievement is possible w devoted effort of one man or a few individuals.

Victory over one or more of the world's worst has been achieved largely through the efforts of liberally endowed foundation for medical resear we ascribe this to the foundation itself, to the eff massive institutionalism? Tommyrot! All the g given by a single individual who happened to be in an important industry, and the actual work of ing and combating the causes of disease has been handful of scientific specialists, a dozen at the m

Does any city clean up its crime, does any cru clear away its calendar, does any Federal de make a record, does any state charitable institu stantially reduce the sum of human misery, does drive out commercial frauds or financial swindl a few individuals or more commonly a lone exercises real power and works for a desired end of his own comfort and leisure? For that matter banker lend freely to a corporation, does any group believe in a stock or bond, unless there is and trust in both the integrity and the ability group of executives or even of a single executive

Whenever a business enterprise falls upon e and thousands of them have in the last year one attempts to diagnose the trouble or prescribe without first making sure whether those in co honest and able or dishonest and incapable. writer and lecturer who says that the great le passed away would not think of investing his in an enterprise whose executives he positively without qualities of leadership. Only a mento would dream of deliberately intrusting money known to be totally devoid of such qualities.

It has long been said that if you want to get a go to someone who is already very busy. Wh in every town and village a comparatively sm people serve on nearly all the committees an burden of civic work? In a town where there childless married women with ample means, ants and good health, a few busy mothers of dren, in none too good health, with relatively and only part of the time of one maid, are cons to undertake various forms of work for the pu Why? Because everyone knows they have qualities and capacities.

If leadership is a thing of the past the cu indeed. But the evidence is strangely ha labor unions, where group action is magn utmost, have their leaders, and very able, in conspicuous they often are. Indeed both in and England a few labor leaders have bee recent years of running the country, of vetoi government itself, of forming a supergovern ist parties have their leaders, men who mak heard, and even in that paradise of proletar ship, in that Mecca of the downtrodden mas there seem to be a number of astute and leaders—Lenine, Trotzky, Tchitcherin, Krass

Human leadership is an inheritance of the to the possession of superior qualities, or at standing qualities; and those qualities in in some men and not in others because of the of evolution through untold ages. Leaders new forms, but the thing itself is embedded nature of man. One might as well talk about tions doing away with hunger and with love

ARD TIMES IN SCANDINAVIA

By IRA NELSON MORRIS

Minister to Sweden

ING a recent visit in America I as frequently faced with the estion: "Are conditions as bad n and the other Scandinavian countries as in America?" Both in the Eastern States e Middle West the business men were anxworried. They wanted me to tell them in the period of depression affected the counorthern Europe and what means were being gain a secure balance in national affairs. t Americans generally appreciated the fact est of the world was suffering, but I think the belief that America was burdened ily than the countries across the Atlantic. e unwise to make a sweeping statement ll Northern Europe, but I am sure that on the Scandinavian peninsula have been hard as Americans. It has been a terrible every viewpoint—the worst in a quarter y.

ulties in Sweden and her neighboring nabeen very similar to those in the United th the wave of depression came unparalcement of labor, each month witnessing s in the number of unemployed. The roaned under their burdens and bitterly eir governments. Arctic winds brought eratures than had been recorded since roze the lines of water traffic so solidly g remained paralyzed for over a month. e of influenza raged over Sweden and d a host of minor ailments affecting the d their share of torment. Such was the general terms. It was a gloomy picture, se inspection there could be seen high ight spots. An optimist would stress the ough the adversity of the present will evolve erstanding of the problems that have aggra- and governments for years, while in a broader r bond of sympathy will be drawn between hrough their mutual suffering.

Relief Measures

he greatest problem of the period of depress- Scandinavia was that presented by the huge employed. In the summer of 1921 the vari- s affected by hard lischarging employes. concerns in the cities taffs to the minimum, ne winter set in there en over 80,000 job- nark 65,000 and in 50,000. These fig- rapidly through the and during January of unemployed in to about 160,000, d to the population, ,000,000, made the vorkless very heavy. e unemployed num- re about 100,000 out lation of 3,000,000, the figures reached a population of judging the extent yment, however, it mind that the fig- only those wage out of jobs. In have dependents. example, it is esti- ,000 unemployed

The French Steamer Rodfaxe Encountering Difficulties With the Ice in the Sound

have others to support, in most cases two dependents, making a number of people suffering through the closing of factories or the reduction of staffs close upon 300,000.

To help the workmen during the period of depression the Swedish Government decided to appropriate a large sum annually, to be doled out in allotments to the jobless. This appropriation amounted to an equivalent in Swedish money of about $12,000,000 last year, and an appropriation twice as heavy is asked for the forthcoming twelve months. Whether this method of dealing with unemployment is beneficial for all concerned is a matter of much debate. It is complicated by many disputes over the individual payments and the status of men employed upon temporary work conducted by the state and municipalities, as well as the right of workmen locked out by their employers to be classed as unemployed. Proof of the worth of unemployed allotments by the state will develop only after industry has recovered and it is possible to observe the effects upon labor generally. The heavy appropriation required for the allotments was one of the burdens shouldered by the taxpayers, whose complaints against the measure are as strong as those of the American taxpayers against the multitude of their difficulties. During January of this year the Swedish Government paid out a sum equal to $1,350,000 to the unemployed, with no hope that the drain on the treasury could be lowered during the ensuing months.

Conditions in Denmark

ALTHOUGH the taxpayers complain, at the same time they feel a deep sympathy for their less fortunate fellows and they express that sympathy in many practical experiments for the benefit of those who are involuntarily idle. Schools for the unemployed were opened in Stockholm shortly after the first of the year and at the first session, held in a theater donated for the purpose, over 900 were enrolled for the term. The courses covered technical training in a dozen different trades, lectures on art, music, literature, economics, and classes in languages. Noted professors, actors, musicians and leaders in various industries gave their time free for the benefit of the workmen enrolled in the schools.

To each member of the school for unemployed a ticket was issued entitling the holder to a free meal. The plan was adopted in other cities and will continue as long as the number of unemployed makes the venture worth while.

In Denmark the unemployment situation has been greatly aggravated by a fierce contest between the powerful employers' society and the labor unions. Employers were faced with two problems, just as employers were in England and America: First, they determined to reduce wages; and second, to increase output through the extension of working hours. In their proposals for wage reduction the Danish employers announced their intention of heavily lowering all wage scales, and simultaneously demanded a relaxation of the eight-hour-day law. To enforce their terms they instituted a lockout, thereby adding to the already large number of unemployed nearly 30,000 others who might have continued, at least on part-time work. The result of this fight is unknown as this article is being written, but regardless of which side comes off with the victory, the effects will be hard on both. The lockout has already cost Denmark $10,000,000 according to the estimates of the officials, while the keen competition from neighboring countries, especially Germany, which the Danish employers seek to overcome, grows apace.

Scandinavian shipping has been dealt blow after blow by trade conditions, by the elements and by the rapid decline in freight rates. All last summer the Swedish, Danish

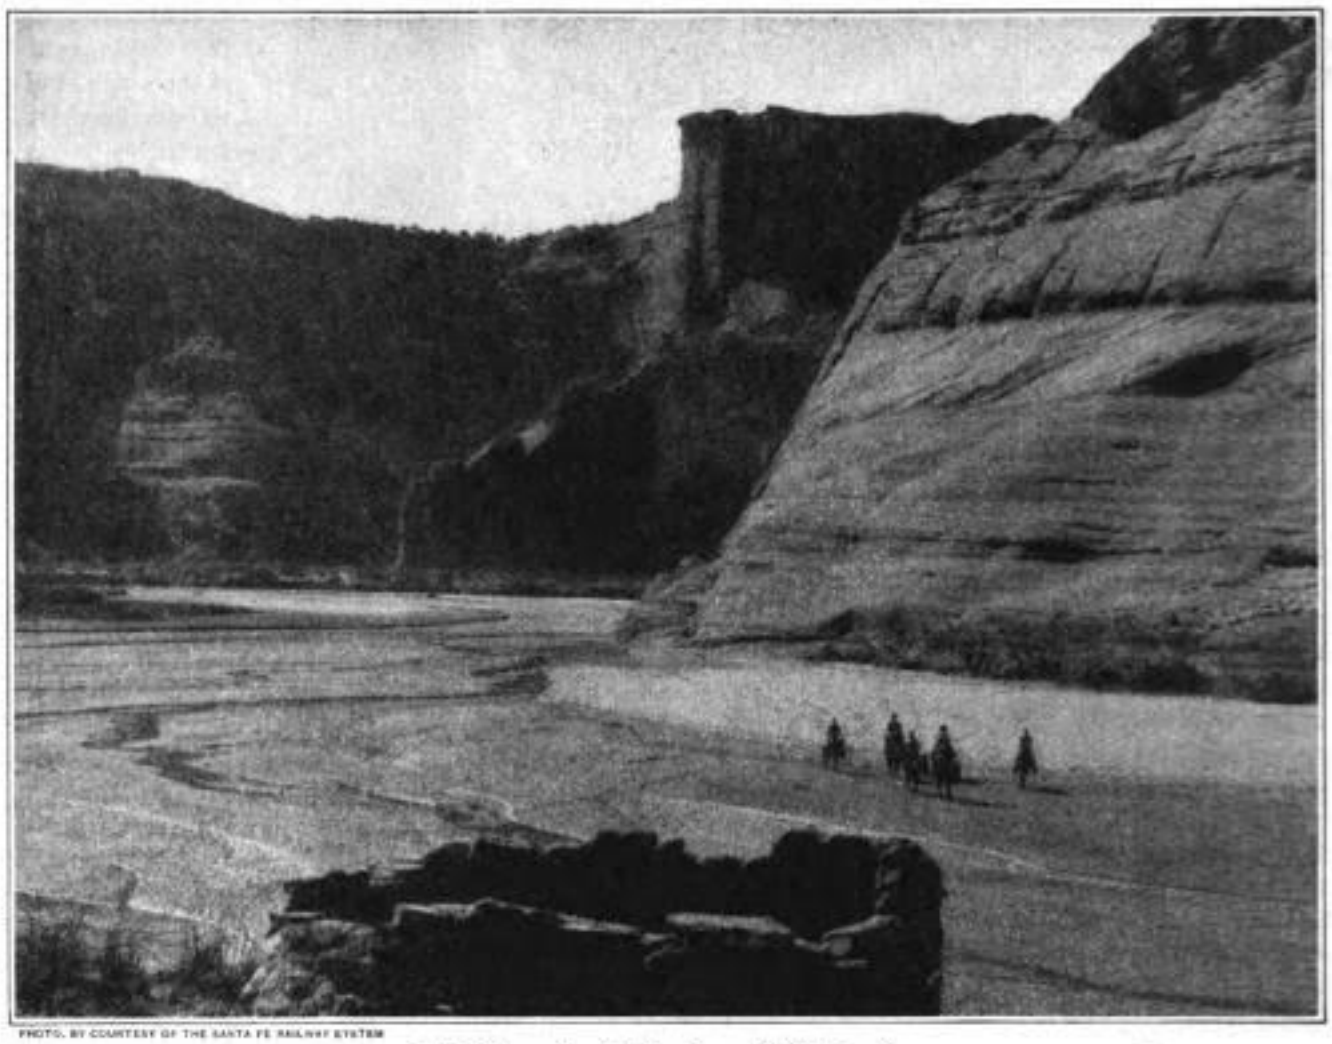
A JITNEY GUIDE TO THE SANTA FÉ TRAIL—By Nina Wilcox Putnam

IN ANOTHER year or so they are going to need traffic cops on the Santa Fé Trail all the way from Broadway and Forty-second Street to San Bernardino, California. And it is for the benefit of those who want to join the crowd that this article is written. Having made the trip myself and suffered upon it from lack of certain knowledge, it occurred to me that perhaps a lot of folks who contemplated motoring across this trail might like a little practical dope on the trip. So here you are. Tear this out and stick it in your wallet. You can depend upon its being the real thing.

To begin with, it is possible to cross the continent by motor at any time of the year, but it is not probable. Take it all in all, the best bet for general good weather and good road conditions is from the first of June to the first of September. I wouldn't, however, advise making the start from the East after September first, as on the Lincoln Highway snow would very likely be encountered on the Continental Divide and through the Rockies. As for the time it takes, George—that's my husband—and I drove across in eighteen days, actual driving time, without any night driving at all, taking our way in leisurely fashion and seeing everything as we went.



In talking to prospective motorists about the transcontinental journey I find that two principal terrors loom largely in their minds—to wit: Crossing the desert, and the fear of not being able to get adequate supplies for the motor and for their living. Both of these fears are chimeras. There is a gasoline station every seventy-five miles all the way across the desert, and other supplies may be purchased anywhere along the route. There is no Sahara stuff about it, except that which is derived from the Eighteenth Amendment.

Once you have made up your mind to go, the question that follows in natural sequence is, Which way? There are no less than six main roads from coast to coast, and the first thing to do is to obtain a good road map and look it over carefully. A good one is the Transcontinental Map of Main Traveled Roads issued by the American Automobile Association, which may be secured from their national headquarters, Riggs Building, Washington, D. C., or their New York office, 501 Fifth Avenue. This is not only a clear and well-arranged map but has a great deal of valuable detailed information printed on the back. In the Far West good maps are to be got through the Automobile Club of Southern California, Figueroa and Pico Streets, Los Angeles, California.

The Route From Coast to Coast

EVERY trail is worth taking of course, but the route offered for your present approval is a good one for a first transcontinental journey. Here is the itinerary. Read it over, and then look at your map, and you will see why it is so good.

New York to Baltimore, Maryland.
Baltimore to Wheeling, West Virginia.
Wheeling to Columbus, Ohio.
Columbus to Indianapolis, Indiana.
Indianapolis to Terre Haute, Indiana.
Terre Haute to St. Louis, Missouri.
St. Louis to Columbia, Missouri.
Columbia to Kansas City, Kansas.
Kansas City to Hutchinson, Kansas.
Hutchinson to Syracuse, Kansas
Syracuse to Trinidad, Colorado.
Trinidad to Las Vegas, New Mexico.
Las Vegas to Albuquerque, New Mexico.
Albuquerque to Magdalena, New Mexico.

PHOTO, BY COURTESY OF THE SANTA FE RAILWAY SYSTEM

Outlook From the "White House" Cliff Dwelling in Cañon de Chelly, Near Gallup, New Mexico

Magdalena to Springerville, Arizona.
Springerville to Winslow, Arizona.
Winslow to the Grand Cañon.
Grand Cañon to Seligman, Arizona.
Seligman to Needles, California.
Needles to Barstow, California.
Barstow to Riverside, California.

These are comfortable jumps, that any average driver can make, and are based primarily on the fact that excellent hotel accommodations can be secured in all the places mentioned.

I especially recommend the Santa Fé route for its infinite variety. Beginning with the charming Southern city of Baltimore you will next in order come upon the quaint little town of Frederick, which looks exactly as though it had been plucked bodily out of a set for a Civil War motion picture. It's all you want and expect a small Southern town to look like, and then some. Next you get a good glimpse of the Western Pennsylvania coal fields and mining towns of which you read in the newspapers whenever there is a big rumpus going on in the coal industry.

Leaving this behind you will come into Wheeling, West Virginia, a charming city, alive, yet with a touch of quaintness, too, and from there to Columbus, Ohio. This is agricultural country, and so much of a muchness as there is of it! From there you go to Indianapolis.

During the rainy season—or any other season for that matter—it is quite possible that you will find mud in this district, but there is always a way to get through.

Cornfields in Ohio, Indiana and Illinois are not measured by the acre but by the mile, and the growth not by the foot but by the yard. One passes literally through forests of corn and, I might say, shoals of pigs. There is a richness about this entire stretch of territory that is enheartening to the Easterner, to whom bugaboos of Bolshevism and labor conditions are constantly presented. From Indianapolis you come into St. Louis over the Mississippi bottoms, a fertile flat land which in September is a blaze of golden bloom. St. Louis is a true city in the sense in which we know the word in the East. The rest of Missouri is interesting chiefly because here begins a succession of beautiful little cities which are, so far as I know, unique and which continue from St. Louis through and beyond Kansas City to La Junta.

The next stop is Kansas City, which truly calls itself The Gateway to the West. Almost imperceptibly the whole journey has so far been leading up to the great change from the East t
West, but here
though the curtain ha
denly been lifted up

THE GREAT BREAKFAST FOOD—GOOD HOT SOUP

She's a dandy housekeeper
So I said, "Let's go!"
For she's a Campbell's housekeeper
And has her soup just so.

"—and they lived long and happily ever after."

Let Campbell's Soups help. Every taste of them puts an extra sparkle in your meal—they're so delicious and nourishing and tempting. Go to your grocer today and select an attractive Campbell's assortment, including your favorite soups and several "new" kinds for variety. Then see how much more everybody enjoys their food.

Campbell's Tomato Soup

is the favorite of millions—the best-liked soup in the world. Taste it and you'll know why! Luscious sun-sweetened tomatoes—aristocrats of the vines—give to it their pure tonic juices, enriched with smooth, golden table butter and the most delicate of piquant spicing. A bright spot in any meal!

21 kinds **12 cents a can**

Delightful variety in Campbell's Soups

Asparagus	Mulligatawny
Bean	Mutton
Beef	Ox-tail
Bouillon	Pea
Celery	Pepper Pot
Chicken	Printanier
Chicken Gumbo (Okra)	Tomato
Consommé	Tomato-Okra
Julienne	Vegetable
Mock Turtle	Vegetable-Beef

Vermicelli-Tomato

Your grocer can supply any of these soups

(Continued from Page 26)

route is perhaps more picturesque. On the southern route the Datil Forest offers a relief from the desert country and is extremely beautiful in a friendly and more intimate manner, and one rides for hours through great cathedral-like columns of fox-tail pines, an uncommonly straight tree with red bark and dark green needles. This route is unquestionably cooler than the other.

From either Winslow or Gallup it is possible to go out into the Hopi Reservation. On the map you will find a large square marked Moqui Reservation. According to the inhabitants themselves this is incorrectly named, as Moqui means Dead Indians and they like to call themselves the Happy People, which is translated into Hopi. The surrounding country is the real Bad Lands, full of color and extremely picturesque. The Hopi villages on the three mesas are really primitive and unspoiled as yet by tourist travel, and can be reached only in good weather, as there is, properly speaking, no road out to them, but only a trail leading through the sagebrush. It is inadvisable to attempt this trip without a guide, but perfectly safe if you take help along. It is necessary to camp overnight at Oraibi or Walpi, for there are no hotels or accommodations of any kind.

Not Like the Sahara

THE road from Winslow to Flagstaff is through a mountainous pine-clad country, and both roads up to the Grand Cañon are passable but not good, having sand in many places, but no very bad grades. But from Williams to Needles, California, is perhaps the most difficult part of the trip, for the roads are undeniably poor and it is desert country. Kingman is the only large town en route. It is one of the biggest mining centers in America and is the focusing point of all the mining interests for hundreds of miles around. This is gold country, silver country, and one of the principal districts from which copper, zinc and our semi-precious stones come.

Needles gives one the first glimpse of what California is going to be like, for there are palm trees in the square and the color in the mountains is more intense than it has been heretofore. There are two ways to reach it from Kingman. One is across a rather bad stretch of alkali desert, through Yucca and Topock. And the other is by way of Goldroad, directly through the mountains over very bad roads and dangerous grades, but passing through several real mining settlements that bear all the earmarks of a gold boom town in a moving picture. Exceptionally careful driving is certainly necessary hereabouts, for the roads are full of blind turns and there is a long and usually muddy stretch of bottomland approaching the Colorado River, which must be ferried on this route. The other route, which crosses the alkali stretch, is much longer, but the approach to Needles is over a bridge. When one reaches Needles the real desert, the part of the trip which most people fear, is still before one. But here begins the work of that astonishing organization, the Automobile Club of Southern California, which has attempted to lay a hard road over the face of the desert. In point of fact it has actually done so, though succeeding at times indifferently well, and after wading through heavy sand for a few miles immediately out of Needles one comes upon this paved boulevard in the middle of nowhere. It is an unexpected sight that raises one's hopes unduly, for the character of the ground is such as to make a permanent road little short of impossible. Nevertheless, their attempt has resulted in good stretches, although the frequent sandstorms have completely buried it in places. Very likely even as I write this condition has undergone a tremendous improvement, but it is true that the terrors of crossing the desert have been greatly alleviated by the work of the club and you can now drive and still look at something besides the wheel and the road immediately ahead of you.

You mustn't expect the desert to be like the Sahara, because it's not. There is growth of one kind or another on every bit of the stretch across which the road passes, except that one piece of alkali country between Kingman and Needles. It is mountainous country, instead of being flat as one naturally presupposes, and occasionally enormous dead volcanic cones appear upon the horizon. Some people fear the desert, and some, having crossed it, dislike it still, but to me it seems almost the only part of America where man has not yet interfered with God and where your soul can get out and stretch to its fullest extent. If you can see nothing else upon the desert be sure you train yourself to perceive its shifting color and the weird tricks the light plays.

More than this I cannot say. If you can't see what is there I can't tell you about it; it is one of those things that everyone must find for himself.

From Daggett to Barstow the road is difficult; sandy, rough and high crowned; and from Barstow to the head of the San Bernardino Pass is also poor, the roadbed being of loose gravel, and the grades stiff. But at the end of [illegible] pass the miracle of the California roads begins. At the very summit, sharply divided from the crude trail as though a knife had cut the black tar ribbon of [illegible] the paving starts, and from there on into San Bernardino and thereafter, the beauty of the roads and the charm of the scenery both exceed the Eastern motorist's wildest dream of perfection.

The first question which comes naturally to any woman's mind in connection with going anywhere is, What shall I wear? And it's the truth that the choice of clothes for a transcontinental motor trip is a good deal of a question.

To begin with, one wants to be thoroughly comfortable through the day, have a change for the evening, especially if one intends to stop at hotels, and plenty of linen because of the difficulty of getting overnight laundry done. But against these necessities stands the even greater necessity for making your baggage as small in quantity as possible. An overburdened car heaped with bags and suitcases and blanket rolls, and so on, in addition to the necessary appliances for the car itself, is enough to destroy the pleasure of the trip—that is, if anything could.

What Women Should Wear

EAST of the Mississippi George and I found it practical to wear just such motor clothes as we would wear at home. But we both made one serious mistake—at first. We started out in dark clothing. Believe me, before we had gone very far we found that what you want is dirt-colored clothes. West of the Mississippi khaki for all hands comes positively *de rigueur*. After we left Kansas City I put on a pair of riding trousers, and oh, the joy of them! I need not sing their praises to any female who has worn them, but for the encouragement of those who have not I allow me to insist and reiterate that they are the best thing to wear in thorough comfort west of the Rockies. Everyone from grandmamma down to the snappiest chicken in the snappiest [illegible] that you pass wears 'em. Do not be afraid of going without a pair. Every department store that boasts of a men's goods department now carries riding trousers and knickers of khaki for women as well as for men, and these are remarkably reasonable in price, washable for as little as [illegible] and believe me they will save you hundred dollars' worth of fort and ease. I assure you ladies, that you can [illegible] the best hotels through the West in the aforesaid [illegible] without the slightest embarrassment, and the clerk will not smile after your back is turned. And if you are going to [illegible] such a [illegible] will be a little indispensable. Curiously enough it is necessary [illegible] though [illegible] in the [illegible] weather. A couple of [illegible] weight [illegible] what [illegible] need the [illegible] high [illegible] as sum[illegible] ing. The [illegible] rually [illegible] down [illegible] tains [illegible] which [illegible] graphic [illegible] though [illegible] Beach [illegible] be the [illegible] abso[illegible] sweaters [illegible] coat [illegible] lutely [illegible] Asia [illegible] fishing [illegible] helmet, [illegible] one [illegible] exercise [illegible] slips [illegible] hand, [illegible] handker[illegible] and [illegible] neck [illegible] with a [illegible] a cravat [illegible]

Long-Proven Value Now Breaking All Hupmobile Sales Records

The story of the Hupmobile business since the first of the year is an inspiration.

In all the 14 years of our history, there has been no such succession of shattered records. Never has the factory been called upon to meet such a tremendous demand for its product.

In January the increase in sales began almost with a rush. That month was the greatest January on our books.

April Outstrips All Previous Records

Like a huge snowball, sales have kept on rolling up and up. February showed a 5 per cent increase over January, and the March business leaped ahead so far that it made the first quarter our largest by all odds.

Then came April with 3806 cars shipped, thus outstripping all of these 1922 records, and registering an increase of 180 per cent over the first four months of 1921.

May orders in hand as this goes to press indicate still another record-breaker in the greatest year the Hupmobile has ever known.

The inference to be drawn from these facts is perfectly plain. It is the Hupmobile that people want, now that buying has settled down to a basis of real dollar-value.

They want it because for 14 years it has been known as an exceptionally good car. Because today it is proving its greater value by what it is and what it is doing every day for its owners.

In economy, the Hupmobile stands almost alone. Records carefully kept by business houses which operate fleets of cars show its upkeep and running costs below those of cars whose chief appeal is price.

In performance, it is known everywhere as the remarkable equal of cars which cost a great deal more and are therefore expected to do a great deal more.

New Buyers by Scores and Hundreds

The higher prices which the used-car markets put upon used Hupmobiles—when they can get them—indicate the preference of their buyers, and the higher value everyone concedes to this car.

All of these things, which are known to other owners almost as well as to Hupmobile owners, are working together to attract new buyers by the scores and hundreds, and to make this year the greatest our history has ever recorded.

protects the back of the neck. It is easily folded away into a small rubber envelope, which comes with the set. These are much cheaper than the ordinary raincoat and if you are driving an open car you will probably find more use for this outfit than for any other one item of your wardrobe, even though you should have very little rainy weather, as they are light in weight, windproof and of course dustproof.

So many women have asked me what clothes I took upon the big hike that I am moved to give a list herewith:

1 Gray-brown-mixture tweed suit.
1 Medium-weight topcoat.
1 Pair low-heeled oxford ties.
6 Very plain tailored shirt waists for use in the East.
1 Silk crêpe dress, high necked.
1 Khaki-colored flannel shirt, boy's model.
1 Small motoring hat.
1 Boy's tweed cap, with visor.
1 Plain black evening gown, of uncrushable silk.
1 Pair of dress slippers.
Driving gloves.
Khaki riding clothes.
1 Pair high boots, of the type known as Pioneer.
1 Rubber fishing shirt.
Small compact toilet roll.
Underwear, and a pair of goggles.

These last are especially important and great care should be made in selecting the proper sort.

The clothes George selected after the usual husbandly performance of packing and repacking his bag not over seven times and constantly interrupting my own packing by yelling out questions such as Will I take the old gray sweater or the one Cousin Mary knitted for me? and other equally important queries, were as follows:

1 Cloth cap.
1 Rubber fishing shirt.
1 Medium-weight overcoat.
1 Sweater.
1 Tweed-mixture lounge suit.
1 Dark suit for evening.
2 Flannel shirts.
1 Pair khaki breeches.
2 Pairs golf stockings.
2 Pairs shoes.
6 Soft shirts with collar attached.
Underwear and socks.
Jar of cold cream.

This last item may seem a curious article for a man to take along, but the action of alkali dust upon the skin makes it necessary. In the Southwest it is an excellent plan to start out in the morning by rubbing in a small quantity of cream upon the face and allowing it to remain throughout the day, as soap and water are not a sufficient agent as a cleanser, and besides, without it the heat and dust make shaving next to impossible; or so George says.

Tools and Equipment

DO NOT turn up your nose at taking something fresh and a little dressy to put on in the evenings if you are going to stay in the hotels. The midcountry towns are not hick villages, and you will need and want one attractive costume when you hit Columbus, Indianapolis, St. Louis, Kansas City and many other points along the road. Furthermore the refreshment that comes from a bath and a change at the end of the day grows to be an absolute necessity on a long motor trip; so don't make the mistake of thinking you can live in your motor clothes day after day.

Camping is another matter, but even in that case I would suggest taking along some costume, no matter how simple, which you do not wear in the car. You can pretty nearly pack your bag in sequence for the trip, so that it is unnecessary to disturb the garments in it until you come to the part of the country where you are actually going to use them. Start out with your Eastern clothing on top and your khaki things below, and you will have the comfort of not being obliged to unload the car completely every night. We had our bags so arranged that they could be padlocked to the running board, and sometimes for two or three days at a time it was unnecessary to take anything into the hotel except our dressing cases. The first law of long-distance motoring is one big bag apiece, and that's a generous allowance.

Don't take good new luggage, for it surely will be ruined; and cover what you do take with a tarpaulin.

So much for what the well-dressed motorist will wear. But all the equipment necessary for the trip does not go upon one's back. Though there are many fancy motor accessories upon the market, the inventions of numerous ingenious persons, beginning with the devil, these are mostly hokum, and can be perfectly well dispensed with. However, there are a few tools it is foolhardy to go without. When you read the list of them over don't get cold feet, because you're not going to the North Pole, although I know it reads that way. These are the tools of common sense, and you will be glad to have them along before your trip is finished, or I miss my guess.

To begin with, you must have a complete set of chains for your tires. Four chains. That's what I said: four. Of course you may have great luck and never be obliged to put them on at all. But through the high-crowned dirt roads of Indiana, Illinois, Missouri and parts of Kansas, take my advice and put them on instantly if you get a sudden shower, no matter how light the shower may be. The soil all through this part of the country is so constituted that a light shower makes more dangerous driving than a really heavy rain.

Take along a good strong tow rope. We used ours twice to tow somebody else out of a ditch, and once to bind on the spare wheel after the leather straps had broken. A good rope has many uses.

A block and tackle is a splendid thing to have along. Next you need a collapsible water bucket, preferably one with a spout. These come made of watertight canvas and take up very little room. They are practically necessary if you have to fill your radiator from a brook or a spring. Then—perhaps most important of all—is your desert water bag. A five-gallon size will take good care of your car and is about as large as the average automobile can carry comfortably. This water bag is absolutely essential, and should be filled upon every possible occasion. If you don't do it, just as sure as you're born you'll spring a leak in your radiator; and the desert water bag must be carried on the principle of an umbrella in fair weather if on no other basis. You will principally find it useful on the steep mountain grades, where there may be no springs and where your car will very likely boil. Don't forget a tarpaulin. The three dollars that it costs will save you twenty times your investment. A folding shovel is also most important, and so is a strong practical ax.

The above-mentioned are all essential. If you have them you can safely ignore the fancy additions that may be offered for your consideration.

Now there is a third class of personal equipment that it is well to consider, and foremost in it is the vacuum bottle. You will not want to drink from your water bag, and a very large vacuum bottle is indispensable. Keep this full of something cold to drink, whether you think you're going to need it or not, because you will. A compact picnic case is a good thing to have along, and when you are at a hotel or in a town where good food is easily obtainable it is a splendid idea to have a lunch put up. I would further suggest that the car be equipped with iron rations at all times. We found fruited crackers the most satisfactory thing. Chocolate is impractical because in the intense heat it melts so quickly. A few oranges kept in the car help a lot, both for thirst and nourishment.

There are several types of excellent gasoline stoves on the market now, and these are splendid if you are going to camp, but we were at no time so far from hot food that we needed one. If you want something that will give you a quick and ready flame the gasoline stove is, however, better than the compact alcohol ones, and you have your fuel right with you in the car.

If you do not take a luncheon kit be sure you have drinking cups, and, apropos of nothing at all, I highly recommend carrying a pair of field glasses. You will frequently come upon a wonderful bit of scenery that you will be able to appreciate far better for them.

The Rainbow Bridge, Utah. Largest Natural Bridge in the World—309 Feet High, 279 Feet Span

And now, last but not least, be sure always to [have] gallon of oil and five gallons of gas parked somewhere the car. I know you think you're not going to [need] We thought the same, but we know better now. At time we ran over a stump in the middle of the desert, broke off the oil pump and would have been wholly u to move without that hitherto unused and rather [use] extra gallon of oil. At another point we became so i ested in the scenery we forgot to watch the gas [gauge] might have remained on that delectable mountain the present writing had it not been for the five gal gas in its pretty little tin box. I know that all these will take up precious room, and that you'll have t them covered with newspapers or something to s stop their spoiling the rest of the articles in the c take them, just the same. You never know your l

And oh, I nearly forgot! Be sure to take a good light and a couple of extra batteries to fit it. There be a dark night when by its aid alone you can mak light to shine.

I suppose that every car made is capable of cross continent. This is certainly true if we are to believe the advertisements say, but everyone knows that the advertisements say a lot, advertising writers a sessed of that great human tendency to tell only the they want known. And anyone who has ever bo automobile is only too well aware of the fact th marriage, a car has got to be tried to be understo one but the car owner, if he is also the car driver every little thing about its moods, its fits of te little meannesses and its bursts of generous good h

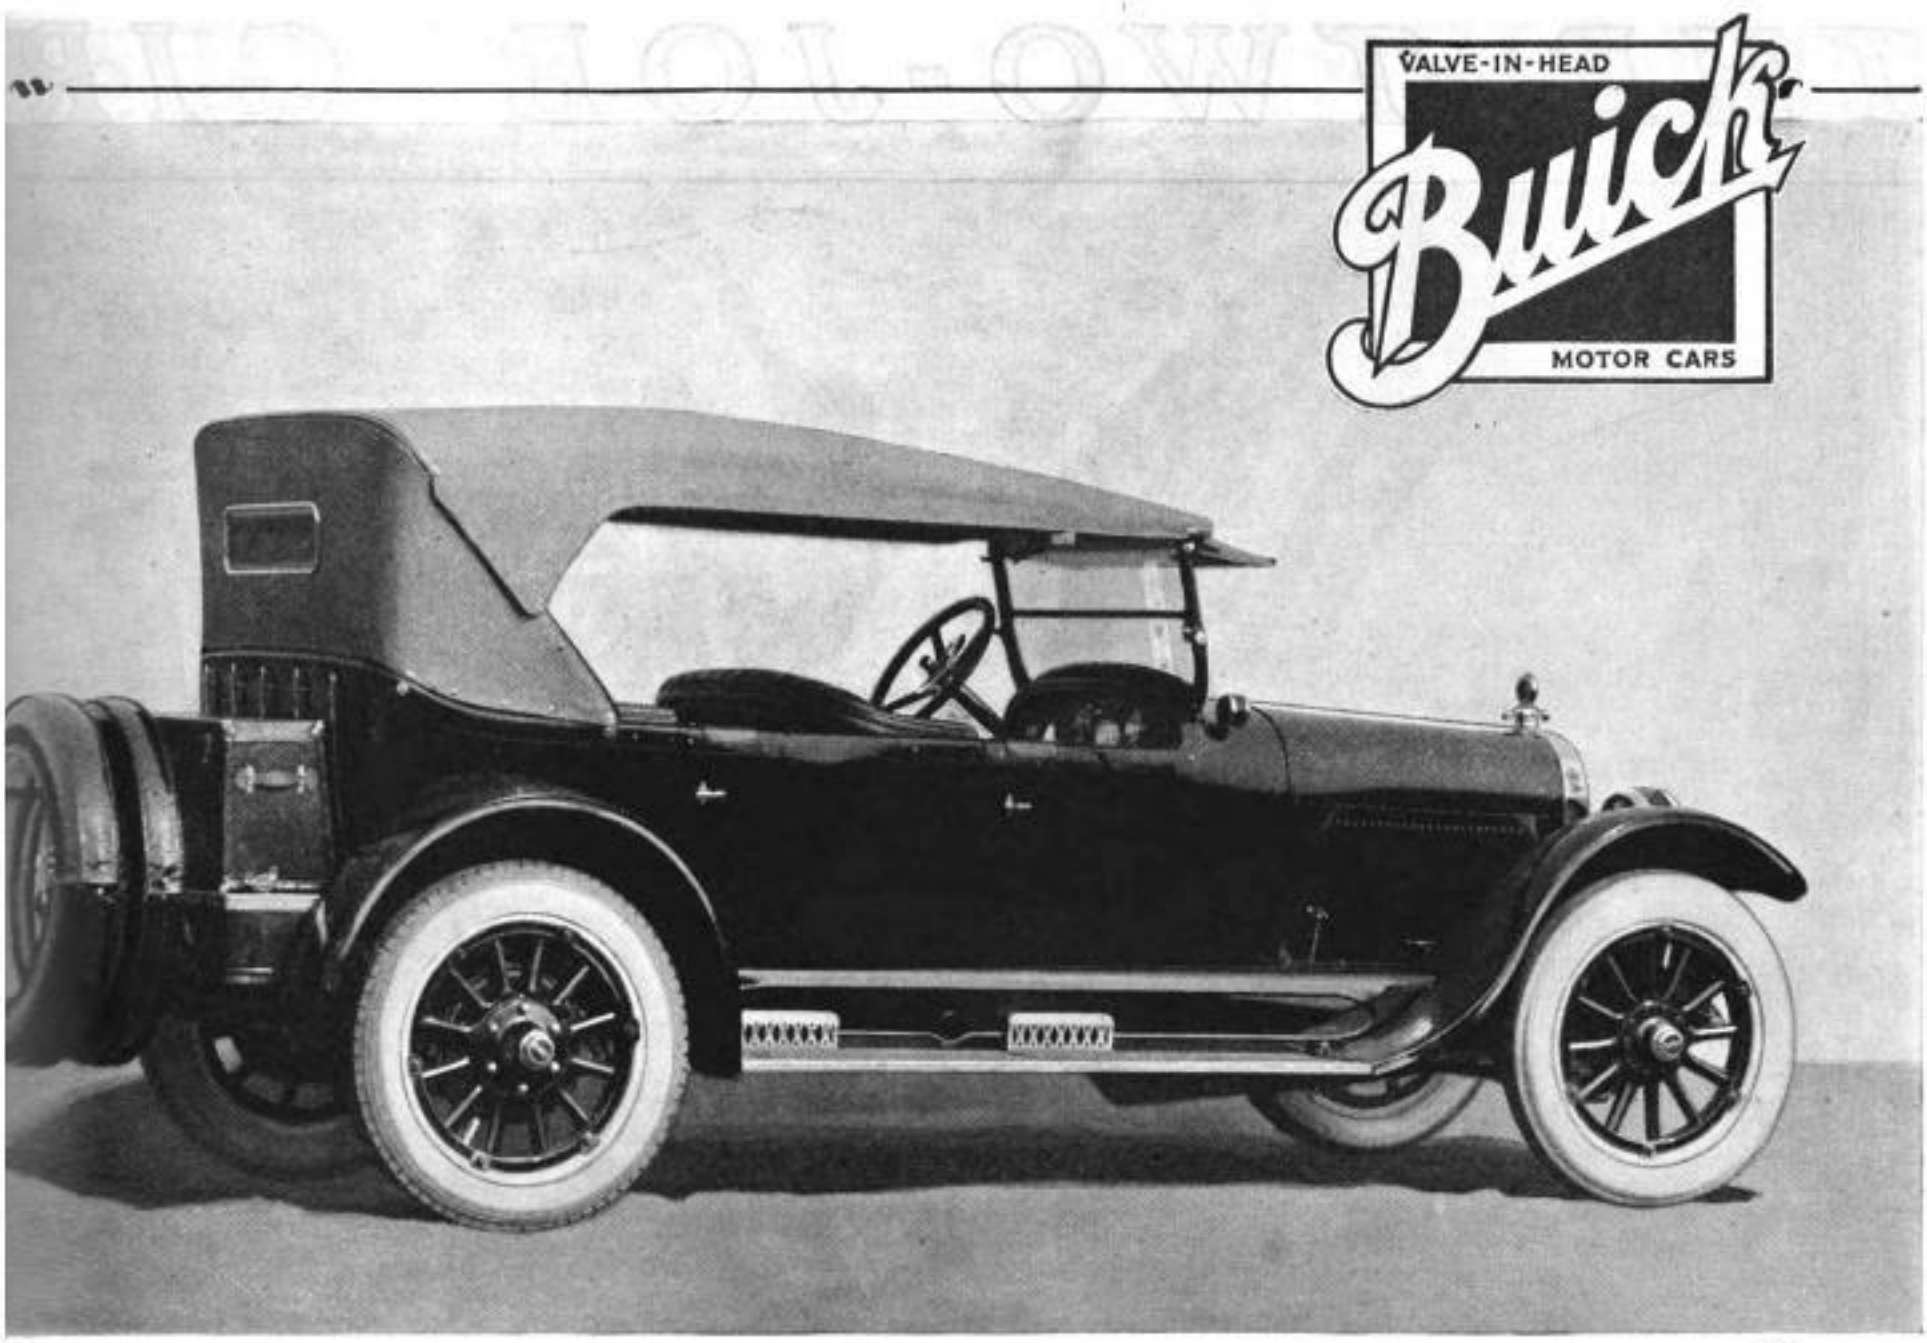
The Choice of a Car

PERSONALLY I have been wedded to four mak mobile, divorced one of them, two have died on I am now living with the fourth in as much peace a ness as can reasonably be expected from a road co costing in the neighborhood of three thousand d

I have also learned that town merit is not count in a car, and that there is a time and place for al type of bus you want to name.

The high-priced, powerful and heavily built automobile is not necessarily the best car to cross the continent. A sturdy medium-priced c desirable for the transcontinental trip and will just as long as road conditions are uncertain.

To begin with, one must have plenty of cle many of the roads are high-crowned; and clearan important where mud is encountered, and w necessary to ford a river. Strong springs are an important item, as there is a great deal of rough reasonably deep upholstery is likewise desirable is sitting upon said upholstery eight to ten hours upwards of fifteen days.



It is a fact that the garages along the Santa are on an average only seventy-five miles apa some districts of course are much closer together nearly any one of these repair shops will be qu make light repairs. Of course running expenses be considered, especially as through the desert tr tion facilities are difficult and the cost of gas and one hundred per cent, and sometimes more. Springs, Arizona, we were even obliged to pay for the radiator, so differ pensive is it to obtain garage is, at a considerab obliged to import water f one hundred miles away

As far as the most type of body goes, no yet been invented that the good old-fashioned tou the most practical and for long-distance travel. T sedan has many excell its favor so far as vary is concerned, and though continental traveler will a ably find the journey mo able with the top up most the really practical tour body has yet to be inven the long grades all closed tendency to topheavines

But whatever bus you journey and however cur facilities for its care along I would suggest that you some extra spark plugs a belt, and a set of magne which are the most difficul obtain along the way—and make certain that your tou tains a complete equipme extra insulating wiring a addition, as is a packag

$1785 f. o. b. factory

The Special 6-55 Sport-Touring

A patrician motor car with every appointment found in the finest automobile—

And, with all this—the certainty of Buick performance, Buick sturdiness and Buick power.

The Special Sport-Touring is built in response to the demand of the motorist who seeks Buick's kind of motoring with the intimate comfort and refinement of the sport design.

No detail of convenience has been omitted. No effort has been spared to include every comfort and every appointment that could be sought in any motor car. The rugged, powerful, Buick driven chassis gives it the speed, endurance and smoothness that make touring a pleasure and not an uncertain adventure.

The Special Sport-Touring is finished in dark Buick maroon with wheels to match—which with the beautiful trimming, binding and finish give this special model its tailored appearance. Nominally four passengers are accommodated in the roomy body but five can ride.

The demand for this handsome model at the remarkably low price will tax factory production to the limit. Consult the nearest Buick dealer for detail specifications and delivery dates.

Additional Equipment of the Special Sport-Touring

Khaki top of exclusive Buick patented design with no bows to obstruct vision; khaki adjustable sunshade; two-piece full ventilating windshield with wiper and mirroscope; glass-covered ignition and lighting switch with push button dash lamp; combination gasoline gauge, oil pressure gauge and ammeter; combination clock and speedometer; cigar lighter; handsome, heavily nickel-bound luggage trunk mounted on permanent specially designed base; Buick design drum-type head and cowl lamps; front snubbers; carpets in both front and rear compartments; walnut steering wheel with walnut control lever knob to match; heavily nickeled radiator, step plates, guard rails and all other fittings; Tuare steel wheels built to Buick specifications are optional equipment at an added cost of $50.00 if installed at the factory; extra tires or tire covers not included.

THE TWO-JOB GIRL

I'm Dashing This Off Before Dinner at Atlantic City, Where We're Spending the Week-End Honeymoon

By Elizabeth Frazer

ILLUSTRATION BY FRANK SPRADLING

ATLANTIC CITY.

DEAR AUNT CECIL: Permit me to present to you Mrs. Stephen A. Sheridan, née your beloved namesake, who's been and gone and done it proper. Steve and I were married at two this P.M. It's now 7:03, and I've been married all of three hundred and three minutes. Can't say I feel any different. No strange sea change. Pulse normal. Temperature fair and warmer. Gay on top but sort of thrilly away down deep. Steve looks rather solemn.

I'm dashing this off before dinner at Atlantic City, where we're spending the week-end honeymoon. The family thinks I'm all wrong. I know I'm right. You see, this is the point: Steve's salary, at present, is not big enough to support two, and so I'm going to continue my job as secretary to Old Joplin. And that's the rub. They all want me to wait. Papa's agin it. Mamma's agin it. And, worst of all, deep down in his heart of hearts my Steve's agin it too. He hates it! Doesn't want his lovely young wife to be a sordid, money-grubbing wage earner. Wants to support said lovely young wife himself without pecuniary aid or assistance. Aren't men funny? And the nicer they are the funnier they are.

We had one of those fine old free-for-all family rows, with everybody sticking in and handing out free advice, and wanting to settle my matrimonial hash; and the upshot of it all was that I settled it for myself: Namely, to get married and to continue with my work. Why not? I'm free, white and over twenty-one. In fact, I'm twenty-three this month. And everybody's doing it these days. Self-expression, economic independence and all that sort of thing. Why hasn't a woman as good a right to go on with her job after marriage as a man? She has!

It all boils down to this: We couldn't marry on Steve's salary, on account of the h.c.l. in New York and Steve's work keeping us in the city, but we can on his salary and mine put together. I've got it all figured out. Hence and wherefore, Q.E.D.

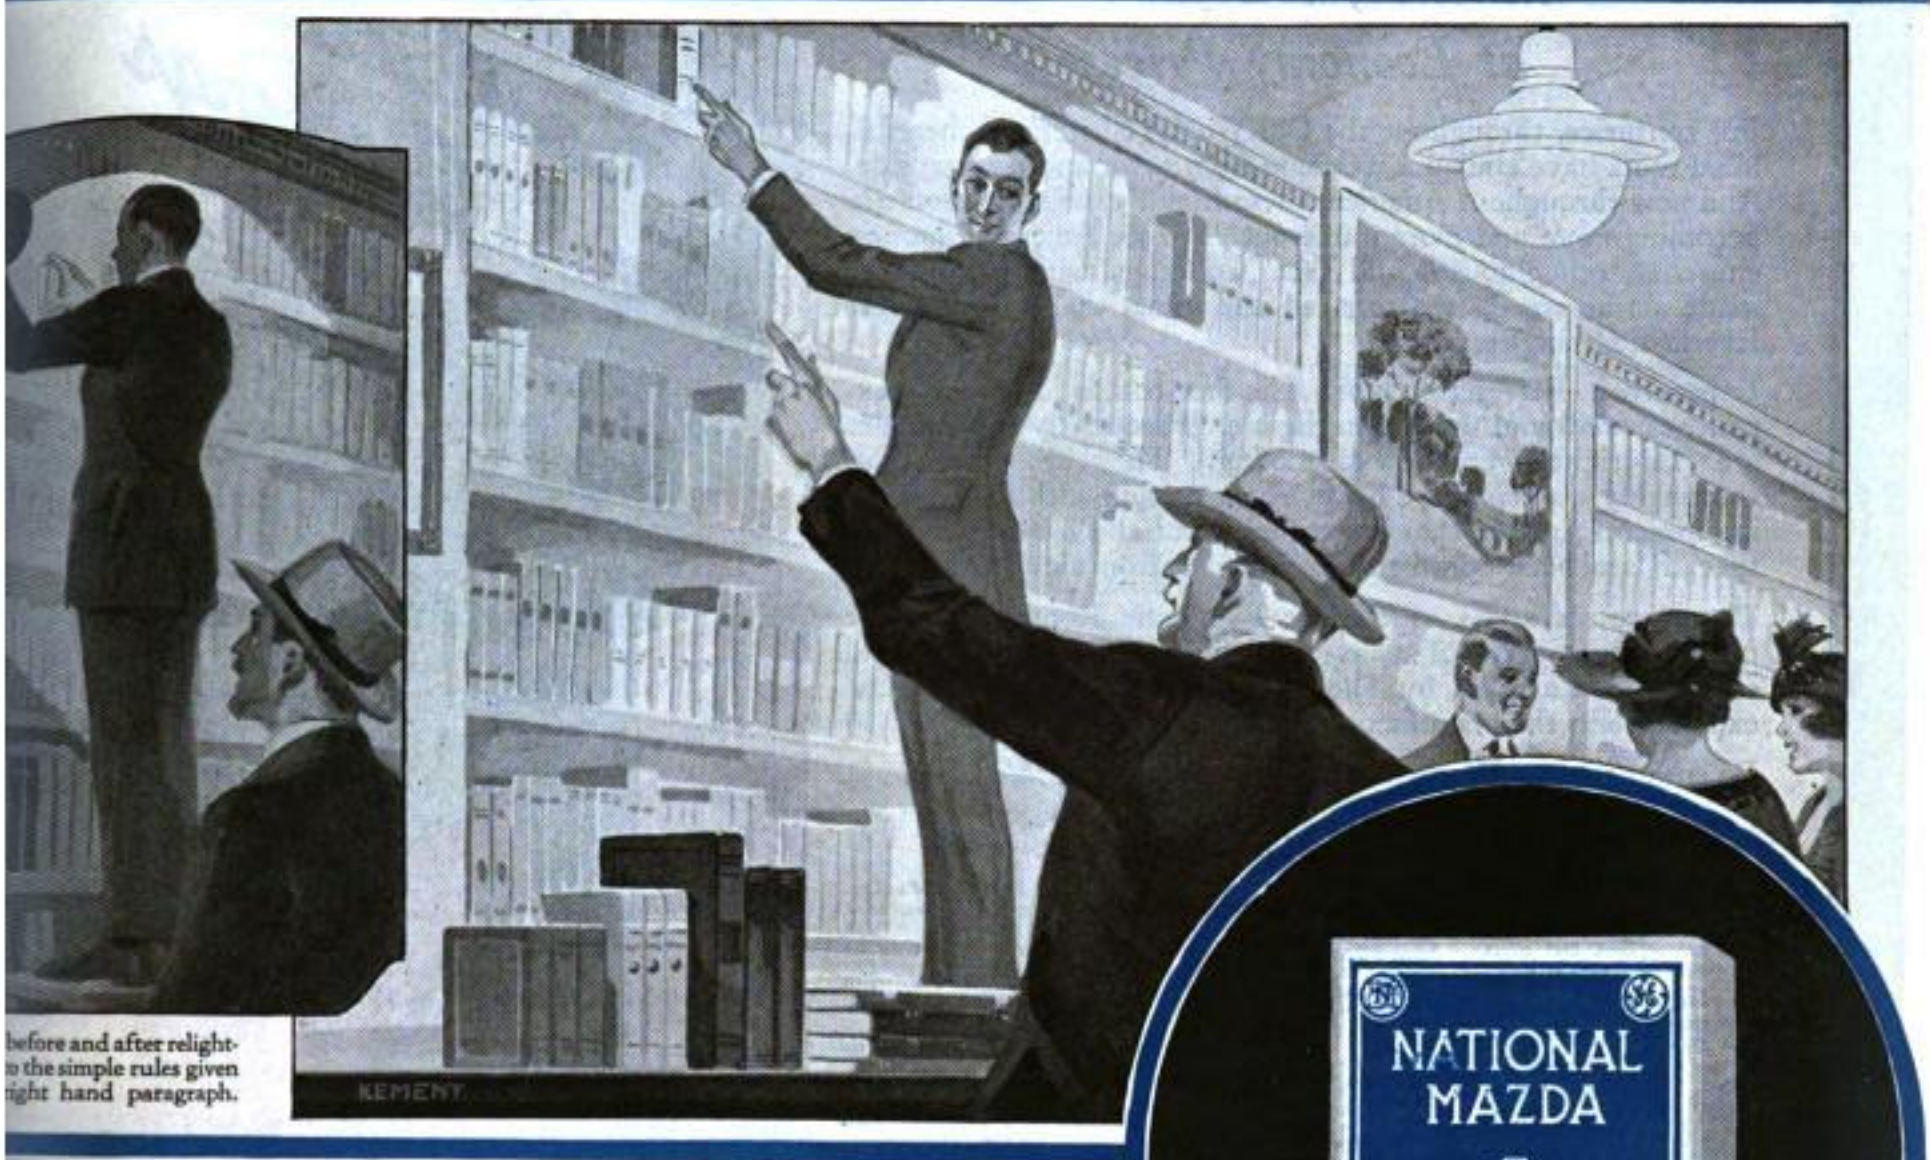
But that's not the biggest reason. Dollars-and-cents reasons are never the big reasons. The real reason is because I want to. I simply couldn't endure this business of going on being engaged indefinitely year after year. And so I looked and then Steve and I leaped together. We spend the week-end at Atlantic City, and on Monday Steve gets up and departs to his downtown job, and simultaneously Mrs. Steve gets up and departs to her downtown job. And that's that. So here we are, sink or swim, live or die, survive or perish, e pluribus unum forever—and the great experiment is on! Don't you think I'm right? I know I am—but the family don't. So stick up for me, like a darling! Your loving namesake, CECIL SHERIDAN.

PLEASANTON, IND.

MY DEAR NIECE: Heartiest congratulations upon the leap! Give Steve a buss from his new old-maid aunt. I'll give you youngsters something more substantial when I get around to it. Just at present I'm up to my eyes in making apple butter and taking care of two lovesick girls. This business of being resident house-mother and chaperon at a country club for the week-end parties of young people is no sinecure. My hat! I could write a book on the present generation that would curdle the conservative blood of your poor old father and make him believe we were going headlong to the devil—and yet, even at that, I can't see much difference between this generation of girls and the last. These talk more at their petting parties and wear less, but fundamentally, at bottom, it's just the same old, immemorial questing girl. Let her quest, I say! Just now, in addition to getting the house to rights for the coming jamborees, I have two bad breakdown cases on my hands which I'm trying to coax back to life—one a fine little girl who tried to kill herself over a good-for-nothing fellow not worth his salt, and the other a thoroughgoing little egoist eaten up with self-pity.

About your question: Do I think you're right? Well, it makes absolutely no difference whether I do or not, if you're sure of it yourself. It's your party, not mine. I'm not much for butting into other people's private affairs. You have a good headpiece; use it; I guess you do. As a matter of fact, however, I do think you're right—thus far. Right to get married, I mean, and tackle the odds. For you've got odds against you: don't ov[er]look little fact. I see one big risk in par[ti]cular now on you're a two-job girl. And m[ar]ried jobs is going to take you out of the ru[t] I'm only a tough-grained sporting old of the last generation standing on the side co[ur]t while you're a combatant down in the ring. I want to cramp your style for a second by offe[r]ing tions on how to play your game. But I do wa[nt] the issues clean-cut, for I'm placing my bet o[n] the big trouble is, these two jobs you're ha[v]ing mutually antagonistic; each tends to co[m]pete croach and swamp and swallow up the other. earning job demands a certain expenditure of [ti]me and vital energy. Your wife job also makes [de]mands and vital demands. Each job has its own [in]dividual And it's you who must fit those two sets of [de]mands together each in its own place, and see that [y]ou do a wrong of it. Mind, I don't say you can't do [it]; you have two sets of rights or necessities, each [w]ith natural inclination to swallow up the other and [i]t to you to maintain an even balance between [th]em there's your danger. Can you hold the balance?

Of course I don't know all the ins and outs of your ticular case, and why you chose to marry and working rather than wait. But anyhow, it's [do]ne; I believe that it will all plot out right in the end. your parents objected. They've had a hard [ti]me ends meet on a meager professional salary, and they should see the harshness of the road that [yo]u over, and want you to wait until it's smoothed oiled. Never mind us oldsters. But remember the chief ingredients of success in marriage, [be]sides thing else, is brains. You won't be penalized [fo]r gray matter. Tell me about Steve's dispo[si]tion; deal may hang on that. YOUR [AU]NT



P. S. Self-expression? Yes, we had that [al]so, but we called it having our own way.

DEAR AUNT CECIL: You ask me [to] taken into consideration the fact that [I'm] two-job girl. Why, for a whole blessed m[on]th!

he Big Job in 1922 is SELLING

before and after relighting to the simple rules given right hand paragraph.

KEMENY

ıe Biggest Salesman at the Lowest Salary is Lighting

ı sell books, hardware, drugs or "shelf goods", the interior of your becomes one vast silent salesman. piece of merchandise tries to call lividual attention. Permitting any item of stock to become hard to its label hard to decipher, means much valuable salesmanship re- from active duty while it still s on the payroll.

y make it *hard* for a customer to What easier or less expensive way e to aid vision, examination and ın than by driving out *gloom, glare tdows?*

stigation shows that even the stores frequently have less than five "foot-candles"* of illumination, while careful tests show that ten to fifty foot-candles are usually none too much. That "too much light" is rather difficult to attain is shown by the fact that in a shady spot outdoors in the summer time the intensity is 500 candles and upward!

For satisfactory lighting of the average store, the rules in the next column may be followed, or more detailed instructions will be mailed on request. National Lamp Works of General Electric Company, 305 Nela Park, Cleveland, Ohio.

*The "foot-candle" is a measure of intensity of illumination. It is no more mysterious than inches, degrees, gallons and other familiar units of measure. Ask the National MAZDA lamp agent to have foot-candle readings taken throughout your store.

Each of these labels represents a Sales Division equipped to give a complete lighting service.

One Recipe for Good Store Lighting

For most stores the following rules point the way to excellent illumination. *First*—Use 300-watt MAZDA Daylight lamps, or 200-watt MAZDA C lamps. MAZDA Daylight lamps are preferable, under most circumstances, because (1) they show colors more accurately, and (2) their light blends more agreeably with natural daylight. *Second*—The space between lighting units should not greatly exceed ten feet. *Third*—The lamps should be properly shaded. Shades and reflectors, when made of glass, should be of dense white glass rather than clear or frosted glass, and should surround or enclose the lamp. *Fourth*—Clean the lamps and shades once a month.

Jim Henry's Column

Do you believe me?

An advertising expert told me the other day that if every man who reads my stuff should believe it and act upon it, the avalanche of orders would probably put Mennen out of business. I guess he's right. Imagine my whole audience of ten million men all deciding overnight that they wanted Mennen's!

I'm puzzled. I'm wondering how many of you fellows do believe me—how many of you I can get to confess a genuine interest in Mennen's Shaving Cream.

I wonder how many of you I can get to gamble a dime to prove to your everlasting satisfaction one of two things. Either I am the possessor of a high speed imagination—or Mennen's is the greatest preparation ever produced for reducing a growth of he-bristles to a state of pitiable non-resistance.

Either you believe me or you don't. If you do, you probably belong to the select class of men who are enjoying a blithesome Mennen shave every morning of their lives.

Now, if you are in doubt, why not at least put it up to me to prove my case? Forget reason, prejudice or habit and act on your regular-fellow instinct. Obey that impulse and send me a dime for my big demonstrator tube and dare Mennen's to give you the kind of shave you've always wanted. Dare it to flower into the most gorgeous bank of lather that's ever decorated your facial landscape. Settle once for all this question of my veracity by using three times as much water as usual—and try cold water if you like it. Let your razor sink into the snow drift and dare it to give you the best shave you ever had in your life. That's all I want.

I'll go you one step further. When I get your dare-devil dime, I'll send you along a sample can of Mennen Talcum for Men—a real man's talcum for after shaving or bathing. It's fine for the skin—and it doesn't show.

If you're a sport, come through.

Jim Henry
(Mennen Salesman)

THE MENNEN COMPANY
NEWARK, N.J. U.S.A.

Nice of him—wasn't it? He was trying to get me out of a hole, and he landed me in a deeper one, for Steve smelled a rat right away.

He said thoughtfully as he closed the door, "Funny guy! Acted as though he knew you."

And he strolled over and sat down in the very identical overstuffed chair that Smith had come to collect the bill for, the springs of which as he settled down gave a sort of lugubrious squeak, as if to say, "Could I but speak instead of squeak, I could tell you, young man, what he came for!"

"Don't you think he acted funny?" demanded Steve.

Here again was my chance to explain, but now it was harder than ever; for the man had stood by me and I was bound to stand by him—wasn't I?

And so I said, "Well, now I think of it, he did look a trifle surprised."

"No," said Steve, still thoughtful, "not surprised. It wasn't that. That guy came for something. I got that, clear as day. And then when he saw me—or, rather, when he looked behind me and saw you—he suddenly stalled, backed down, and invented that yarn about looking for a man by the name of Smith. I'd give a penny to know what his game was. How's the thumb?"

"The thumb feels like two cents, and so does its owner. Steve, how would it be if we sold out all this junk—did you notice how that new chair has taken to squeaking?—and went to board?"

"No!" said Steve quite loudly—and I knew I had reminded him of his homeless days and his mother. I felt like the woman in How She Lied to Her Husband. But the funny part about it is this: If my thumb hadn't been cut, and if I hadn't been tired, and the dinner hadn't fizzled, I shouldn't have minded telling Steve at all. It was just the darned climax of it. Lovingly,

CECIL.

MY DEAR NIECE: Your two jobs seem to be getting their hooks in you. But keep a stiff upper lip. Try to find a good, reliable, middle-aged housekeeper who'll take all the responsibility. She may come high, but she'll be cheap in the end, and that's the only solution so long as you work outside.

Of course I think it would have been far better had you told Steve about the collector; but as you didn't, the thing to do now is to remove the cause of further trouble by squaring off all the rest of your indebtedness at once. In order that you may do this, if you'll send me the dem'd total I'll loan you the amount—at the usual rate of interest. Ordinarily I'd let you sow your own little financial wild oat and reap whatever is coming to you, but you seem to have your hands overfull already, what with Joplin changing into a snickery old snake, and Steve developing an antimother complex.

I note you dodged my question about Joplin. What does he look like? And what is his advanced age, anyhow? I figure him as sort of like one of these unscrupulous, domineering, big-business pirates of Wall Street that the story-writers of THE SATURDAY EVENING POST tell us about—a hard, mean, impassive guy, with an overhung jaw, a trap mouth, cold, narrow-set eyes, the kind that has no friends and never forgets a foe—a combination of Sitting Bull, Napoleon, Old Scrooge and Simon Legree all rolled into one. I don't know where they get that stuff, for I never saw a big or little business man look like that—but, anyhow, that is the picture I've formed of Old Joplin: the man with the cast-iron face. Am I right? YOUR AFFT. AUNT.

DEAR AUNT CECIL: How on earth did you ever get that notion of Old Joplin? I read your letter down in the office, and I burst out laughing right under his nibs' high-bridged, aristocratic old nose. No, you're not right. You're away off. Before I was married I used to think he was the handsomest man I knew, and so kind and just and fair. Now he's showing up in his true colors. As to looks, he's tall, spare, rather elegant—something of a dandy, in fact—with thick, curly chestnut hair which he has hard work to keep smoothed down, dark blue eyes, often quite merry, a big mouth, but not a bit traplike, nice hands and voice, and a very spontaneous laugh. He must be all of forty-six—twice my age!—but he doesn't look it; and he prances about with a sort of false sprightliness, pretending he's about thirty-five. Why can't old people admit they're old?

About my job—well, if you must know, things haven't gone very well; on the contrary, they've gone steadily crisscross. It's all Old Joplin's fault. He's got it in his head that I'm slacking and that it's his duty to keep me up to the mark. And he's doing that little thing. He used to tell me that I ran his business better than he did himself. But no compliments now. Oh, no! The change in him began the very morning I told him I intended to be married.

"Well," he replied after he'd congratulated me, "that means I'll have to look out for a new secretary. And that's bad—right now."

"You don't have to look out for one unless you especially want to," I laughed.

"How's that?" he asked, genuinely surprised.

"I'm going to be married—that's true," I explained, "but I've planned to keep on with my work."

He raised his eyebrows in an ironical manner he has.

"Oho! So you're that kind of a girl!" He added soberly after a pause, "You need the money, I suppose?"

"Partly," I said stiffly. "But I'd keep on, anyway. I don't see why a business woman should give up her career after marriage any more than a man. It's horribly unfair."

He smiled rather grimly. "It makes precious little difference what you or I think. Nature's the old girl that holds the trump cards here; and she'll play the game along her own lines, no matter how much we squeal. But there's something else to be considered here. This job's not going to grow any lighter with time. I'm expanding this business, reorganizing some of the old departments and adding new ones; it'll take all my brains and vitality to put the thing across. It goes without saying that I must have a secretary I can rely on, and even overwork at times." He looked at me hard. "Think you'd best tackle that?"

"Have I failed you thus far?" I asked indignantly.

"No. You've done fine, but ——"

"Well, then," I said, "I'm going to keep right on doing the same thing, and if at any time I fall below grade you can fire me!" I laughed when I said it, but he took me right up.

"I certainly will!" he assured me genially. "With promptitude and dispatch. There's a lot of money invested in this enterprise—not all my own. And I can't take on a single ounce more of risk. So if you keep the job you may be prepared to be the hard-worked secretary of a hard-working man beginning from to-day."

Of course I agreed. Well, Aunt Cecil, he's been even better than his word! It's been drive, drive, drive. The very first day after my return from our week-end honeymoon that man kept me until seven o'clock—and he'd have gone on indefinitely if he hadn't seen something in my face that made him pull up short, glance at his watch, burst out laughing and say, "Good Lord, it's seven o'clock! And you've just achieved a husband. He's probably tearing his hair out in clumps. I certainly am sorry. Well, tell him we're reorganizing. If he's a business man he'll understand. And I do my best thinking when it's quiet at the end of the day. But I'll see this doesn't happen again. It was your expression put me wise. By Jove, your face was as long as my arm!"

And he laughed again—but just the same, Aunt Cecil, away down deep he was irritated through and through. He can't fool me. I can read him like a book. He wanted to go on working while he felt like it, and he wanted his secretary to go on too. It's perfectly true that he works better at the end of the day when the office is still. And before, I didn't mind. It was even rather fun. He can concentrate just like father. But the devil of it is, he insists on concentrating at the end of the day, just when it's time to begin to think of getting ready to go home. And when he starts one of those séances along about five, I just can't help sneaking a glance at my wrist watch. Of course Old Joplin catches me; then out comes his lower lip, his brows draw down, and he shoots me a steely, blue look, keen as a razor blade, as much as to say: "Is this time yours, or have I bought and paid for it with cold cash?" To have me glance at my watch as a gentle reminder riles him like old Ned. But what am I to do? There's no such word as "stop" in his bright lexicon. He's detained me over and over again.

Steve, you see, gets home before I [illegible] Even when Old Joplin doesn't keep me, [illegible] beats me by half an hour. And that's [illegible] trouble! He hates to come home and [illegible] me gone. I know how it is. It's just [illegible] way I used to feel as a child when [illegible] come pelting home from school, hurl [illegible] our books and make a bee line for mother [illegible] sitting room. If she wasn't in her accustomed chair by the window, sewing or reading, we had a distinct sense of disaster, catastrophe, alarm; and we'd go rampaging all over the house, screeching "Mother-ee! We just wanted to see her, to assure ourselves by looking at her that all was well with the world. I asked mother the other day if it was sheerly by accident that she sat in that particular chair at that particular hour all through those years. "Gracious, no!" she laughed. "I made it a special point. If I was at a neighbor's I excused myself and came away. I wanted to build up in you the feeling of confidence that mother was always there."

And it's that sense of goneness, of momentary dismay that I fancy Steve [illegible] when he comes home and finds me [illegible] But I can't help it. I can't change Old Joplin's habits. I tried to! I suggested to him one morning that he do his [illegible] thinking earlier in the day, after lunch. You should have heard him snort.

"Now, Mrs. Sheridan," said he, biting his words off short, "don't try fitting [illegible] and my habits on to any little private Procrustean bed of yours and chopping off where I don't match up with your domestic schedule; it won't work. As I see this proposition, the job doesn't belong to you; you belong to the job. The job can't be cut and hacked and added to and subtracted from to fit your own private and personal convenience; it's you who must fit your private convenience to the requirements of the job."

One good thing—we now have a splendid cook. Mother shopped around and found her for us—an old Frenchwoman called Philomene, who adores Steve and is forever concocting new dishes to tempt his appetite. I'm glad, for these days, with Old Joplin bearing down harder and harder, I come home too exhausted to do more than crumple up on the sofa. She stays all day and sleeps in the house. That means extra pay, extra food, and the rent of an extra room. But she's worth it at the price, for now Steve and I have some time to ourselves, and we've even given a dinner or two and had some friends in for a bridge supper after bridge. Of course, with this drain, we're not saving a single [illegible]

We're going with a set of young married people the husbands of whom have been in business five or ten years, and so, naturally, have bigger salaries than Steve's. Steve says we're trying to beat the game five years by competing thus socially with people beyond our class. He says we're trying to telescope five years, and he thinks that it's my salary which has been the accelerator.

The other day he brought home a silver, and when I scolded him for the extravagance he replied, "Want to know why I bought it? You're getting between my eyes two perpendicular lines which require an S to change into a dollar, and it's the express purpose of this [illegible] to expunge that sign from your [illegible] map."

That purchase was pure inspiration. [illegible] we've had some wonderful Sundays in the country, with a delicious cold lunch that Philomene puts up. Those Sundays save my life alive. Steve increasingly hates to go to work. But he doesn't say a word. [illegible] Steve. Some nights I'm ready to drop with nerves and fatigue. Of course, I'm not beat physically—but that's not all. I'm torn between two contending forces. Joplin trying to absorb me at the office, Steve equally determined that business shall not interfere with his home. It's a war of two strong personalities, and I get it on both sides. Old Joplin's not giving a square deal. His character, as I told you before, has utterly changed. He's a regular slave-driver, scarcely ever laughs, sometimes won't even say good morning. All the old cordial feeling between us completely gone.

Once or twice, when he's shown signs of keeping me late, I've had to say, "Sorry, Mr. Joplin—but aren't we paying overtime? I have an engagement to-night."

That always wins out of him a steely glare. It's like pricking a caged animal. He almost growls out loud! It's true he [illegible]

Pro-phy-lac-tic
Tooth Brush

THIS brush cleans more thoroughly because the tufted bristles reach between the teeth.

It is easier to manage because of the curved handle.

It is more sanitary because it always comes in the yellow box.

It wears longer because of the quality of the bristles.

Four visits a year to your dentist and daily use of the Pro-phy-lac-tic Tooth Brush insure good teeth for a lifetime. Adults', youths', and children's sizes.

Made in the United States.

FLORENCE MFG. CO.
Florence, Mass.

(Continued from Page 36)

like a horse himself. But it's his business, not mine. Good night.

YOUR LOVING TIRED-OUT GIRL.

P. S. About that furniture loan. It's all right—thanks just the same. I blurted it out one night to Steve, and I needn't tell you he was a prince. Of course he kidded me some. Steve's some kidder. He admitted, moreover, that he had exactly the same luxurious streak in him—which made him willing to marry me before he could afford me!—like a black zigzag streak running through pure Carrara marble—his simile, not mine!—and so we made a solemn compact: He's to keep an eye on me and I'm to keep an eye on him. Why can't Old Joplin be square like that?

MY DEAR NIECE: Dancing, dinners, flivvers, bridge—you and Steve seem to be having a high old time. Who's paying the piper? In my day the first few years of married life were largely given over to the practical undertaking of raising a family; that was the chief investment of those first years; it was a woman's major responsibility, her major contribution to life. And during that period it was the husband's business to earn the living; that was his job, not the woman's; she generally had her hands full inside the house. That's the eternal triangle: Father, mother and child—father out rustling the grub, and the mother, of necessity, sticking pretty close to the child. It's on that triangle we've built up our laws. Now, up to the present generation, that's been the normal rule of life for an American family. The husband's the natural provider; if he fails to provide he's liable to a severe manhandling in the courts. It's a thing in America we're rather strict about. The time, of course, may come, when this country is so densely populated and its resources exploited down to the vanishing point, that every moderately placed woman may be forced out into a gainful occupation, because the man, working alone, cannot earn enough to support a family. That's how it is with the working classes in Europe right now. But that day in America has not yet arrived. The average, moderately placed young American woman hasn't engaged in a gainful occupation after marriage because she hasn't been financially forced to do so, and because she's been otherwise engaged in raising a family.

But you and Steve seem to be starting in at the other end of the game. You're investing your time, money and vital energies, as nearly as I can make out, in having a royal good time, and I'm wondering what kind of a balance sheet of net gains you'll show in ten years from now. Mind, I don't say you're wrong. There are thousands of young married women who are doing exactly the same thing; trying to make a go of marriage and of business life at the same time; wanting the double experience—and also the extra cash. I don't blame them.

Thanks for your description of Old Joplin. The imperial, ineffable arrogance of that man astounds me. The only theory on which I can explain his ogreishness is that he's not in love with Steve. Which explanation doesn't get us anywhere—for why isn't he? I give it up. The real trouble is, to him his business is life; to you it is a weekly envelope. He feeds himself to his job. You make it feed you. A slight difference in the point of view. Be kind to the doddering old gent; he can't help loving his business more than Steve.

YOUR AFFT. AUNT.

Sundry weeks later.

MY DEAR AUNT: If I've not written before, it's because these days I seem to be pulled all ways at once. At night, if we're not outward bound, I turn in after dinner while Steve sits up with his work or to read. Things are going better with him financially. A small raise. I think Old Joplin might raise me! Steve came home as excited and jolly and mysterious as a kid on Christmas Eve. He'd phoned Philomene to prepare a bang-up dinner, and sent home a bunch of red roses. And over our coffee and cognac—thanks to Philomene's special *ami*, a purser on a French boat—Steve sprang his little surprise. He announced his raise, and then—and here's the joker!—suggested that I give up my job. Aunt Cecil, you could have knocked me down with a pinfeather. Just when things seemed to be going more smoothly!

"Why, Steve!" I gasped. "We can't do that—not now!"

"Why?" demanded Steve, with a glint in his eye.

"Why, because——"

"Well, go on—trot out your becauses."

"Because we'd have to start in all over again at the foot of the ladder."

"That all?"

"Because we'd have to stop giving parties and having in friends, and start to save and scrimp. And besides——"

"Yes?"

"What would I do with my time—not to mention my brains? I don't know how to cook, and I loathe housework. And also, now I've got Old Joplin just like a trained dragon so that he lets me go on the dot without letting out a single roar."

"All right," said Steve stiffly. "Have it your own way. But I'd like to know one thing: When we were married you said you were going on with your job because I didn't earn enough. That was simply a little bluff, eh, to get what you want, to have your cake and eat it too? Now come across with the straight goods—is it the job with Old Joplin you can't give up—or is it the extra cash?"

Well, Aunt Cecil, I thought and thought, and finally I said, "Honestly, Steve, I can't tell. It's about fifty-fifty, I guess. But one thing's sure: I don't want to start in at the foot of the ladder again. I hate to scrimp and save."

"All right," said Steve, with a poker face. "That's settled. I just wanted to know where I stand."

And then, Aunt Cecil, I suddenly thought of another reason. And just as a flyer I said, "Besides, why haven't I as much right to self-expression and self-determination in a career as you?"

I don't know why that should have made the lid of Steve's temper blow off—but it did.

He stood up suddenly with a kind of suppressed violence and he almost yelled, "Why can't you be inside of a room and out of it at one and the same time? Why can't you be married and single too? Why can't you live at the North and the South Pole both? Why can't you be my wife and Old Joplin's secretary, and mingle in society, and give sparkling little dinners, and spread yourself generally all over the map? Why doesn't two and two make ninety-eight? You can self-express yourself from here to Halifax and back, and I shan't say a single word."

And he flung himself out of the room, leaving me too astounded for words. But I know I'm right!

YOUR LOVING CECIL.

MY DEAR NIECE: Don't be forever harping on your rights. An American woman these days has the right to do just about anything she can get away with, short of homicide. And I've known her to get away with homicide—with a male jury. Self-determination is a very highfaluting word. I almost wish it hadn't been introduced into the best circles by a certain brilliant man; he started a whole lot of trouble just with that one word. It's something like calling a workingman Nature's nobleman. Maybe he's a nobleman, and maybe again he's nothing but a lazy loafer, too proud to work. Self-determination and self-expression, as I've seen them work out in real life, usually mean doing what you want to when you want to, and letting the other fellow pay. In your particular situation it's for you to decide whether the game is worth the candle. Nobody else can settle that for you. And I know of no better way of discovering just how high a price you are willing to pay for the particular brand of self-expression you seem to be going in for than by the course you're now pursuing—namely, by actual personal experience—trying it on the dog. Of course it's rather tough on the dog, but that's the dog's affair.

YOUR AFFT. AUNT.

DEAR AUNT CECIL: Who's the dog—Old Joplin or my Steve? I know what I am—a little buffer state between two big encroaching powers; and when both begin to squeeze me—ugh! And I know what Old Joplin is—a big, surly bloodhound with his nose down to the ground keen on the scent for the trail of gold. How can he think so much of a little extra cash? A mere money-grubber! But I don't care what happens to him, and that's not what I started to say.

Aunt Cecil, I'm nearly frantic with worry! It's about Steve. I'm afraid something terrible is happening inside of him. I'm not absolutely sure. It may be nothing but my own silly imagination; but lately he's been talking very strangely in his sleep. And when he's awake he's rather glum. And how he throws money around! To put it baldly, I fear Steve's not really becoming reconciled to my helping with the financial support but he's swung around to where he believes that I ought to, it's my right, my job. The other day he gave me a shock. He suggested, cross my cucumber, that we pool our salaries, throw for dollar, and go even-steven all the way. You see, since he got his raise we've been living on his salary and piecing out with mine, and what was left over I spent. He pleased.

"Why, Steve!" I gasped, so hurt the tears sprang into my eyes. "Do you actually want to spend my little money that I earn with Old Joplin by the sweat of my brow?"

"What's sauce for the gander's sauce for the goose," said Steve. "What's mine is yours, but what's yours appears to be your own. That's unfair. I've got a right to self-expression too."

His coolness took my breath away. It was so petty, so—so ungenerous and mean.

"But, Steve," I faltered, "I—I pay extra for that. Of course you may have it all."

"No," said Steve doggedly, "I don't want it all; I only want my share."

His share—of my money! Aunt Cecil, I thought my heart would break.

And here's another thing: Steve has a friend, an artist, called Bill Eames. Steve, who is a pretty good judge of those things, says Bill is a fine artist, but he's having a tough time financially. He paints the right sort of stuff that won't buy him a dairy farm, but that'll bring him fame when he's dead. Steve says he can't help it, that he's made that way. About four years ago he married a girl, and just for his own amusement taught her to paint. Now here comes the ironic twist: He uncovered in her a real talent, not for his kind of art but for commercial advertising, pictures of Beauties, shaving soap, and so on; and inside of a year she was making ten times as much as Bill, who'd put everything else aside to stage-manage her, be her errand boy, run out and buy her paints and peddle her stuff to the firms. He stopped painting to push her, and she became a howling success. I've seen her. She's a tall, feverish, aggressive, big-boned, mannish woman with a big nose. A human dynamo. This year she divorced Bill, giving as reason nonsupport. She said he had contributed a dollar toward her support in two years, and she was tired of having to forever dipping into her purse. Steve, of course, sided with Bill and has been having him home to dinner about five times in the week, just to buck him up, and has lent him some money to get on his feet.

Steve and I had a grand discussion on the whole case. He says that two people in the same household between whom love is the death of love. I would have contended that the proper kind of love for a modest, self-doubting chap like Bill was one of these sagacious, soft, little girls who would bring out every sense of responsibility in him and make him believe he was the finest fellow on the earth. I don't care much for Bill's work, I think she had a good right to what she wanted to—and I'll stick to that. But it makes me sort of sick at my stomach to be at odds with Steve.

Query: How far is it wise for the ordinary woman to take the whole responsibility off the average husband if she wants him to remain the provider, as the saying goes?

YOUR LOVING NAN.

MY DEAR NIECE: What you say about your friends is mighty interesting to me and I've been mulling it over in my mind. Sometimes an innocent bystander like myself gets a few things the active combatants can't see. First I'll tell you why in my judgment that union didn't stick. It's been my observation that in every real union worthy the name there's a he and a she, the attraction of the sexes. If the man's a he-man and the woman a she-woman the probabilities are that they'll pull through their difficulties. If the man's a soft, woman-natured man and the woman wears the pantaloons in the family, for that's the same combination the other way around. But if it's a man woman and a man-minded woman there's two of them for a merger, being nothing to

The Touring Car

A New Ideal in Motor Car Value

A new ideal has come true—plainly and unmistakably. The New Oakland Six establishes it.

Oakland deliberately planned to make this new six model the finest light-weight six that advanced, correct engineering, highest grade materials, and expert workmanship could build.

Oakland's experience in light-weight six manufacture, the testing laboratories and all the resources of the General Motors Corporation, have been drawn upon to make that ideal come true.

It is borne out in the rugged and reliable Oakland chassis, built to endure all burdens of travel through years of service.

It is observed in the new and remarkable efficiency of Oakland's own overhead valve six-cylinder engine—with power, smoothness, flexibility, economy and downright dependability unequalled in light-weight six manufacture.

It is manifested again in such items of construction as silent chain camshaft drive, pressure feed oiling system, interchangeable bronze-backed main bearings, and many other important features which the New Oakland Six shares with much higher priced cars.

Crowning this splendid mechanism are the five new and distinctive Oakland bodies—of a beauty, comfort and fine equipment unequalled anywhere in their price range.

All these things prove the attainment of an ideal. They all attest to Oakland's leadership in light-weight six manufacture. Oakland is proving that leadership to an ever-growing number of Oakland owners by its sustained, reliable performance, backed by the 15,000 mile written guarantee.

See this fine car! Test it thoroughly! Compare it with other cars! The New Oakland Six—the light-weight six of the General Motors group—is by far the finest and most desirable automobile in its price class.

they're two of a kind. And that, I suspect, was the case with your friends.

As to this business of competition in the same line between man and wife, in my opinion it's a highly dangerous thing. Only a very big man and a very big love can get away with it. Partly it's because in America it's the tradition that it's the man's job to support his wife. If he doesn't support her it argues some inherent flaw, some lack of manhood, some yellow streak in his nature. We're not yet civilized up to the European aristocratic point of view that a man has a dashed good right to be supported by his rich wife without soiling his hands. We may be primitive, crude, vulgar in this respect; and then again we may be nearer the straight biological norm, the deep guiding race instinct which runs truer, stronger in a fresh vital young nation than in an old worn-out stock.

So if Steve is sensitive about wanting to support you during these first years of your married life and flares up, don't lay it on to him individually; lay it on to the American tradition; lay it on to race instinct which commands that a male shall take care of his mate when she's otherwise engaged and can't take care of herself. The fact that you individually are not otherwise engaged does not alter the universal law. And don't worry about Steve. He's probably giving this experiment the intellectual once-over—and testing you out too.

YOUR AFFECTIONATE AUNT.

P. S. What does Steve say in his sleep?

MY DEAR AUNT: I have been ill and in bed ten days. Nothing serious—a nasty cold aggravated by nerves. It's really not bad, resting like this, for it gives me time to think. I've made Steve Secretary of the Treasury and of the Interior and Foreign Affairs. It's now a one-man show; the strain of my being sick is telling on him; he looks a bit gaunt. To add to his afflictions, last week his mother landed down on us without warning, and asked him for money to go to the Hot Springs for a cure. I don't know what Steve said to her, or even if he said anything; he may have just looked at her; but she decamped the same afternoon—*sans* cash. Steve's character is developing a bite—but no bark!—at the rate of a mile a minute these days.

Old Joplin has been most kind—for him. He sent around his cousin, Doctor Hoyt, a perfectly charming woman, with four children and a paralyzed husband to support. Her history is interesting. While she was still a medical student she fell in love with the man who was giving one of the lecture courses—a very brilliant but conservative research doctor. They were married, but he objected strongly to her practicing her profession, so she gave it up, had four children, and at the end of ten years he had a stroke of paralysis—a judgment of heaven, I call it!—and the entire burden of the family fell upon her. There was nothing for it but to resume her profession—ten years late.

Now, Aunt Cecil, don't you think she did wrong to give in to that reactionary, hidebound old Turk, who wanted her all to himself? I want your flat answer—yes or no. It seems to me, reading between the lines of your letters, that you think I'm wrong in continuing to work for Old Joplin, but you're afraid to come right out plump and say so. Now I'm going to call your bluff. Hands up! Right or wrong—which do you say? CECIL.

DEAR SILLY-BILLY: You and your little abstract rights and wrongs! Don't you know yet that what may be all right for Sadie Smith may be all wrong for Sally Jones? That circumstances alter cases, and that each case must be judged on its own merits, in relationship to the particular facts? With regard to your own concrete case, all I have to remark is this: You've got there not one right to adjudicate, but three, each separate and distinct—your own, Old Joplin's and Steve's. Now you may try to fit those three rights together, whittling each one down a bit so as to give them all a fair show; or you may sink your own rights; or you may sink those of Joplin and Steve and play your own up strong. It's your game, not mine. Then play it. But don't be so muddle-headed that you can't see the real issues involved.

I've always believed it was a fine thing for a woman—or a man, for that matter—to have an occupation, by means of which she could gain her livelihood in time of need. Nothing so broadens her, shows her the actual practical stuff out of which life is made. It teaches her the value of money, gives her the discipline of regular work and hours; it takes the conceited crimps out of her nature by showing her that what she considers good enough and what her employer considers good enough may be two vastly different things. But whether she's to go on with her job after marriage is a matter of prudence, advisability and plain common horse sense. The doctor manifestly studied her particular problem from all angles, looked at her right, her husband's and the public's right, and decided that her major contribution lay in the home. Yes, I think she was right; I think that, taking it all in all, she made a wise investment, as the result amply demonstrates. But her case is not your case.

There is staying with me now a teacher, a brilliant, accomplished, magnetic woman, with a real flair for her vocation—delights in her work and wields great influence over the girls—the rare case of a round peg in a round hole. She is happily married, has a husband and three children, and has continued more or less irregularly with her work. Just now she's deeply disappointed over a splendid position for which she's eminently fitted but failed to obtain—on account of her children. It was in a large private girls' school of excellent standards and reputation, and the principal liked her immensely—beyond all the other applicants; but there was also to be considered the responsibility to the students as well as to the parents who were paying a heavy tuition to have their daughters prepared for college. The absence of a brilliant teacher from her classes, or her irregular attendance at a critical period, might dislocate the entire course and prevent some of the students from passing their examinations.

The principal thought deeply and finally she said, "How many children have you?"

"Three."

"And their ages?"

"Four, eight and eleven."

Just the disease-catching age!

The principal continued, even more thoughtfully, her questionnaire, "And in case one of your children fell sick, which would you choose—your duty to your child or your duty to the school?"

Quick as a flash the teacher replied proudly, "To my child—naturally."

The principal nodded. "I think you're absolutely right!" she agreed warmly.

But notwithstanding, she did not engage the lady for her school!

"They penalize you for having children!" said the teacher bitterly, recounting the story to me. "If I'd no children she'd have taken me like a shot."

No doubt—for then the situation would have been materially altered. As it stood, the two sets of responsibilities clashed, and both the teacher and the principal were right. Now—would I have that brilliant woman give up her teaching? Lord, no! Would I have her give up her children? God forbid! But I would have her realize that she can't have the privileges of married life without accepting its disabilities; she can't be married and single at the same time. Each state carries its own advantages and its own disabilities.

YOUR AFFT. AUNT.

Old Joplin to Aunt Cecil.

MY DEAR MADAM: Your interest in your niece must be my apology for intruding my personal affairs upon you in this unconventional fashion. But before her marriage your niece was wont occasionally to read choice portions of your letters aloud to me, and the quality of native common sense which I so greatly admired in them is the quality in their owner to which I now address these words.

The fact is I am in an awkward predicament concerning Mrs. Sheridan, and I should be deeply obliged for your advice. To be brief, my business is amplifying by leaps and bounds. It necessitates my absence on frequent trips, and during such absences I must have in my office someone who is absolutely competent, absolutely devoted to my interests and willing to take infinite pains. Hitherto your niece has been satisfactory in these three important respects; but since her marriage I am bound to state that this is no longer the case. Speaking as a private individual, I do not blame her; on the contrary, I admire her more as a woman for putting her marital responsibilities before her responsibilities to her job. Nevertheless, the fact that she does so lands me, as her employer, in a hole. The candid truth is that she a

It is easy to understand the really wonderful welcome accorded the new Packard Single-Six everywhere.

No one who reacts to aristocratic atmosphere in a motor car can well remain unresponsive to the eight distinguished new types.

You will find the new Single-Six not merely true to Packard tradition, but carried beyond, to new heights of taste and beauty in embellishment.

Here is not alone the exquisite environment and positive performance of Packard, but a greater emphasis of value than a truly fine car has ever accomplished before.

In the new Single-Six, Packard mastery of high class production has culminated in an economic as well as an artistic and engineering triumph of the first order.

Five-Passenger Touring, $2485; Seven-Passenger Touring, $2685; Runabout, $2485; Sport Model, $2650; Coupé, $3175; Five-Passenger Sedan, $3275; Seven-Passenger Sedan, $3525; Seven-Passenger Limousine Sedan, $3575; at Detroit

The Packard Twin-Six offers extremes of luxury and performance beyond which motoring cannot go. Packard Trucks are known for unequaled durability and low ton-mile cost

events hailing down so thick and fast that actually I nearly lost sight of the old familiar landmarks for a while. First of all, Old Joplin offered me a raise! Think of it—Old Joplin! Of course I know I'm worth more to him than he pays! Why, I do about everything. Half the time he just sits around, waiting for me to jog his elbow! For a while I was too staggered to do anything except gape at him dizzily while he outlined the new duties which went with the increased pay, and to wonder where the joker was. For I knew there was a joker somewhere. Old Joplin's no plaster saint. He doesn't consider me a howling success where now I am since my marriage; then why should he suddenly offer me a bigger position with better pay? There was more in this than met the eye.

I needed time to figure it out, and so I said sweetly: "Mr. Joplin, I can't deny that I am deeply pleased with your offer—chiefly, I think, because it shows you still have confidence in me. As to accepting it, it wouldn't be fair to you unless I could devote to you considerably more energy and time; it would mean giving up housekeeping and going to board; it would mean—well, a reshaping along the whole line—less time at home and a concentration of interest here. I'd like to take time to think it over—if you don't mind."

"Take all the time you need," he said with a smile. Old Joplin's smile is not half bad. Of course nothing like so sunshiny as Steve's.

"I think I could pull it off all right," said I.

"Oh, yes," replied Old Joplin quietly, "you can do the job all right—or I wouldn't have offered it to you. It's just a case of paying the price. And it's only you who can decide that. This is your little ship and nobody can steer it but you."

Well, Aunt Cecil, he was so simple and friendly and—yes, human—as if he knew all my inside troubles. I mean—as he sat there staring meditatively out of the window in that immaculate get-up of his, that without warning the tears rushed into my eyes and spilled over; I choked up; and without any reason at all I suddenly burst out crying like a kid.

Why? I don't know. It was just as if he had touched some secret chord or put his finger on a sore spot which had been paining me, unaware, all the time. And in one single clear flash of vision, between the act of pulling out my handkerchief and blowing my nose, I knew I couldn't make the grade. I couldn't make the grade because I wouldn't pay the price. And I wouldn't make Steve pay the price. He'd paid so much with his mother that it seemed as if he'd earned a little leeway with his wife.

Old Joplin pretended not to have noted the sudden shower, so I put on my things and slipped out. And as I closed the door I heard him mutter to himself: "That aunt must be a remarkable character!" Some character in a novel he was thinking of, I suppose. For a business man he's rather well-read.

Well, in the Subway on my way home I decided I'd be an idiot to throw up the job with all the extra pay; and all that day and the next I chopped and changed and played with the idea of taking or leaving that job the way a cat plays with a mouse; and I didn't say a word to Steve. He's been so preoccupied and glum and secret of late that I obeyed a little inner voice which said "Keep this business to yourself." Our cook has left, and we've been going out to meals, Steve silent, moody, with a far-away look in his eyes.

"Steve," I said suddenly one night, "suppose we try boarding for a while?"

Steve looked up from his book and favored me with a long quiet stare, then without reply dropped his eyes to the page. I let the idea sink in.

"What for?" asked Steve at the end of half an hour. That's Steve.

"Oh, nothing special," I said lightly. "More efficient, that's all. Less expensive. Less wear and tear on the nerves when we both work."

"What would we do with all this junk?"

He spoke carelessly, but my heart gave a great leap and I nearly sprang out of my chair, for, Aunt Cecil, those were the very words he had spoken out loud in his sleep! He had turned over and muttered as distinct as could be: "Sure. Separate. That's the dope. But what would we do with all this junk?"

I suppose I whitened—who wouldn't? But I saw I must walk softly, like Agag, for one false step would be fatal, and so I laughed as I said, "Why, Steve, it wouldn't hurt my feelings if we scrapped every blessed thing in the place except mamma's linen and dad's beds."

At that Steve rose, came and stood over me, his blue eyes boring me through.

"You know! You've known all along—you star-spangled little fraud!"

"Oh, Steve!" I made a wild guess, judging it must be some good luck by the glow in his eye. "Is it —— It is!—a raise!" He nodded. "Then why have you kept it so secret? Why didn't you speak?"

I was still miles away from knowing what was going on in his head.

"Well," he replied soberly, "I have been figuring on this married-and-stay-in-business stuff from the husband's point of view; and the way I figured it is this: If I've no right to stand in the way of your self-development in a business career you have equally no right to stand in the way of mine. That's logical, isn't it? All right. Then suppose my self-development required that I accept a bigger job out of town—let's say away off in the desert—while yours required that you stick right here in town? The logical result is—separation. Well, when I'd doped out the logical moves on the board thus far, what does the chief do but call me into his office one morning and tell me I'd been promoted to be manager of their new plant ——"

"Oh, Steve!" I broke in, grabbing him. "How glorious!"

"——out in Arizona," he finished grimly.

Aunt Cecil, have you ever gone down in one of those express elevators that drop through space at such insane speed that your whole interior system seems to surge right up and your eyes feel popping out of your head? That was just the way I felt. I saw the whole situation then in one swift flare, just as I had in Old Joplin's office—but as through a glass, darkly.

"Arizona!" I gasped.

"Quite so!" said Steve dryly. "A bit too far, eh, to commute in from Arizona to Old Joplin's office each day?"

Old Joplin! I'd completely forgotten him and his raise. It was on the tip of my tongue to tell Steve, but I decided that would keep. One mix-up at a time.

"And—and you're going out there?" I asked, trying to get the thing straight in my head. I saw there was still a kink in Steve's mind.

"I'd like to see anybody try to stop me!" said he.

"And—and what about me? Have you figured out that move too?"

"Sure!" he replied. "I've no right to stand in your light any more than you have to stand in mine. Ergo: I go to my little place in the sun, and you stay right here with yours. With me out of the plot you'll have more time to devote to Old Joplin. You say his business is increasing. Inside of a month I wager you'll land a raise."

"But that means sep——"

I just couldn't get it out; my voice, in spite of me, broke. Steve still stood over me with a hard smile.

"That's right," he said. "You've got it. Spit it out."

I looked at him, but he had on his poker face and even the expression of his eyes baffled me.

"And—and that's why you want
off all this stuff?"

"Well," said Steve, sort of
hard, "no use paying storage. We
well clean up as we go along. All
beds. That might make
bad. I'll tell you what: You
and I'll keep mine—
Sort of symbolical—eh? Can't you
the morning papers: Cruel Tragedy
Twin Beds. Twin Beds, Created
Together, Forced to Separate and
Their Master and Mistress in
Business Careers!"

I don't know why it was
but that last silly remark just
ished me; although I knew there
joke somewhere I couldn't seem to
finger on it; I laid my head down
pillow and began to sob. Steve
and began to comfort me.

"Cheer up!" he said presently.
"They're not separated yet!"

"I think it's frightfully bad
on such subjects," I told him.
knew you were making it up all

"I wasn't though," said Steve
"It's all Gospel truth—just as I
I've had the refusal of that
weeks."

"And you're going to take it
manded.

For reply Steve fished in his
brought out a letter, addressed
"Here you are—here's the
side."

"But what?" I cried.

"Can't you guess?" asked Steve
"You've never turned it
gasped.

"Sure I have!" said he with
"Don't look so frightened
only job on this planet. You
I'd force you to come with me? Or
go without you? Not a chance! I
to prove to you that this
expression worked out to a
between man and wife is as
sieve. If love doesn't mean
ger than the self-expression of
picayune personalities, then I'm
lay off some morning and
word for the feeling I have for

And so, Aunt Cecil, the
that I didn't even tell him about
lin's offer at all! You see, the
time. Steve's chief had to know
sion the next day; and if we
to pack up and get off inside of
course it was sheer moonshine
giving up his chance on account
Joplin. I succeeded in convincing
I might find means of self-expression
Arizona as well as here. So after
I got Old Joplin on long distance
him that important business
at home the next morning, but
drop in toward the end of the
explain.

And that was my last afternoon
Joplin. He'd saved up quite a
for me—trust Old Jop not to
shining hours!—and that first
was just the same as any other
the new secretary, a woman
competent, I fear. I caught
dictation, sneaking a look at
watch, from which I augur ill.

So to-night, Aunt Cecil, Steve
sleep for the last time in our
listen to the melancholy moaning
horns down the bay. It seems
breaking off with Old Joplin. The
absorbing. He was an absorbing
don't know what he'll do with
That other woman won't suit
What a mix-up life is! And how
pick the right right! But I
picked it this time—haven't I?

YOUR LOVING, FROM-NOW-ON
GIRL.

MY DEAR NIECE: It makes
ence what I think if you've
right yourself. As Old Joplin
own little ship and nobody can
you. You've given up your job,
but you may need one the day
morrow; so don't lean too hard
gray matter and don't lose your
outside world. If you really
new secretary incompetent, and
just female jealousy on your part
her in your place, what's the
my applying for the job myself
Mr. Napoleon-Scrooge-Simon
don't wear a wrist watch, and
Steve! YOUR LOVING AUNT

This curious, fibrous rock is the basis for all Johns-Manville Asbestos Roofings. It gives them fire-safety, of course, and, in addition, durability and permanence. It keeps roofing costs down.

\$30 more he could have prevented this with an Asbestos Roof

RK from the chimney flue . . . . . lls on the roof . . . . . a tiny, flame . . . . . and soon the whole ablaze—betrayed by the roof pposed to protect it.

use somebody grudged the few cessary to make that roof a real . The cost of a few shrubs lawn would have given that fire-safety of Asbestos Roofing.

s they did not know this. Many e inclined to think Asbestos xpensive because it is always spoken of.

s is not so. Anybody who can et up four walls can afford to em with Asbestos Roofing. On use as that in the picture the difference is less than thirty dollars. It is worth it.

For the same indestructible rock fibre that gives Johns-Manville Asbestos Roofings their fire-safety also gives them permanence. Weather, rot and corrosion have little effect upon asbestos. These roofings never need painting, refinishing or other protective measures, and they should last as long as the home they protect.

There is a roofing of Johns-Manville Asbestos, either in shingle or roll form, for every type of structure. Select yours from the chart on the right.

Ask your roofing dealer or builder for samples and prices of the roofings. Each is given the highest rating in its class by Underwriters' Laboratories, Inc.

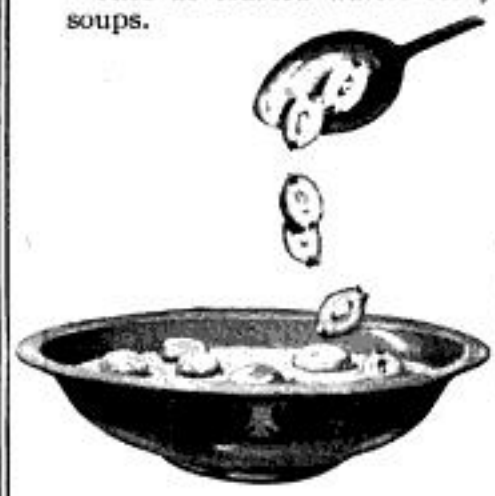
For June Days

These Bubble-Grain Delights

In the Morning

Mix Puffed Rice with your berries. These flimsy, nut-like morsels add a delicious blend.

Consider how Puffed Rice tastes served with cream and sugar. It is like nut bubbles. Then imagine what it adds to fruit.



Afternoons

Lightly douse with melted butter for hungry children after school. Then it forms a food confection.

Use as garnish on ice cream, as leading chefs are doing.

Use like nut-meats in home candy making.

Also as toasted wafers for your soups.

At Night

The ideal dish for children is Puffed Wheat in milk. Whole wheat, with its 16 elements, forms a practically complete food.

Whole wheat, with every food cell blasted, easily digests.

Puffed Wheat Puffed Rice

Whole grains puffed to 8 times normal size

Made by Prof. Anderson's process. Over 125 million steam explosions are caused in every kernel. Every food cell is broken, so digestion is made easy and complete. High heat makes them flavory. Puffing makes them thin and flaky. So these—the ideal foods for children—are the foods they love the best.

Household Saving

HARD times ended the orgy of spending. Personal incomes were reduced. Nine families out of ten must even yet give thought to ways and means to get the most out of every dollar. The chief expense of the average American is in maintaining a home and supporting a family. It follows, therefore, that the greatest opportunity to save lies in reducing the outlay of each household for the so-called necessities of life. The wisest kind of economy is that founded on the fuller utilization of the things we use rather than doing entirely without them. It is also a fact that the greatest waste in the home is from little leaks that are cumulative; not the glaring losses that are plainly evident.

Food is the principal item of expense in most homes. Through improper handling large quantities of vegetables and foodstuffs are wasted. Here are a few simple suggestions for everyday saving: Lay in quantities of vegetables in season, for later use. Keep potatoes in a cool, dry, dark place. Edible roots such as carrots, parsnips and turnips should be kept in earth or sand filled boxes in the cellar. Sweet potatoes can be kept until January if first cleaned, dried and packed in chaff. Tomatoes can be kept for some time if gathered immediately before frost and placed on straw-covered racks in the cellar. Celery should not be cleaned or washed until the day it is to be eaten. Oranges and lemons should be wrapped in paper, for their skins provide a good feeding ground for mold.

Sugar is best kept in tin; salt in wood or crockery. Cornmeal spoils more rapidly than flour, so it is best to buy it in small quantities. Rice, tapioca, macaroni and practically all the dried fruits should be kept in covered crocks in a clean, dry place. Breakfast cereals and crackers remain fresh longer when kept in air-tight receptacles—tin boxes or jars—in a cool, dry place.

Every household refrigerator should be supplied with a thermometer, which should be read at frequent intervals. The growth of bacteria in foods increases rapidly when the temperature of the ice box gets above 55°F.

In a large household where the refrigerator has a capacity of more than one hundred pounds of ice the side-icer is best. The box should be kept in a dry atmosphere, and not be exposed to drafts or rapid changes in temperature. Clean the box with cold water and washing soda, followed by a rinse with clear cold water and a careful drying. Much ice is wasted through the frequent and unnecessary opening of the refrigerator door. Investigation showed that the temperature of an ice box rises about two degrees every time the door is opened. The lowest part of a refrigerator is always the coldest. Ice is useless in a refrigerator unless it melts. Covering the ice with a blanket is a bad practice.

Dollars are wasted through carelessness in cooking. No matter how furiously water boils, cooking does not proceed any faster. Many people waste gas and oil in boiling away more water than necessary. The instant boiling begins the gas or oil flame should be turned down as low as it will go and still continue boiling the water. Equipment that permits fireless cooking is now looked upon with much favor by people who practice economy. The combination fireless cooker and gas range not only saves fuel but helps keep the kitchen cool in the summertime. In such a system the cooking continues after the gas is turned off, for the ovens of these ranges are insulated, and the final cooking is accomplished by the retained heat. An oven regulator or thermostat attached to a gas range saves time, energy and fuel, besides insuring accuracy in cooking. The flow of gas is regulated automatically by the oven heat.

If an electric range is used the housewife should cultivate the habit of turning the switch to medium or low, instead of always keeping it at high. Kerosene stoves are generally used in homes where gas and electricity are not available. In using a kerosene outfit always take care to see that the stove is set level so that the flow of kerosene will be uniform. Instead of trimming or scraping off the tops of wicks, press the carbon down evenly with a p paper.

It is always possible to conserve planning meals with reference to whose preparation takes the most steaks or chops are to be used, select tables which cook quickly on the top stove, like boiled potatoes or green For meats cooked inside the stove as roasts, use the oven at the same baking potatoes or for preparing an dishes. By following this plan the time heat needed for cooking the fully utilized. In the case of a stew on top of the stove it is possible steam rice or other things on top stew.

Dietitians suggest the substitution fresh or dried fruits, with cereals. Raisins, dates, and the like, can be with the cereal. Sirups may be used stead of sugar. The housewife should ways ask for the trimmings of the buys, for soup and like purposes. In case of a large family it is often the buy the whole carcass of a small Bargain hunters are often incorrect is no economy to spend carfare and or more of time traveling to a distant ket just to save ten or fifteen cents.

One expert contends that shopping around at cash stores is not always economy. The trade of a small family appeal to one grocer or butcher divided up among a number of stores no one of them will be greatly interested the patronage. A cash purchase should returned. In dealing with one store in each line follow the practice of every wilted vegetable or other factory article. Give the merchant understand they can have your long as they come up to the standard have set.

The campaigns to save fats during the war have been largely if we are to judge by recent analyses contents of garbage cans in several Many fats can be clarified and cooking. One scheme is to cut small pieces, cover with water and to soak for a day. Change the water during that time, and then drain empty the fat into an iron pot half a teacupful of skim milk pound of suet. This is cooked all sounds of boiling entirely cease the mixture has partly cooled strain off carefully. This fat may be used for butter in many recipes, for unpleasant taste or odor. Lard has melting point than beef fat, so thorities suggest adding one part lard to four or five times that of suet to make a softer fat.

A material loss results from caring for shoes, clothing and furnishings. Shoes when wet are ruined by being placed on a stove or too close to a fire. Wet shoes dried slowly. Insert shoe trees in shoes solidly with paper. Shoes cleaned before being put away. be stored where there is circulation. Castor oil will make shoes water proof, and is a particularly good for patent leathers. There is a true saying that two pairs of shoes alternately will outlast three pairs consecutively.

Woolen clothing or furs are by the buffalo beetle and moths. step in preventing waste of and such things, is to subject thorough cleaning before put away. If possible, it is frequently have such articles steam-cleaned authorities claim that if this is taken furs and woolens may packed away for the summer in pasteboard suit boxes by the boxes with strips of cloth paper pasted over the edges. what protective coverings are furs and rugs should be cleaned stored. To get rid of beetles the floors with crack-fillers. A cleaner is an enemy of the beetle fumes will destroy pests. Allow of sulphur to each thousand space to be fumigated. Gas used to destroy beetles and

Further Facts—

Back of Oldfield's Increasing Success

OLDFIELD successes in 1921 are being outdistanced by the achievements of 1922.

In the first four months of this year, 216 established tire dealers—leaders in their communities—adopted the Oldfield line.

In one week eight distributors ordered carload lots of Oldfields.

To date, there have been 98 of these carload buyers.

It takes a carload a month to supply users in Mexico City alone.

From November to April, the number of Oldfields sold increased 165%, and tubes 174.9%, over the same five months of the previous year.

Every important 1921 racing classic, including the Indianapolis Sweepstakes and French Grand Prix, was won on Oldfields.

This year at Los Angeles, March 5th and April 2d, Tommy Milton was again victorious on Oldfields, setting a world's record for 50 miles in the second race.

Covering 150 miles at 102.8 miles per hour without stop, Jimmy Murphy on April 27th, at Fresno, Cal., broke the world's record for one-mile track in his Oldfield-shod racer.

Everywhere such striking examples of Oldfield superiority are being recorded and an increasing demand for Oldfield quality is making itself felt.

What Are Basement Windows For?

You put windows in a building for one principal reason—to let in daylight and fresh air. The more light you get through a given window opening, the better. So in the first place, you buy basement windows

to let in the daylight

The accompanying illustration shows a Truscon Steel Basement Window and a wood window for the same sized opening. Note the difference in the amounts of daylight obtained. With Truscon Basement Windows, there is a gain of 50 to 80%, depending on the size of opening. So you are buying daylight at a greatly reduced cost.

to keep out weather

Basement windows must not only admit the light, but must shut out the storms. Any window which shrinks will develop cracks and crevices through which wind and rain can enter. The continuous overlapping double-contact weathering around Truscon Steel Basement Windows makes them tight against even driving rains.

for ease of operation

Basement windows, being near the damp ground, are subject to the effects of moisture. Truscon Steel Basement Windows, being made entirely of steel, cannot warp or swell or stick or lose their shape. They therefore operate easily under all conditions. A spring latch locks them automatically.

for economy in cost

With all their advantages, Truscon Steel Basement Windows actually cost as little as the old-fashioned wood window. In some localities they cost considerably less. For your own satisfaction fill out the items in the accompanying cost sheet. You can get the price of Truscon Steel Basement Windows from us or dealers.

Itemized Cost of—
ONE WOODEN BASEMENT WINDOW
1 Wood Sash ---------- $ .....
1 Wood Frame ---------- .....

(Continued from Page 44)

have invaded rugs, carpets and upholstered furniture. Take the articles out-of-doors, saturate them with gasoline and keep them outside until the gasoline has evaporated. The common practice of placing newspapers under carpets and rugs to protect them from insects is a wise one.

Placing furs in cold storage during the summertime tends to restore their glossiness, for the low temperature is that of their native element. Furs packed away with cayenne pepper, tobacco or insect powder are fairly safe from beetles. If a family cannot afford a mothproof cedar chest a substitute may be improvised by using red-cedar shavings or chips in an ordinary trunk having a tight-fitting top. Many cigar boxes are made of red cedar, and these are utilized by some housewives in providing themselves with the moth-defying chips.

Ants are a destructive pest in many localities during the warm months. These insects usually succumb to kerosene, turpentine or quicklime. An ant nest can be destroyed by boiling water. Powdered cloves keep away red ants, while all varieties dislike camphor. One remedy is to make an ant tape by soaking an ordinary cotton tape in a solution of corrosive sublimate. In making the solution place an ounce of corrosive sublimate in an unchipped granite-ware vessel and dissolve the poison in water. After soaking the tape in this solution hang it up to dry. Later wind the tape around the legs of tables, refrigerators and other furniture used for storing food. The efficiency of the tape will last for at least a year. Do not let the sublimate solution come into contact with iron, tin or steel.

Mildew is a fungous growth found in places where there is a relatively high temperature and poor circulation of air. If goods are attacked by mildew wash immediately and expose to sun and air. In every household there are many articles made of rubber, and although these will last for years if handled carefully, they can be destroyed in a few weeks by failure to observe a few simple rules. Heat and sunlight hasten the deterioration of rubber goods. Waterproof coats, rubber shoes and hot-water bags are frequently ruined by being placed on radiators to dry. Oil destroys rubber, as is well known by the owners of automobile tires and inner tubes. Rubber articles are best preserved in a cool, dark place.

Many things are purchased by housewives which could easily and cheaply be produced at home. Any number of articles are thrown away which might be recovered and utilized again. Gasoline, benzine and other liquids used for cleaning fabrics, after serving their purpose once, can be used over again if they are first strained through filter paper, which can be procured at any drug store.

There are certain kinds of saving that are poor economy. One example is the hoarding of old medicines. Many medicines lose their potency after a few weeks or months, and are without benefit when used at a later date in a similar illness. The very presence of a bottle of medicine in the house is likely to cause it to be pressed into service for some specific ailment for which it is entirely unsuited in strength or dosage. Even with two people having the same complaint a certain prescription may help one and harm the other. It is wisest to throw away all unused medicine after illness, unless it is a standard variety which does not deteriorate. If saved, each bottle of medicine should be labeled with the date of the prescription, the disease and the name of the patient.

One way to offset a contraction in the family income is to apply more thought to intelligent economy in the home.

Gas Saving

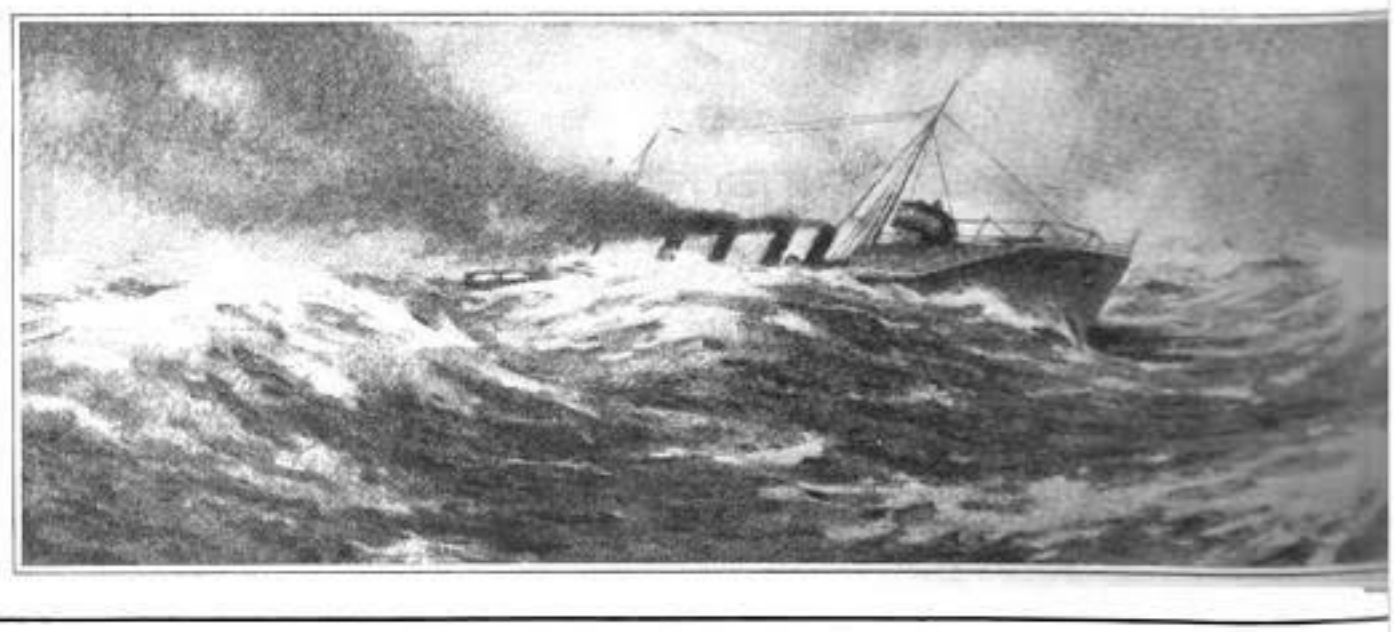
NATURAL gas is one of the most important of our resources. It is one thing in which every citizen has an equity and should take an interest. Every cubic foot of gas that is wasted is a loss to the whole nation, for it is a valuable natural asset that cannot be replenished after what we have is gone. In the words of one engineer, "Those who now waste the gas do so at the expense of others who would be glad to use it efficiently."

The public-utility companies that supply gas service to customers have no way of compelling the efficient utilization of the product they sell. In this particular, gas service differs radically from practically every other kind of public-utility service. Gas is wasted when, through carelessness or ignorance, the consumer fails to see that the gas is properly mixed with the proper proportion of air. Other wastes result when the mixture is not completely burned or when the flame is poorly directed to the object to be heated.

When natural gas is completely burned carbon dioxide and steam are formed. For each cubic foot of gas that is burned, two cubic feet of water vapor or steam are produced. It is this water vapor that causes gas ranges to rust, and the walls and windows of rooms where gas is burned to sweat. When the gas is not completely burned, as is the case when the flame suddenly strikes a cold surface, such as a hot-water heater, carbon monoxide is formed instead of carbon dioxide. Carbon dioxide is the gas that is exhaled from the lungs when air is burned in the human body; carbon monoxide is a poison.

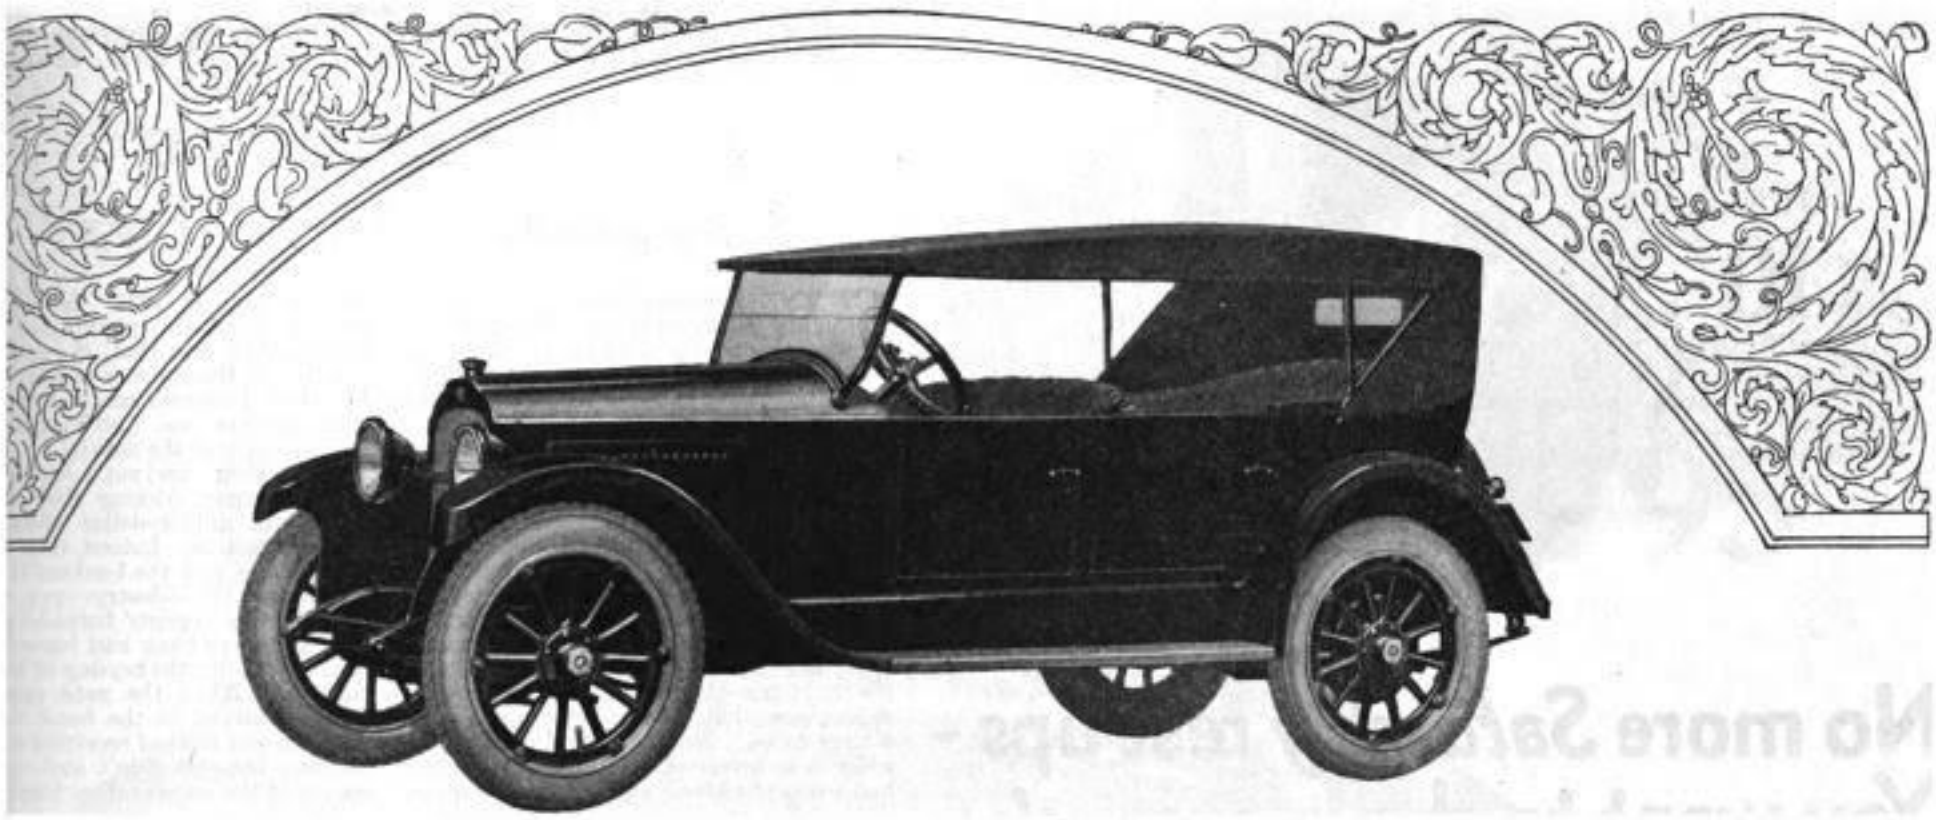
A few points consumers of gas should bear in mind may be stated briefly as follows: In order to burn gas efficiently the cooking vessel should be placed about one and one-quarter inches above the holes in the gas burner. In other words, the gas flame should be one and one-quarter inches high. When a higher flame is used, much of the heat generated goes out horizontally and downward, and is without effect in cooking. The tip of the flame should barely touch the bottom of the cooking vessel. The flame should never be permitted to lick up along the side of the vessel. The gas should burn with a pale-blue, nonluminous flame. A luminous flame not only deposits soot but is wasteful. In order to get the proper type of flame it is necessary to exercise care in admitting the right amount of air.

In the wintertime the pressure of gas is usually low. In meeting this condition it is advisable either to raise the burners or to lower the position of the cooking vessel down to within one-half inch of the burner top. In this way it is possible to make the tip of the short flame touch the bottom of the vessel. At times the pressure is so low that the flames are less than one-half inch in height. But the ga still be burned efficiently by a the position of the cooking vessel. Ra the burners or lowering the cooking not a difficult job, and can gener done by the man of the house.



Contrary to general belief, the va value of gas increases as the tempera the gas decreases. To be exact, th value of gas goes up 2 per cent for e of decrease in the temperature of th More gas is used for cooking in winte in summer, not because the tempera the gas is lower but because the tem ture of the food and water in the co vessel is so much lower in the cold wa and more heat is needed to bring the and water to the boiling point. Fu more, the temperature of the air kitchen is usually lower during the than in summer, and consequently heat is lost through radiation on cold

In order to get the greatest value a given quantity of gas, shut off drafts, so the flames will not be bl and the heat fail to reach the ves sel. Never burn the gas under ve on cookstoves. Burn it under ave or grid tops. If there is any red in the flame adjust the air shutte the vessel ready to place in posi lighting the gas. Turn off the gas the vessel is removed. A cooking cannot be made any hotter after commences; so when boiling beg flame should be lowered. Clean burners frequently. Deposits of s bottoms of hot-water tanks are of scale inside hot-water heaters tate the use of greater quantities heat the water.



Hundreds of small towns the United States, too small for the tion of manufactured gas, are w with a bounteous supply of natural many of these towns the advan cheap fuel is accepted as a matter and not fully appreciated. The ma many of these communities are who are guilty of wasting this va limited resource. Greater care a servance of a few simple rules w tend the life of the nation's gas s to twenty years.

In many towns in the gas incandescent-mantle lamps are doors as well as on the street, burned all the time—8760 h year. Three of these lamps way waste enough gas in two y supply all the light and fuel re average household. Another w of gas results from leakage in t the gas fittings are faulty. If cubic foot of gas per hour leaks an imperfect gas cock, this means of 8760 cubic feet of gas in a every month or so the consum should shut off all the burners house, and then note the move pointer on the small dial attached meter. The Coming Car

The Knight-type motor is coming into its own in America through the Willys-Knight car. Europe long ago adopted it in some of her foremost cars—the English Daimler, the Belgian Minerva, and others.

Now Willys-Knight presents it to America in a car, itself irresistible in grace, beauty, worthiness and comfort, at a price which brings it within the reach of all—$1375.

And the results are everywhere apparent. You see the Willys-Knight blossoming out every day in the streets of every town and city, and on reaching country roads.

The Willys-Knight motor is the highest development of the Knight sliding sleeve-valve principle.

Everything that motor engineers have been searching for for years with multiplicity of cylinders, complications of valve contrivances, and ingenious devices is attained in the Willys-Knight through *simplicity*.

Just two sleeves connected directly with a shaft and sliding on a film of oil—a smooth, even, solid, uninterrupted pressure of power at all speeds; instant, sure response; economy of fuel and oil; quietness; and above all, freedom from trouble.

It actually improves with use; carbon, that deadly enemy of poppet valves, merely builds up its reserve of power.

No more *Saturday* rest ups – You want to shave *every day* with Williams'

Many men have the sort of skin that must be humored a bit, that every now and then says, "Oh, let me alone!"

Many men shy a little at an every day shave. When Saturday morning comes it's easy to say, "Oh, well, it's only half a day. Let it go! My face needs a rest now and then."

But the face that gets a daily lathering with Williams' never says this. You want to shave every day if you use Williams'.

For the Williams' lather is lather for the *skin* as well as for the beard. It is lather that meets and overcomes that difficult and all too frequent combination of a tough beard and a super-sensitive cuticle.

Give it half a chance and it will not only soften every hair in the stoutest beard, but it will also prepare and lubricate the skin, make it flexible, make it ready to yield gently and evenly as the razor edge glides smoothly over it.

And afterward a face that is glove-smooth and blooming.

Williams' Holder-Top Stick

is one form of Williams' Shaving Soap that furnishes this perfect lather. The *original* Holder-Top—the stick in "the holder that holds."

The metal collar that holds each stick, both the original and the re-load stick, does several things:

It prevents loosening or wobbling.

It makes it easy to remove the stub—a firm stub that you can use the last wafer of.

It makes it easy and quick work to put a Re-Load Stick in.

Re-loads save you money. Get one and keep the original box.

Moisture-holding lather from the perpetual stick in the holder that holds. There is no more perfect product.

Send 10 cents in stamps for a trial size stick in a full-size *permanent* re-loadable box

Business Chapers the Movies

By HELEN BULLITT LOWR

IN THE motion-picture seats of the mighty to-day sit staid banking persons who are asking prosaically, "Yes, but will the financial returns justify the output?" instead of uttering a dashing "Hang the expense!"

So endeth the last flicker of romance that had managed to flick into the twentieth century, when even wars were conducted on a German-efficiency basis. Into history's back yard of disillusionment have slid the glorious days of easy money in the movies, along with the gold rush of '49.

For these bank persons are the financial doctors that have been acquired from the sober world of tried old business, to teach the industry how to live within its income—now that that income is not what it used to be. Not that cautious capital, when it is investing its money, has never had a way of putting an unemotional financial adviser in on an emotional board of directors to watch its money. And it was so some two years ago, when the big money was going into the movies and motion-picture stock was being put on the market—when the workingman and his family were doing their nightly motion picture.

But now suddenly—and by a turn of the dice—these financial advisers seem to have become the caliph instead of the grand vizier. Every nickel that is being spent has to go through their hands. Tired business men are running the art of the motion picture.

And maybe you think it was an easy job that confronted them—this new thing of putting the huge, lumbering, unorganized, extravagant industry on a business basis. And of course the first thing that they thought of—I use the term "they" because the various financial experts placed in the various companies seem to have gone through identical experiences without collaborating—was to place the whole outfit on a business budget—as would any nice young man who had ever read an earnest business-administration magazine, clipped a coupon or taken a correspondence-school night course.

Bankers in Control

But when they began making up their budgets they found themselves faced with an industry in which all that you buy with your money is the intangible personality of stars, of directors, of mob scenes, of continuity writers, of press-agent-made fame, and of somebody's temperament. And all that you have on your shelves to show as your assets are miles of shadows on miles of celluloid.

Those orderly gentlemen from banking circles, with their pasts full of balanced ledgers, found themselves in a chaotic world where the value of the product you've manufactured has no especial relation to the amount of money it has cost you. Tush—that last little item of five thousand dollars in the cost of the picture may be merely because that azure-eyed chit of a star developed temperament—when her dressing room had not an outside window—and refused to act while the mob scene you'd engaged to act with her ticked up the meter for twelve hours. Or again, you may not have wasted a nickel—but the fans may just not take to the way the curls curl on the forehead of your hero. Dun and Bradstreet themselves would pause for a reply when asked to render a few snappy estimates.

Yet how these hard-headed, unsentimental financiers have managed to shake the rudiments of a business system into this great, overgrown, genius-shot industry forms one of the most dramatic chapters of modern finance.

Ah, but those were the swashbuckler days of romance, in the hours of the halcyon sowing of dollars and of the even more halcyon reaping. When the season was over and the harvest gathered, a simple mathematical problem was performed. The expenditure was subtracted from the income. The number that came out was the profits. It was a nice business—that is, till the May of 1921. In trouble about this picture bookkeeping was that, if tracting in the summer of have found yourself subtrac from the expenses. And th ber is known as the deficit.

It was then—and not a da bankers began sticking the the bright million-dollar id sioned directors. Indeed, thu of the loans and the bankers throughout the industry—yea, of the dealer in gents' furnishing a conservative bank had loaned five sand dollars in the heyday of the clientele. When the note came dealer returned to the bank renewal, and instead received a clothing business didn't look season to the conservative bank

"But have you ever been in the business?" urged the dealer.

"Why, no, sir," replied the Wall Street dignity; "as you in the banking business."

"Vell," said the dealer with sive gesture, "you may never h the clothing business before, b the clothing business now."

Not otherwise came the ba business of at least one of the ing companies.

The High Cost of Temperam

To-day the comptroller of one largest of the picture corporati ex-cashier of a large bank in New Y the holy of holies of another s ness representative of money that in the spring of 1920.

Yet think not for an instant conservative financiers and [illegible] who have been set the task of re undervalue the native genius up the colossal business structu movies. Only those reorganizers proved successful who have a native vein which senses the ro that early adventure into unfam ness worlds.

But that does not at all mean banking persons did not find th shouldn't be.

As for what they've found wro sentence, that unbudgeted way th tor was allowed to operate—al hundred thousand dollars to the picture, whiff, just like that, w very well got ready—that was a sin worthy of a pre-Wells be huge salaries paid to some of the not an economic sin, because th really did have much value a cards, and if you did not pay it s else would. "... float along without jar or jolt"

"You will probably be interested in knowing my experience with Ride Rite Springs.

"Have just returned from a long and very hard mountain trip, having been gone about a week. Owing to rain in the mountains some of the roads were in pretty bad condition.

"I did not think it possible that different spring equipment could make such a difference in the riding qualities of a car. I noticed a particular difference on wavy oiled roads that had been cut up by traffic until they were in about the same shape as a washboard. The front Ride Rite springs eliminated all of the short snap and jar usually experienced on this type of road. The rear springs took up the shock and there was not the tendency for the rear wheels to drum on the road as is so apt to be the case under this condition. The car seemed to float along without jar or jolt as would normally be the case on rough roads.

"These springs cannot help but be much easier on the wear and tear of a car as well as insuring materially greater tire mileage."

This is just one of the many unsolicited letters we have received from enthusiastic Ride Rite drivers. Thousands now know the new joy in motoring that Ride Rite Springs afford. Ride Rite Springs add 100% to comfort and pleasure — reduce rattles and squeaks—cut upkeep costs—increase tire mileage. There is a set designed for your car.

Write for "The Joy of Easy Riding." Your copy is waiting.

Make Rough Roads Smooth

(Continued from Page 48)

wear Fifth Avenue clothes in a blight-of-Broadway production, it was an economic sin for a director, who knew she couldn't get away with it, to let her. But if they didn't go and let her do three Lucile-clad pictures!

Indeed, and the salary you paid her was the least of your troubles in this whole star complex. Each star had a private business manager who personally conducted her temperament. Which of 'em got the first idea of temperament being a negotiable quality is hidden in the mists of 1918. Be that as it may, the whole outfit took it over from the camera man to the hack electrician whenever they wanted a raise of salary. They took over the technic of the Italian diva and of the Slav impresario—plain Anglo-Saxon and Hebrew persons from Indiana and Brooklyn. That was the year that one star found that her temperament would not allow her to do a big emotional scene if there was any gum being chewed on the lot.

But the most expensive temperament of all was the unbudgeted temperament of that director. Not that it was his fault, poor dear. His was manufactured for him by the press agent too—to be accurate, about the year of 1918, when a director had produced three pictures of such drawing power that the management decided to star his name on his pictures as a trademark. Then what one company had done all the other companies had to do. This is the best little business extant for the game of Keeping-up-with-Lizzie. Every company looked around among its little things and picked out a director to star.

And it was after his name was featured that the director really discovered what money was meant for. It was meant to build the glass floor for a ballroom at the cost of eighty thousand dollars for a scene that was displayed for just three or four minutes. It was meant to pay the actors' salaries, while the director experimented for three-quarters of the day with the lighting problem. It was meant to take four times as much film—which means four times as much actors' salaries and overhead—as could possibly be used—because it interfered with the director's temperament not to work spontaneously.

The Drop in Salaries

It's a good thing that there had not been a budget system in the past for somebody to try to balance—or some of our most promising young experts would be by now in Bellevue. For what those fool directors were doing was working for immortality! So much so, indeed, that the séances spent with the stars by the business administration have been mere child's play compared to talking the director into living within the company's income.

"You can reach a star sometimes," explains one such gentleman, looking cautiously about to be sure that there is nobody listening, "by appealing to her with tears in your eyes. She's enough of a trouper to be reached by a piece of sentiment if you'll broaden it."

Moreover, in broaching the subject of the star's salary they were helped by the brave old law of supply and demand. The stopping of the works out in the city of Hollywood—where the press agents are telling us the motion-picture colony divides its time between work, Christian Endeavor and home cooking—did more than save the money that would have been spent producing pictures. It brought down the whole wage scale from overpaid stars to overpaid carpenters. And if it wasn't a plot—at least it was a good idea.

The salary of a good sea-going star has dropped from eighty-five thousand dollars a year to sixty-five thousand. That may not sound like ironing your handkerchiefs on the window-pane and washing out your silk stockings in the washstand bowl—but twenty thousand dollars is twenty thousand dollars—especially in these new and cru-el days when a departmental head at one company indignantly insisted that a dozen sheets of carbon paper be transferred from his books, as it brought down his economy record. *Sic semper gloria mundi.*

Generally speaking, the wage scale now stands about like this: A leading woman, not a star, who was getting seven hundred and fifty dollars a week has her new contract made out to the tune of four to five hundred. A fifteen-hundred-dollar leading man—beautiful young men with cupid's-bow mouths, that do not make you suffer when you look at them, by the way, are just that much scarcer than leading ladies with eyelashes—now brings down from seven hundred and fifty to one thousand dollars. As for the stars who had contracts which have not run out—well, those personal business agents of the stars aren't advising their clients this season to get sick so that their contracts can be broken.

The salaries of directors have dropped in proportion. Those who were getting four thousand dollars a week now average twenty-five hundred, while the twenty-five hundred to three thousand dollar a week men have come down to one thousand. The directors stood that blow bravely from the business administration. But where they went all to pieces was when they heard about the budget system. Ah, well, in most instances it was a matter of take it or leave it. The new prosaic world of motion pictures has no room for the brave adventure of not knowing what you are going to do to-morrow. When I beheld next year's schedule for the productions of one company, and saw that such and such a picture was going to cost one hundred and fifty thousand dollars, and such another two hundred thousand dollars—and that it was going to be completed on August fifth—well, what's the use of going on living in a world where romance is dead and all men wear derby hats?

Not only is there a general schedule in at least two of the large producing companies, but each picture now has its working schedule. No more may an actor draw a salary for ten weeks who is needed for ten days. The picture is scheduled so that those ten days occur consecutively. The picture is scheduled so that the director must furnish a reason why if he runs behind his schedule. Perhaps there were four rainy days while he was on location. Perchance the star had a pimple on the left side of her nose. That pimple would be accepted as a perfectly good business-administration alibi—provided, I should add, that the director explained that he tried to paint it out and its geographical location wasn't propitious.

Neither is a director held down to hard and fast hours. If he wants to spend three days getting a certain expression on a star's face, that's all according to Hoyle. Perhaps next week he can catch up on his schedule. Or he can put in some night work.

"It's just like the war," explains one practical picture man who had also been a practical war man. "They gave us an objective when we went over the top, but they had to depend on personality to get us there."

Therefore is the director's schedule not manufactured in bulk in the New York office. Such and such director does his best work slowly—then he is allotted more time to reach that objective. All really efficient schedules are custom-made. And the tailors of the schedules in the final analysis have been practical motion-picture men.

For one of the most interesting findings of the recent months of intensive reforming is that the financiers must make the broad outlines of the picture of the penitent prodigal movies, but the details have to be filled in by the actual workers—with the financiers, forsooth, pricking them with a dagger in the rear to keep them on the job of thinking up new details. Or else they lose their enthusiasm.

Saving on Scenery

The practical men are still telling with gusto of the business adviser who intercepted the go-get-it man—which means the person who purchases the stage properties—on his way to purchase twenty-five dollars' worth of Grade A poker chips.

"Get the cheaper chips for five dollars," ordered the reform administration. Twenty dollars was saved.

The next day the stage was set. The gambling hell was ready, as were all the denizens. The camera began. And then they found that the poker chips would not stack. Exactly twenty-four hundred dollars was lost in time while the go-get-it man went to purchase twenty-five-dollar chips.

In short, there is nothing that those so-called practical men get so much fun out of doing as telling you privately that the art of the motion picture is being stifled by crude business men.

And yet—and yet—what makes them so certain that pictures aren't going to be better? There was certainly room for it. Nor did money succeed in buying art in the days of spendthrift spending w than money can buy love. Bu the first time in history, mo directors are having to use the ca instead of carelessly throwing a fifty thousand dollars. In a recent tion I beheld what may be the d new era. Instead of the interio taken on the old-time stage w walls, the effect was obtained by up just one side of the room by the of one side wall and the back w the third wall was suggested by a a table that the tail of the eye of th could pick up. Behold the illu room instead of the photoplay' realism. When Taylor, the ve director of Hollywood fame, sa provided for him, he refused t piece. And yet so successful scheme that only the foreknow what had been done enabled me the mechanics of the thing.

That mechanical invention ma saving on scenery of exactly 50 And what's more, I found myself a play that contained some o delightful interiors yet shown on Somehow the whole psychologic of thought has been different. stately hall needed to be shown exactly enough properties to m cestral hall—and not a suit of ar The old system of dragging in but the kitchen stove may be the old system of unlimited fur

Cautious Finance

And yet the business mans willing to spend even a carefully million—if by so doing a picture drawing power can be ass "Economical" does not necess "inexpensive." It is just that is going to build up a million-do on them impromptu.

But whatever they cost, th has found that it must have pict supreme drawing power—for th this year of low attendance in t has been that the public is shop pictures. Therefore, never were of any organization so conce giving the public what it want whole movie outfit. Two year was a public-be-damned att public was so busy proving th pay money for anything. A you consider that the article wants is art or is not, all whether you are the backbone or whether you are interested i theater movement.

But the stabilizing of the in have a tendency anyway to c number of vicious pictures. every vicious picture is a specu osition," explains one hard-h ness man who is a part of the "If it gets by the censor you w double your money, but ther chances of your product be destroyed." So, even if the pul for its weekly vicarious vice. gime is going to do a lot of thi it invests hard cash in supply

There is a tendency, too, world of cautious finance to try vein of commercialized virtu Nest was produced on this w on the idea that there is an public which would actually something respectable and h than something naughty—or came the circulation of the wo magazines? Big business has lieved in opening up new terri of course, always are there c be met with in such adventur difficulty that is being encoun business of commercializing v the exhibitor who runs the selects the pictures shown has sold on the idea.

For one rather tragic detail, self-made industry is that the hibitor—there are, of course, has a cruder sex outlook and culture than has the average ence. The man who puts the bubbles in it

YOU have perhaps noticed the silvery bubbles in Clicquot Club inger Ale and that they stay in it a ng time.

"Putting in the bubbles" is an im-ortant part of making Clicquot. The ring water, drawn from the bed-ck through aluminum pipes, is quite ld but not cold enough.

By refrigeration, the temperature of e water is forced down almost to ezing. Then the water is carbon-d. *That's* what makes Clicquot so ely, so full of sparkle.

Warmer water would not take the bonation so well, nor would it hold it so long after the bottle is opened. So the man who puts the bubbles in Clicquot watches the thermometers and keeps the temperature just right.

And every part of the making of Clicquot Club is just as carefully guarded. No ginger but real Jamaica ginger is used; only pure cane sugar sweetens it; and the happy blend of Clicquot is made with the addition of fruit juices. No wonder *"They all like it."*

Order Clicquot Club Ginger Ale by the case. Should you desire a change in flavors at times, you can get a mixed case with Ginger Ale, Sarsaparilla, Birch Beer and Root Beer.

they be shoes, groceries or
e dependent for their exist-
edit system.

Hence the real reason why the motion-picture industry must be whipped into shape, must show economical organization and earning power, is that it may join the sober society of unspeculative industries. And, of course, the degree to which this credit has been extended in the year 1922 has depended on the condition of each individual company or corporation.

Ah, well, the new-rich industry has come up in the world—that wasn't the way its financing began. Try a cut back—no, not to the days of new-rich spending, when everybody was taking a flyer in movies, even the New York Stock Exchange—but back to the simple old sunbonnet days, before it came to the city to be made a "lidy."

Twenty years ago the side-show exhibitors of freaks were the financiers of the motion-picture business. Being smart guys, they saw in the pictures the chance to syndicate their Siamese Twins and their Living Skeletons. After it was taken the picture was shown in the arcade penny-scopes. And to give the long-lost missing link as to why the movie society scene to-day recalls the second act of A Kiss for Cinderella with its hokey-pokey cart—out of those arcades came three of the most important men in to-day's motion-picture world.

But anyway, nobody was having the audacity to refer to the art of the motion picture then, or to develop temperament—and that was something. Nor yet in the next chapter, when the financing was done by enterprising individuals on the fifty-fifty basis. Financing was conducted on the sleeping-partner technic instead of on the Wall Street theory. Maybe you lost your money, maybe you retired on an income. When a producer named Tyler had a hunch that he would like to produce The Christian he needed just five hundred dollars. And he happened to hear of an old lithographer who had exactly that five hundred dollars he wanted. That picture cleaned up the first half million dollars in the motion-picture annals.

Delegated Authority

The industry was traveling on a shoestring and conducting itself modestly accordingly. Indeed, up till 1914 the fabulous sums that were paid to stars were the invention of the press agents, simon-pure and simple—about as spendable as Confederate money. There was a certain amount of homemade efficiency in the days when stars' names were in the synthetic making, instead of so made that the stars themselves forgot where the fame came from. The man who had borrowed the money personally oversaw its spending, because he knew that, when that thousand was gone, he had to get another thousand.

Indeed, the birth of delegated authority was registered when one director-producer announced suddenly, "I'm going to stop doing everything. You fellows have me a society man's Fifth Avenue library by to-morrow." He returned to find a china spittoon in the middle of the set.

"Can't I turn my back for one minute but you spoil everything?" he roared. "You take that little china spittoon out of that society man's library and get me a great big handsome brass one."

But in spite of this first disappointment delegated authority had come to stay.

Thus grew the motion picture out of the people, by the people and for the people. Thus grew it in its might and in its peasant strength.

And yet the banking interests were still holding haughtily aloof, as banking interests will. Instead of gobbling up infant industries, Wall Street has a way of coldly asking applicants who come to borrow money, "Well, what have you got?" For bankers are very wary of new businesses. It was thus when the automobile industry came knocking. It was so when the great oil industry was new.

The bankers employ experts to pick out the weak places before they'll even nibble—much less gobble. And the weak spot that they found in the precocious motion picture was that same fatal extravagance. True, it wasn't throwing away so much money prior to 1917—but that was for the very good reason that it did not have so much money to throw. And there was also that weak spot that, in the final analysis, the assets consisted of that shelf full of celluloid. And celluloid on the shelf brim, to the expert on weak spots, a simple celluloid was to him.

It is a pleasure to have attractive, Lyonized teeth—and easy as well as safe.

"I don't need *three* hands with the "YANKEE Bench Drill"

"No hand feeding with the 'Yankee' Bench Drill. The 'Yankee' friction and ratchet feed does away with feeding by hand. The pressure is automatically regulated for all drills from the smallest up. Think of the drills I save!

"One hand steadies the work on the table—the other turns the crank. That's all the attention I have to give it.

"Friction feed rapidly runs drill down to the work. Ratchet feed then goes into operation. Automatic throw-off prevents jamming.

"I never knew what rapidity, accuracy and convenience in drilling meant till I got a 'Yankee' No. 1005.

"My 'Yankee' Chain Drill has the same Automatic Friction and Ratchet Feed."

No. 1005 (illustrated). Two speeds; 3-jaw chuck; holds drills up to ½ in. diameter. Entire length, 28 in. Extends below top of bench 6 in.

No. 1003. One speed; 3-jaw chuck; holds drills up to ¼ in. Entire length, 18¾ in. Extends below top of bench 4¼ in.

"Yankee" Vise No. 990

Designed for use on "Yankee" Bench Drills. Machined true on ends, bottom and sides. Swivel jaw for taper work. Jaws open 3 in.

Make Better Mechanics

And that is why the motion-picture industry had grown to be the fifth in importance in the United States before the big banks of the country had given it a look-in. It was not until movie palaces began to rise in every city—well, banks can see real estate. So it was in the industry's glad days around 1918 that conservative money began going into the movies. Then every motion-picture house, from orchestrated Broadway palaces with urns of red roses, to the Jewel Theater in Junction City, was packed to capacity and running over. On paper, at least, not the most enterprising expert on weak spots could have found a weakness. When they subtracted the outgo from the income—behold the difference was millions and millions and millions.

There was so much money coming in that exhibitor, producer, star, director, director's little friend and investor—could all be enriched beyond the dreams of Ponzi's clientele. What matter if some of the juice of the melon ran out on the ground?

Thus precipitously did the new-rich industry begin breaking into financial society. But there's Wall Street society, remember, and Wall Street society. Some companies merely operated on those industrial notes furnished them by banks. Others were incorporated and the stock of them was sold on the curb, and one company made the New York Stock Exchange—as is possible only when a group of responsible bankers underwrite the stock and issue it. Not until the fall of 1919 did this ultrasmart thing happen to a member of the new-rich business. Otto Kahn was the banker who believed in this industry and interested other bankers in it. The industry had outgrown private capital, even as had our railroads.

So it was that big business became a part for better or for worse of the motion-picture industry—and the motion picture a part of big business.

Well, better it was for the industry, anyway, if not for the bankers. If it had not been to somebody's interest to steer that fleet of big, topheavy, gold-laden, unseaworthy things through the storms of last summer and fall and winter there might not be a survivor left to tell which wave had struck them. Nor is the storm of financial depression over by a long shot. Last summer just about 60 per cent of the theaters closed down. Some of them never opened again. Yet others, that are still extant, may fail during this coming summer. The fans have not yet come back in bulk to their beloved pictures.

What of it? Good seamanship does not pretend to still the waves of outside circumstances. It only claims to enable the boat to weather the storm. And while the waves are dashing, the pilots are not taking their hands off the helms of the boat either—or the practical motion-picture men could still risk a nice wreck before the summer is over. For, left to their own devices again, it does look as if the directors would do just what he's always done.

Meet now the most extravagant director in captivity. Every extravagant folly of the dead past was repeated in quantity production as his unbudgeted pictures went on mounting up to a million dollars. The president of the company was the most surprised man in the movie world when he discovered that his director was building one set at the cost of one hundred and fifty thousand dollars. But with true reform temperament the director had sewed up his employer by imprinting his own face, as one of the actors, on a million dollars' worth of film. The director actor had become unfirable. The old days of romance seemed to have come back.

But those were the days when everybody else was doing it—and nobody was concealing it—while the amazing part of the last money madness has been that the lights on Broadway are telling the story. "Cost a million dollars."

"How do you dare do it?" I ask one of the officials.

And serenely he replies, "Because we are one of the few companies that still finance ourselves. If we had stockholders and issued that advertisement—well, it just couldn't be done. But, as it is, we are using it to shame to advertise the picture."

From now on this company, too, will finance sedately on the tracks on the banking system. In short, the only unbudgeted expense that the reformed industry is making this season is the purchase of Will Hays, without knowing just what he is going to do for them—on the bright hope that he is going to coordinate the industry, clean up the censorship tangle, and restore public confidence in how stars spend their rest hours.

"And personally," confides one banker adviser, whose name shall be held back, "I'm not sold on this Hays idea."

THE PIONEER FAMILY

(Continued from Page 23)

of the required time or energy. Hence it fell into the hands of a semi-idle class who could afford to make it a business, often the only one they had.

Within the first year after settling the pioneer had assured the future supply of food necessary for himself and family. Even in the forest, next to impenetrable—when in any given fall or spring he had fixed upon it as a place for a home—the next twelvemonth found him reaping in succession, amid the stumps or the charred trunks, a harvest of vegetables, wheat, corn and oats sufficient to carry him on with confidence until the harvest of the following year, reaped from an increased area, brought him for sale a small surplus beyond the demands of his family. He had grown enough hogs for his own pork consumption and some to sell to incoming neighbors; had increased his stock of cattle and horses; grown poultry in all its forms; and, however ill-provided in the beginning, was on the way to an assured prosperity, time, health and strength being the only elements to be taken into account. The hunting, gradually dropped, became for the first time the amusement of habit or an idle hour, or the resource that brought a change of diet; and generally speaking, as for him, the great fighting pike might swim in safety back and forth by his door, as if to say "Come get me."

But his supplies of food were not limited to these chances or to this foresight. He and his family had only to walk out into the woods, or, if on the prairie, down to the river bottom, to get all that was needed—and more—of the wild fruits growing there in profusion. There was the wild grape, with its great vines, which with his usual disregard for the future he pulled down in order the easier to despoil them of a fruit fit for the gods. In the future days, when it was gone, always it was pronounced superior to anything the Concord, the Catawba or Clinton could show in what was known the tame grape. The wild plum, also there, had a like reputation. The apple, perhaps when eaten raw the most and most disagreeable of all known, worked into delicious jellies and and its manipulation was the often the secret of efficient The wild cherry, of several other tree that grew on the river gave ample reward to the boys its trunks and risked their among its branches. There was black haw, delicious for eating the first frosts, and the red haw, though a coarse product, fully its gathering. The blackberries, size and fine in flavor, were found patches on the bluffs where the grew; and nothing more attractive palate ever came out of the the wild strawberry, ready for the and the eating, along the narrow bottoms.

No piece of ground came so near to is known by the term intensive as the farm garden. It was generally fifty to a hundred feet square, inclosed with a fence of pickets or set close enough together, with pointed tops to exclude even nimble of fowls, however well they train their wings. It was plowed great a depth as possible, and there where necessary, its soil worked hoe and rake and enriched with known and available fertilizer feed the various plants. The seed garden were specially grown, procured a neighbor by purchase or exchange imported from the outside, only the perfect of them used; and the sprouting on this plot of ground to the southern side when it could be and the cultivation were as assiduous

WATER

s *More* Important than *Gasoline*

Because if you run out of gasoline your car will stop. *No* damage is done. But the loss of water, due to leaks anywhere n the water system, can inflict *ruinous damage* on the engine, cylinders, pistons, bearings, and internal parts.

A. P. Warner, The Man Who Gave the World the Speedometer

His name safeguards car owners. He has never permitted his name to be connected with any automobile product that was not 100 per cent quality and satisfaction. No name is better known among motorists and none represents a better guarantee.

a nation-wide investigation shows Mr. A. P. Warner is an alarming failure among car owners to realize vitally essential is the care of the water system. Are ne of them?

n a vague way, people know they need water in their ors—but, few understand that this water *must* con- isly circulate *through the engine*, and that its cooling on is of the very *utmost* importance. The loss of through a leak can quickly overheat and damage the working parts of the engine.

ıy Car, Any Minute May Spring A Leak

very day car owners suffer this sad experience, be- they are *unprepared* to instantly stop leaks. Repair are full of cars needlessly damaged in this way. A eak has started thousands of cars on the way to the ile.

ow, A. P. Warner introduces this absolutely reliable and economical way to stop leaks without injuring gging up the cooling system. Order a can at once.

It is as foolish to think you will never have a water leak as it is to think you will never have a flat tire. Be *prepared*.

One car owner in Boston paid $85 for a new core to mend his radiator. A can of Warner Liquid-Solder would have saved him that expense. Make sure that never happens to you. In Detroit, the cylinders of a lawyer's car cracked, due to lack of water in the circulation system. A can of Warner Liquid-Solder would have saved $400 repairs.

Get A Can—It Will Save *You* Money

A woman was driving from a visit into the country near Cincinnati, alone at night. The radiator began leaking. Stranded, and frightened, she had to walk miles along a dark road for help. A can of Warner Liquid-Solder would have stopped the leak instantly.

Those are examples of thousands of similar, unnecessary and avoidable troubles and expenses. Why wait for a leak? Put Warner Liquid-Solder *now* in the radiator of your car *(new or old)*, and *avoid* leaks.

Warner Liquid-Solder is guaranteed not to retard the flow of water or injure metal or rubber. It is not affected by heat or cold. It is time-tested and endorsed by engineers and car owners. It overcomes the common objection, because there are no *sediments or solids* to cause trouble. It is sold on a money-back basis. Beware of imitations. Use coupon below.

ARNER LIQUID SOLDER

Finds Leaks and Stops Them

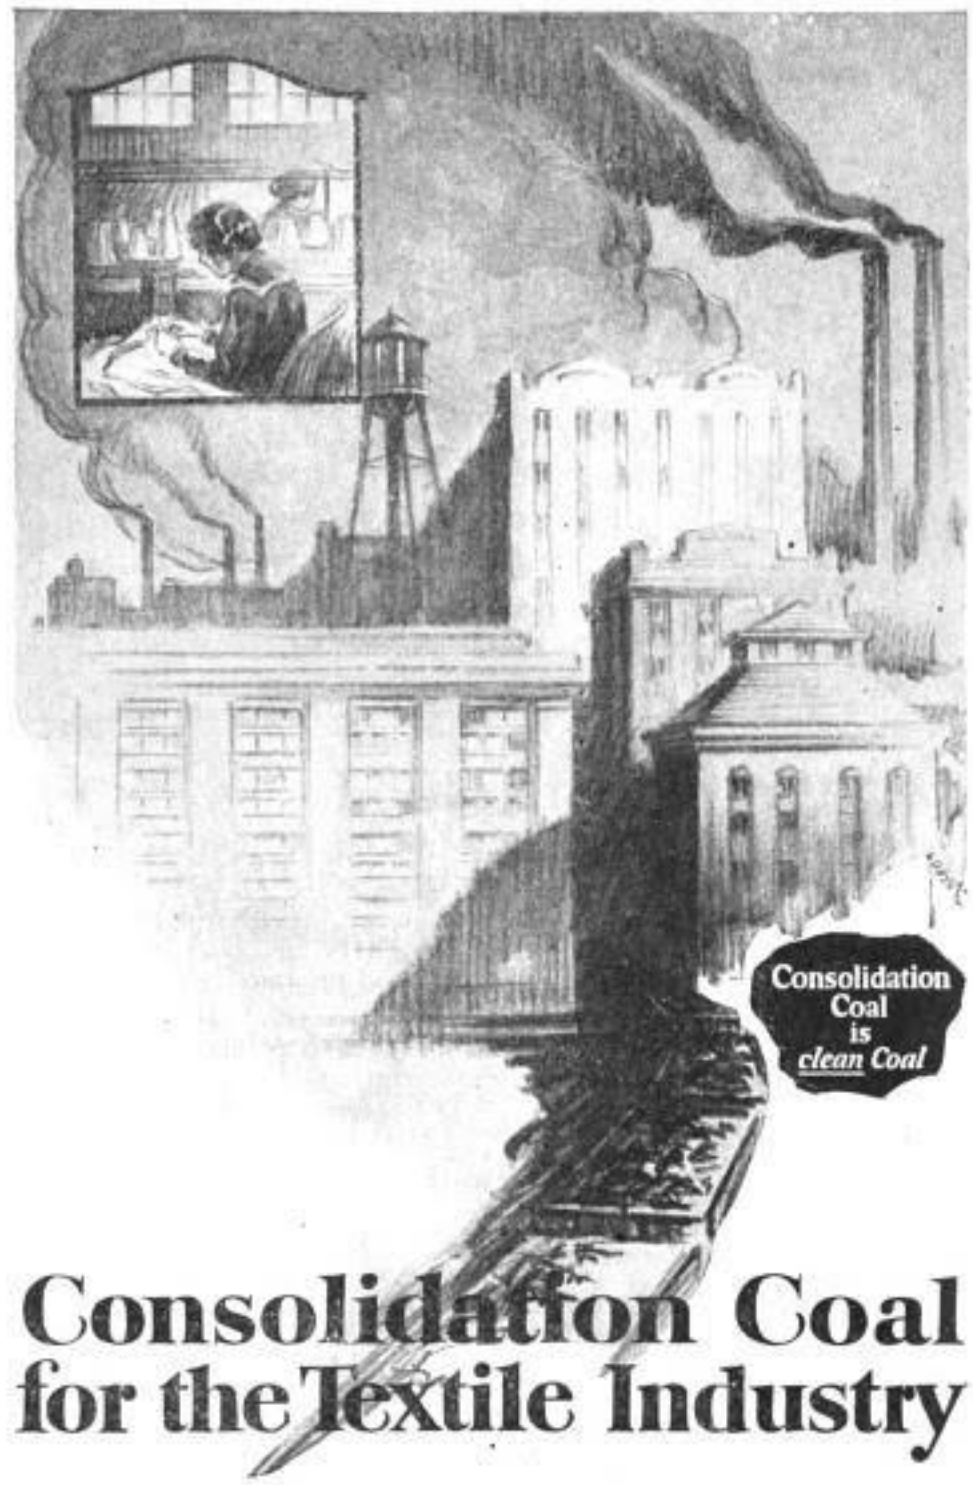
f living or the order of hos-
lescribed was universal or
But the example thus set
the different degrees that
entered into the make-up of these communities, with as much fidelity as are like examples everywhere else. In this secluded life the standards of living were as various as anywhere, and the workings of an exacting caste were scarcely less in evidence. The average cooking was so bad as to be beneath contempt. Many women were slatternly; sometimes they were coarse and dirty; children were ill-mannered and boisterous; many men were lazy and useless, shading into the ornery; houses were ill-kept; farms were scratched, not cultivated; horses were beaten and other livestock neglected; crops rotted in the fields, or when gathered were left as the prey of vermin; men drank whisky overmuch, and women smoked ill-smelling pipes. In short, this pioneer world was so very real, there was in it such a variety of men, women and things, that the effort to attempt a description of it in all its ramifications scarcely seems to be necessary or desirable.

There was no reason, inherent in the surrounding conditions, why any man, woman or child should go hungry or lack clothing, shelter or paying work. It was as true then as when Cassius exhorted:

The fault, dear Brutus, is not in our stars,
But in ourselves, that we are underlings.



So it was not the fault of the pioneer life if it carried upon its bosom so many elements and forces that it did not know how to take advantage of its blessings.

An Age of Barter

But the best showed a high average, especially when material conditions are considered, and these were the first, the inevitable consideration. The majority lived well so far as quantity went, though on no such scale as I have set forth as pertaining to the best. They had plenty to eat, as wholesome in quality and as well prepared as they knew how to provide, and their standard improved from year to year. Often their plenty had in it much of rudeness, but at its worst it was remote from the miserliness of the peasant. They were little given to selling their best and living on the waste, or the worst that had small commercial value. They had their varying grades of hospitality, and when it was in them they could raise the scale. They were God's common people, a host great in number, out of whom there was to come in due time so much that was both human and good. In peace they worked and worshiped in their own way, not always the highest; in war they fought for things which they had been taught or had learned to believe.

Measured in money, the cheapness of living under pioneer conditions was so surprising as to be almost beyond belief in our modern urban life. But even the reader unfamiliar with simple methods has only to consider the simple story told here in order to ask what use there could be for money when all the food consumed by a family, with the exception of sugar, salt, tea, coffee and spices, was home grown; where only the materials for clothing had to be bought, with no outlay for making, leaving only shoes and dress goods; when rent was a part of the return for the farm; when almost nothing was payable as interest; when schooling rendered no bills except the small amount paid for taxes, which the majority escaped entirely, and that for books; when the great mass of artificialities, now thought essentials, did not exist; and when content was measured not by an outward show of money, or even by what it would buy, but by real values. Even many of the items thus named have no place there. The household groceries were almost uniformly purchased by the barter of by-products otherwise unsalable; cloth was bought with home-grown fleeces; shoes with hides sold or exchanged; taxes were paid often by extra wood disposed of in the only available market—the near-by town. Indeed, it would have been next to impossible to spend any considerable sums to command even the high standard of comfort then possible throughout the pioneer region.

Gauged by present-day standards, the pioneer farmer, like his predecessor, the colonial, was the most poorly paid man known to our history; at the same time, measured in real returns, no man of the same general ability and standing will bear comparison with him in service to his country and time, and in individual and collective happiness. Nothing in history more discredits the much-vaunted quantitative theory of money than that this country, from the days when wampum passed

Consolidation Coal for the Textile Industry

Ranking high among the industries of America, is the great Textile Industry. This industry, in 1919, consumed $2,727,000,000 worth of raw cotton, wool and other supplies, and from it produced $5,180,000,000 worth of textile products. To accomplish this great increase, 8,000,000 tons of bituminous coal were consumed.

Because of its high heat content, cleanliness and careful selection, Consolidation Coal is ideally suited to the requirements of this progressive and efficient industry.

And the same high quality of ore, backed by the sound principles of production which render our coals so acceptable to the textile industry, guarantees equal satisfaction to other industrial consumers.

Everything That a Good Golf Ball Should Be

The true test of a perfect golf ball lies in its ability to perform in *every department* of the game, with every stroke, off every kind of club, over a long period of usefulness, with unfailing accuracy and uniform dependability.

Public preference has set out the *162* as the leader of the Dunlop line—a ball which excels in every quality that makes up a perfectly balanced golf ball. The more important of these are given here.

Distance: Resiliency is the easiest thing to build into a golf ball. But to temper resiliency, so that it is equally suitable for the high-powered, accurate stroke and for the lighter but firm blow (according to the necessity of any particular shot), is an achievement gained only from long experience and skill. The Dunlop *162* has always delivered distance.

Direction: To get maximum distance a ball must hold a true course in its flight and have a perfect trajectory. It must have sufficient elevation for a long carry, but must not soar, swerve in its flight or duck. Direction is largely controlled by the balance of the ball, and by the correctness of its markings. The depth and spacing of the Dunlop recesses are the outcome of careful laboratory and field experiments over a period of 15 years.

Putting Accuracy: Golf balls which are untrue in shape or balance cannot follow a straight line putt. Dunlops are floated on mercury to test the degree of rotation, which proves whether the center of gravity is in the center of the ball.

Controllability: A ball that is made primarily for resiliency (loose tension winding) is too lively in the short game, approaching and putting. Even the smallest depressions or obstacles such as a worm cast will deflect such a ball from its true course. The tightly wound core of the Dunlop *162* will not compress under a light blow, and it can therefore be played firmly on and around the putting green.

Durability: It is skillful application and precision in selecting covers to match the degree of resiliency for each particular ball that gives to Dunlops their fine qualities of durability—not easy to pound out of shape, to cut or split. Dunlop covers are put on under hydraulic pressure. The gutta percha shell penetrates the core to a considerable depth and the Dunlop VACuum process prevents air bubbles, the frequent cause of splitting with balls less carefully made.

Visibility: Dunlops are distinguished in color. A creamy tint of paint is maintained for the practical purpose of visibility; a bluish paint, as commonly used, looks well in close-up appearance but loses itself too easily against the sky or on the turf.

In price, Dunlops at 85c. each are only slightly in excess of the best grade domestic brands. Compared with most of the other imported golf balls Dunlop offers a material saving. The Dunlop *Warwick* (really much superior to the average ball) sells for 70c.

The difference a Dunlop adds to your game makes it an item worth insisting upon.

DUNLOP

from hand to hand, grew, lived, prospered and was gradually occupied by an industrious, contented population, almost without the use of money as a measure of value.

The housewife, though no longer the spinner and the weaver who made woolen and flaxen cloths, still remained the sole, the universal tailor, dressmaker, seamstress, milliner, hosier and haberdasher of the community. If she could not cut and make the clothes of her husband, herself and her children, there was nobody to whom she could turn to have it done; and even if representatives of these various trades, now minutely divided, had been present, she would have had no money to pay for their services. She might exchange work with a neighbor or a group of neighbors, and thus form a sort of cutting and sewing society which held its meetings at the houses of the members, though many a mother, confident of her own skill and less gregarious in her nature, preferred to solve her own problems as best she might. Often such a one rather resented the prying eyes of an outsider in so sacred a thing as new clothes, preferring, where costume was involved, that element of surprise so dear to the female heart.

Home-Made Clothing

Under such coöperative methods the housewife most proficient in cutting garments would devote herself mainly to her specialty, and others—there were seldom more than three or four within the same social circle in these gatherings—would baste or sew or fit the resulting garments upon the hapless boys and girls whose play was thus interrupted. It was before the days of universal patterns when the human figure, of whatever age or size, can be covered even if not fitted. As families were generally large, and if not, all shapes and sizes at least would be found among those belonging to the co-ordinated workers, the garments were designed from those already in use somewhere, always making due allowance—this generally meant an anticipation of growth in the unfortunate child, which often produced an incongruous effect so far as appearance was concerned.

The responsibility thrust upon the housewife in the purchase of goods for clothing was always serious and heavy. It involved a general knowledge of textiles now almost lost from disuse. If intended for winter garments, the principal consideration was to determine whether it was all wool and a yard wide, as well as its capacity for shrinkage; and the way the goods were pulled apart and their warp and woof examined was often the despair of the storekeeper with whom patience, whether natural or acquired, had to be a virtue. In prints or ginghams the one question was, Will it wash? In this line the knowledge of the seeker counted for less; but the seller's penalty for mistake or misrepresentation was likely to be imposed even more promptly than in the case of woolens. The choice of linings was also one of more difficulty than now, because the variety was so restricted as often perforce to produce ridiculous results.

On the whole, however, the pioneer woman, when there was a choice, had quite as much natural taste, as sharp an eye for ultimate consequences or results, as her more fashionable and more pretentious sister in older communities.

This is not to say that the pioneer woman was proof against the attractions of the fashion book, or the descriptions of gowns and lingerie—how she would have laughed at the use of this word as a name for underclothes—which made their way, in however scanty supply, through the local, political or religious newspapers that found subscription and study in her family. But it was only to look and to languish for something as remote as a jewel case full of pearls or diamonds; it was not even to disobey or disregard the Tenth Commandment. The making of women's garments was no simpler than it is now. What with the ingenuity necessary to cover a hoop skirt or a bustle, besides fairly fitting the figure; the keeping up with the inevitable changes as to the length of the train; or that thing of male mystery, the fixing of the waistline, and the absence of aids in the way of figures or models for study or use, a skill was required that taxed the ingenuity and taste of the maker. She did not have to consider the thing called décolleté—how this word, too, would have puzzled her, the low-neck dress being not only unknown but an abomination if mentioned—or many of the developments now the pride of the fined or the necessity of the well-dressed woman.

This woman had one dear possession a black silk dress for high occasions. She also had a black of other material church or visiting; a gray of wool for winter wear; a white muslin dress; a cheap ginghams of the old kind for house when visitors came, and eked out her robe with a supply of calico or print dresses in various shades of gayety or sobriety. In many cases the precious wedding dress dom worn, was oftenest held as an heirloom for the daughter when her day of should come. When to these was added Quaker sunbonnet—about the simplest well as the most attractive and, to the mind, the most tantalizing of feminine headgear—it will be realized that the neer woman was not devoid either of or the desire and ability properly to herself. She often added for head bonnets of the most wonderful among them the type known then skyscraper—a name afterward applied buildings—for dress occasions. These seldom the work of her own hands were fashioned with more or less skill the village milliner, who, learning the available female trade other than the seamstress proper, with which often united, betook herself to the important town in the vicinity and perhaps a year to her apprenticeship. this was completed, if there was a ing, she returned home to follow her

In men's clothes there was little but a variety almost as infinite as puted charm of Cleopatra. The garb had to be adjusted to the the winter heavy coats, seldom garment known as a vest, or which was an afterthought; with overcoat, heavy woolen or cotton sers, drawers and undershirts of flannel, or sometimes of Canton heavy cotton goods with a nap all cut and made at home—thick shirts, generally red or blue, with close-buttoned collars not encircled adorned with a necktie; surmounted fur or cloth cap, with ample ear the historic comforter—beloved Cratchit—which was a long neck wrap about eight inches from six to eight feet in length. forter was worn by persons of wrapped round many times and into the coat in front or tied behind in addition, the legs were still further tected by thick jeans overalls, carefully incased in something the modern puttie, over top-boots which were the heaviest obtainable socks, and then a pair of overshoes buffalo skin with the hair when to all these preparations the coverings of the hands was to meet the arctic conditions sled or horseback, on the way to any other errand that required with the thermometer ranging to thirty degrees below zero. The quired for dressing a man for might well rival that of the debutante paring for her first dance, and the ping process suggested the disinterring an Egyptian mummy.

Summer Garb

The working costume for summer all the contrasts that the different temperature could suggest. When paratory plowing began around the of April the man's clothes took change. By the first of June and succeeding four months the question was not how much clothing be worn, but how little would suffice sure decency and comfort. When foot season had fully arrived under of all orders and conditions of the check or hickory shirt of an appearance; the coat was and was only carried into the field tection against possible rain; the were a light thin denim, supported times by two suspenders made of material as the shirt—and hence such goods can be—but very often one; whatever the number, they ways galluses, out of which grew "Oh, he is a one-gallus fellow," an expression of contempt indicating ferior social position in its wearer garb was not encumbered with anything else of ornamental

To any Plant Executive
—*blessed with a boring-in mind*

…E assistant to the country's foremost producer …nd exporter of lumber says of his chief: "*He …nust always be shown. He wants to see things for …imself. He always gets at the bottom of everything.*"

…e have yet to find a plant executive …o concentrates on the subject of lubri- …ion and gets to the bottom of it with- …t being richly repaid.

…This does not mean that you put on …ralls, or spend your evenings reading …hnical literature on lubrication.

…It means simply that you let us place …ore you an authoritative Lubrication …dit of your plant to show:

…hether your engines and machines are …eing helped to greater …oduction by correct …brication—or are being …nalized by unscientific …phazard lubrication.

Such an Audit would also include accurate lubrication recommendations based on world-wide lubricating experience with all types of mechanical equipment.

You buy and use oil for one purpose only: to reduce friction. Do you know the extent of friction's menace in your plant?

When you check friction's huge annual bill in the form of slowed-down machinery, frequent repairs and lost horsepower, we believe you will wish to put a guiding hand on the choice of the lubricating oils used throughout your plant.

Meanwhile, a Lubrication Audit will give your mind something definite upon which to focus. Details in column at right.

GARGOYLE

Lubricating Oils

A grade for each type of service

THE
Lubrication Audit
EXPLAINED STEP BY STEP
(In Condensed Outline)

INSPECTION: A thoroughly experienced Vacuum Oil Company representative in co-operation with your plant engineer or superintendent makes a careful survey and record of your mechanical equipment and operating conditions.

RECOMMENDATIONS: We later specify, in a written report, the correct oil and correct application of the oil for the efficient and economical operation of each engine and machine. This report is based on:—

(1) The inspection of the machines in your plant.

(2) Your operating conditions.

(3) Our 56 years of lubricating experience with all types of mechanical equipment under all kinds of operating conditions throughout the world.

(4) Our outstanding experience in manufacturing oils for every lubricating need.

CHECKING: If, following our recommendations in this audit, you install our oils, periodical calls will be made to check up the continuance of the desired results.

SELZ $SIX

All leather, made of genuine full grain Cordo Calf

Goodyear Wingfoot Rubber Heel

Goodyear Welt

Natural Finished Oak Sole, bringing longer wear

The dealer who sells you a pair of Selz 'Six, at $6, is making a sacrifice that can only be appreciated by himself and by us. In no other way could a fine shoe of this standard high quality—a Chicago city-made shoe—be sold at this price.

We believe that the public's appreciation will repay us both by greatly increased sales to make up for the smaller profit. Already this appreciation is evident—Selz 'Six sales are larger today than those of any other single shoe of its kind.

You will appreciate this unusual value when you inspect the Selz 'Six. If you don't know a Selz dealer, ask us. Address Selz, Chicago or Pittsburgh.

The Boy's Best Suit

nan and boy, outside the lowest or white, had to have a best suit, known, in the dialect of the time, -go-to-meeting clothes. For the he became seventeen or eighteen, modification of his school suit, in a better quality of goods, put off when he came home and took up that two or three hours idden under the deceptive and ame "chores." This best suit— e indicates—was almost a sacred , as outgrown, went down the succession, as did all other gar- male or female, from the oldest ungest, until in its downward it had finally to be worn out as a working suit in the fall or spring Wearing it was resented as a form so that its life was prolonged out e. Perhaps it was never put on xcept to go to the circus or the . It had a successor when the up to seventeen or eighteen, be- that, after all his gibes and bash- rls were really interesting and important human beings. He would be promoted out of his mother's hands and sent off to the nearest tailor, probably in the county-seat town, with a piece of cloth made in the adjacent woolen mill, probably from home-grown fleeces, in order that there might be fashioned for him a tail coat, commonly known to this country, though not in England, as a Prince Albert. That it came out as one of the wonders of sartorial art is a statement that need not be denied, as nobody could or would dispute this judgment. But as it was no more ridiculous than those examples worn by his mates, the standard, whether of achievement or of fashion, would not be disturbed, and each boy could laugh or be laughed at in his turn.

Every man that either had or was anything at all must have a really best suit for outside use. It, too, must include a tail coat, accompanied by broadcloth trousers, a high vest, white shirt with high attached collar, fine calf boots, woolen socks, but often perhaps of white instead of colored yarn, some sort of necktie, almost indescribable because it was in the chrysalis stage, hanging between the old-fashioned stock, which had tormented several generations of men otherwise rational, and the simple black ties that preceded the development which has been under way during the intervening half century. Perhaps no generation of men clad in respectable costumes were ever more uncomfortable than those of the time under review. They had to conform. They were quite as much the slaves of fashion in their plain way as if they had lived in the period of Beau Brummell and the Prince of Wales [George IV]; but they took their clothes, as the early English were said to take their pleasures, with a sadness that nothing could conceal or overcome. There were probably never more than from two to a dozen swallowtail coats and an equal number of fashionable stovepipe hats in 1860 in an average county; but according to the fashion of the time these men were well and fashionably clad in suits that when new had, like modern dress coats, an unusual expectation of life. The old-time bandanna handkerchief had not yet gone out of fashion or the fine linen one come in.

The Day of the Paper Collar

For probably twenty years the large, square, gray shawl was an accepted article of apparel for the school-teacher, the doctor when on dress parade, or for the lawyer. It was a legitimate successor of the old-fashioned cloak, and had all its convenience and warmth. Many readers will recall pictures of Lincoln in one of these covering garments.

Early in the war period came the paper collar. It was another step on the way to an improved appearance. If there was one thing in which the pioneer housewife's failure was conspicuous it was in laundering the white collar and its connected shirt. Somehow she could seldom acquire this art, and it was probably this fact quite as much as anything else that brought into existence that really funny product—the paper collar. It came in almost without warning during the early war days along with shoddy and many other articles thitherto strange. It was cheap, in both cost and value—two essentially different things—it came in a variety of shapes, in paper boxes of ten, and was at once hailed as a boon. Many a manly neck which only with difficulty had bent itself to any sort of collar soon found itself, according to the fashion, incased in these curious pasteboard bands, thus arousing in both beholder and wearer a sense of the ludicrous not always so agreeable to all concerned. It was the precursor of many improvements, including real collars and eventually real laundries, an almost unsuspected passion for cleanliness and an enhanced desire for neatness; but while it lived, which was perhaps not more than five or six years, it was one of the really amusing concomitants of the male toilet.

A word ought to be added about jewelry. Long strings of beads were still worn, mainly by girls and young women. Most women wore earrings and had breastpins, bracelets, brooches or lockets, generally rather heavy, old-fashioned articles in solid gold. Diamonds and other precious stones were conspicuous only by their absence. Rings were not so much in fashion; even the wedding ring, not being a necessary accompaniment in marriage ceremonies, was so far from being universal that it was hardly general. Few watches were worn—almost none of them by women—and these were generally set in heavy silver hunting cases. When the sun shone neither they nor other indicators needed for telling the time were worn, as every man, woman or child more than ten years of age asked nothing better than a doorway—all buildings were set square to the four points of the compass—a tree, a row of corn, a fence post, or wanting all these, his own shadow, when standing erect in the middle of a field, to give a fairly accurate idea of the hour.

Discipline for children was still patriarchal, on religious lines, firm and steady, full of a real affection that was tempered by recognized duty, seldom fitful or wavering, but practically devoid of show. "Train up a child in the way he should go" and "Spare the rod and spoil the child" were orthodox, and better learned by heart than the shorter catechism itself. It would be safe to assert that corporal punishment was universal, regardless of sex, almost without respect to age, up to and including majority—often beyond it. It was probably the most widely distributed habit of the time. It was seldom severe, but as the doctrine of total depravity was never questioned, so the effectiveness of physical punishment was not doubted.

Unrestricted Child Labor

A family once started did not long remain a burden, however great the number, if only its new members could stand the pressure and live at all. Even before direct earning power came, they paid their way by caring for each other. The result was that, among people both industrious and prudent, the larger the family the greater the prosperity. Therefore, no study that should overlook or belittle the economic contribution of children to this life would be either true or complete. This fact was so much in evidence that the average age in industrious families at which strong, healthy children, whether boys or girls, had repaid to parents their actual money cost, including medical attention, food, clothing, housing, education and all other possible expense, was not more than fifteen. As it was rare that, save for books, any real money was expended for education between this period and their majority, the half-grown or full-grown child was so much profit.

Taking the value of farms and their equipment at any given census return from 1840 up to and including 1870, it would be safe to assert that one-fourth or one-third of the whole was the product of the labor of children under the age of nineteen or twenty. As the boys seldom left home for an average of another two or three years, they probably earned for their parents, in this extra service alone, far more than was distributed to them in the shape of a pair of colts and sometimes a small farm, often nominally a present, but sometimes so seriously handicapped by its lack of improvements that either a mortgage or tiresome waiting was required to give it value.

Nobody, not even the boy or girl who put in fourteen hours a day of hard, unrelieved labor for nine months a year, with scant pocket money, often begrudged, with a meager three months in school, accompanied then by many hours of work each day in return for the privilege, ever thought about it as an imposition. But under this profitable system talent, ambition and independence were never before or since so successfully turned into enforced though willing sacrifice. As parents had passed through it, it was not thought of as exacting or unjust or as child labor, in the sense that this term is used as to mill or cotton field, where the hours are tempered by sentiment of law to the recognized average physical strength of its participants and some systematic play is provided; but it was in their own homes, doing the same order of work, often performed under compulsion or threat, or crowning it with a devotion and at the same time a simplicity that was monumental. How they came out of it all, why they did not rebel, are among the wonders of a rigorous but marvelous time. And yet these tasks were done with a willingness, even an eagerness far greater than that shown under more favorable outward surroundings by the average wage earners of those times or any that have succeeded them.

The spirit behind these young people was the same as that shown by their parents—the stern, indefatigable men and women

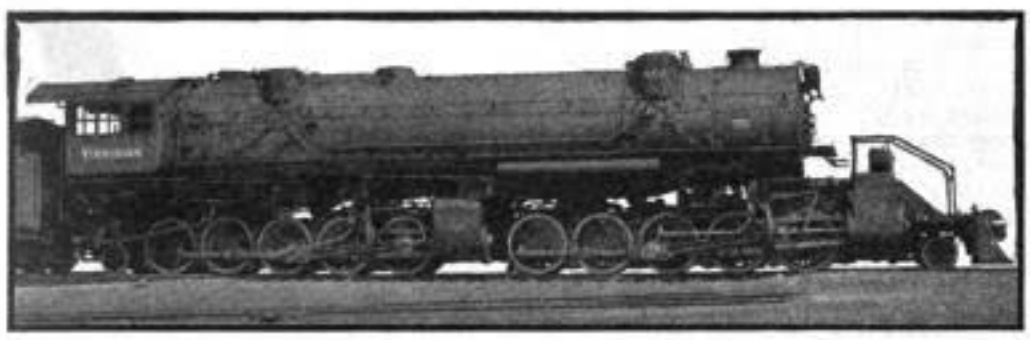
"C'mon, let's go swimming"

GET your crowd interested in swimming this summer. It's great sport—and just twice as much fun when you wear a real *swimming* suit, the JANTZEN! Wherever good fellows get together, you'll find Jantzen the popular suit. You see them *everywhere!*

Jantzen-stitch gives permanent *elasticity* and utmost freedom of action. Never binds. Never sags. Comfortable as the touch of a cool breeze.

Jantzen is the only suit that has the non-rip crotch and bow trunk pattern, not forgetting a flexible rubber button that goes a thousand times through the wringer without breaking.

Worn and endorsed by holders of world's records and winners of Olympic games.



Ask your dealer to show you why a Jantzen is best. Styles for men, women and children, in fashionable Jantzen colors and stripings. If you do not find them, write us for the 1922 Style Book and name of nearest dealer.

200 Kewanee Unions on the world's most powerful locomotive

IN any piping that must withstand extremes of temperature and high pressure, and where frequent disconnection is necessary, the Walworth Kewanee Union is standard.

The American Locomotive shown above hauled 17,600 tons—far the heaviest load ever pulled by one locomotive—over a long grade in the Blue Ridge. It operates with superheated steam at 215-lb. pressure, and a temperature of 650° F. Its 200 Walworth Kewanee Unions make leak-proof steam and air connections.

The Kewanee Union's five distinctive points of advantage are—

(1) Brass to steel ball seat—no gasket. (2) Brass to iron thread connection—no corrosion. (3) Compressed-air test under water—no defective unions. (4) Solid three-piece construction—no inserted parts. (5) Easily connected and disconnected—no force required.

We are sending ¾-inch Kewanee Unions for 25c to engineers—as the quickest way to make a demonstration

who, whether by choice or fate, were working out their destiny in the belief that they were making and saving a race. This army of children, uniformly numbering probably one-fourth of the active workers of the community, were not doing these grinding tasks for themselves, but because of the hope that, driving them on, sprang eternal in the breast of the pioneer, born in him as the inheritance of many generations. They realized, often quite early, the hardness of their fate; but there neither was nor could be any other, and they cheerfully bowed their necks anew to their appointed work, as the prisoner in the galley bends his back to the oar.

We are all prone to sing pæans of praise to the hardy and courageous men and women who went out to conquer a wilderness; but when we do this I should like to hear at least a word or so of chorus to celebrate the sufferings and the achievements of these youthful heroes and heroines who, between the ages of ten and twenty years, added, without direct compensation, the extra touch that marked the difference between existence and living, between failure and success, and did it in the face of a neglect of the play or rest proper to them, of the charms of that Nature which they were too worn to see in all its beauty, and of the educational privileges that was more than unpardonable—really the result of the indefensibility of ignorance. It was a child slavery far worse than that denounced—often with the exaggeration due to the zeal that marches arm in arm with ignorance—and has finally been forbidden by law and opinion in the past quarter of a century.

In spite of these high, almost unjumpable hurdles there were compensations absent in our time. In this simple life boys and girls were able fairly to know everything good or interesting which, within its narrow range, the time offered. Long before they had reached their majority they were known to their elders all about them almost as well as to their parents. On the one hand, their industry, energy, ambitions, outlook upon the world; or, on the other, their laziness, uselessness and their lack of spirit were so measured that their future place among their fellows could be fairly predicated. This was true, too, whether they elected to remain within their own narrow environment or went out into a world which, if not larger, was at least different.

The opportunity of knowing what so many parallel trades meant gave to the boys who did not look forward to the farm as a career, a perspective, an insight into these other branches of useful work. They could see at first hand and thus know from ocular demonstration how the blacksmith, the wheelwright, the carpenter, the shoemaker, the weaver, the storekeeper, the miller, the editor, the politician, the doctor or the preacher did his work, how he handled his material or utensils or that more important tool—his mind. When they were freed from the farm they could choose, with some approach to intelligence, their own careers.

Learning From Their Elders

Then, too, children were admitted pretty freely to see and know whatever lay in the path of their parents. From early childhood, almost from infancy onwards, they ate at the same table, where manners and quiet were imposed upon them; they went and came freely whenever, indoors or out, there was company; they heard and knew everything that pertained to business or religious or social affairs in all their ramifications, and were thus introduced to a wide range of interests, which gradually grew into the thoughts and ways of their elders. By these means they knew well, though seldom prematurely, many things that could not have come to them under the workings of the usual policy of exclusion—a fact not only interesting and important in itself, but carrying strong evidence of the propriety of the language used in family or social relations upon which I have already insisted.

As the work of these neighborhoods, both singly and in coöperation, was transacted in the open, the children, if bright, curious, really social beings, had an opportunity to know every movement in the mysterious process of making a state from the moment the first family came until, within ten years, the average township had grown to about six or seven hundred people, comprising all conditions of men, and the county had made a place for itself. Such a child became an interested spectator long before it was fairly out of its [illegible] order of clothes. It heard all the discussions about schoolhouses and schools, about roads and bridges, about preachers and revivals, about government and politics, as in its simple way would take its message to the various elements with which it came into contact. If there was any amusement from a shooting match to a hunt for a thief, it would be first a spectator and then, often prematurely, according to development or precocity, a participant. If it was inclined to the bad or coarse it might hear or see now and then unseemly things, but woe to the man or group by whom such offense had come if the rising discriminating elements in the neighborhood should discover this attempt at demoralization.

Such a child, in spite of educational drawbacks and deficiencies, would get a real knowledge of the world, far more helpful to it in its later days than that which could possibly come from the more formal and pretentious training that some distant child acquired in urban surroundings. Its life, in spite of hard, grinding toil at certain seasons, was far from dull, and it acquired in reality that round knowledge and experience which have given to the American the abnormal development so often accounted as a reproach to our life.

Strong Family Ties

This close association with neighbors and elders not only brought to these children, exiled to an always receding frontier, a knowledge of men, but it corrected many of the defects inseparable from their meager educational outfit. They were far more likely to learn something real about geography by looking up in their atlases the places of residence of the visitors to whom they had listened with open eyes, and open mouths than when they were [illegible] memorizing the meaningless names of countries, capitals or rivers in Asia, or bounding some useless principality in Europe.

They had a better chance of learning something both interesting and useful about manufactures from hearing about a reaper factory in Chicago, or a big wagon-maker's shop in Indiana, or a saw-mill or shoe factory in Massachusetts, than they had from the meager, undirected, undigested reading about such enterprises the fugitive accounts that might pass before their eyes, or even be wholly missed to their lives by neglect or the absence of opportunity.

The ties that bound families together were unusually strong during these formative days. Sentiment still survived blood relationship in a way almost astonishing as in the biblical times upon which many customs and manners were based. Families followed each other in the making of new settlements, the members helped each other in their work, respected each other's likes and dislikes, and in general were helpful. "Family" then meant both sides, that of the husband and that of the wife. The mother-in-law joke had not acquired its present vogue, as in most cases the wife's mother was often the reliance in time of need. If one member lagged behind in life's race it was not cast off, but was aided so long as there was a desire and willingness to help. When children settled down in the same neighborhood they generally did so in small modest homes, where without the gifts of money, which few had to give, they made their way up as their fathers before them had done in one generation after another. Often they were able to command that advice and assistance which are so much more valuable than [illegible] money. In this way they could make up in emergencies that coöperation which enabled each to benefit the other. The replacing of a cow or a horse which met with accident, disease, theft or straying, the timely aid in haying or harvest or [illegible] the going for the doctor—all these neighborly functions were discharged without regard to the fact that they lived in separate houses rather than in one, as they did in other days.

There was a strong feeling against married sons and daughters continuing to live in the paternal home, the feeling of independence dictating a separation. The sentiment so common as almost proverbial that no two women will

"I Look for the Havoline Sign"

"I bought my first car nearly twenty years ago—a two cylinder roadster with a ninety-six inch wheel base. I used Havoline Oil in that car. I've insisted on Havoline for every car I've owned since.

"It only took one experience—back about 1906 it was—to teach me that it pays to use a good motor oil. That time I couldn't get Havoline, or I didn't ask for it hard enough. In any event, I learned my lesson once and for all.

"I learned that Havoline *does* give increased power and greater mileage, that it *does* reduce the amount of carbon deposit, that it *does*, over a period of years, save hundreds of dollars in overhaul charges.

"My regular dealer always brings out Havoline for me. When I'm touring I look for the Havoline sign—that blue one with the red bull's-eye. **It's a darn good sign for any motorist to believe in. There are thousands of them scattered over the country. You're never far from a Havoline dealer.**"

SETH THOMAS

"He couldn't wait"

THE CALLER arrived on time—as he thought—but the executive with whom he had the engagement was gone. And the caller realized that the clock in his home must have been fifteen minutes slow!

It is surprising, isn't it, that any one should tolerate a lying clock, when for a hundred and nine years Seth Thomas Clocks have told the truth.

The Jeweler whose store is near your home takes a positive pleasure in showing Seth Thomas Clocks. Their beauty tells its own story; but the story of their accuracy *he* can tell, illustrating it from the experience of Seth Thomas owners in some of the finest homes in town.

A non-striking clock to hang on the bedroom wall is illustrated below. A splendid time-keeper—one of the fine 7-jewel movement clocks which range in price from $24 to $35.

Above is shown one of the fifteen Seth Thomas chime clocks, a group of clocks that are unexcelled anywhere. They chime the quarter-hours and strike the hour. Prices from $60 to $110.

A SETH THOMAS CLOCK IS A GIFT THAT MAKES A PLACE FOR ITSELF IN THE BRIDE'S NEW HOME.

SETH THOMAS

(Continued from Page 62)

considerable measure of authority should live in the same house. This prompted the sententious saying that no house, whatever its size, had ever yet been designed or built that was big enough for two families, and none too small for single families that wanted to be happy. When boys or girls went away to school or out into life the parental watchfulness was keen and the feeling of pride universal and strong. Perhaps the proportion of family quarrels was smaller than in a more conventional society. There was not much opportunity for differences about property—the laws providing for equal distribution prevented this; besides, as there was not much property to quarrel about, it was easier and pleasanter, as well as more independent, to earn it than to yearn for it by inheritance.

Perhaps the strongest incentive to family unity lay in the fact that there was little going away to school or for long and distant visits, and that the latter, when made, had an interest for all concerned, the reports of them tending to relieve the tedium incident to isolation. They were all driven to steady work, with no idlers or favorites, so that there were many motives to draw them together and few to drive them asunder. Everything considered, isolation tended to promote family peace and unity, and as each community was a collection of families, there was little chance to brew dissensions or misunderstanding.

Limited Amusements

Though the pioneer came into duties and surroundings in which he had little time and less inclination for hunting and shooting as amusements, he never quite lost his devotion to games—especially with his children. Some of these were new in form or adaptation, but for the most part they were so old as to be time-honored. In some cases they partook of the nature of both sports and games, and in others they related themselves somewhat intimately to the practical business of life. If the pioneer attended a barn or a house raising he was there primarily to do his part in the process of give and take. It was practical coöperation—a return for favors received or a possible anticipation of favors expected. The question of getting or giving pleasure was secondary, but in his somewhat primitive way he did not disdain enjoyment during the few hours of outing and close association with his neighbors. Being work, there was little room for the rowdiness or horseplay inherent in the man of the rougher sort, even if he had been so inclined; but generally speaking he had little leaning in this direction. If he insisted upon turning the scene of a house raising or logrolling into a game, he soon found that he had no business in that galley. When the work was done it might be followed by some rude fun in the form of wrestling, jumping, running, shooting at a mark or supper at a neighbor's house, but if so they were only incidents.

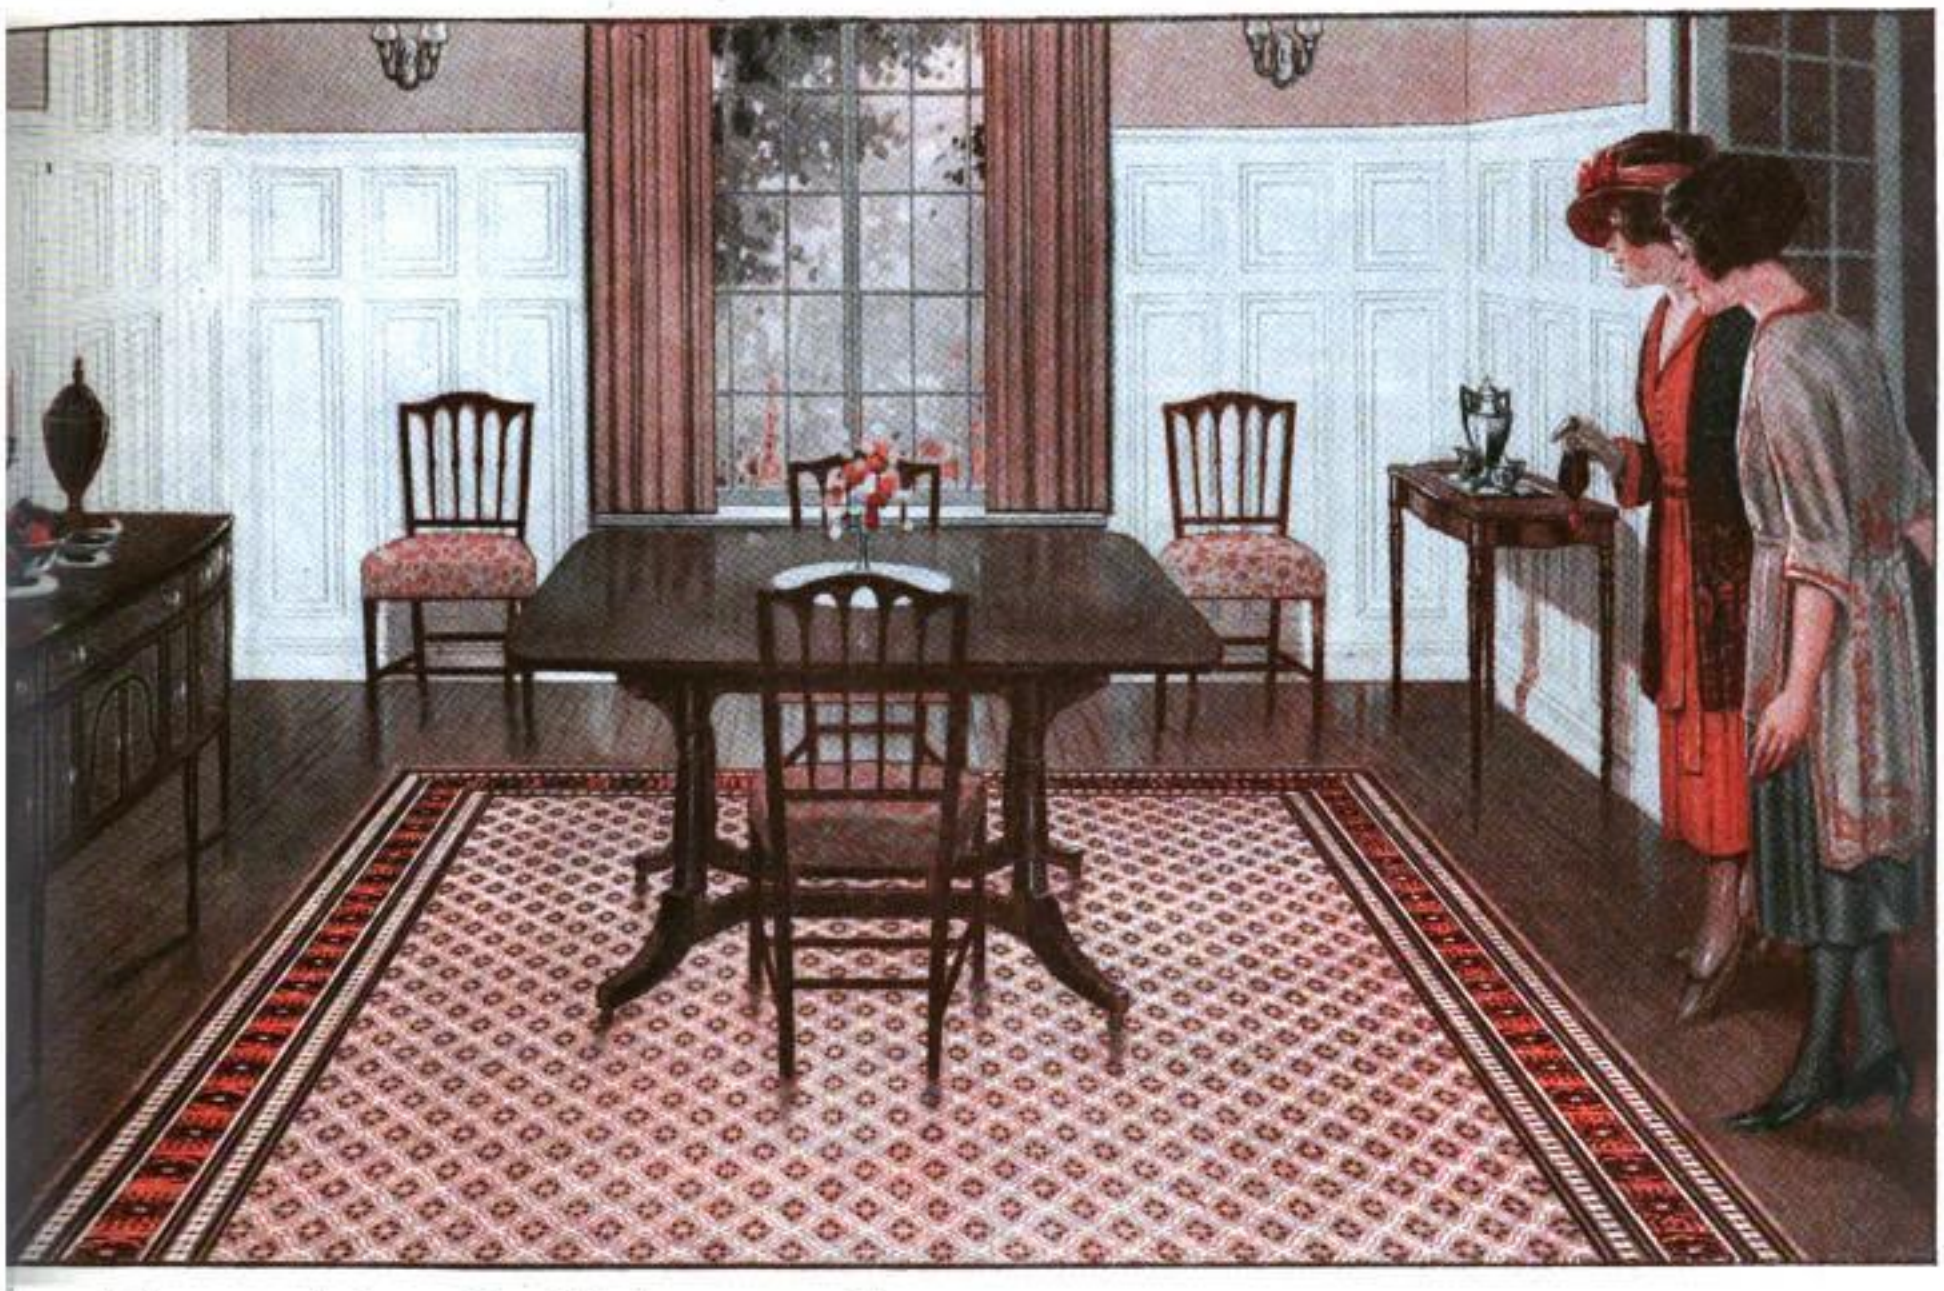
A prairie fire can hardly be listed among amusements, but it was at least both spectacular and dramatic, and on occasion it drew out all the men within reach. How such fires were started was quite as much of a mystery as arson is always and everywhere, but generally there could be next to no doubt in the majority of cases what the cause was. The motive was not quite so clear, but in most cases it probably lay in the desire for excitement rather than in others more ulterior. When in the earliest days such a fire came it had before it an expanse almost unlimited, without a house, a fence or other obstruction. It went on until the wind changed or it had reached its uttermost limits or the banks of a stream wide enough to check it. As settlement proceeded precautions were taken against its ravages by plowing a wide strip round houses, stock pens and hay and grain stacks. In many cases this was badly done, or it came too late, so that a fire once started would jump this strip and go on about its only business—destruction within forbidden areas. Then neighbors would turn out and endeavor, by setting back fires, or in emergencies by direct fighting, to check its ravages. It was one of the exciting episodes in this life when such a crisis came, and in addition to its spectacular interest brought into strong relief the qualities incident to helpfulness and coöperation.

The pioneer boy did not need any history or handbook of games to tell him of their existence or to teach him how to play them. He, like his predecessors, knew how to employ himself with them, and, as the had done, to suggest a change or make improvement now and then. But in long romp across half a continent he not devise a game wholly new. The Indian games did not much attract though—I suggest this with distinct serve—ice hockey may perhaps have gr out of lacrosse.

Then, every boy played; actual pa pation was universal. Even the wea the crippled could find a place and panions, while the strong and vig might be cast out if he became a b There was no room for the spect Every boy, assigned to his allotted chosen place, was expected to do his p otherwise the scheme would be broken The playgrounds about the school were generally large, out of proport the schoolhouse itself, so that not every game but every boy could fi place; but unless he desired to be exc from everything, he must not quarrel or hesitate. Some games were inclusive, so that during a recess of minutes all might play together.

A reference to pioneer sports w incomplete that did not emphas ingenuity of pioneer fathers in de vising and making of playthings for dren. Balls, bats, sleds, wagons and whipstocks, bows and arrows, whistles for the boys, doll house mother generally provided rag dolls girls—together with practically ev vice then known for amusing or inst children, had either to be made at h to be left out of their young live process had already gone on for six or generations, so that a certain skill become hereditary. The older boys caught some idea of this secret and able to take up the task for themselv the younger children in their own families in the neighborhood. Some this kind of work would be done for less skillful man doing something in so that in most families, outside the ut edly poor, everybody would be affo least a glimpse of those gifts which conventional elsewhere, were making way into the older parts of the country.

Little Play for Jill



As these toys were used up in one they would be passed on, like school to those otherwise deprived of such h that universal business of childhood as play. There was no Christmas, ho Santa Claus, but the making of pres New Year's was not uncommon, the from universal; but in some way, mo and often mysterious, by daily c rather than on special occasions, som blance of seasonal joy was brought minds of the children.

The story of sports, both for childr adults, relates itself almost wholly to The separation of the sexes in s churches and at play was so strict th girl was thrown back upon the limi of sex, and the pioneer woman closely beleaguered in her house th had little time or strength, even if s had inclination, to take any decide in games or diversions. Her nature of sacrifice was satisfied when her c were amused or interested. The ti one so distinctly devoted to the c that the very diversions of the hu woman, her unbending with her ch had in them the great motive of unse seldom of play for its own sake.

The great variety of games or c to which a girl now has access wou seemed to the pioneer woman not s improper as discordant with the mi her sex. Besides, it must be borne that men have so long practiced ga they are expected to devise as well them. It would, perhaps, be diffi name any game generally in use th invented by a woman and then ad and by her sex. Sport, like war, somehow to have been the busine self-assumed lord of creation.

Author's Note—This article on The Family and a previous one on Pioneer have been extracted from an elaborate, unpublished, study made by the author, American Pioneer. It deals, comprehen the population origins of the West, with wh with political life and organization, with with education and with social conditions 1840 and 1870, thus including the Civil Wa not in any sense a formal history, but i interpret the philosophy of the move made possible the growth and develop great region.

es, Everything is Valsparred—
Floor, Furniture, Walls and Floor-Covering"

VALSPAR, Valspar Enamels and Valspar Varnish-Stains are a real joy to the woman who takes pride in keeping her home spick and span. In every home you will find countless uses for them.

Valspar Varnish. This famous waterproof varnish gives a most beautiful and lasting finish. It is spot-proof and can be freely washed with soap and water.

Valspar Enamels. Made in twelve beautiful colors (also Black and White, Aluminum, Bronze and Gold). Since they are Valspar Varnish, combined with the highest grade pigments, they too can be washed freely and are unequalled in durability.

Valspar Varnish-Stains are Valspar Varnish in six transparent wood colors—Mahogany, Cherry, Light and Dark Oak, Walnut and Moss Green. You stain and Valspar with one sweep of the brush. These stains are absolutely waterproof—nothing will cause them to spot, fade or turn white.

All three are easy to use. They work freely under the brush, dry dust-free in two hours and hard in twenty-four. They may be rubbed down to a beautiful dull finish if desired. *All three stand the famous Valspar boiling water test.*

Description of Room

In the beautiful room shown above, the hard-surfaced rug and the furniture are finished with Valspar, the floor is finished with Valspar Varnish Stain (Mahogany), while the panelling is finished with White Valspar Enamel. The room can be freely washed with hot water and soap and kept perfectly bright, clean and sanitary.

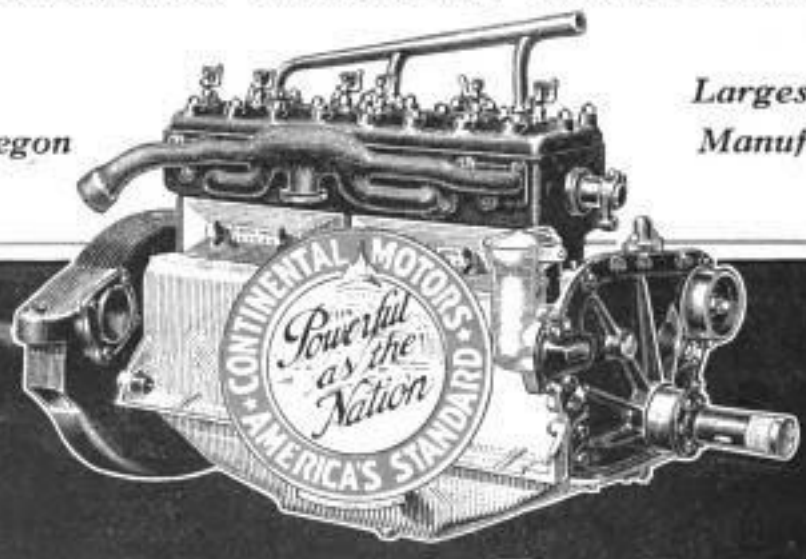
The ever increasing demand for SPECIALIZED vehicles reflects public preference for *proven* units

In purchasing a car or truck, the experienced user focuses his attention on essentials. The vital parts upon which depend *performance* are the things that influence his choice.

If the vehicle is powered by a Red Seal Continental Motor—as the high-grade SPECIALIZED vehicle is—the buyer *knows* that motor efficiency is assured. He *knows* that an organization such as Continental with its vast equipment and years of experience—an organization whose energies are devoted exclusively to the building of a motor—necessarily builds a *superior* motor.

Likewise, his experience justifies his confidence in other SPECIALIZED major units—the clutch, the transmission, the axles, the universal joints—which in the SPECIALIZED vehicle are all products of organizations of SPECIALISTS.



It stands to reason that the purchase of a car or truck built of SPECIALIZED units will prove a sound investment. For continuous performance not only is guaranteed by the vehicle builder, but is backed by the unit manufacturers and is further assured by parts-distributing stations throughout the world.

Since the judgment of the vehicle builder who selects for his power unit the Continental Motor is sound, his careful selection of other important parts can be confidently depended upon. Consider this fact, and in buying your car or truck choose the vehicle whose motor bears on its crankcase that foremost symbol of SPECIALIZATION—the Continental Red Seal.

Ice breakers—specially con- oats with powerful engines— from the southern ports of from Denmark to aid the help- but these heavy blunt-nosed nd the ice too thick for them, oo, became icebound.

ebound Shipping

expedition was organized in nd dispatched upon one of the breakers in this part of the ssel whose breadth of bow is that of an ordinary freighter. low in the water with her nose forced with steel plates riding t she can push up over the until her weight breaks down The cruise of this ice breaker olm to the Cattegat will go marine history of Sweden. It days and three nights to get outhern point of Sweden into hood of the helpless steamers. now, blizzards and pack ice uise a series of battles each sful conclusion, but involving this long stretch of pack ice that delayed the shipment of American relief supplies to Russia. Some of the ships bearing American food were just entering the Cattegat or heading for the Kiel Canal when the ice formed. Some of them went into Norwegian harbors, others proceeded on their courses and were caught.

The shipping of every country surrounding the Baltic was hard hit by the ice blockade. The Finnish ports were closed and southward every harbor as far as Dantzic waited for the ice breakers to clear the outward paths. Communication between Germany and Sweden was interrupted and at times stopped altogether, the big ferryboats finding it too dangerous to risk the pounding through the floes or the equally hazardous movement through constantly recurring fogs rising thickly over open water, which sent off a vapor when swept by frigid blasts from the northwest.

The governments of the Scandinavian countries have grappled with the period of depression valiantly, seeking in every way possible to lighten the burdens of the industries as well as those of the individual. Huge sums were necessary for the relief of unemployment just at a time when national revenues were decreasing. The task of each government was to find methods of increasing the revenues without interfering too much with commercial or industrial recuperation. To meet the situation the Swedish Government proposes to prohibit temporarily the importation of coffee, tax sugar heavily, and increase the taxation on tobacco. The Danish Government has presented to parliament an entire new program of tax revision, involving a new method of catching the profits of restaurants and eating houses by levying upon the gross earnings a 10 per cent tax. In budgeting for the year 1922 the finance ministers of all three Scandinavian countries expressed the hope that the immediate future held forth promise of better times.

Curiously enough, they based these hopes largely upon the reports on the prospects of better times in America. The appropriations required for 1922–23 are lower than for last year, the reductions vindicated mostly upon the prospect of America showing the earliest signs of recuperation. The interest in America's economic condition remains intense, each trifling indication of betterment being reported in full, but there is reason to discount the optimism over our affairs voiced by the finance ministers of the northern neutrals. Financially the Scandinavians are in better shape this year than last, and if the exchange rates can be taken as a real thermometer of financial conditions the situation is getting better. The relation of Swedish currency to the American dollar was very near normal during the early months of the winter. Denmark's loan of $30,000,000 floated in the United States has helped her financially, the effect being manifested in a more favorable exchange rate in New York. It is hoped that the normal tendencies of exchange rates will encourage trade between America and the Scandinavian group.

Bolshevik Contagion

One of the greatest problems of the Scandinavian countries during the postwar period has been the operations of the Soviet Republic. The disturbances created by the Bolshevik experiment and later by the Russian famine cannot be estimated. They have caused political turmoil throughout Northern Europe and upset trade calculations to such an extent that predictions of future operations along any given industrial line in the Baltic countries are worse than useless. The question of how best to deal with Russia will remain the big question during the spring as the proposed trade agreements will then be under discussion.

The P-A-X augments and completes but does not supplant nor connect with local and long distance telephone service.

These are some of the things the P-A-X will *do away with* for your organization~

There's no operator to delay interior calls with the P-A-X. If a line is busy, you know it immediately.

The secretary of a P-A-X user would say, "Just a second, I'll locate Mr. Brown." And she would, through P-A-X code call, no matter in what part of the building he happened to be.

The P-A-X makes it easy for telephone orders to reach you. Your own operator, relieved of all interior traffic, is always free to render courteous business-getting service to customers or prospective customers.

A P-A-X user would dial the file clerk and get that information, while his client held the city wire. No delay! No calling back! Better service!

Hundreds of wise executives are eliminating this waste and inducing discipline by installing the P-A-X—an isolated system for interior calls only.

The P-A-X saves time and money, and prevents customer-irritation. Some of the most important mercantile and financial concerns in America profit by its credit-checking feature and other services.

Through the P-A-X any number of executives may hold a conference at any time, without leaving their offices, by simply dialing a number.

~because, the P-A-X *has* done away with them for over 1,000 dominantly successful concerns in the United States and abroad~

YOU cannot afford the time, money and good-will waste of doing without the P-A-X! The saving which results from any *one* of its various uses will pay you for installing it.

Among the concerns who testify to its universal user-satisfaction are some of the most prominent in practically every line of business.

We suggest that you get in touch with our nearest representative. He will tell you more about what the P-A-X can do for your own organization.

Dark as the past winter has been, there was never a moment when the prospects for the future were not in the minds of the leading men with whom I have come in contact. There is such boundless room for development, such wealth in natural resources and so great an incentive to move forward that the period of depression combined with the rigors of this terrible winter meant nothing more to them than temporary hindrances. The year holds out many promises of achievement. Shipping will begin moving early in the spring after its long stagnation, carrying the first traffic eastward.

Within the past four years trade with America has brought into the transatlantic service a great line of commercial and passenger steamers, all operated by Scandinavian firms, to foster the trade westward. In addition, there is a thriving coastwise traffic. One Stockholm shipping line has ninety steamers, of which the great majority are coasting passenger and cargo boats especially built to handle the traffic from Sweden to Finland and the Baltic states, to Denmark, Norway, Germany and the coasts of Sweden. There are 126 registered firms of shipowners in Stockholm alone, while in Denmark and Norway hundreds of other firms are seeking, when conditions will permit, to build up the trade between the northern group of states and the rest of the world.

Scandinavian Free Ports

Facilities for handling commerce have been increased steadily until to-day Denmark and Sweden boast of two free harbors unsurpassed in equipment in any part of the world. In Copenhagen and in Stockholm shippers from any country can unload cargoes destined for northern ports, store their cargoes in absolutely fireproof and thoroughly guarded warehouses, and after sorting, the goods may be shipped out in a dozen different directions. All this takes place without paying duty to either of the countries operating the free harbors. In other words, there is set aside a strip of water front, fully equipped with machinery, warehouses and guards, wherein the shipper has extraterritorial rights.

Throughout the period of stress and doubt the Swedish free port has been growing, new warehouses, excellent modern machinery and greater length of quayage being added regularly. There is now a total of 1328 feet of dock space with a depth of thirty feet of water alongside. Within the year the docks will be extended to a point where the water is thirty-three feet deep, thus making provision for the entrance and handling of the heaviest freighters. The available space for the free harbor is 3,000,000 square feet and if required an additional 2,000,000 square feet will be added in 1929. A space has been reserved for a terminal to accommodate a new steam-ferry service between Sweden, Finland and Russia, which in the course of time will be one of the important international ferry connections across the Baltic.

Americans visiting the Scandinavian countries, as well as those who have lived over there, feel the irresistible forward movement of these peoples and know that they will recuperate from the years of distress and turmoil following the war. They are settling their political differences, both domestic and foreign, peaceably. They have put forth every effort to assume their share of the world's burdens and they face the future courageously, firmly believing their effort will keep them in the front ranks of the progressive nations of the earth.

Showing How the Ice Piles Up

The ZAY-TEK Blend in Eatmors is a Chocolate treat for you

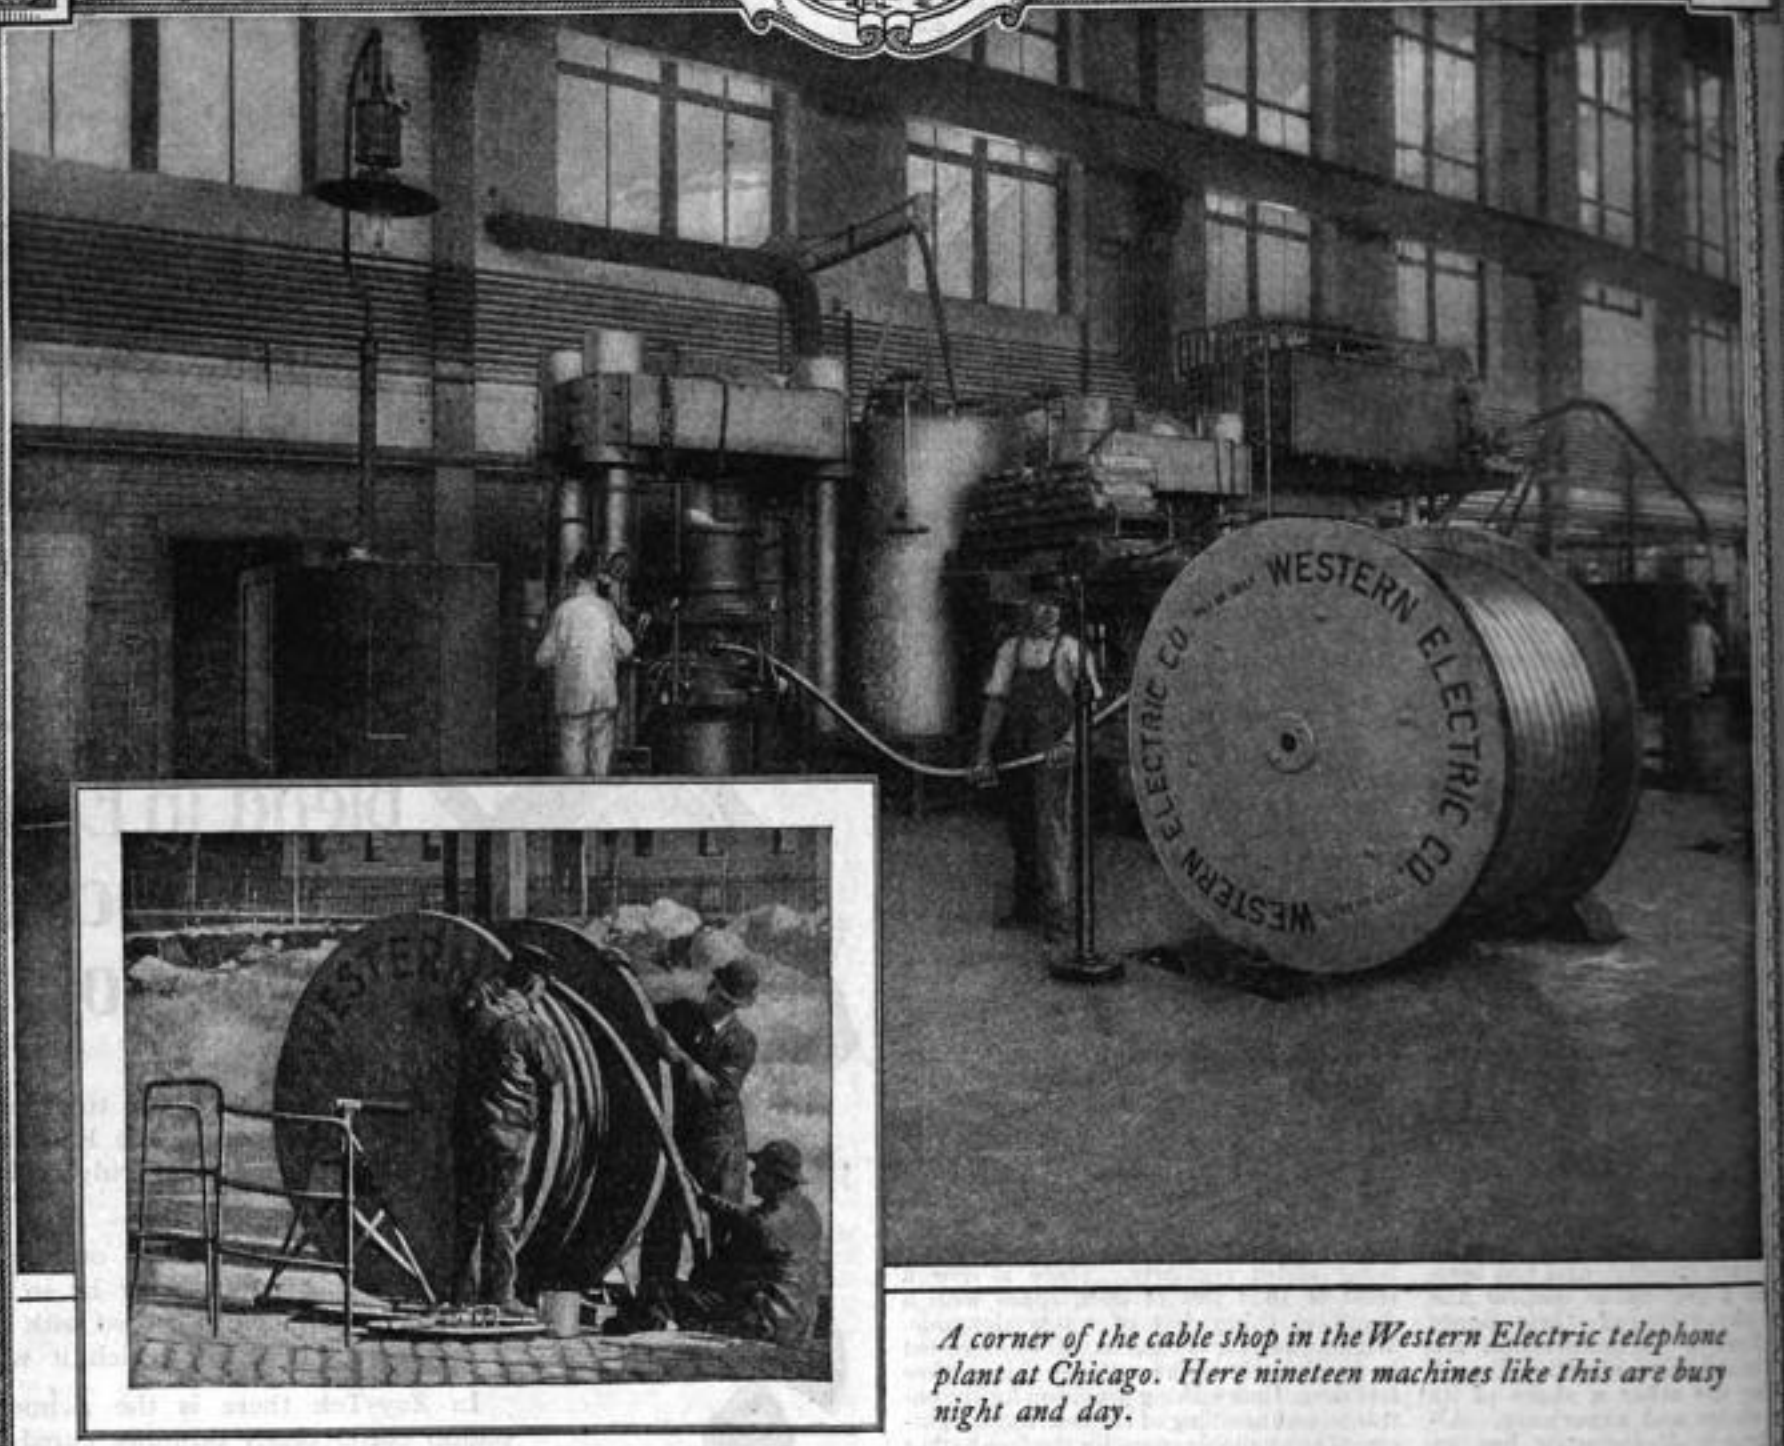
Tear open the big red tube of Zay-Tek Eatmors. Place one of the Eatmors on your tongue—and realize how truly delicious milk-chocolate can be.

Of course Zay-Tek is no ordinary blend of chocolate, or it could never be so satisfyingly wholesome, so much in accord with the particular American taste for which it was created.

In Zay-Tek there is the richness of ripe, plump cocoa beans skillfully cured by the expert planters of tropical South America and the islands of the Southern Seas—all roasted and blended with fragrant vanilla beans, snow-white powdered sugar and *full cream* milk.

Each choice ingredient gives its own full quality to Zay-Tek. Each blends with the others in just the right balance to produce the smooth, delicious, creamy taste which is Zay-Tek's very own.

A tube of Eatmors will be a good introduction to the Zay-Tek family. Buy it at the nearest counter. 5c everywhere.



PENNSYLVANIA CHOCOLATE CO.
Pittsburgh, Penna., U. S. A.

There are also Zay-Tek Almond Bars and Zay-Tek Cocoa, in 1 lb., ½ lb. and ⅓ lb. cans. Each is blended to suit the American taste.

A corner of the cable shop in the Western Electric telephone plant at Chicago. Here nineteen machines like this are busy night and day.

A familiar scene, and what's behind it

To you who have wondered how telephone cable is made, a simple answer would be "One machine winds the wires and another puts a lead covering around them."

But that gives small idea of the task in producing 6000 miles of cable each year from more than two million miles of copper wire, each wire separately insulated and all compressed into a diameter of an inch or two and sealed with a covering of molten lead.

Western Electric is the largest manufacturer of telephone cable in the world.

Yet all this is only one phase of the Western Electric Company's work of making telephones and telephone equipment—and making them in great quantities, yet with extraordinary accuracy.

es there was a raffle of mis-
r, in which she discovered a
few funny old colored prints of early Presidents—Tyler and Polk and Monroe and Jackson.

She clapped her hands again.

"I know! We'll use that south room as a gift shop—antiques, mostly. We've got enough right here to make a beginning, and I'll get mother to pick up some more. She can buy them awfully cheap; and we can sell them at simply piratical prices! Father, I've got a feeling we're going to make a wicked lot of money out of this."

Mr. Weldon dusted his trousers and fumbled for the stairway. Shirley was happy, and after all there wasn't any harm in letting her have her way, especially as she'd get it anyway. He discussed alterations with her soberly when they were downstairs again, pleased that she accepted his suggestions so readily.

"I just knew I was right," she declared as he fumbled with the rusty padlock. "I've always thought that I had a natural gift for business, and now I'm sure of it. Just see how well I've done with the chickens, after everybody laughed at me for wanting them! Even you tried to persuade me that I couldn't, father! Own up that you were wrong!"

"Looks like it," said Mr. Weldon, grinning.

She didn't even realize that she hadn't had a thing to do with that chicken venture since the day when he had overruled the piano-box idea. If he hadn't run it for her —— Well, let her think she'd done it all. It pleased her and it didn't hurt him. And he and Carrie, between them, could keep her from wasting too much on this tavern notion.

He half closed his eyes. After all, with proper management there might be money in the scheme. The Grimfield hotel was pretty bad, and there wasn't another within twenty miles in either direction. And the motor traffic on the main road was getting bigger every year. If he and Carrie handled this thing it wouldn't lose much, at the worst of it. And it would keep Shirley from getting into mischief too.

There was more confidence in his tone as he repeated his promise to talk Carrie around. He felt vaguely sure that Carrie wouldn't need much persuasion when she understood.

III

"I SIMPLY don't dare leave her alone a minute. There's no telling what she'll do if I'm not here."

Carrie spoke briskly, as always, but Mr. Weldon observed that she wore the peculiar smile he had come to associate with Shirley. Somehow you couldn't speak of her without that look and that spreading gesture. Even Phil did it, he remembered; and Phil was abjectly in love.

"It's all right, Carrie. I know. I don't mind. We've got to look after her, of course. I'll get my supper here too. Sort of lonesome, home." He glanced about the cheerful low room, admiring Carrie's trick of decoration. Everything in view was for sale, and yet it looked extraordinarily homelike, not a bit like a shop. He could hear Abednego singing, in the kitchen wing:

"So goo'-by, trouble an' pain—
Gonna hearum onna mo'nin' train—
My sin been taken away!"

Carrie knew how to handle 'em. He had overheard her remarks to that shiftless rascal ten minutes earlier, and marveled that Abednego didn't throw up his job at the first sentence. And here he was, singing as if he hadn't a single sore spot!

It was a good idea of Carrie's, bringing Lyddy and Abednego over here to the inn and leaving Shirley's housework in the capable hands of that Jap. Shirley couldn't manage this pair a bit unless Carrie stood at her back, but she got along well enough with the Jap, who didn't need any supervision to speak of. And that Lyddy could certainly cook when she wanted to.

He smiled gently at the pleasing memory of the figures. He and Carrie, between them, had made the inn pay a pretty profit, especially when you considered how he'd kept down the cost of alterations. Those signs brought business a long way; he'd driven over the roads for a twenty-mile radius to nail them up. And Carrie wasn't afraid of charging, either. The prices she got for meals and for antiques!

"If I hadn't been here this afternoon she'd have taken fifty dollars for that four-poster of Martha Sprowl's," said Carrie suddenly. "That woman from Philadelphia happened to say she'd been looking for one, and Shirley came right out and offered to sell hers before I could stop her." Carrie's lips closed firmly. "I got two hundred for it, though. And it cost me thirty-one-fifty, including the refinishing. Shirley thought it was outrageous to ask more than fifty. And she keeps telling me that she always knew she had a gift for business!"

Mr. Weldon grinned reminiscently. "Said that about the chicken house too. And if I hadn't interfered Brewer would have soaked her eight hundred—and extras! But it tickles her to think she's doing it; and it keeps her busy. That's the main thing, after all. It's a bad idea for a girl like Shirley to be left with nothing to do. There's too much mischief for idle hands, mother."

"There's a car at the gate, Arthur. You go meet them. I'd better keep an eye on Lyddy."

She vanished through the swing door, and Mr. Weldon went out to the stoop. He didn't mind welcoming Shirley's customers, although it had pricked his dignity at first. These people were only strangers, whose opinions didn't greatly matter. Grimfield knew that Arthur Weldon and his wife didn't have to keep a hotel for a living. And most of these motorists were nice, agreeable folks, too, pleasant to meet.

He shook hands cordially with a lean, sunburned man in knickerbockers, with a jolly plump woman who made him think of Carrie, a little, and a sober girl of twelve or so, who scraped her foot in a curtsy.

The plump woman exclaimed delightedly at the sight of the show room. Mr. Weldon explained, as usual, that the whole thing was just a fancy of his daughter-in-law, and discovered that he had employed the selfsame spreading gesture that Carrie used. They were nice people, he concluded. They seemed to understand at once that it was just a plaything, not a serious business. He beguiled the brief wait for their dinner with the story about Sim Randall and the hearse, and, encouraged by applause, related as an encore the anecdote of old Sam Dixon and the summer boarder. Grimfield people were familiar with both these stories, but transients generally shouted when he told them.

He and Carrie ate their dinner in the pantry. They'd got into the habit of doing this on busy evenings, instead of going back to the big empty house. Mr. Weldon didn't object; it was sort of fun to picnic over here, and you couldn't trust Abednego and Lyddy to serve a meal without somebody to keep an eye on them.

Carrie talked briskly of the day's events. She had sold two rush-bottomed chairs and a set of whale-oil lamps, besides the four-poster, and they had served lunch for twelve people. She had heard about an auction back in the hills, and must manage to get there somehow; it was all she could do to keep enough stock on hand, the way people kept buying. Mr. Weldon listened, mentally calculating profits.

"And she really thinks she's doing it," said Carrie. "That's the best part of it; she's so pleased and proud that I'd never have the heart to let her find out."

He agreed eagerly. If Shirley ever suspected how little she had to do with the Wayside Inn she'd be sure to lose interest and think of something else to do—something that might be a lot worse than this. Let her think, by all means, that she was singly responsible for this, as for the chicken business.

The guests were explicitly content with Lyddy's dinner. The plump lady frankly confessed a desire to kidnap the author of the corn pudding and the architect of that noble beefsteak pie. Carrie received these tributes becomingly, explaining that she had trained the servants herself, and that, of course, they were better than the disinterested help you found in ordinary hotels.

"And now if we could see our rooms," the plump lady continued. "My little girl's sleepy, and we're all tired."

"We haven't any rooms," said Carrie. "It's just a tiny place, as you can see; but there's the hotel downtown."

Her tone conveyed her opinion of the Battle House. The plump lady looked faintly aggrieved.

"Oh, dear! We thought that there'd be rooms. The signs—I thought an inn always had rooms. And that hotel looked perfectly impossible!"

"I'm sorry." Carrie shook her head sympathetically. "It's really pretty bad, by all I hear. But you could go on to Minster—it's only twenty miles or so—and there's a very nice hotel there."

Mr. Weldon's eye encountered that of the solemn little girl, and was detained and enlightened by the intensified solemnity of her expression. She looked resigned, he thought, to those twenty miles, but she foresaw no pleasure in them. Under his inspection she became suddenly self-conscious, and twisted her hands in her lap and turned in her toes. Mr. Weldon had an idea.

"I tell you what," he announced, "you can come up and sleep at our place. We've got plenty of room. Of course"—he encountered Carrie's aghast contemplation and spoke hurriedly—"of course we don't do it as a regular thing, you understand, but—it's part my fault, about those signs. They'd ought to say plainly that this inn doesn't rent rooms, for a fact."

The little girl's solemnity abated slightly. The plump lady hesitated, but the lean man voted promptly in the affirmative.

"That's mighty good of you, sir. But we'd want to pay. As long as your daughter-in-law's running the inn perhaps you'd let us pay her for the accommodations too. I wouldn't feel right about it ——"

Mr. Weldon was about to protest, but Carrie intervened. "That would be all right; you can pay the inn for meals and lodging both. But of course you understand that—that Mr. Weldon and I wouldn't ——"

"Oh, of course!" The plump lady beamed understanding. "It's awfully sweet of you to take pity on us. We're just tired out."

Mr. Weldon rode over to the big house on the front seat with the lean man, and told him the story of Luke McNab's three pigs; and the other one, having to do with the elder and the bootlegger. Carrie put them in the three west rooms, apologizing for the dismal disorder, which seemed to be invisible to any eye but hers. Presently, as Mr. Weldon listened to Carrie's comment on his mad act, there was a step on the stairs and the lean man appeared.

"Too early to turn in," he explained. "And I thought maybe you had some more of those stories."

Mr. Weldon leaned slightly forward. "Have you heard the one about the two Yankees that swapped horses," he inquired.

"No," said the lean man. "What is it?"

When they had driven away in the morning, leaving two express checks in the drawer at the Wayside Inn, Mr. Weldon was pleasantly aware of a slight hoarseness.

He made light, however, of Shirley's contrition.

"Wasn't a mite of bother," he declared. "Not a mite. Turned out to be mighty pleasant folks. Fact is I asked 'em to stop over with me and Carrie on their way back. Got a nice little girl. Made me think of you, some ways, Shirley."

She was not easily comforted, though. "I feel just awful about it—making all that work for mother! It isn't fair; it's my inn."

"Don't you worry about it," he said, narrowly escaping an incautious reference to the fact that Carrie spent seven or eight hours a day at the inn, and that Shirley herself visited it chiefly in the capacity of an absentee landlord. "Mother kind of liked having company, if you want to know. I could tell it tickled her to have that Mrs. Plummer see the hooked rugs in the blue room, and those rope beds and all."

He cleared his throat cautiously. Shirley was partly consoled.

"I'm glad if she didn't really mind. But it's too bad to fill your house up with strangers, father. I just won't have my customers interfering with your comforts."

"Oh, I kind of liked it, myself, if you come right down to it," he confessed. "It's a sort of change, talking to strangers. And Mr. Plummer got me talking about Grimfield folks—sat up half the night, we did. Don't you fret a minute about it, Shirley. We managed fine."

She tugged at his lapels. "You're just saying that to make me feel better, you dear old fraud, father! I know you! And I'm going to see that it never happens again." (Continued on Page 74)

(Continued from Page 71)

She overestimated her powers of precaution, for it happened again in less than a week. And this time Carrie herself proposed the solution. Mr. Weldon made a curious discovery in the course of this second evening. His prize anecdotes were received with far less acclaim on the part of the two gentlemen from Baltimore than they accorded his narrations of Grimfield episodes to which no native would have listened at all. He also discovered that the world is a relatively small planet; it developed that these wanderers knew the Plummers, and had encountered them this very week at the Blue Mountain House, over in Vermont.

There were other emergency hospitalities at diminishing intervals after this. By the end of July it was the exception when he and Carrie didn't have some of Shirley's guests under their roof. Carrie didn't complain much, considering all the trouble it made for her, and she generally referred comfortably to the effect of these visitations on the profit-and-loss account at the inn. Mr. Weldon himself kept the books of that establishment and drew off trial balances every Saturday. He never even cracked a smile when Shirley plumed herself over his neat figures. She didn't dream that she wasn't doing it all herself.

But it troubled her to let Carrie turn in the money paid for lodgings, in spite of Mr. Weldon's reiterated assurances that he and mother kind of liked having company once in a while and couldn't think of collecting money for themselves.

"It's not fair," she would say. "It's my inn, and I ought to take care of every part of it, instead of just the gift shop and the meals. I haven't any right to feel proud of my profits if some of the money comes from mother's renting her rooms to my guests. I'm going to think up a way to stop it."

Mr. Weldon always found it hard to keep a suitably respectful face when Shirley gave one of her imitations of a person in the act of thinking. It was a good thing he had a sense of humor, he told Carrie. If it wasn't such a joke there'd be more work than fun in this conspiracy to keep Shirley out of mischief.

Even Phil was deluded by the fiction that Shirley did it all. He bragged openly to his long-suffering parents about her; mighty few girls brought up as she'd been could take hold of a business and make it pay this way. They'd never been altogether just to Shirley, he thought; of course they'd never said anything, but he had perceived that they considered her a frivolous, flighty little thing sometimes. He'd even felt that way himself before this inn experiment had shown him what a level-headed little genius she was.

Mr. Weldon and his wife encouraged this hallucination of Phil's, but they shook their heads over it afterwards, and exchanged glances of faintly guilty amusement.

In mid-August the blow descended without warning. Shirley led Mr. Weldon to a corner of the show room at the inn and seized his lapels ominously. He had learned to interpret the look in her unfathomably gray eyes, and he was restive under her restraining clutch.

"I've done it, father! I've solved the room problem absolutely! I just knew I'd think of something!"

Mr. Weldon glanced apprehensively at the kitchen door, beyond which he could hear Lyddy's browbeaten rejoinders to a running fire of comment in Carrie's competent tones. Shirley took the hint and adopted her creamy whisper:

"I don't see why I never thought of it before. It's been standing there for years, just waiting for somebody to realize the possibilities—and I got it for just simply nothing! Aren't you thrilled, father?"

She jerked at the lapels. Mr. Weldon moistened his lips.

"What you been up to now?"

"You don't guess, even after I've as good as told you!" She enveloped him in her smile. "I've bought the old post-road tavern, of course! It's the very place! There's room enough in it to take care of thirty people."

Mr. Weldon felt his jaw sagging. The old tavern! A vision of its forlorn decay rose before his mind's eye. It had been empty since his boyhood, a gaunt, venerable ruin of rotting floors and sagging roof. He managed to reach his handkerchief and mopped his forehead.

"Now, Shirley, honestly ——"

She refused to listen. "I know exactly what you're going to say, and you needn't say it! I've proved that I can manage a business, haven't I? Didn't I think of this inn all by myself and start it, even when you and mother kept telling me I'd just throw my money away? And hasn't it paid? Just because I can't keep house you think I can't do anything, you old stubborn darlings, but you've got to admit that I can run hotels, haven't you? Just look at the way I've succeeded with this!"

Mr. Weldon glanced again at the kitchen door. If Carrie heard this flattening intelligence from Shirley she'd certainly forget and say things. A summer inn was one thing, but a thirty-room hotel —— He'd have to get Shirley away and break the news to Carrie later.

"Let's go and look it over," he suggested. "You—you'll have to put a sight of repairs on it, Shirley."

Shirley skipped delightedly toward the door.

"I just knew that you'd say that, you old dear! You always remember about repairs and little things like that, that I'd forget. Come on and see what we'd better do—unless you're tired of being bothered with that tiresome Mr. Brewer. You'd say so, if you were, wouldn't you? I'd never forgive myself if I made any trouble for you and mother with my little schemes. I always tell myself that when I'm thinking. And that's why I bought the old tavern. I just couldn't stand it to have you and mother worried by putting up all these tourists. It's all on your account, really, so I don't mind asking you to help with the alterations, you see—if you're quite sure that you don't mind."

"I—I'd just 's lief 's not," said Mr. Weldon. "Just 's lief 's not, Shirley, honestly."

"I haven't told you the best part yet." She squeezed his arm as they went through the gate. "The inn's only a summer business, you see. As soon as the roads get bad there won't be enough travel to keep it running. But if we can get the old tavern fixed up we can keep open all winter. Lots of people are getting tired of going South and come North instead. And this would be splendid country for winter sports—snowshoes and skis and skating and tobogganing—lots more fun than playing golf on sand greens, and ever and ever so much healthier too."

Mr. Weldon shook his head, appalled at the utter futility of speech.

"You see I've got so used to being busy this summer that I couldn't stand it to go back and be just an idler when we have to close the inn. And this will give me something to do all the year round, won't it? Let's hurry! I can hardly wait to get Mr. Brewer at work on those repairs."

Mr. Weldon made a noble effort to resist an unworthy temptation. It would be sort of fun, planning those alterations and chaffering with Brewer over the contract, but he had no right to let that ignoble impulse influence him.

"Now, honestly, Shirley, you ought to think this thing over before you go getting yourself all tangled up in it. This hotel's bound to make a sight of work for ——" He caught himself just in time, and was relieved to observe that Shirley didn't suspect that he'd almost named Carrie. Carrie would have the whole thing on her hands, of course.

"Oh, I thought it all out long ago," said Shirley. "You said that very thing about the inn. And just see how little of my time it's taken to manage that! Why, I've seen just as much of Phil as if I'd never started it at all. You see," she explained kindly, "keeping a hotel looks a lot harder than it really is unless you know about such things. And I guess I've lived in enough hotels to know about them! Besides, it doesn't matter how much work it makes—I'm going to do it; I won't have you and mother bothered with putting up my tourists in your house a minute longer than I have to. That's settled. I just won't listen to any tiresome old arguments about it."

Mr. Weldon thanked her.

IV

"I CAN'T possibly go home till after dinner, Arthur. The minute I turn my back something goes wrong, and you know it."

Carrie pursued Abednego with a glance that seemed to exert a galvanic stimulus on his reluctant gait, and resumed her attention to the big yellow bowl of whipped egg. Her sleeves were turned back to her elbows and she was enveloped in a vast white apron, but it occurred to her husband that she looked younger and—yes, happier than since Phil's wedding. He sniffed approvingly at the blended smells of the wide, warm kitchen.

"Just as lief stay here for supper," he declared. "Just 's lief 's not, Carrie, if you don't mind. Shirley going home, I suppose?"

Carrie's lips twitched. "Oh, yes. She doesn't believe hotels are good for young married people. And she thinks that simpleton of an Asa Thorne can manage a place like this! I wouldn't trust him with a hencoop!"

Mr. Weldon nodded gloomily. After suffering acutely over young Mr. Thorne's warped notions of bookkeeping he had solved the problem by taking over that department himself.

"Don't get too tired, Carrie. Strikes me you're doing a mite more'n you have to over here."

She dismissed him with an absent wave of the egg beater.

"Don't bother me now, Arthur. I've got all I can stand as it is. You go out front and tell 'em about Sim Randall and the hearse; maybe it'll keep 'em from thinking too much about this meringue."

Mr. Weldon grinned. He had been at some pains to conceal his preference in favor of the big cheerful common room at the Webscott Arms—Shirley had chosen to name the tavern after herself—but he suspected that Carrie was not wholly deceived. These folks who came up here and paid good money for the privilege of freezing their fingers and ears in zero weather had redeeming qualities, like the summer tourists. He was getting so he could tell that hearse story better than ever these days.

He slid out of his fur coat in the gloom of the cupboard below the back stairs, rehearsing the opening lines of his pet anecdote, a premonitory chuckle gently nudging at his diaphragm. He heard the door of the office open behind him, and identified his son's voice.

"Of course I'd rather go home, Shirley, but it doesn't seem right. You ought to be on the job here."

Mr. Weldon stood very still. It always amused him to hear Phil's innocent ideas about Shirley's part in the conduct of her enterprises. That was the spice of the joke—that Phil never guessed who made them pay.

"They don't need me a bit," said Shirley's round little voice. "Mother's looking after the kitchen and she'll send father out front to tell his stories."

"That's just it. You're leaving it all to them, Shirley, and it isn't fair. Of course I know you don't mean to impose on them, but you do. You let mother plan the meals and manage the servants, and father slaves over the books as if he was hired."

There was a pause, Mr. Weldon held his breath. Phil was beginning to see through this grindstone at last. If he wasn't stopped he'd spoil all Shirley's pleasure in her harmless little conceits. He was about to interrupt when Shirley's voice stopped him very short:

"O-o-oh, grandmother, what terrible sharp little eyes you've got!" It was very much in Shirley's normal manner to something in the affectionate tr caught Mr. Weldon's ear as different. sees something, Philly does, bless his He's finding out what a terrible scheming deceiver he's gone and marr Starting hotels and shops and all such things and taking all the credit and cash while she lets his poor old parents all the dirty work for her!"

"Don't, Shirley. It's serious. M been putting in just about all her time this blessed tavern of yours; and father here about as much as she is. You realize ——"

"Don't I?" Shirley laughed. It was regular Shirley laugh at all, Mr. W thought. It was short and—and al bitter. "Phil, where was the big davenp in the living room when we came h from our wedding trip?"

"Where—what's the davenport got to with this?" Phil spoke blankly. "I'm ta ing about the hotel, Shirley."

"Where was it? So am I!"

"Why—in the corner, wasn't it? I member that you didn't like it there first."

"Where is it now?"

"I don't see—in front of the fireplace course—but ——"

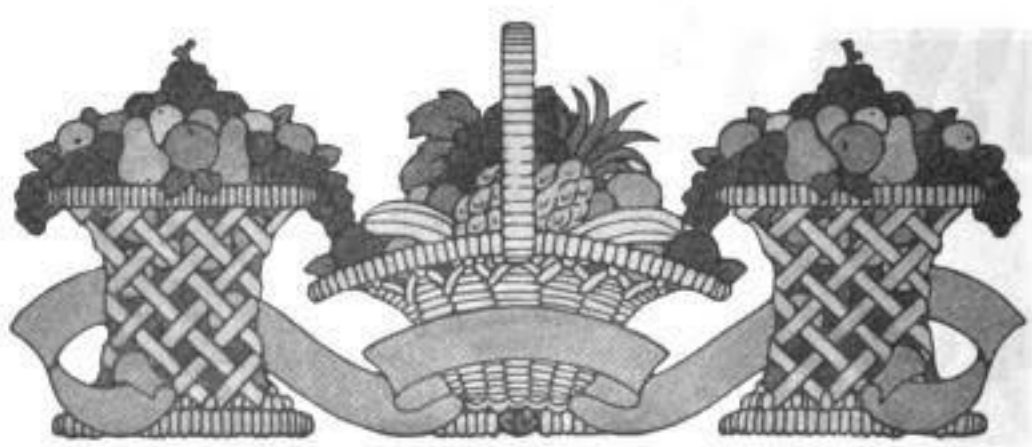
"Good. What happened when that low girl Lyddy was insolent to me an discharged her?"

"Really, Shirley—oh, all right - must smoothed her down, of course. Mot knows how to handle darkies."

"She does." Shirley spoke with decis "One more question: What kind of a was in our room, and where did it c from?"

"Why—oh, you mean Martha Spra old four-poster? You were silly as that at first, Shirley. What did it ma who'd died in it? And it was a bully you've got to admit ——"

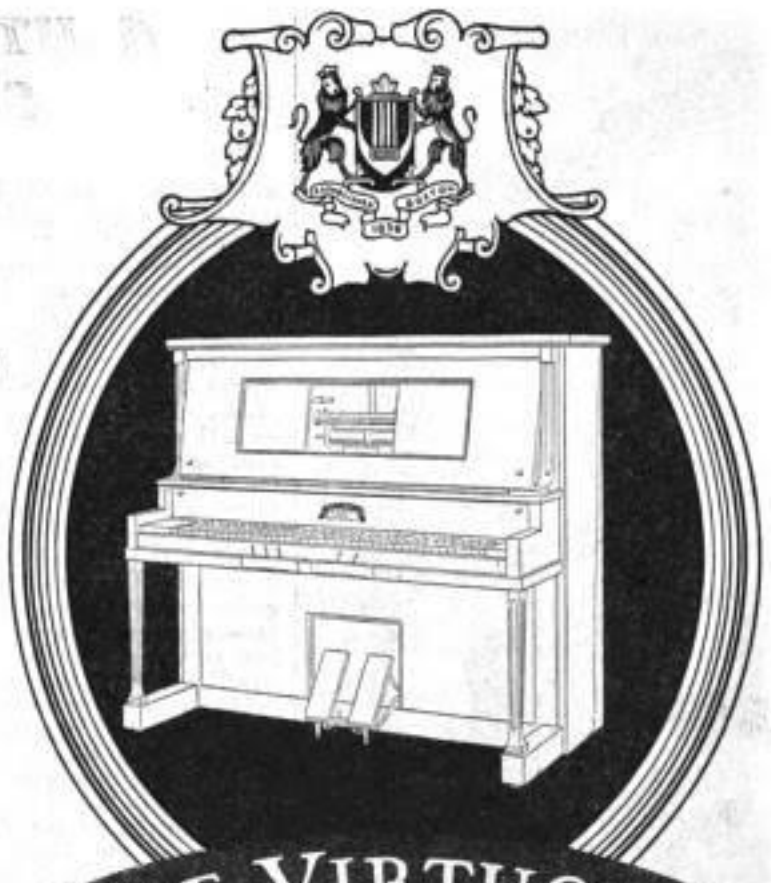
"Phil, I wasn't going to say this to ever. I thought I'd get around it, guess we'd better have it out and forg When I came home with you I just your father and mother. I thought girl ever got such a perfectly darling of in-laws. But after a couple of wee Phil, you're not a woman and you'll quite understand, but even you can what it meant to be nothing but a sort of visitor in my own house. Your m hired my servants and they took or from her—they wouldn't do what I them unless she backed me up. S planned the house, bought the furn arranged it, and if I changed a thing to get her permission—if I could. I she did it because she loved us both, I just couldn't stand it, Phil. If it had on there'd have been trouble betwee all. I got so that I was afraid to see father come up the walk—I knew ex what stories he'd tell me. And I cou set the thermostat to suit myself always set it back, no matter what I s



"But you only had to tell them—or

"No. It would have hurt them you—made feeling, no matter how gen hinted. You're all they've got, Phil. I'd taken you away from them. I cou ask them to stop making a plaything of us and our home and our life—I only think up some toy or other that th be perfectly sure to take away from I couldn't leave them with empty hands; they're perfectly certain to mischief, idle hands, no matter how they are. And it's worked. They're ha and it hasn't hurt them a bit. They love it."

Mr. Weldon's faint resentment was merged in a wave of amazed admir The cute little—— Who'd have th there was anything like that in her little head? Why, even Carrie was smarter.



"Don't, Phil—let's go." He inter accurately. He heard Shirley's sm little laugh. Once more it made him of smooth sweet cream. "Come on, you'd better! We're having frankfu

Mr. Weldon heard the door slam gust of frozen wind. He emerged fr retreat and stood hesitating. Sho tell Carrie? On reflection he decide it would be better, all around, to ge the birch fire in the common room those city folks about Sim Randall's secondhand hearse.

$495
for a Genuine VIRTUOLO PLAYER PIANO

Confidential
INFORMATION SERVICE

In keeping with the universal plea for *Best Music in Every Home*, a new plan of pricing and financing has been developed by one of the oldest and strongest player-piano makers in the world—The Hallet & Davis Piano Company, producers of the world-famed Virtuolo, "the instinctive player-piano." It places this supreme instrument in the most moderate circumstances. *You play as you pay.* Terms practically your own.

Mail coupon below for confidential information—free and postpaid.

R NOTE: The following ex- a new plan for placing the sown means to rapid musi- aining in the home. A plan internationally by eminent au- s, educators and publicists.

No money, mothers and fathers, can buy the social vantages good music will bring your children in later life

THER things being equal, there is no question that the boy or girl who meets the world equipped with a basic home training in music, will advance far beyond the boy or girl without it," noted educator.

al training leads to social success. And ccess to business success. Doors are o the musically cultured, which remain those less fortunate.

at reason, one of the important problems her and father must meet, is how to pro- ssential for their children—how to give advantages they themselves may have

The best way

is of the musical home is the self-playing ghest authorities subscribe to this.

to lasting musical appreciation; to the timacy with great composers and their aluable in later social life. For by con- iation with good music, a child learns usic *without actually being taught.*

in this way are amazing.

The Virtuolo may be obtained in various instruments, as follows:

Home Companion Virtuolo	$495
Colonial Virtuolo in Conway Piano	595
Petite Virtuolo in Hallet & Davis (4 ft. 4 in. high)	685
Puritan Virtuolo in Hallet & Davis (full size)	750
Empress Grand Hallet & Davis Piano, reproducing Virtuolo, on which may be played exact reproductions of world-famous artists	2250

Remarkable new terms of payment. *You play as you pay*

Hence, the problem has long been to place this heretofore expensive instrument, the player, within the means of every home—to place children of the moderately well-to-do on the same footing with those of financial prominence.

All the family can sing on song rolls. If the key is too high for Father, you can set the transposing device to fit his voice, too.

Now, amazing new plan places genuine Virtuolo within financial means of everyone!

Now, a new plan of manufacturing and financing has been developed. A plan which places the new Virtuolo Player Piano—made by the makers of the Hallet & Davis Pianos, supreme in musical centers throughout the world—within the means of everyone.

Only the world-spread manufacturing capacity and powerful financial position of the Hallet & Davis factories make it even remotely possible.

The plan is *new*. It is propounded from a new idea. It is unique both in point of price and the amazing terms of payment offered. World authorities approve it. Foremost educators endorse it.

It puts a new light entirely on the matter of providing the proper musical environment in every home. It has been carefully evolved to meet every family status and condition.

For confidential information, detailing the entire plan, simply mail the coupon. But you are urged to do so without delay, so as to participate in this new method of ownership.

Murphy Varnish—for over fifty years an invisible preserver of beautiful surfaces

For Men Who Think They Can't Paint

Probably the greatest thing about Da-cote Motor Car Enamel is that its base is Murphy Varnish—the identical varnish that generations of master painters have preferred for their most beautiful surfaces.

Da-cote is *smooth*—flows like cream—ideal for men who think they can't paint. No skill required. Just *flow* it on. Brush marks quickly disappear; dries over-night. In the morning, you have a new car—hard, smooth and radiant as glass. Costs about two dollars.

Da-cote gives equally splendid results on all other surfaces that require a smooth, opaque and high gloss enamel. Fine for baby carriages, wagons, porch furniture and all metal surfaces. Comes in black and white and ten popular colors.

Murphy Univernish

Will Brighten Your Home!

Are your floors, linoleum and woodwork dingy and dull? Have you a few pieces of worn looking furniture? A few hours with Murphy Univernish will make all radiate with newness! Univernish is the wonderful "universal" varnish originally made for professional painters; now put up in small cans for home use. Of course, it won't turn white! Boiling water, soap, alkali, or even ammonia cannot affect it. Comes transparent and in six wood colors.

Murphy Varnish Company

The Dougall Varnish Company, Limited, Montreal, Canadian Associate

A JITNEY GUIDE TO THE SANTA FÉ TRAIL

(Continued from Page 30)

which comes in mighty handy in case of a leak in the radiator far from the garage and its handy soldering iron. Also a little fuller's earth, if you have a cone clutch, may prove mighty useful in case of overheating.

We were told that in the high altitudes it would be necessary to readjust the carburetor, but we did not do so, preferring to run slowly until we found a downward grade. However, both this and boiling with those who are not used to mountain running are to be anticipated and prepared for, beginning at the Cumberland Mountains, although the altitude reaches its climax on the Continental Divide.

One safe road rule to have constantly in mind is that, notwithstanding your five-gallon can of extra gas, it is wise to fill your tank whenever you get a chance, whether you actually need to or not. This holds equally good for the radiator. Fill whenever you see water, even though she'll take only a cupful. The stitch-in-time principle reaches a high degree of importance on a long motor trip and it is better to be too fussy than to be stranded.

The one real danger of the roads between Hutchinson and Winslow, and then again beyond the Cañon from Williams to Barstow, is the washout. During part of the summer cloudbursts are frequent in this part of the world, and a road that was perfectly passable of an evening may be annihilated at some point by a rush of water from the mountains during the night. It is not at all uncommon to find a bridge washed out or that a big piece of road has been gouged by a temperamental river changing its course. These washes are not always so bad as they look, however. We found that by coming down slowly and stepping on the gas hard at the very instant we struck the bottom we were always able to get out. Never under any circumstances attempt to rush a wash. If you do you ram the nose of your car into the soft sandy soil or clay at the bottom, and are stuck. This is a really serious matter, as washouts usually occur far out in the country, away from any help. You can't depend upon always finding brush to cut if you're mired or stuck in sand, and a large heavy tarpaulin, which folds and takes up very little space, is especially suited for a brush substitute in such a predicament.

Another thing to look out for through the Far Southwest are the numerous old washes spanned by little bridges. These are sometimes barely wide enough for one car to cross, usually made of wood, and often most unstable. You dart upon them before you know it, for there is usually no warning sign of any kind.

Life in the Wilderness

Just a word about grades. George and I had an awful time accustoming ourselves to driving without warning signs. Back home in the East we have now and then complained about the advertising signs that infest our roadways. We get sick of looking at Whosiz Liver Pills and Anybody's Clothing Store, and are very fond of saying to each other, Wouldn't it be lovely but for this? Just the same we had unconsciously become pretty dependent upon the knowledge that very often these signs are warnings of dangerous curves or grades. Farther West we came close to more than one bad accident before we learned our lesson. The A. A. A. has marked the Santa Fé Trail with direction markers, but there are few warnings until you come into the territory of the Automobile Club of Southern California. A mighty good rule to observe is—slow up when you can't see ahead. You never know what is going to be just beyond that charming horizon line.

And for the benefit of the transcontinental novice let me insist upon the healthy axiom that brakes are of no value on a bad grade. You must have good brakes of course—they are exceedingly important; but through great stretches of the West they are more important to keep you from slipping downhill backwards than to keep you from falling downhill forwards. You will have to make all your bad down grades in low, plus brakes, and even then you will do well to slow up at the summit and begin your descent very conservatively in second, going into low when necessary. To experienced motorist this is an unnecessa warning, but many a novice will avoid aster by paying attention to it.

As this is intended primarily for mo ists who expect to use hotels, perhaps is just as well to dispel immediately miasma of horror and dread that usu springs up at mention of provincial telries.

From the moment one leaves Wash ton behind one leaves the provincial h behind. This may seem a strange st ment, but it is nevertheless a fact. Eastern small-town hotels come up to high standard maintained as a matte course by many of the hotel keepe towns of the Middle and Far West. Sp ing generally, the rooms are better equip cleaner, better cared for; and as fo food, the transcontinental trip will vince you that the East really knows ing of culinary art.

From coast to coast we were only nights bereft of a tiled bathroom. O first of these occasions we were o overnight in a mere hamlet where, th there was a bathroom, two large and h cockroaches had seen it first; and course when we opened the door, they had neglected to lock, and foun place was occupied, we withdrew an them in possession. The second of unwashed evenings occurred at Bar California, when we had neglected to ahead for rooms, and as the large and to the hotel was as yet incomplete we forced to content ourselves with a fifteen-foot double room, containing hogany twin beds, a private balcony porcelain fixed basin with taps for thing except champagne. Yes, it's a life in the wilderness!

Sleeping and Eating

From Washington westward one it is true, use some discrimination one's hotel accommodations, and season the wily tourist will alway ahead for rooms, and preferably tw ahead. The truth of the matter is th best places to stop are not nearly enough to accommodate the crowd. found that it was far better to waste five cents on telegraphing for room we found we had to cancel later t show up tired and dusty of an evenin to discover that we could not be acc dated. Incidentally, first-class ho commodations are not anything expensive in the Middle West, and the Far West, as they are on the seaboard.

True, in the big industrial cities pay six to eight dollars a night for a room if you have a mind to. But not necessary. On the whole I cou that staying at Midwestern hotel little more expensive than campi so infinitely more comfortable, th those possessed of a very moderate for the trip need not fear planning them.

Now about lunches. Until one Kansas City it is safe to say that be able to get an excellent lunch at erate price in practically any sma at which you choose to stop. Be Syracuse, Kansas, on, however, I strongly suggest carrying lunches you unless you are reasonably sure taking a Harvey House before overtakes you. And on leavi Grand Cañon, until you cross t Bernardino Pass into California s territory, it is most certainly the wisdom to carry lunch from Fred H hospitable board. And be sure t drinking water as well.

Not having been a camper myse tell you only a few things that ma use. At the beginning of the jour suming that you start in the E well-known free camp life in the unquestionably a joy. Water is a and so is shade, and many a ha meadow spreads a tempting ground on either hand to lure th wayfarer. Many of the nearer townships are hospitable to cam many are not. People have a con jection to letting folks pitch a tent

muss up their back yards, and one top where there is water. However, ough Pennsylvania, Maryland, West a and a considerable distance into ricultural belt as far as Missouri, ıg is true camping.

directly one leaves Kansas City and upon the great Southwest, camping ons change utterly. Water becomes . Shaded groves are rarer. In tead comes the municipal camping . These are hideous, almost without on. As a rule, the only place the tourist finds to leave his car is in a roofless garage, or corral, where he is to camp in company with anywhere ın to two dozen other automobiles ed as closely as if the place were a in truth. Water is usually supplied r with some primitive sanitary ments, but all the joys of camp life it certainly lacking.

there is literally no alternative. vater appears upon the earth's sur- places many miles apart the camper choice. Besides this, the prairie sert are mighty lonely places to e's camp at night unless one hap- be an Indian or a Mormon home-

The average tourist needs to ent his stock of supplies constantly, ry town through which he passes well equipped to help him out; the running down to the store for the n yeast cake is not eliminated on a ıtinental tour except by the most ced and hardened campers, and ently it is absolutely necessary for age outfit to park itself within a ole distance of a grocery store.

ule the public camping grounds are it is not uncommon to find that a made for use of them. I think it to give full warning of the diffi- o be encountered by the camper. ature lovers who have planned out on this trip on the supposition going to be a grand free life in the in for a shock.

ea of recommending that one take any special feature along a route ust chock-full of scenery may at ce seem rather absurd. From the one leaves the tidy streets of Balti- ind and begins crossing the friendly ious Cumberland Mountains scen- mething that practically cannot ed.

e Wonders of the West

plete with interest as the whole Trail is, and inescapable as are ies thereof, I am still going to lay on the advantages of certain side are easily made from the main i without which no transconti- ır is complete.

ough the Middle West you will the trade names of familiar arti- ng across in front of their home you will find a welcome from all these concerns if you care em. I would suggest that when- ble you do so, inasmuch as ac- ing the tremendous scale upon ierica manufactures goods and ariety of articles we produce aids in forming a proper concept of y as a whole.

s does not give the external ap- f a packing center, for its resi- ict is uncommonly handsome, and s an exceptional art museum.

City is an object lesson in home and the average Easterner will led at the uniform beauty of its levelopments and the interesting which areas are restricted to a of architecture. The plan upon boulevards are laid out also is d the planting of the parkways r them will bring joy to the r and the tree worshiper.

ansas City to La Junta I know of ar objects of interest to recom- cially. However, if you are a golfer and are making the trip in a leisurely fashion you will have ample opportunity of playing even in many of the smaller towns, all the way from Washington to Syracuse, Kansas, the St. Louis municipal course being especially worthy of attention, as it is one of the finest public courses in the country. Even in a small town like Garden City, Kansas, a nine-hole course is usually available, and though these are not commonly municipal links, Western hospitality makes little difficulty about permitting the stranger to play.

La Junta is the real starting point beyond which a variety of interesting side trips may be taken, beginning with the comparatively short run up to Colorado Springs via Pueblo, where the road in normal times is excellent, and from which a jog may be made back to the main route via Aguilar to Trinidad.

And of Santa Fé with its prehistoric ruins and Indian villages I have already spoken.

The Department of the Interior at Washington, D. C., provides, upon request, an excellent decorative pamphlet covering all the national parks, as well as automobile and motorcycle regulations, standard rates for trips, guide fees, bedding and provisions, saddle-horse rentals, and so on, and these pamphlets are extremely useful and suggestive. Write direct to the Department of the Interior, stating just what territory you wish to cover, as each section is described in an individual booklet. All these folders contain splendid maps, which are kept up to the minute as to road conditions, and so on.

The One Great Side Trip

Below Albuquerque allow yourself an hour or two at Isleta, an Indian village, which is one of the cleanest and most self-respecting of the Indian centers but which has not foregone picturesqueness in favor of blue jeans, as so many of the professional railway-station Indians have.

Then between St. Johns and Holbrook you will drive directly through a corner of the Petrified Forest, and you should allow plenty of time for a stop-off there.

On the northern route from Belen it is a short trip to the Enchanted Mesa, while Laguna, perhaps the most noted of the pueblos, is almost directly on the railroad but is exceedingly picturesque in spite of the fact that it is the most highly commercialized of the Indian villages.

From Thoreau there is a splendid trip to the more remote Pueblo Bonito, and Gallup offers the starting point for numerous beautiful side trips, notably the Zuni Indian Reservation and the far-famed Cañon de Chelly, which is perhaps the most dramatic trip of all.

On the northern trail the Petrified Forest is reached by a short trip from Adamana, from which point a run can easily be made to the edge of the Painted Desert.

From Winslow you can go down to the Roosevelt Dam over a somewhat difficult but exceedingly beautiful road, or north to the four little sky cities which represent the last stronghold of the Hopi Indians.

Even though you pass up every other side trip from coast to coast you cannot, must not, pass up the Grand Cañon of the Colorado.

With Kingman, Arizona, the gold country begins, and the great basins used for washing gold by modern methods are only one of the many interesting things you will want to stop off and see.

From then on to Barstow there are no side trips of importance, and the only thing calculated to delay the traveler, who has by now become thirsty for a glimpse of California, are the marvelous experiments in dry farming for which this district is famous.

Upon leaving Barstow I strongly advise making straight to Riverside, California. But there is no news in that; I have from the start been advising you to go to California.

Communication!

THE manufacturers of the new Light-Running, Quiet-Running Royal believe they have achieved in it the ultimate design of typewriter; the final word in simplicity, balance, strength, practical quietness and speed. And the gratifying results it is giving today in hundreds of progressively managed offices more than justify this belief.

Communication is one of the two great agencies that have made mighty nations out of struggling colonies and transformed lone trading posts into bustling centers of commerce. And how vital a factor in modern systems of communication is the typewriter! It actually prepares the majority of business messages and authenticates most of the others—"confirmation to follow."

No miraculous invention made this new Royal possible. It is simply the result of a long, undiverted quest for the one typewriter—without complicating embellishments—that would so nearly approach perfection as to stand unequalled for years to come and probably never be surpassed.

The Light-Running, Quiet-Running Royal is the typewriter of the future available today!

Our fifty-six page book, "The Evolution of the Typewriter", beautifully illustrated in color, will be mailed free on request. Address Department S.

THE LANGUAGE OF THE ANGELS

(Continued from Page 19)

Ya-he, the Black Angel, was terribly ill. His was the worst case in all heaven. It was serious. It seemed hopeless. Mudgett paced the anteroom night after night. Then Ya-he got better, the worst had passed, and Mudgett tried to sleep.

He lay down on his cot that night, but could not close his eyes. He rose up, paced the anteroom, paced the hall. He leaned against the door that led downstairs. Motionless, he gazed into the darkness. "I'm glad Ya-he's better." He moved down the hall to the matron's room, put his elongated ear to the door, listened. All was silent. He wanted to knock at her door—an almost unconquerable desire. He wanted to talk to someone. "About the new home when it's finished," he told himself. He stood there undecided, vacillating. "I say now, just about the new home and about Ya-he getting better."

In the gloom of his mind other and curious things were revolving—like a merry-go-round he had seen when a penniless boy, a thing he had wanted more than anything on earth, a thing he had watched until dusk brought out the revolving will-o'-the-wisp lights to mingle fantastically with barbaric strains of music. He wanted something now, wanted it like that. He formed the little matron's name, but did not utter it. Perhaps if he just stood here thinking about her she would come out. He waited. She did not come. "Just about Ya-he getting better," he muttered to himself and waited longer.

But no sound came from Miss Bax's room. She and the babies in there were fast asleep. He thought of her sleeping, tried to imagine her eyes when they were closed, thought of her lovely level gaze, told himself her eyes were like a mirror that reflected a gray curtain, wondered what was back of the curtain. "I say now ——" But the ponderous dark machinery within his mind continued to revolve—will-o'-the-wisp lights, distant strains of music. He visualized a woman's alluring hair, like Egyptian dusk, against the smooth whiteness of her forehead, and he imagined that Egyptian dusk against the smooth whiteness of a pillow. "I say now ——"

Old Mudgett shuffled along the hall and reëntered the antechamber. Fumbling in the dark he placed his ear to a listening instrument. One of the babies was crying. He knew the cry, knew the cry of each of the babies; each was distinct, unmistakable. This was the cry of the smallest angel in heaven—the Dove.

Mudgett replaced the receiver and seated himself on the edge of his cot, supported his head between his hands, pulled his ear nervously. "I got to talk to someone—about the new home," he mumbled to himself. "Is it ever going to be finished? This old building—firetrap." He locked his gaunt jaws with determination. "It's going to be finished!" Cheat? Yes, he'd cheat, bully and beat down. It's going to be finished! Lie? "I say now, it's going to be finished." These thoughts were followed by a great void of darkness in his mind. Into this void came again the carrousel wheeling through the gloom. He reached out his gaunt arms—toward the thing he wanted most in all the world, then, pulling himself together, rose up and started down the hall again. Halfway he turned and came back to the anteroom. Again he picked up the listening apparatus. The Dove was still crying.

Old Mudgett entered the front room and hung over the crib of the tiniest angel in heaven. Awkwardly he patted her with his huge hand. She continued to cry. Presently he lifted her up. She stopped crying. "Why not? Say now, why not?" Miss Bax would never know. No one would ever know. Silently across the cloudlike floor he moved with the Dove in his arms, and entered the anteroom. He closed the door of the front room and the door leading to the hall, and seating himself on the edge of his cot he rocked the Dove in his arms. Against the rules of the home? Well, hadn't he made the rules? Hadn't he? Couldn't he break them if he wanted to? Who was going to stop him from rocking a baby in his arms? "I say now ——" Anyway, Miss Bax would never know.

He leaned over the tiny mite. She was making a strange noise—the sound from which had come her name, like the noise of a dove: "Coo-oo, coo-oo." That was her name. She was saying her name, over and over. Old Mudgett rocked her some more. She made other noises there in the darkness, liquid lovely sounds. He told himself he understood them—understood everything she was saying. She was talking to him, and he understood. He, Thomas Mudgett, understood the language of the angels! Say now—another idea! Why not?

He held her up in his arms, leaned over her, whispered her name: "Coo-oo."

The Dove answered: "Coo-oo."

"Of course she knows her name!"

He was delighted, strange thrills passed through the length and breadth of his gaunt body. He tried to think of something else to say. He wanted to tell her the new home was going to be finished and that Ya-he was better.

Presently he whispered, "Ya-he—good." That was as near as he could come to telling her that Ya-he was better. "Ya-he is good."

"Goo-oo," replied the Dove.

Say now, didn't she understand! Didn't she? Old Mudgett became lost in ecstasy, thought. Presently he leaned even closer to the little mite in his arms. "Goo," he whispered. "Goo—mag." Would she understand that? Would she? He repeated, "Goo — mag — goo-goo" — the mysterious, God is good." That was what he was saying.

And the Dove replied, "Goo-goo," "God is good."

Old Mudgett, trembling with ecstasy, held her close to him, formed another phrase, whispered it, waited for the reply. But no reply came. He placed his elongated ear close to her lips. The Dove was sucking her thumb.

Presently he reached out and got a pillow, placed it across his knees, laid the little Dove on it and covered her with a blanket. "In a few more months, I mean now ——" He thought of the incomparable delight of conversing with the angels in their own language. He kept thinking, thinking about it. His gaunt form crouched over the sleeping child. "Ya-he's better." He closed his eyes.

In the white slender light of morning Miss Bax slipped noiselessly into the front room on her way to the babies. But there she was stopped in her tracks by the sight of the gaunt man drooping over something on a pillow. She refused to credit her eyes. She moved closer. The Dove! What could he mean by taking one of the babies from its crib? The Dove, at that! She moved out with the determination to carry the baby back to the front room; but instead she just stood there. Her gaze became strangely level, indeed, and baffling too. Then she turned away, noiselessly left, and went to her own room, where she remained until she heard old Mudgett moving around in the hall.

Later she informed him solemnly that the babies are better this morning, Mr. Mudgett; and the Dove is entirely well.

IX

ON THIS day old Mudgett climbed down from his heaven atop the building home, went out into the outer world, hung over public markets like a scavenger vulture, bargained, beat down and haggled. Once again he sang his sparrow song, "Cheap, cheap, cheap!" and with intensely practical mien approached prospective patrons. To little avail, the Lord knows, he pestered them with prayers for contributions. He sang hymns and jazz, laughed and wept. But when it came to bringing home, he could not. No credit to Mudgett. Somewhere, somehow, he had lost the knack of lying—and greatly deplored the loss.

Nevertheless, now and again a small army of workmen appeared across the street, which meant that someone had paid the rent and rid of old Mudgett. But a ragtag and bobtail lot these workmen were. Picked up here and there, they loafed more than they labored, and they yelled ribald jokes at each other and jocosely from the top of the building to their fellow laborers below, called names, one other inanely enough: "Hey there, you dumb-bell!"; answered with even more amazing profanity—called each other "hellhound!" In short, they seemed to old Mudgett to be on a rowdy holiday at his expense. He fumed, he fretted, he

Don't Forget This

When you order Pork and Beans

The Van Camp experts have delighted millions with a new-type Pork and Bean dish. You get it when you buy this brand. It differs from ordinary pork and beans in a dozen important ways. It will change one's whole conception of this dish.

When first perfected, thousands of restaurants and hotels bought it to serve to men. The men told their wives about it—the wives told other wives.

Thus the fame of this dish has spread. Now millions of homes enjoy it. And Pork and Beans, once a rare dish, is served many times as often as it was.

Don't forget the facts we tell here. Be sure you get Van Camp's. For you, like all others, want such Pork and Beans as these.

Our premier creation

The Van Camp kitchens are the finest in the world. They cost $1,700,000. Famous chefs are employed here. Also culinary experts—men with college training. Also experts in dietetics. Also a Domestic Science Expert of nation-wide repute.

This entire staff worked some four years to perfect this Pork and Bean dish. And this dish made us famous.

We are known for many delightful food creations. Our cooks are masters of the culinary art. But the dish in which they most excel is Van Camp's Pork and Beans.

Other Van Camp Products include

Van Camp's Soups
Van Camp's Spaghetti *Peanut Butter*
Van Camp's Evaporated Milk
Catsup *Chili Sauce* *Chile Con Carne, Etc.*

Prepared in the Van Camp Kitchens at Indianapolis

Some Van Camp Surprises

You'll find the beans extra-flavory, l and plump. That's because they are g on studied soils, rich in nitrogen. Eac is analyzed before we start to cook.

The skins are tender. That's becaus water used is freed from minerals. H water makes skins tough.

All flavor is intact. That's because we l in sealed containers.

The beans are mealy, mellow, wh None are crisped or broken. That s to steam ovens. The beans are bake live steam under pressure, without co with the beans.

The beans easily digest. That is ... hours of baking at high heat. Steam make this possible without crac bursting the beans.

There is wondrous tang and zest. Th due to the Van Camp sauce—a mat creation. It was perfected by comp countless formulas and blends. That is baked with the pork and beans, so granule shares it.

Order a few cans of Van Camp's now. C pare them with the ordinary. Lear good this dish can be.

home in America. "I say
't be another like it."

They had reëntered his office. He pointed out the uncompleted wall across the way, pulled his elongated ear, divulged his hopes and plans, told about the heaven atop the home.

"There are more babies!" She could hardly believe it. Her emerald eyes were wide with surprise. "I haven't seen them all?"

"Seven more," Mudgett informed her with tremendous importance. "Seven. And think of it—they haven't seen a human face since they came here; haven't even heard a voice!"

She was incredulous. But Mudgett convinced her, tapped the book on his desk, opened it; and when she tried to pronounce some of the baby words old Mudgett hung over her, shadowlike and gaunt.

"I must, I must see them!" A weeny bit tired now, she had to go; but could she come again—soon?

"I say now, will you?"

Standing at the curb old Mudgett remained in an ethereal trance long after the pale yellow motor had vanished. He was oblivious of the March breeze that flapped the coat tails of his Prince Albert, oblivious of the workmen calling each other dumb-bells and hellhounds across the way; and also, alas, oblivious of the solemn gray eyes that were looking down upon him from the heaven atop the foundling home.

As motionless as Mudgett was now standing, Miss Bax had stood since first the motor with its glinting nickel trimmings had slipped up to the curbing. Miss Bax had seen the top of a jaunty little toque, the dainty shoulders of a moleskin wrap, and had thought of a certain raccoon coat she had dreamed of long ago. Standing there, four flights up, she had imagined a faint elusive fragrance, and actually caught the sparkle of a rhinestone button on a gray suède slipper. She had stood motionless amid the wails, the laughter and tears of heaven for nearly an hour. Her reward—a glimpse of that appealing face that had gazed up at Thomas A. Mudgett a moment past. Poor old Mudgett! She knew the droop of his shoulders, had seen them droop like that once or twice during these years. And she knew the meaning of that rapt expression upon his gaunt features.

When he turned slowly into the house Miss Bax turned slowly from the window. Silently she went through her afternoon routine—bathed each of the babies, fed them, tucked them in at dusk, and after picking up the room for the night slipped through the empty gloom of the anteroom. She desired no supper. Weariness—the weariness of two years that she had never admitted even to herself—descended upon her.

She undressed, removed her trim little corsets, slipped off her lisle stockings and allowed them to lie in a limp heap on the floor. She sat on the edge of her bed gazing at her nicely modeled foot and thinking dully of suède pumps and silken stockings. Presently, wearily, she put her small feet into flat-soled Japanese slippers with pompons on them, donned a faded kimono that poorly matched the pompons, stood in front of the mirror for a moment gazing at her hair, her eyes, her throat and shoulders, then, without further ado, lay down on her narrow bed and wept.

XI

WITHIN a fortnight the pale yellow motor again paused in front of the foundling home. Old Mudgett was unable to restrain himself. He rushed down the narrow hall, and was greeted at the door by a nicely dressed young man with a dent in his nose. All too patently Mudgett's disappointment was portrayed in his gaunt features.

The man laughed. "Not Miss Saxton this time. My name's Norton—Max Norton. I'm her representative, Mr. Mudgett."

A very agreeable person he proved to be, and also, despite his small nervous hands, quite commanding. From the moment of his appearance things began to happen—rapidly. He fired old Mudgett's imagination with the suggestion of a rather large donation. Miss Saxton had become really, deeply interested in the home. "A big donation."

"Say now"—Mudgett eagerly translated the promise into a reality—"we'll put it into the building fund."

For an hour they were closeted, heads together, in Mudgett's office. And undeniably Norton's interest in Mudgett's secret book of the language of the angels was genuine, sincere. When shown to the fourth floor he kept his eyes to a peephole for half an hour or more, and bubbling with enthusiasm accompanied old Mudgett on a marketing trip that very afternoon.

"Great experiment! No doubt about it; greatest in history! I tell you," said Norton, "I believe you've accomplished something big. I don't know anything about it, but I tell you, Mr. Mudgett, I'm sure this experiment is unique, and I believe it's big."

"I say now, I think it's big too."

They talked as they strode along.

Norton made an interesting suggestion: "Why not get two or three philologists, real ones, from the big universities?" He could get them; knew he could.

"Would they come to the home?" asked Mudgett. "Say now, do you think they would come to the home and see it for themselves?"

Norton was confident of being able to arrange it. "And if I succeed you won't have to worry any more about the building fund. It will go big." He went into details—the right kind of newspaper stories. And still another brilliant flash came to him. "I have it! It's going to be big. Why not on that occasion—say it is big—when the philologists are looking on and listening—why not let the babies hear someone's voice for the first time? Phonographic records. Phonographic records! Big! I tell you, it's going to be big. What will they say in their own language when they hear a voice for the first time and see a human face for the first time?"

"I say now! I say now!" Mudgett was carried away with the idea. "Could you"—he hardly dared suggest it, but summoned the courage—"could you get Miss Saxton?"

That evening gaunt, shadowy Mudgett, blinded by excitement, made his way to the fourth floor and told Miss Bax. She gave no sign of the havoc his words wrought behind the calm gray curtain of her eyes. She listened, seemingly unperturbed, then turned away and busied herself unnecessarily in the dietary kitchen. After all these months, these years—another woman. She had taken care of them, watched over them, and—and they were to see someone else, hear some other woman's voice.

She wondered who this other woman was, and the more Miss Bax wondered the more she wondered.

The following afternoon before taking her tramp through the park the little matron called for a number on the telephone, and, later, said to Mudgett, "I wonder, Mr. Mudgett, if you will take the evening watch? Someone is coming to see me."

"A man?"

"Yes."

Mudgett pulled his ear nervously. "I say now, is he married?"

There was no finesse in the little matron's make-up. "He isn't married, but he's old enough to be my father."

An old, old friend indeed, the ship-news editor of one of the large dailies, he came that evening with a heavy, substantial tread and the sound of a cane along the narrow hall to the dimly lighted office.

"Helen," said he when he was inside, patting her hand, "you're prettier than ever. I've a notion to forgive you for treating me shabbily."

"But I haven't been out of the house, Jim, except for a walk in the afternoons; not for two years."

He was a large man, carelessly dressed, with iron gray hair. He continued to pat her hand. "Can't believe it. Not with that color." He hesitated. "It's real?"

"Yes, it's real," laughed Miss Bax. "You don't mind that I dragged you way up here? It's important." She waited for him to seat himself comfortably in Mudgett's swivel chair. She remained beside the desk—standing there, looking down at him in the dim light. "I want you to tell me about some people; then, afterwards, we'll plan the little trip you promised me on the press boat. Who is Miss Saxton, Jim?"

"Never heard of her. What's her first name?"

"Flora. . . . Flora May Saxton."

He regarded her with humorous incredulity, a twinkle in his eyes. "Don't you ever read the papers?"

The little matron blushed. "I haven't time to read anything."

"Flora May Saxton. Well, Helen, a woman shouldn't read the papers," said he stoutly. "Not fit—only the ships' news, anyway. Flora Saxton—well ——"

"Yes. What is she, Jim?"

The Dance of the Perfumes

THE Dancing Girls of Araby glow pink in their cheeks of desert brown. Tall, slender, swaying to the plaintive magic of the lute, —they weave strange steps upon the edge of the Sahara. Dark eyes sparkle, white teeth gleam and, as they dance, perfumes are poured upon their pink-tipped fingers—exotic odors from the Gardens of Nabeul, where satin breezes play up from the Gulf of Hammamet.

Borrowing afresh from the arts and gardens of the East, Vantine has created wondrous new effects in Win-Sum Flowers. Rare essences from the Land of Veiled Women—adding to your store of ways to fascinate. Scented with Win-Sum Flowers, Beauty basks in a memorable modish fragrance sure to charm.

Combination: Toilet Water with Atomizer

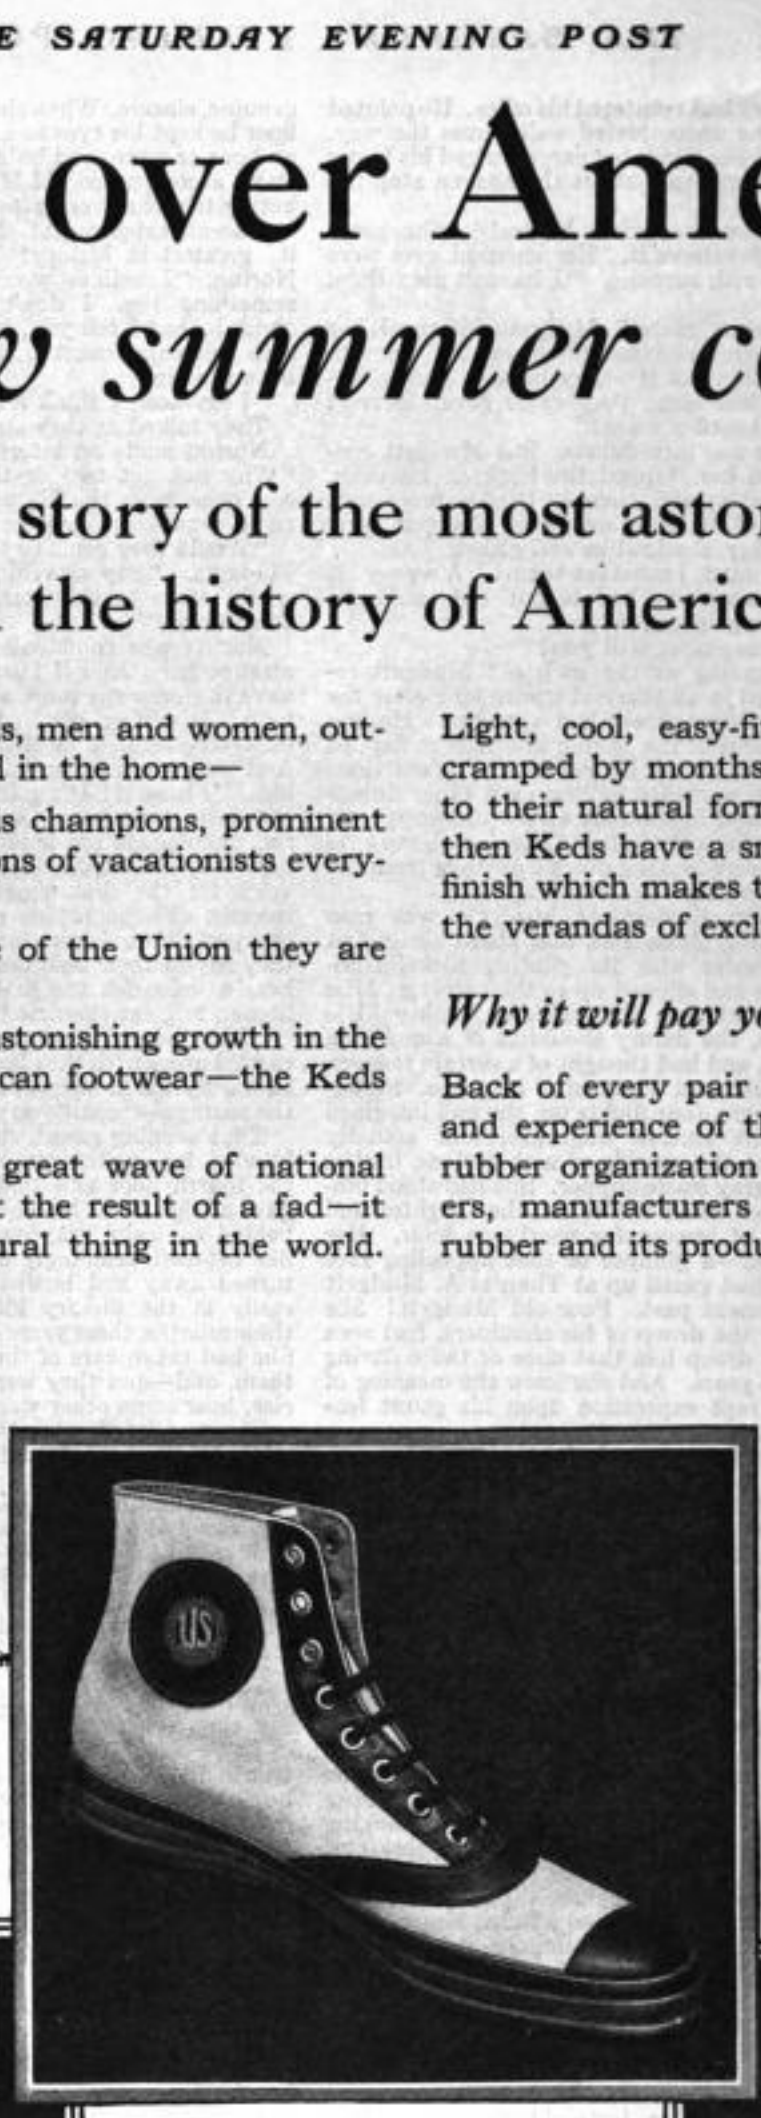
All over America
a new summer comfort

The story of the most astonishing growth in the history of American footwear

BOYS and girls, men and women, out-of-doors and in the home—

National tennis champions, prominent sportsmen, millions of vacationists everywhere at play—

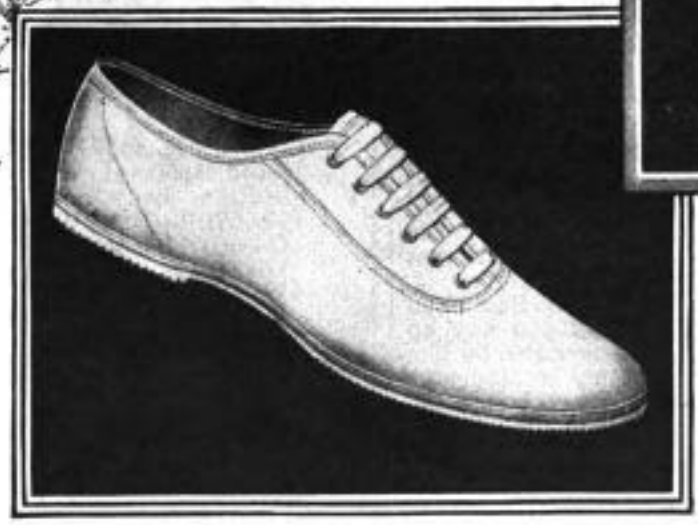
In every state of the Union they are wearing Keds!



It's the most astonishing growth in the history of American footwear—the Keds line.

And yet this great wave of national popularity is not the result of a fad—it is the most natural thing in the world. Light, cool, easy-fitting, Keds let feet cramped by months of stiff shoes return to their natural form and breathe. And then Keds have a snap in their lines and finish which makes them popular even on the verandas of exclusive clubs.

Why it will pay you to insist on Keds



Back of every pair of Keds are the skill and experience of the oldest and largest rubber organization in the world—growers, manufacturers and distributors of rubber and its products.

Sturdy sport shoes, with or without heels. Heavy reinforcements and ankle patch. Smooth, corrugated, or suction soles.

The world's standard summer shoe. For tennis, canoeing, sailing, and general outdoor wear. High and low models, sizes for everyone.

One of the children's Keds, made on a Natu... last. Similar models with low heels, with ... and without, are made for women and g...

They are not Keds unless the name Keds is on the shoe—

Uppers of fine white or colored canvas—soles of tough, springy rubber from our own Sumatra plantations—Keds make you proud of their appearance as well as enthusiastic about their comfort and wear.

There are many different kinds of Keds—high and low, plain and athletic-trimmed—styles for out-doors, for home, for every kind of sport.

America's most popular line of summer footwear—that's what the name Keds means.

One of the newest Keds for girls and women. White or colored trimming. Welt construction, composition sole.

A popular pump. With or without strap. With or without heel. Made also on a Nature last for children.

One of the most popular all-purpose Keds. For street, home, sport. Comes also in a low model.

You can get the kind of Keds you wish at your dealer's. If he hasn't them, he will get them for you.

But remember, Keds are made only by the United States Rubber Company. If the name Keds isn't on the shoes, they aren't real Keds.

The trademark of the Hartford Fire Insurance Co. Engraved by TIMOTHY COLE

The Hartford Fire Insurance Company is serving individual property owners in two distinct ways. First, by selling indemnity for all losses caused by fire, to insurable property. Second (free of expense to policy-holders), by inspecting property of those business men who desire or are willing to co-operate to avoid the occurrence of preventable loss by fire. You can secure this service by calling on the Hartford Fire Insurance Company's representative.

Ask for the name of the nearest agent.

HARTFORD FIRE INSURANCE CO.

HARTFORD, CONN.

The Hartford Fire Insurance Company and the Hartford Accident and Indemnity Company write practically every form of insurance except life.

(Continued from Page 81)

"Well—not an unusual type; only—she's prettier than the rest. Her principal rôle—the one that made her famous—was in connection with a breach of promise or alienation of affection suit or something of the kind two or three years ago. Then—there were other things—and, after the trial, headliner in vaudeville. Let's talk about something else. Myself, for instance. You've noticed I'm beginning to use a cane, Helen. I'm still unmarried. I'm beginning to use a cane, Helen."

She put her hand into his and he patted it with tenderness.

"There's someone else I want to know about. A man named Norton; Max Norton."

He became interested. "You're dealing with characters. What's back of this questionnaire? Are you writing a drama? What's the plot?"

"But that's what I'm trying to find out," said Miss Bax. "Who is Max Norton? Do you know him?"

"I've known him ever since he was a copy boy."

"Yes?" She waited. "Please go on. What is he now?"

"Offhand, I'd say he's an architect—specializing in castles in the air. That is, the things he builds seldom have foundations. Norton—well, say someone wants a reputation. Max will build it for a consideration. Nice fellow, keen, successful—one of the keenest press agents in the business."

"I think that's all I want to know," said Miss Bax in an even voice. "Now tell me about the garden on Long Island and the men who go down to the sea in ships."

"Let's talk garden," he insisted, rooting in Mudgett's desk for a sheet of paper. "I'll show you how I'm planting it this year." And he began to draw diagrams.

Some days later Miss Bax received a note scribbled on copy paper. With difficulty she deciphered this breathless piece of information:

Asparagus is up.

JIM.

P. S. Flora May Saxton is to make her début on the screen latter part of this month. Will you go with me? Picture called The Foundling. J.

XII

NIGHT in the little room adjoining heaven, yet far removed therefrom. This is the immaculate room done in gray and old rose. But it is night, and the little matron, with fingers interlaced beneath her head, is gazing up into the dark void above her narrow bed. It seems to her she is not looking up, however, but down into a well the fathomless waters of which mirror vague, disquieting pictures. Reflected are the faces of other women's children—children they have abandoned and she has loved. That is one of the things she sees—her love for them, pent up for months, for years, never a syllable, never a sigh to tell them of it.

Even more clearly, gazing into the darkness, she sees the foundling home, poor old Mudgett, heaven itself being used to advertise the wares of Flora May Saxton. She tries to imagine the stories Max Norton will write about the first woman these babies are to see—the gurgles of delight, the gestures, the liquid sounds that will come from their throats as they cling to her with bewildered joy. She tries to imagine these stories actually in print—Mudgett's records of two years, college professors, phonographs to give them authenticity; her months of weariness and love, the home, Mudgett, heaven itself, described in the papers to advance the notoriety of some woman—such a woman!

The little matron restlessly unlaces her fingers, gropes for the listening apparatus at the side of her bed, places it to her ear. Lo! One of the angels is awake. It's Ya-he, the Black Angel. He's laughing: "Ya-he-he-he!"

She continues to listen. Heaven becomes silent.

Determinedly now the little matron closes her eyes, but presently they open wide again, staring into the darkness. Perversely enough, she cannot stop her mind from working. She is thinking of gaunt, helpless Mudgett. Her thoughts, however, contain no demeaning adjectives. She sees him as he is—not his acts, but his motives. And her vision is very clear. Also—this, too, is strange—she gazes unperturbed into the darkness when her mind pictures him as a gaunt ungainly man begging and bullying—penurious, miserly, vulturelike. She loves him for all three qualities because—well, because. She can't explain it to herself, but there is something noble even in miserliness—when it is for a purpose.

She tells herself, "He isn't afraid of what people think. That's part of it. He just goes ahead, bargaining, beating down, begging. The thing he is trying to do is bigger than the things people think—counts for more."

Then, too, aren't these qualities the readable record of the things he has suffered—a life as angular, hard and shadowy as he himself? His exterior is a portrait of his life—that is it—a portrait of his life—his huge bony fists, those gaunt shoulders.

Lying there another curious thought comes to her: "What a spacious, gloomy heart he has!" She thinks of its vastness, its simplicity; and remembers that a single candle on a frosted cake had dispelled its gloom. A spacious heart, but how easily illumined!

Again she gropes for the listening instrument. Heaven is silent.

She asks herself a question: Is love ever unselfish? Her love? Suppose he should love some other woman; suppose it were possible to transplant all the feeling she has for him into this other woman, leaving herself empty, would she do it? Did she love him that much? "Yes," she whispers presently, "I love him that much. But I wouldn't do it!" It isn't a fair question; she has put it merely to torture herself. "I couldn't do it because it would leave me just an empty shell." And she thinks of herself as an empty shell lying at the bottom of the deepest of oceans.

Once during this tortured night she sits bolt upright in her bed, her gown falling from her shoulders. She will dress! She will tell him who these people are! Now! She can't wait. But presently she sinks back among her pillows. If she told him he would be sure to go through life with his shoulders drooping and with that perplexed look in his eyes. No, it wouldn't do, it wouldn't do. He must find it out for himself. He himself must discover them. How? She knows not. When? She cannot answer. But he must discover things for himself.

Again she listens, hoping for some sign from heaven. But there is none. The angels are sleeping. She places her head in the elbow of her arm.

"No—I couldn't do that. I don't want to be an empty shell. I want to sail like the nautilus over the surface to the end of the wide ocean, then—then with all imperfections left behind to sail on and on—together."

Dawn reaches in with its slender finger and closes the little matron's soft gray eyes.

XIII

EASTER came in the April of this year, so it will be remembered; and on Good Friday, the date set by Max Norton, three distinguished scholars met in the dingy office of Thomas A. Mudgett. The culminating event of the great linguistic experiment was about to take place. Mudgett was arrayed in his Prince Albert, a stiff shirt and high winged collar. He had strutted about all morning in this regalia, giving orders, repeating them, dominating the home. But now he was pulling his elongated left ear, clearing his throat, and gulping in an effort to explain the magnitude of his experiment. Almost incoherent, he was botching it terribly. Norton, at the desk assiduously making notes, turned and shot old Mudgett a glance. In lucid smooth periods Norton explained what Mudgett was trying to say. The three philologists listened politely. Now and again the bald-headed man sitting by the window crossed the other knee and pursed his lips, but he listened; now and again the large man near the desk shot his gray, parted beard a little farther out of his collar, but presently sank back in his chair and listened; occasionally the sallow young man by the door smiled and his eyelids twitched behind thick glasses, but still he listened. All were listening politely. It was clear, even to old Mudgett with his brain a hopeless muddle, that all three were agnostic to his evolutionary theory of language. They doubted the value of his experiment, doubted him, his angels, heaven itself. Agnostics. Finally he could stand it no longer.

"I got it in the book!" He rose up and broke in upon the smooth dissertation of Norton. "I got it in that book—there!" He hung over them, shadowy, vulturelike. "I say now, you don't believe it, but I [illegible] it in a book—written down." He [illegible] over to the desk. "It's in here." He [illegible] the book on a table and opened it. "H[illegible]dreds, four hundred and thirty sounds [illegible] combinations of sounds. I got the [illegible] they use again and again. And the [illegible] meaning back of them. A language. [illegible] language. The first language. I can [illegible] it. I can talk it, and they can [illegible] It's their language. They understand [illegible] other; not everything, but enough—[illegible] everything. And I can understand [illegible] You may laugh ——" He straighten[illegible] up, faced them defiantly. No one was laugh[illegible]ing. "I say now, I'm not a scholar; I understand them. I don't know G[illegible] or Sanskrit; but I've taken down [illegible] sounds they make and written down [illegible] they mean and traced these sounds [illegible] into the common everyday words [illegible] body uses right here in America to[illegible] Language came from this, and Greek [illegible] from it, Sanskrit, Latin, all the langu[illegible] You don't believe it? I'm going to [illegible] it! They've never heard a human [illegible] not a single word. But you're go[illegible] hear them talk—say things, under[illegible] each other. You can take notes, an[illegible] phonographs will take notes too; [illegible] we'll come back to this book and [illegible] see for yourself. That's all. I'm go[illegible] take you up there to hear for yourself [illegible] original language. I'm going to tal[illegible] now, right now. I'm not going to wa[illegible] longer. Right now. That's all."

"Not quite all," put in Norton. "[illegible] experiment is even more interesting [illegible] tlemen. To-day," he told them im[illegible]sively—"to-day for the first time in [illegible] lives these children are going to h[illegible] voice and see a face other than their [illegible] They are going to see a woman, and [illegible] fitting, a beautiful woman. You [illegible] witness their reaction. Careful [illegible] graphic records will be taken of [illegible] sounds they make when she enters. [illegible] have given names to everything [illegible] them—everything they have ever [illegible] You may quite properly ask yourself [illegible] will be their name for woman? The[illegible] in the original language, for woman [illegible] this woman? We shall see. Mme [illegible] will be here in a few moments. Pr[illegible] you have heard of her—for she is, [illegible] men, concededly the most beautiful [illegible] in America. I shall wait here and [illegible] to the fourth floor."

Mudgett led the way; the three [illegible] gists followed, discussing learnedly [illegible] tones a certain brand of pipe to[illegible] Reaching the fourth floor, however, [illegible] became interested in the scientific a[illegible]ment and apparatus of the anteroo[illegible] when they placed the receivers to [illegible] ears and their eyes to the miniature [illegible] holes all three became absorbed. [illegible] would not?

The babies had but recently wa[illegible] from their nap. It was modified [illegible] Ya-he, the African giant, and Ca[illegible] the White Crow, were having a wr[illegible] match in the far corner over a st[illegible] empty spools. They were grunting [illegible] other angrily. La-la was looking on [illegible] to pull Caw-caw's hair when the [illegible] presented itself. Yo-o was laughing [illegible] Dove, seated beneath a window, was [illegible] ing to a rag doll. The two others [illegible] were still in their cribs.

Miss Bax, trim and efficient, with [illegible] veil and gray-blue uniform, was ob[illegible] of the four pairs of eyes watching h[illegible] anteroom. Quietly she went about [illegible] duties—making up the cribs, dress[illegible] babies, putting them on the floor t[illegible] Her thoughts were not of the phil[illegible] at all. She was thinking of the wo[illegible] nay, was it not a serpent that soug[illegible] enter this Paradise so carefully [illegible] from all the world? Her mind [illegible] natural digression. What would Flo[illegible] Saxton wear? Diamonds? Cloth o[illegible] Something equally gaudy, she decid[illegible]

The babies having been [illegible] clothed, Miss Bax threw wide the [illegible] windows, converting the room [illegible] was quite as airy and healthful as [illegible] tected porch. She stood there for [illegible] ment gazing across at the new fre[illegible] home, slowly nearing completion. [illegible] afternoon and the laborers were [illegible] noisiest—good-naturedly shouting [illegible] shocking profanity from the roof [illegible] sidewalk. The little matron decided [illegible] best to close the windows on this [illegible] days. Having done so, all was in re[illegible] for the climax of the great exp[illegible] Miss Bax stood motionless for a [illegible]

THESE times when most of us have to make every dollar go further than it ever did before—

These days when every home-keeper expects and demands one-hundred-cents-worth of value for every dollar she spends—

These are the days in which these attractive, modern, inexpensive Bird's Neponset Rugs come into their own—

Because they enable any woman who has pride in herself and her surroundings to keep her home, and every room in it, as spic and span, as bright and clean and nice looking as though she had double the price of these 1922 model rugs to put into floor coverings.

For every room in many homes
For many rooms in every home

And the time and energy saved in keeping them clean, always! Stainproof, spotproof. Should anything spill on them, a damp cloth removes it instantly.

No strong-arm exercises. No heavy sweeping. No lifting. No beating. No vacuum cleaning. Once lightly over with a damp mop and your rug is immaculate again.

But, although it is yours any day, every day, at bargain prices, a Bird's Neponset Rug is never cheap looking. It is always *good* looking. It has no disagreeable tricks of rolling up at the corners or wrinkling when you move the furniture. No tacks are needed to make it lie smooth and flat all over.

Waterproofed, both sides, and all the way through, these rugs do not rot. Their life is surprisingly long. They wear amazingly.

The makers of Bird's Neponset Rugs are the originators of felt-base printed floor covering. See these splendid, economical, sanitary and durable rugs in their many patterns and colors at your department store or house furnishing dealer's.

When it's Shortcake-time

RICH, pure milk from the country—evaporated to the consistency of cream and sterilized—that is Carnation Milk. Use it for all cooking because of its economy and great convenience; use it for drinking, serve it with coffee, pour it over fruits, cereals and desserts because it is so pure and delicious. When you add an equal part of water to Carnation you get milk of more than normal richness. If still too rich add more water. Send today for the Carnation Cook Book, it contains 100 tested recipes.

CARNATION MILK PRODUCTS COMPANY, 632 Consumers Building, CHICAGO; 732 Stuart Building, SEATTLE

Strawberry Shortcake—1 teaspoon salt, 2 cups flour, 4 teaspoons baking powder, ¼ cup butter, ½ cup water, ½ cup Carnation Milk, 1 tablespoon sugar. Sift flour, salt, sugar and baking powder together; cut in butter; add the liquid gradually. Toss on floured board and shape. Bake in a hot oven. Split and spread with butter. Sweeten strawberries to taste; put between layers. Use largest berries whole for top; garnish with whipped Carnation.

y had entered heaven. This
nced by the rushing here and
angels—their small bare feet
the cloudlike flooring. Heaven
moil. Miss Bax held the re-
listlessly. She could visualize
what they were doing, where
imilar scenes had been enacted
before when something had startled them—a few howls, and the scurrying of bare feet and bare knees.

Now they were silent. All of them. Not a sound. She could visualize their wide eyes and gaping mouths as they crowded together for mutual protection against the wall, near the cribs. She wondered if the phonographs had recorded the frightened howls.

La-la began to cry.

Goo began to cry.

All the angels in sympathy began to cry.

"Kiddies ——" The voice of Flora May rose above the din. "Kiddies ——" There was shocked silence, breathlessness. Flora May laughed. "Kiddies, what is your name for me? You mustn't be frightened. What is your name for Flora May?"

Caw-caw, the White Crow, the offspring of vikings, let loose an ear-splitting wail. And all the angels in sympathy began to wail.

"But, kiddies! Kiddies!"

Silence.

"You mustn't cry like that. I'm just a woman."

La-la and Yo-o howled in unison.

Miss Bax smiled. Then the smile left her eyes—suddenly.

"You're awful!" came the exasperated voice of the Saxton woman. But it was not this that caused Miss Bax to clutch the listening instrument so tightly to her ear. She had detected amid that babble an unusual sound, a combination of sounds, a word. She could have shrieked aloud, "Take her out of there!" She whispered, "Oh! Oh! It's terrible! It's —— If they stop their howling everyone will hear it—the philologists, the phonographs! Oh! Oh! Oh!"

"Kiddies"—again the voice of the Saxton woman had risen above the babble, again there was silence—"what is your name for Flora?"

A soft angel voice answered before the question was completed. "Ell," said Ya-he, the Black Angel, trying out a word, "ell—ell—ell—ell—ell—elloun—elloun—elloun."

Caw-caw made it a duologue and got the "h." "Hellhoun'—hellhoun'—hellhoun'."

And all the angels took up the cry in sympathy.

Miss Bax dropped the instrument, rushed from her room, along the hall, into the antechamber. The bald-headed philologist was shaking with mirth, the bewhiskered one was chuckling, the sallow youth was taking notes. Poor old Mudgett with his Tower of Babel falling about his elongated ears was groaning, "I say now! I say now!" Norton, vying with the angels, was vilifying the phonographs in his frantic effort to get them turned off.

It was too horrible! The little matron hardly paused. She burst into heaven. Chaos. Pandemonium. All heaven was vilifying the woman. The angels were swearing like parrots. The Saxton woman in her bewildered desperation made a grab for one of the flying babies. She caught the little Dove. "You! You little ——"

Miss Bax ran to the child, stood over the woman.

"You mustn't! Don't you dare!"

But her threat was unnecessary. Some mysterious thing more potent than the little matron had laid a restraining hand upon the woman. She stooped over the Dove, transfixed; a drawn expression, almost a grimace, came over her lovely face. She loosened her hold on the child, staggered to her feet and groped for the door. The little matron led her gently to the anteroom, where Norton, now grimly silent, took her in charge. Mudgett had followed the philologists to the stairway, expostulating, "I say now! I say now!"

Miss Bax reëntered the front room. She closed the door. She was alone with the babies, her babies. "Mine!" She held out her arms to them and they came running to her, clung to her skirts. She got on her knees among them, and they smothered her, sobbing and wailing. "Mine!" She was no longer mute. The pent-up love of months came to her lips in words and to her eyes in tears. "My babies! Mine!"

It was dusk before the little matron could quiet them and get them into their cribs. She leaned over each in turn. First there was Ya-he, then La-la, then Goo. To each she gave its first kiss. They laughed. They thought it very amusing indeed—to be kissed. They had never been kissed before. They laughed and imitated the noise with their lips. Next there was the giant, Caw-caw, who thought it funnier than all the rest. He laughed even louder than Ya-he. Then came Gar-r-r, the Merchant Prince; then the Dove.

Over the sixth crib she leaned for a long, long while. The Dove was silent, looking up at the little matron. Miss Bax studied the large lovely eyes of the Dove—like emerald sunlight coming down through the leaves of young trees. "I wonder—I wonder ——" And presently she said, "You are going to be mine. I'm going to adopt you."

As she straightened, a curious object came into her vision—a gaunt, shadowy man standing silently by the door in the dusk. Poor old Mudgett! His shoulders were drooping. He seemed wholly befogged.

"I—I'm going to adopt her," whispered the little matron.

Mudgett gazed through the gloom, and he shook his great shaggy head. "No. I say now, Miss Saxton's down in the office—crying. She wants her."

"She can't have her!" said the little matron.

"Crying," repeated Mudgett. "This heaven has done something to her—to me—to all of us. It's changed her. I can't tell you what she told me. I say now, she told me everything."

"She can't have her! She can't have her! She tried to use you, these babies, heaven itself ——"

"That was Norton," said Mudgett. "She couldn't tell him—not till just now. When she first came to the home something drew her here. She couldn't stay away any longer. She thought her own baby was here—and it was."

"She can't have her! She can't have her! She can't have her!"

"Listen!" said Mudgett. He moved through the dusk and leaned over the sixth crib. "Listen!"

From the Dove was coming a lovely liquid sound: "Goo—goo."

"What does it mean?" asked the little matron.

"It is the first thing that every baby says. It means," replied Mudgett hoarsely, "it means, 'God—is—good.'"

Silence. Dusk. And the silence was broken by the sob of the little matron. "I want her. I—I want her."

Poor old befogged Mudgett! "I say now," he faltered, "why don't you have some babies of your own?"

"Mr. Mudgett!"

"I say now—I mean—why don't we—we—have some of our own!"

And heaven was atop the foundling home—fourth floor front.

exclaimed Lady Hunter

"Everyone," said Mrs. Drelincourt slyly, "needs a little sense of humor."

She looked at Lady Hunter's hat and at the deplorable pictures of the twins. She began to laugh cruelly. "Ha, ha, ha! Forgive m-m-me! I simply c-c-can't help—ha, ha, ha!"

"Knowing," said Arthur, trying to follow up his little advantage—"knowing—er—no one would want to—er—meet the other—er—when you all kept coming, I—I—had to devise some means straightaway of keeping you all apart."

"Man's a fool of a liar!" murmured Cyril, wringing his hands. Tact was now nowhere.

Before Arthur could stumble on, however, the Hunters' cook appeared in the doorway, dim but definite in the waning twilight.

She, too, had left the flower show, and toiled, by heaven knows what route of lanes and short cuts and stiles and thorny hedges, to Arthur. She had arrived late, owing to having traveled entirely under her own steam; but she was there.

IX

"OH, HELP!" said Arthur.

The cook was dreadfully taken aback on beholding the assembled company.

"Ow!" she exclaimed.

Lady Hunter rose wearily, and lorgnetted the female through the gathering gloom.

"Cook!" she breathed.

"Come in, cook!" cried Arthur wildly.

Family Size—
Holds a Full Gallon!

Haven't you often longed for a thermal bottle **big enough** to supply hot coffee, iced tea or lemonade for the whole party? On your next motor trip or outing take an **Aladdin Thermalware Jar.** Its one gallon capacity holds eight times as much as the ordinary pint thermal bottle—16 cups.

Or you can pack it with **8 pounds of food.** Four inch opening admits big pieces of fried chicken, potato salad, meat, or other foods. Keeps ice cream firm and fresh for hours.

Sanitary, because easily cleaned. Insulated sanitary glass stopper instead of cork. Beautifully silvered heavy glass insulated container **sealed** to steel jacket by patent Thermalseure seal. Unusually sturdy—stands rough usage.

You'll Want This New Thermalware Dish

Serve Meals Hot Now

Prepare soups, stews, vegetables, puddings, desserts, griddle cakes in advance and serve **piping hot** at meal time and keep them hot during the entire meal.

Bake or cook food in insert, place it hot in insulator (outer receptacle) and put on insulated cover. **Instantly sealed by vacuum.** Released by touch of air-vent valve. Silver, Nickel or Copper. Ask your dealer to demonstrate.

Ask for Aladdin Thermalware Jars and Dishes at leading Department, Drug, Hardware, Jewelry, Sporting Goods and Auto Accessory Stores.

Fry Guarantee Visible Pump

Cyril looked at him, appalled.

"Thank you, Mr. Arthur," replied cook coyly; and she stepped in.

"And sit down!" added Arthur with sudden determination, for it was revealed to him that if it had to come, really it were better that it all came at once.

"Ow! Thank you, Mr. Arthur!" murmured the cook more coyly yet.

She crossed the room, followed by the eyes of everyone present. She was still breathing hard after her arduous journey, for she was most generously built. Nature had, in fact, endowed her with far more than any sane woman could wish for.

"She cannot sit!" said Lady Hunter, outraged.

"Oh, how distressin'!" Cyril murmured sympathetically.

"She can and will sit just like other people," said Arthur. "Sit, cook."

"Ow! Thank you, Mr. Arthur," repeated cook.

She took a little chair against the wall, from which resting place she glanced blissfully round her.

"It's a nice solid little 'ome, isn't it?" said she.

Lady Hunter groaned angrily.

"Dear lady," whispered Cyril, soothing her, "democracy! Democracy! It's the only thing you'll ever get Sir William into Parliament on."

Before Lady Hunter could reply the door from the kitchen opened very quietly, and in came little Parks, in her ulster, carrying her things. For a moment, so unobtrusively had she entered, no one saw her save Arthur. Then Gwen caught sight of her retiring figure.

Gwen stood up and pointed. The others looked. There was a tense silence.

"Cy-ril!" said Lady Hunter, turning to him.

"No," said Cyril, nearly pettish by now, "I can do nothing."

There was an appalling pause, all eyes straining upon little Parks, who stood very quiet and demure. People tried to s things; began, and stopped.

Cyril sighed. "No," he mused, "I do not know how—he—does—g

"I don't do it," growled Arthur

He kept looking towards Parks, smiling a very little. He could gleam of just two little front teeth by her parted lips.

"Demand an explanation!" Drelincourt quite faintly to Lady

"Cyril!" cried Lady Hunter.

He sidled away. "No, dear he, really firmly: "no, I can do My *savoir faire* is at fault."

Then Arthur spoke very sturdily he tugged at his collar a bit as more air.

"I think you've all met Miss Parks will kindly give us tea."

"Oh, if you please, Mr. Nethery Parks, gasping a little. "I'm g you I was going!"

"You shan't go," said Arthur "Didn't you promise to help me

All stared through the dusk at Arthur.

"Do you need me, then, Mr. asked she slowly.

"'Course I need you!" said gruffly. "Drop that thing!"

She put the holdall on the one saw her smile.

Lady Hunter recovered spoke in a staccato voice:

"Parks!"

"Miss Parks," said Arthur

Little Parks smiled.

It was then that Cyril finesse, and gave everyone a the cook, who sat in a highly petrified state upon the little

"I came here to save you, Mr. Arthur," said she very softly and soothingly.

"Tell!" uttered Mrs. Drelincourt.

"Tell!" "Tell!" urged Angela and Gwen, storming against each other.

"Tell!" shrieked Lady Hunter.

"Tell, me love!" said cook sublimely, rocking on the little chair.

Arthur tried to say "No! no!" but couldn't.

"Shall I begin at the beginning?" little Parks was heard to inquire very meekly.

"No, the end," said Lady Hunter.

"Begin just where you like, dear," murmured Mrs. Drelincourt.

"Thank you, dear," replied Parks.

Mrs. Drelincourt drew herself up, while the dusk hid Cyril's smile of appreciation. He was so seldom allowed to enjoy things like this.

"And don't—don't hurry," begged Arthur hoarsely.

"And don't let anyone flurry you," advised Angela, looking daggers, first at Mrs. Drelincourt, then at Gwen.

"No, Miss Harmony," said little Parks very peacefully; "no one shall flurry me."

Lady Hunter subsided again on the sofa, lorgnette on the narrator. The twins and Mrs. Drelincourt were poised tensely. How jealously Cyril watched Angela!

Parks sat domestically before the tea tray. "Last night, about seven ——" she began.

"Yes. Yes-s-s!" hissed Lady Hunter.

"Yes?" nodded Mrs. Drelincourt.

"Yes-s-s?" whispered Angela and Gwen.

"Yes?" said Arthur, frozen to the marrow.

"Yes?" encouraged Cyril.

Parks paused for a little while. She really had not prepared herself for this emergency; but she trusted to meet it somehow as the tale unfolded. If the worst came to the worst, she was absolutely and actually capable of telling the truth; but, naturally, she hoped for no such necessity.

"Last night, about seven," she began again, "Mr. Steers said to me, 'It's a full moon to-night, and there's bound to be goings on.'"

"Really!" said Lady Hunter, starting.

"And I said to Mr. Steers," the simple girl continued modestly, "I said, 'Don't you envy them?' And he said to me, 'Thank heavens, in some matters there is no class distinction.'"

"True," said Lady Hunter with pleasant patronage, after the pause had become marked. "Love is for all."

Little Parks looked around rather dreamily. Everyone manifested impatience.

"After dinner," she continued thoughtfully, "the ladies went out into the garden, Mr. Netherby following later."

"Go on!" cried Gwen, nodding.

"Cook came up to me in the kitchen window," continued Parks.

The cook drooped her head a trifle and might have been seen to smile.

Here little Parks spoke more dramatically. "'There he goes,' she says to me. 'A beautiful figure he's got, hasn't he? He's Australian.'"

Arthur writhed.

A low simper broke from the cook, and Lady Hunter instantly lorgnetted her.

"We heard the ladies coo-eeing," added Parks.

She paused again to consider the end of her tale.

"And then?" queried Lady Hunter tensely.

"Cook lost the cat," replied Parks in great simplicity.

Lady Hunter nodded and glanced round. The tale hung together. It was veracious. She remembered the cat.

"Yes-s-s?" she whispered. "And then?"

"Cook went into the garden, too," said Parks.

Arthur made weak signs for her to stop, but she continued to answer the questions put to her.

"Why?" gasped Lady Hunter.

"To find the cat," replied Parks in great simplicity.

Lady Hunter sighed and hit the floor with her toes. "And then?"

"I had to bring in the rugs and cushions from the hammocks," answered Parks.

"Yes?" gasped Lady Hunter.

"So I went into the garden," murmured Parks. *(Continued on Page 92)*

"Nothing but a Topkis can satisfy me on fit"

"IF I never did anything more strenuous than walk to the office and sit at a desk all day I might be fairly comfortable in most any union suit.

"But when I'm sprinting across a tennis court, or jumping after a fast, high one—my arm stretched to the limit of my reach—I'm glad plus glad that I'm wearing Topkis.

"Not a pinch nor a pull—anywhere—no matter how hard a game I play. Why, I don't believe I'd have had the chance to brag about this cup to you if it weren't for Topkis.

"Talk about limb-freedom! That's Topkis all over! Hangs loose and easy—hardly touches my body at all. No clumsy belt. Roomy armholes. Extra wide, extra long legs that never creep up. Crotch doesn't bind or gape.

"Best of all, Topkis lets my skin breathe. Keeps me fresh as a daisy. Wears and wears, too, —and the buttons stay on. Dollar Topkis is what I call real value."

* * *

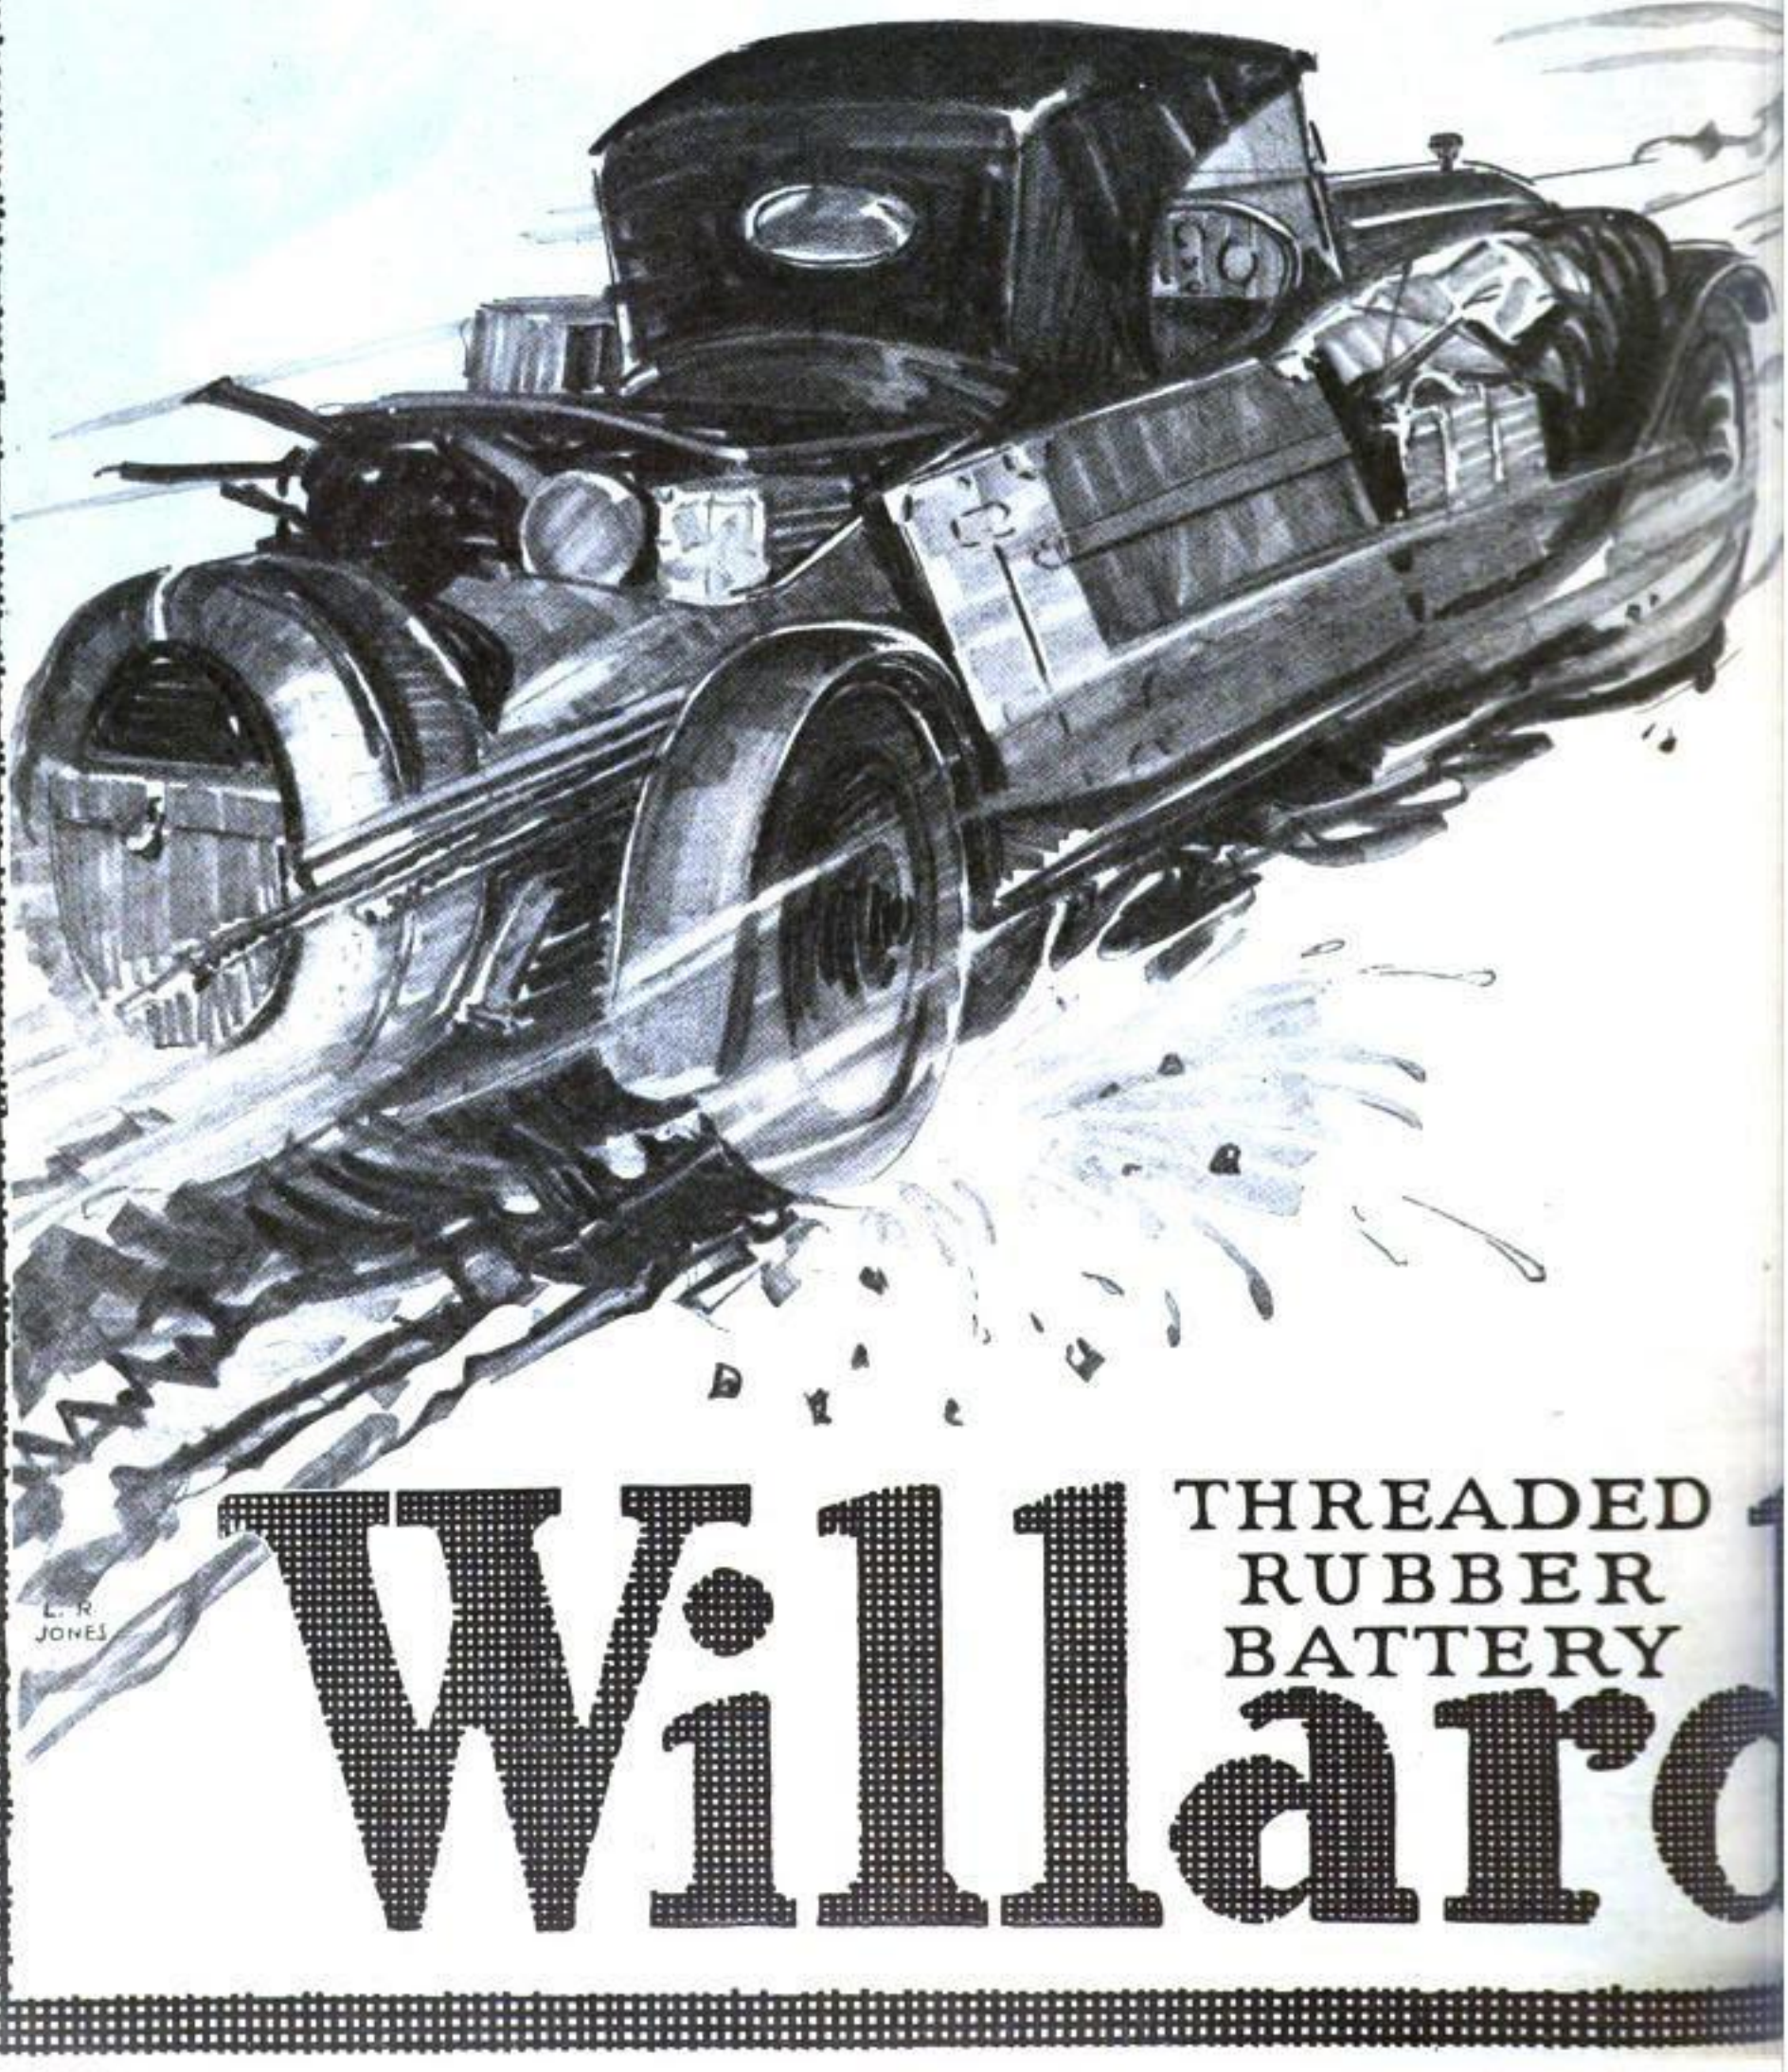
Topkis Athletic Underwear is made of best nainsook and other high-grade, sturdy fabrics. Full size guaranteed; and pre-shrunk to *hold* that size. But get *your* size—38 if you wear a 38 coat, and so on.

No reliable dealer will ask more than a dollar for the Topkis Men's Union Suit—although many will tell you it's *worth* more.

Men's Union Suits, $1.00.

Men's Shirts and Drawers, 75c per garment. 75c for Boys' Union Suits, Girls' Bloomer Union Suits, and Children's Waist Union Suits.

Ask your dealer for TOPKIS Underwear. Look for the Topkis label.



New booklet, "Comfort from Neck to Knee," is full of underwear facts. Write for free copy.

A Tough Battery for Rough Trips

THREADED RUBBER BATTERY

Willard

Digitized by Google

MANY hundreds of thousands of car owners have found the Willard Threaded Rubber Battery to be *tough, powerful* and *durable.* They choose it not only because of the patented rubber-and-thread construction of its insulation but also because the name Willard means to them the best possible assurance of honest quality and conscientious service!

Some owners, faced with an unexpected repair bill or the cost of a new battery, forget the hard lessons they have learned; they buy too cheaply, or take chances on batteries whose reliability is none too well established.

The wiser plan, however, is to follow the example of the 195 car and truck manufacturers who buy batteries unswayed by anything but tested and proven facts, and who pay an additional price for Willard Batteries *with tough Threaded Rubber Insulation between tough Willard plates.*

20 Things that Try the Toughness of a Battery

1. Hard, fast driving
2. Rough roads
3. Mud and dust
4. Infrequent testing
5. Lack of water
6. Long tours
7. Much stopping and starting
8. Cold weather
9. Hot weather
10. Poor carburation
11. Stiff oil
12. Tight motor bearings
13. Short circuits
14. Loose connections
15. Generator out of adjustment
16. Generator worn or dirty
17. Distributor worn or dirty
18. Excessive use of lights
19. Loose hold-downs
20. Electrical devices added beyond capacity of battery

This is the
"Neglected Inch"
—the inch between the furniture and the floor

How much annoyance in your office-day is caused by the "Neglected Inch"?

YOUR office has many "Neglected Inches" which daily cause you and your employees trouble and inconvenience.

"Drat that chair," you say, as you shove from the desk. But it's not the chair; it's the "Neglected Inch"—the casters. They are refusing to swivel and must be pushed broadside across the floor.

You lean back, lifting the chair legs off the floor. A caster falls out. Then another wasted minute, another thought is interrupted as you replace it.

The "Neglected Inch" can be an inch of convenience, rather than annoyance, an inch of protection rather than one which damages your floors, rugs and the furniture itself. All you need is the right kind of casters for your particular furniture and floors.

Bassick Casters swivel and turn easily, freely, and quietly; their fibre bearing sockets insure that.

Bassick Casters do not fall out.

For every piece of furniture in your office and home, there are the proper Bassick Casters.

Ask your dealer or write us for descriptive leaflet.

BASSICK Casters

THE BASSICK COMPANY
Bridgeport, Conn.

For thirty years the leading makers of high grade casters for the home, office, hospital, warehouse, and factory.

(Continued from Page 89)

Then Arthur suddenly drew himself erect, and stood away from the supporting mantelpiece. His hands had been clutched in the pockets of his ruined coat, but now he withdrew them. In one he held a telegram. He tore it open and took one look.

"Hi!" he roared. "Stop!"

The attention of everyone in the room was diverted instantly and completely to Arthur.

He brandished the telegram.

"Thank heaven," he said loudly, "that I opened this in time! It came an hour ago, but I ——"

He gazed round at all their startled faces. Little Parks' face was as wholly startled as the others.

"Thank heaven," said he devoutly—"thank heaven that no one's involved yet but myself!"

"What is it?" queried Lady Hunter.

"Has anything really happened, old man?" Cyril inquired tactfully.

Unnoticed by everyone little Parks rose, distraught, her hands clasped on her breast.

"Has anything happened!" repeated Arthur sardonically.

"Oh, please, Mr. Arthur," cried Parks chokily, "what's the matter?"

"I—I ought to know," said Mrs. Drelincourt, turning her back pointedly on the twins.

"I've had news from Australia," said Arthur.

As he said this he crumpled the telegram and pushed it back into his pocket. He seemed to do it unconsciously.

He continued, "As I said, this came a while ago, but I was so—so busy—so preoccupied—that I didn't open it. Now I have opened it I—I certainly feel you"—he looked at Mrs. Drelincourt, and from her vaguely to the twins—"you have a right to know." He took a deep breath. "I'm ruined."

A rustling pause fell upon the room.

"Ruined?" repeated Lady Hunter.

"Dear, dear Mr. Netherby," said Mrs. Drelincourt with much hesitation, "please—please—explain."

Arthur explained with a truly admirable fortitude in such calamitous circumstances. No one could do other than esteem him.

Little Parks sat down unobtrusively again in her seat behind the tea tray. No one now noticed her. She had lost her recent brief popularity.

"All my sheep," said Arthur, "have had foot rot; I doubt if they'll save half of 'em. I doubt if they'll save a quarter. There seems, also, to have been a bush fire which—er—spread to some new property I'd bought."

Preliminary sounds of grief were already heard from cook in her little chair.

"And to crown all," said Arthur somberly, "my mine's flooded."

"Ow! Ow! Dear!" said cook, crying.

It was quite interesting to observe how promptly the situation began obviously to present itself as one of great delicacy from which everyone must try to extricate herself in a nice way. This feeling began to run over the room in sympathetic air waves.

"Things seem complete, old man," said Cyril. "Complete."

"Yes," said Arthur; "I don't see that there's anything to add. But if you think there is I'll add it."

"Oh, there's nothing—nothing—to be said, my poor boy," said Lady Hunter agitatedly. For a few moments she had been stunned into utter speechlessness. "You must come and see Uncle William, and talk it over. But oh, dear! Oh, dear! I hate these come-downs when the family has only just got up! Really, it's terrible—terrible! Complete, as Cyril says. Oh, dear! Oh, dear! I can't think what to do or say."

"It's like the book of Job," cried the cook, weeping.

"I haven't a solitary bean," said Arthur, looking stealthily around him, and getting the strength back into his knees.

There was, very suddenly, a sound in the room—a rustle, a wave of impending departures.

"This is too terrible!" Lady Hunter was wailing; and Mrs. Drelincourt was sighing, "Oh! it's all too—awfully—sad!" And they were all drawing on their gloves. Mrs. Drelincourt began; and then Gwen, observing her, did likewise; and Angela, who throughout the imbroglio had kept step for step in her turn, followed suit. There seemed to be a kind of feeling that whoever had her gloves on last would have to stay longest, and everyone made haste.

"Buck up, darling," said [illegible] dulcet tones to Gwen. "After [illegible] young and strong ——"

Gwen turned on her swiftly.

"I was never as strong as [illegible] cried.

"As one engaged girl to an[illegible] said Angela gently.

"Engaged?" cried Gwen.

Angela smiled at Cyril, and [illegible] stood by her gladly.

"Yes!" he cried, "to me!"

He rolled an eye round a[illegible] ingly in Lady Hunter's direc[illegible] deed she appeared devastat[illegible] thing had to be.

"Cy-ril!" said Lady Hunter[illegible]

Her emotion was covered [illegible] tinuing to Gwen: "You are [illegible] engaged ages, my dear. And [illegible] must try to cheer up Arthur."

"I don't know what you [illegible]" Gwen. "It's Mrs. Drelincourt [illegible] gaged to Arthur."

"My dear little girl," said Mrs. [illegible] court in a cool voice, "what a [illegible] take! I've been longing for [illegible] when I could congratulate [illegible]

In spite of the awful [illegible] ceived, and the blight it [illegible] Lady Hunter clung to Cyril [illegible] gency. She wished above all [illegible] this situation.

"Oh, Cyril, Cyril!" she said [illegible] shall we all do?"

"Go home," said the youth [illegible]

For he was sorry for Arthur, [illegible] wanted his dinner, and, though the [illegible] full moon, the arbor in Lady [illegible] garden was dark, and he reckoned [illegible] got Angela now, stone cold.

When Arthur heard Cyril say [illegible] mopped his forehead relievedly.

"Yes," said Lady Hunter [illegible] "dear boy, we'll go. And, Angela, [illegible] must come and see Uncle William [illegible] morning." She embraced Angela. [illegible] I'm so upset!"

"Thank you, Aunt Jane," [illegible] Arthur.

Mrs. Drelincourt was at [illegible] touching his arm with a [illegible] "Good-by, Mr. Netherby," said [illegible] womanly feeling. "I'm so sorry [illegible] comforting words are so vain. I [illegible] your quaint homely house!"

She moved from him like a [illegible] and found herself by Parks. For a [illegible] they looked at each other. Then [illegible] Parks smiled reassuringly, laid [illegible] on her lips and nodded; and Mrs. [illegible] court passed on.

"Gwen's staying, Lady Hunter," [illegible] Angela.

"I'm not!" cried Gwen tearfully. [illegible] don't see why, just because I'm the [illegible] everything should be put upon me."

Angela ignored her selfish sister, [illegible] proached Arthur with a marvel[illegible] considering the awkward posi[illegible] which she had just saved herself.

"Good-by, Mr. Netherby," she [illegible] "Gwen's a selfish little thing, but [illegible] lieve how I feel for you." The [illegible] absolutely clung to his hand.

"Thank you," muttered Arthur.

Angela moved away, and a [illegible] later was looking cautiously at Parks, [illegible] rose, nodded, gave silent promise [illegible] crecy, and smiled most understandingly. She was a remarkable girl.

"Good-by," whispered Angela, [illegible] there's anything I can ever do for you."

"Thank you, Miss Harmon," [illegible] whispered back, "but you've already [illegible] helped me far more than you know."

Angela joined Mrs. Drelincourt [illegible] threshold. And the chauffeur [illegible] courtyard, seeing his party [illegible] started his engine and switched [illegible] lamps.

Gwen came, pouting, to Arthur. [illegible]

"I'm not selfish a bit, Mr. Netherby," [illegible] she whimpered. "I assure you, if [illegible] I, I wouldn't have left you as Julia [illegible] court is doing. Good-by, you poor [illegible] man! Good-by."

"Oh, thank you, thank you," [illegible] Arthur.

Gwen lingered by Parks. "[illegible] Parks," she whispered, and [illegible] ploring finger lightly on her lips [illegible] understood.

"Good-by, Miss Gwendolen," [illegible]

Cyril was still hovering in his [illegible] decided position between Lady Hunter [illegible] Angela, but suddenly Lady Hunter [illegible] claiming, "Good-by, my poor dear [illegible] rushed out, for her emotions had [illegible]

Value prices. Quality, rightly priced, is the present day demand. The buying world now insists upon the utmost value. The careful buyer, eager for a full return from each dollar spent, buys Certain-teed products. The millions saved by our enormous production, highly standardized and widely distributed by wasteless methods, insure notable quality stripped of needless costs. Quality, always obtainable at a high price, here comes within reach of the modest purse. But our achievement saves you nothing unless you desire economy intensely enough to ask for and demand Certain-teed products, and take no other.

an.

"No, she wouldn't!" she cried with a laugh that choked a bit. "You'd have this house; and"—her voice quickened—"she'd manage for you, and she'd make the best of everything; and never—waste—anything!"

An emotional pause followed during which she gazed dreamily before her at the tea tray, and Arthur gazed straight before him, at her. It's hardly necessary to say that Emily recovered first from this emotional quagmire.

She hurried on, with great ecstasy: "And the best of being poor is, your husband depends on you; he can't do without you. And you help him with everything. You've got to. And the children ——"

"Children?" repeated Arthur, starting.

"They depend on you, too," Parks murmured dreamily. "They've got to run to you all the time. If they hurt their little fingers it's mother they want, and mother's always there. That's where the work is; 'cause she's got work. No, I don't envy your rich woman!"

Arthur gazed at her with tremendous solemnity. Never in his life had he felt so solemn. For his mind had made itself up in spite of him to do an awful thing. He knew now that if he could only persuade or trap or lure or threaten this unsuspecting girl into the fell step he was going to marry her. He wished to marry her.

"When you're a poor man's wife," dreamed little Parks ecstatically, "you're just someone that can't be done without."

Arthur found he could no longer trust himself near her without betraying his feelings. The metamorphosis was as complete as it was staggering. Hardly had that iced cake hit him, such a short while ago, before the change had begun. He did not want to alarm her prematurely. He turned and walked cautiously to the hearth, whence he again surveyed her.

He really had never seen anything so nice in his life.

Emily rose tranquilly and pattered across to the old oil lamp that had served Arthur's family for two generations. She lighted it and adjusted the ancient shade very prettily. The parlor was now all in a soft glow. Arthur's heart was all in a glow, too, as he saw how sweetly she went about this domestic job, creating these entirely unconscious effects.

"But," she sighed, turning to look across at him as she stood beside the lamp, "I was only just—pretending. Besides, you're going back to Australia."

"Am I?" said Arthur feveredly.

Emily drew the red curtains across the window and shut out the evening gray. The parlor began to take on a nice air of soft privacy that it had not enjoyed a little while ago. Fixedly from the hearth Arthur watched her. He wished that he had had more practice. He saw how terribly innocent she was.

The stream of callers was not over yet, for almost at the moment that Emily Parks finished adjusting the red curtains over the window a stoutish figure with a dignified carriage came through the courtyard and rapped on the still-open door.

"Sir William sent you a little present with his compliments and sympathy, Mr. Arthur," said Steers; "and if there's anything he can do he will do it."

"Eh?" said Arthur, looking round at him malignantly. "Kind of him, I'm sure, Steers. Come in."

Steers came in, carrying a little hamper.

"For a minute," Arthur added.

Steers rolled an eye round at Parks as she stood beside the lamp and the red curtains; and the sight evidently distracted him.

"Sir William asked me what were the best thing he could do for you, Mr. Arthur," he went on after a pause, "and I says, 'Well, seeing the place he's gone to, send him something out of the larder to go on with, sir.' So a game pie and a couple o' dozen oysters, we having had a barrel down this morning ——"

"I'm going to look after Mr. Arthur," said Emily very quickly.

Steers looked from one to the other in silence, and caressed his chin. "That may be, Miss Parks, but something in the way of simple luxuries ——"

"I can manage 'em!" cried Emily in a thrilled voice.

"But why should you manage everything for me?" inquired Arthur in a very soft, swimmy one.

"B-b-because I'm not going to be beat by two Chinamen!" cried Emily.

BYERS PIPE

GENUINE WROUGHT IRON

At right—Magnolia Building, Dallas, Texas. Architect: Alfred C. Bossom, New York City. Byers Pipe installed in Plumbing, Heating and Refrigerating Systems.

Below—First National Bank Bldg., Jersey City, N. J. Architect: Alfred C. Bossom, New York City. Byers Pipe installed in Plumbing and Heating Systems.

How Big Investment Values are destroyed by pipe corrosion

One of the largest items of cost in a building, large or small, is the piping. Certainly it is also an item of greatest influence on cost of maintenance. Its relation to the very investment value of the building is therefore evident.

If the pipe used is lacking in rust-resistance, record-breaking replacement costs must, sooner or later, be faced.

Where piping is buried in walls and floors, the damage done to these is often greater than the cost of repairs to the pipe system itself. But even where the pipe is exposed and readily accessible, the cost of repairs and renewals is usually *ten times greater than the initial cost of the pipe which caused the failure.*

Study the diagram above! Note the items of cost in one pipe system, and the small extra cost of Byers pipe. Note also the fact that Byers pipe, being made from rust-resisting, genuine wrought iron, practically doubles the life of the system.

Byers Bulletin No. 38 contains Analyses of Items of Cost in a variety of pipe systems, with notes on replacement costs and corrosive conditions. Sent Free on request.

THE savage mountain tribes rolled huge boulders down on the invaders, but Hannibal only laughed. "Though the mountains topple upon us," he vowed, "our swords shall drink deep in Rome!"

The Value of Time

By Krónos

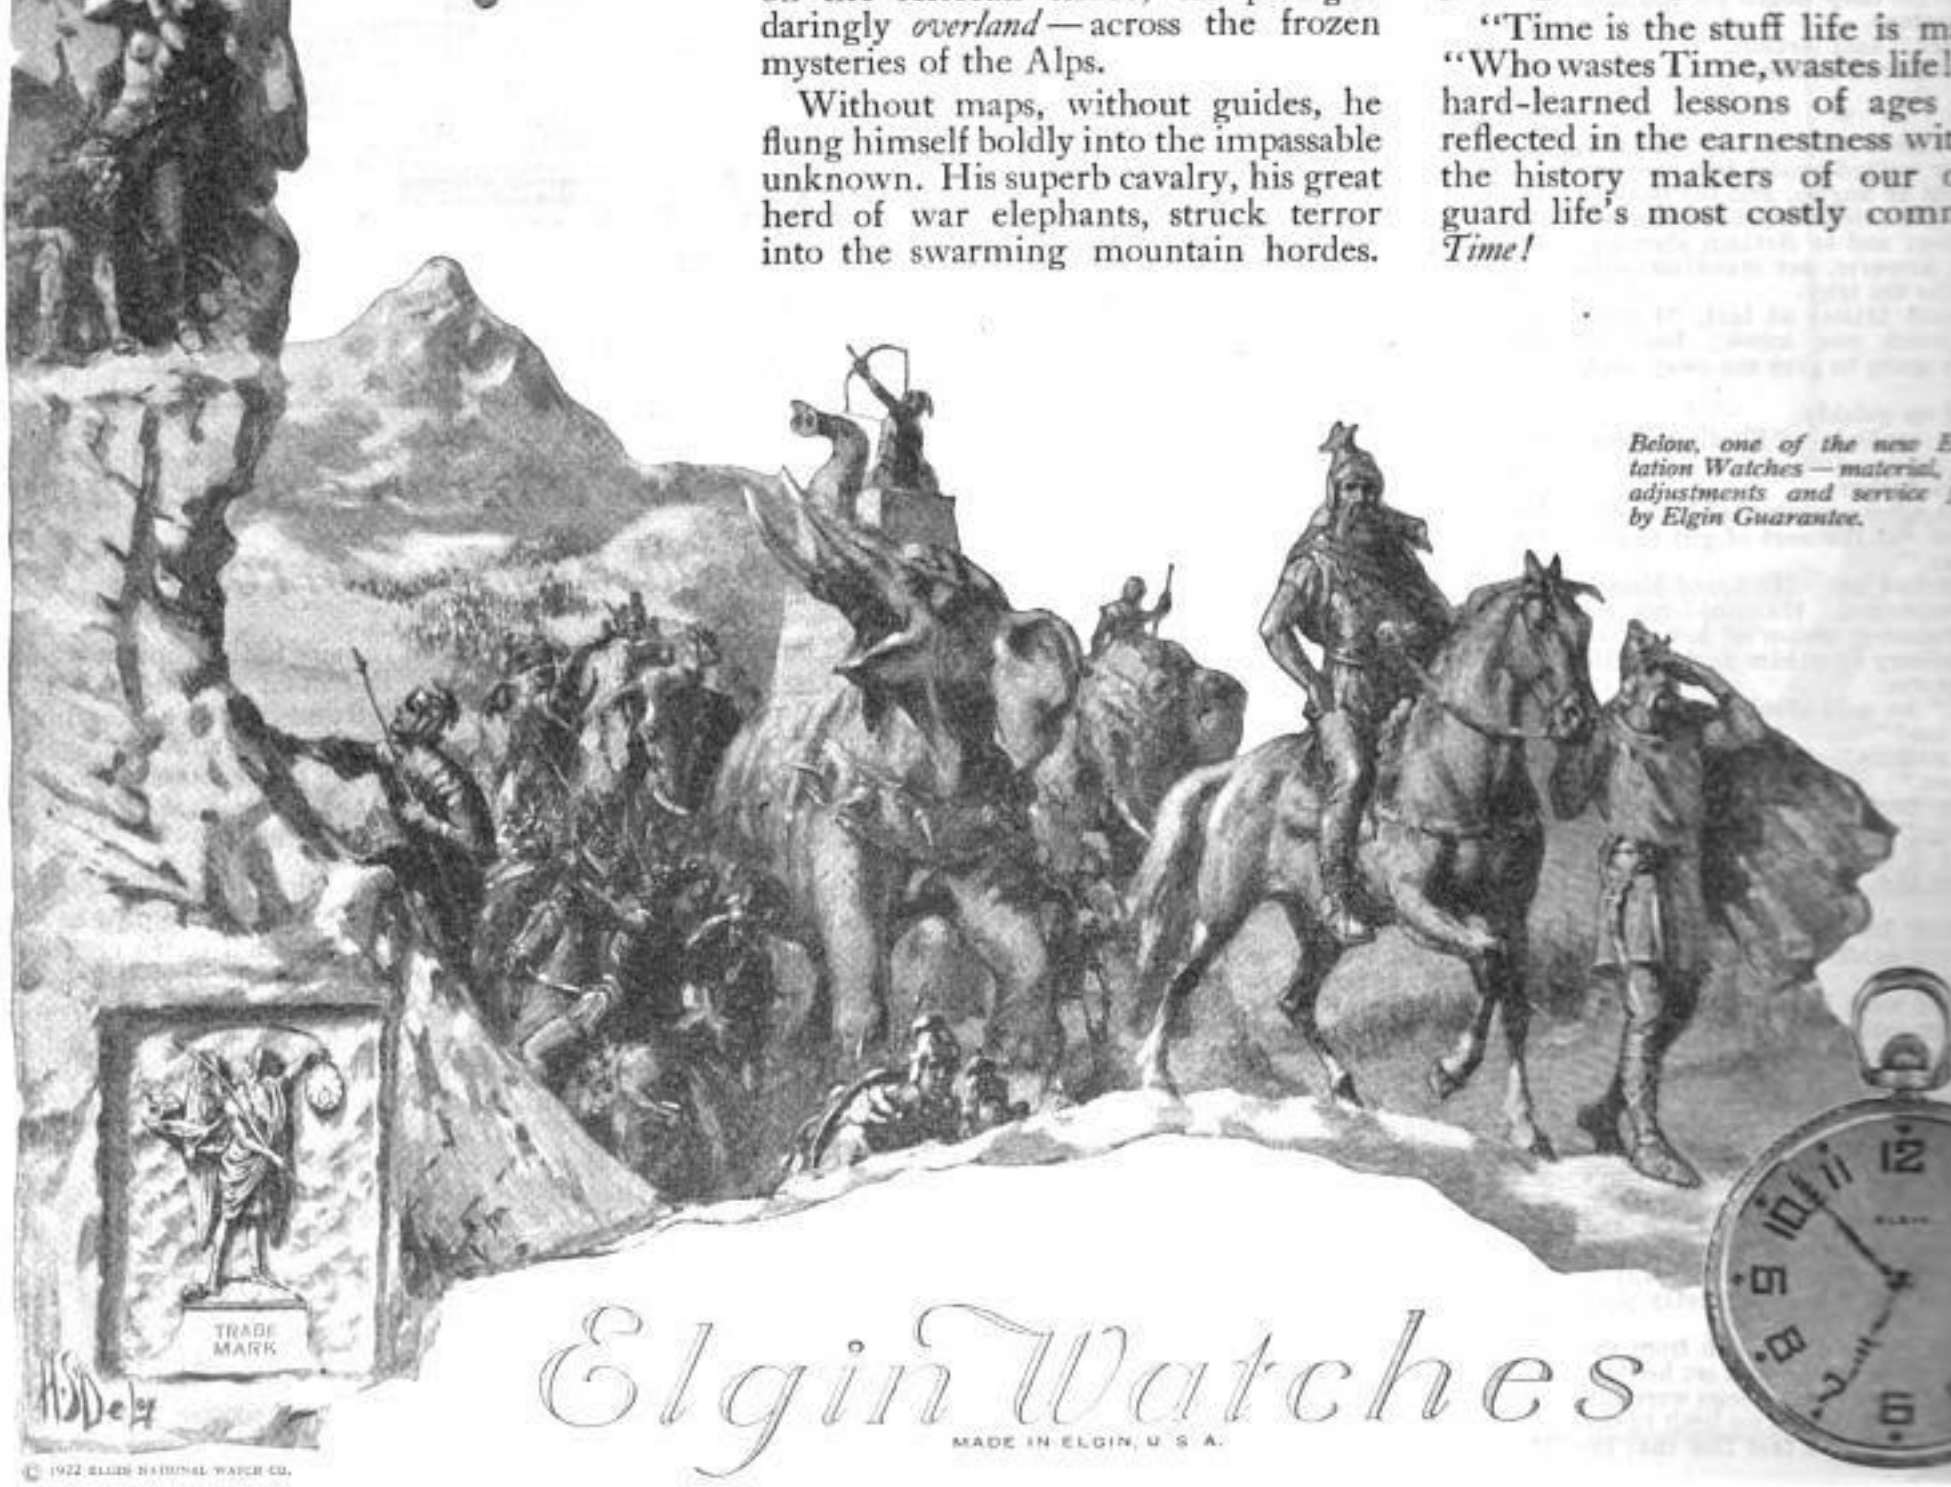
Paintings by HAROLD DeLAY

ACROSS THE ALPS rode Hannibal, thirsting for the blood of Rome.

History holds no more breathless adventure.

Hatred of Rome was this African warrior's earliest heritage. A century after Alexander flashed across the page of Time, young Hannibal—not yet in his teens—swore undying vengeance against the foe of Carthage.

At twenty-eight he was acclaimed commander of the Carthaginian army in Spain. Like a thunderbolt he struck. Instead of following the seaward route to the south, with its inevitable delays on the African shore, he plunged daringly *overland*—across the frozen mysteries of the Alps.



Without maps, without guides, he flung himself boldly into the impassable unknown. His superb cavalry, his great herd of war elephants, struck terror into the swarming mountain hordes. Nothing could stop him. He knew t power of preparedness, the strength surprise. He knew the Value of Ti "Beyond the Alps lies Italy!" thundered—and the world's proud empire staggered under his sled hammer blows.

* * *

The blood-soaked pages of Ha bal's bitter vendetta are covered w dust. Rome is but a memory. Yet *Value of Time* so vividly seen by C fucius, Plato, Alexander, Hannib by all makers of history—is impre more sharply on the race with e passing century.

"Time is the stuff life is made "Who wastes Time, wastes life!" T hard-learned lessons of ages past reflected in the earnestness with w the history makers of our own guard life's most costly commodi *Time!*

"I'm here to do everything for him!" cried little Parks, and she began to cry.

Arthur had heard her cry before, and it had not touched him. Now the phenomenon affected him with agonizing sensations. He was terribly distressed.

"Oh, for the Lord's sake, don't!" he groaned. "Or tell me what's the matter."

"N-nothing's the matter," sobbed Parks.

"Nothing!" groaned Arthur. "But you can't cry for nothing."

"They can, Mr. Arthur, they can!" said Steers delicately, interesting himself now in a sporting print.

"Something must be the matter," continued Arthur, imploring the enigmatic girl.

"Sometimes," Steers went on murmuring delicately, "they cry because they're so 'appy."

"Let me help!" said Arthur. "Tell me about it."

"They can't, sir," whispered Steers in the background; "they can't tell you."

"Oh, please!" said Arthur.

Little Parks shook her head.

"It may be her prize has upset her," whispered Steers.

Parks rose suddenly, controlling herself, and turned to the table.

"All this to clear and wash up!" said she vehemently, "and I sit and sit and sit!"

"Steers will do it," said Arthur, following her.

"No one but me will clear this table," she replied.

She piled the few remaining articles of crockery together and carried them into the kitchen, slamming the door behind her. Arthur stared after her in dismay.

"Women!" he was muttering in a lost voice. "They—they—they ——"

Steers approached him and stood near. A very human look illuminated his face.

"Don't take it to heart, Mr. Arthur," murmured he. "No offense meant. Pardon me."

Arthur mopped his brow.

"I'm not offended, Steers," he said sadly. "I dare say in some matters you're a wiser man than I."

"Oh, no, sir, no," said Steers, waving the deserved impeachment away out of sheer respect.

"Life's a problem, Steers," groaned Arthur.

"Tch! Tch! Tch, sir!" said Steers delicately. "I'm sorry to hear you say that. If I may be permitted to generalize, sir, as man to man, there are some men, sir, who will make work of play. Beautiful play. And from what I 'ave taken the liberty to observe, that is your trouble, if I may diagnose it."

"Play!" groaned Arthur. "Her crying like that has unnerved me a bit," he added. "Awful!"

"Awful!" Steers exclaimed warmly. "I was a bit unnerved myself for a moment, standing there not being able to do no good, as it were. Pity I was here; or a pity you were here, one or the other. A sweet girl like that crying and two men in one room is just stoopid."

"Awful! Awful!" muttered Arthur.

"Cheer up, sir," Steers exhorted.

"I don't know what sort of a chap you are, Steers," said Arthur, "but have you ever been at all—er—interested in women?"

The butler sighed, but not unhappily.

"Oh, Mr. Arthur," he said amply. "Oh, sir!"

"I've known a few men here and there interested in women," added Arthur, musing.

"And I 'ave known a few, too, sir," replied Steers blandly.

Little Parks broke in, snatched the tea cloth from the table, and was out of the door in a twinkling. There was no stopping her.

"Ch-Chinese house boys!" said she, still somewhat fluttery of voice. "You want a woman round you!"

"I do! I do!" cried Arthur hastily. He dashed after her in time to have the door slammed right in his face.

Steers observed these phenomena without surprise.

"It's all very well," said Arthur, feveredly stamping back. "You may be a wise chap 'n' all that. But answer me this: How the deuce is one to start breaking it to a girl who hasn't the slightest idea of anything? Not—the—slightest—idea?"

He walked about vehemently.

"Pardon me, sir," said Steers, deducing all, and perhaps more, "but if you mean ——"

100,000 Car Owners Last Year Replaced Their Original Batteries With the Vesta

EVERY car owner who installed a Vesta Battery in his car last year did so because he was convinced that the Vesta was a better battery than the one he had.

And bear in mind, too, that every Vesta Battery of all the hundreds of thousands in use has been bought to supplant some other make with which the purchaser had previous experience.

It is this preference, constantly gaining strength, that has caused the Vesta to show an increased business year after year, even in 1921; while the demand for Vesta Batteries this year shows a 30% increase over last.

The fact that the Vesta Battery "costs less per month of service" is due to exclusive and patented construction features (namely, Vesta Isolators and Impregnated Mats) which prevent the various sorts of short circuiting that cause rapid deterioration in storage batteries.

Backing up the quality of the Vesta Battery are 3,500 Vesta service stations distributed over the United States, operating under the famous Vesta Code, and impartially providing service and repairs on all makes of batteries.

A Flat Tire!

How often has it delayed you and upset all your plans?

ACTUAL SIZE

All you need are your fingers, pair of pliers, and three minutes to attach a Trex Lock to your tire and stop the repumping nuisance.

Simply take out the ordinary valve insides and throw away. Then attach the Trex Lock onto the regular valve stem.

Fits any tire; any motorist can attach.

Price $1 for each tire

Even punctures can be *minimized* with the Trex Air Valve Lock, which locks the air in the tire, and maintains proper inflation. Leading tire makers agree that proper inflation will prevent half the punctures.

No flat tires can result from slow valve leaks, with the Trex Lock attached, for it is all-metal, double-locking the air passage against leakage. No particles of sand can possibly dislodge the seating when *locked*.

The fact that the Trex Lock eliminates the constant necessity of repumping tires every week or two alone makes it worth its slight cost many times over.

With absolutely nothing for the motorist to take care of, it maintains perfect inflation, and thus gives *full mileage* from every tire.

On your own car—equip every tire with the Trex Air Valve Lock today. No more soft tires resulting in rim cuts or premature blow-outs of expensive tires.

Sold by dealers in all parts of the country. In sets of five or singly if you desire—only $1.00 for each tire. If your dealer has not yet put in his stock, write direct to us.

THE TREXLER COMPANY, Philadelphia, Pa.

AIR VALVE LOCK

"I do mean!" replied Arthur fiercely.

"Then it had ought to come naturally, sir," said Steers.

They looked steadily at each other.

"You've surprised me a good deal, sir," he added. "But here's wishes!" However, he had taken the champagne into the kitchen. "She beats 'em all, sir. She beats 'em all."

"But how the devil am I to break it to her?" demanded Arthur.

"Well, sir," said Steers, "cheer up. You got the oysters, sir. They're courageous things, oysters. And you can't do better than that champagne."

In came little Parks again, sort of shaking her skirt straight as if she meant to stay.

She closed the door resolutely, and she closed the outer door. She looked at Steers. She looked at Arthur. She went and sat down on the sofa, where she sat twisting her little handkerchief about.

"Are you better?" asked Arthur, very swimmy of voice once more. He edged towards the couch.

"I don't know," said Emily.

"It may be the prize," began Steers in a dulcet tone from the background.

She gave him one look.

"Mr. Steers," she said. Steers attended. "There's your hat." And she indicated his hat lying obscurely on a distant chair.

For a moment Steers stood stupefied. "I was about to take my leave, Miss Parks," he remarked when sufficiently recovered, "but ——"

She gave him a look.

"We'll open the champagne ourselves, thank you, Mr. Steers," said she with quiet resolution. "And the oysters."

"It is quite time I started on my walk home, I am aware, Miss Parks," said Steers feebly.

"Do," said she. "Do start. Good night."

"Good night, old Steers," added Arthur in an unfriendly fashion.

He was looking at little Parks.

The parlor was all in a soft glow, the red curtains drawn.

"Good night, sir," Steers faltered. He turned for his hat. "I know human nature," said he rather sadly, "but there's some things ——"

He picked up his hat and stick. Arthur was looking at little Parks. Another knock fell on the door.

"There's another damn nuisance!" said Arthur impatiently. "Open the door an inch and send it away, Steers."

A second knock followed the first peremptorily.

Steers retreated nervously into the room.

"Please, sir," he implored, "if you'd keep me just a few minutes longer. I mean to say, sir, perhaps you'd open the door yourself and send it away, sir."

"Eh? What's the matter?" said Arthur abstractedly, for he was now entirely lost to all troubles save his own.

"I've got a nasty feeling, sir," said Steers, beginning to gibber—"a very nasty feeling indeed—that a certain lady friend of mine, a woman as seems to feel a sort of right to fall back on me, sir, quite unjustified, sir—if there's anything I've got, it's taste—and I'm not quite certain, but I shouldn't be surprised to find as I-I-I'd been follered, sir."

"Followed?" muttered Arthur, looking at Parks.

"Yes, sir," whispered Steers. "Of course"—he threw an ironic look at Emily upon the sofa—"you don't know what it is to be followed, sir—dogged from your pantry to your bedroom and back again, sir. It stopped yesterday evening and this morning; diverted itself, so to speak. But I shouldn't be at all surprised if it was renewed. 'Ark at that knock again!"

"I'll open it, Mr. Steers," said little Parks kindly.

"No, no!" said Arthur, detaining her. "I'll open it."

"Only an inch, sir, for my sake!" whispered Steers. "Only an inch!"

He retreated to the fireplace, out of range of the door, where he cowered nervously. Arthur opened the door a small space, and immediately a foot and arm were thrust over the threshold. Arthur held the door valiantly, examining these limbs.

Then the voice of the cook was heard, saying, "I know the way that door's being 'eld. I've 'ad your pantry door 'eld against me like that, I 'ave. But it's no use. I'm coming in."

Steers almost obliterated himself against the wall.

"Cook!" said Arthur, holding [illegible] against her. "Good heavens! [illegible] are again!"

The cook squeezed her face round [illegible] Mr. Arthur. Yes, here I am ag[ain] thought we passed a friend in our [illegible] cart coming this way, and I got [illegible] feur to stop to set me down, it being evening off anyway. And when I [illegible] door being 'eld against me it seemed natural I were certain. 'Ain't Mr. [illegible] been 'ere, Mr. Arthur?"

"Er—old Steers?" said Arthur [illegible] Steers? No-o, cook, no."

"Ow!" said the cook, struggling [illegible] men do hang together, don't you." Will you let me in to look, sir? [illegible] afternoon the undergardener's [illegible] reported as Mr. Steers had ordered luggage cart ——"

"Darned little liar that boy is!" said Arthur firmly.

"Out of the mouths of babes and sucklings the truth comes nearly as often not," said the perspiring woman, "and you please be good enough to let me satisfy meself?"

It was Emily who, in an access of [illegible] for a fellow woman, betrayed Steers.

"Oh, Mr. Arthur," she cried, [illegible] her hands in sympathy, "let her in!"

"No!" roared Steers.

"His voice!" said the cook.

Arthur fell back. "Cat's out now," said.

And the cook entered, and saw. She [illegible] haved herself like a true woman: ignored what she wished to ignore, and explained matters as she wished to explain them.

"Ow!" she said, reproachful but [illegible] "You shouldn't play your little games me!"

"Games!" cried Steers, trying to [illegible] himself together.

But the situation had passed [illegible] moment beyond even his experience, well he knew it. Again it was Emily basely flung him to the enemy.

"Oh, Mr. Steers," said she, "she wants you to take her home."

The cook looked sweetly at Emily.

"Yes, Mr. Steers," she echoed, "There's a field with a bull in it. [illegible] so frightened."

"If you expect me to fight a bull you," said Steers, "it's off. The [illegible] 'ave you."

He looked at Arthur for help, but was none. It was human nature [illegible] wished to get rid of him, to any [illegible] matter.

The cook was simpering.

"You make such 'eartless jokes," she.

"Jokes!" cried Steers wildly.

Emily now spoke again, very [illegible] "Oh, Mr. Steers, she only wants [illegible] take her home at once."

Once more the cook regarded her [illegible] "Yes, lovey, that is all I want. A man's escort through the field with in it." She caught sight of Parks. "Oh, my lovey! How nice you [illegible]

Little Parks rose to display herself. is rather a nice frock, isn't it, dear?"

"You must let me try it on [illegible] day," said the cook, eying Gwen dreamily.

"I will, one day," Parks nodded.

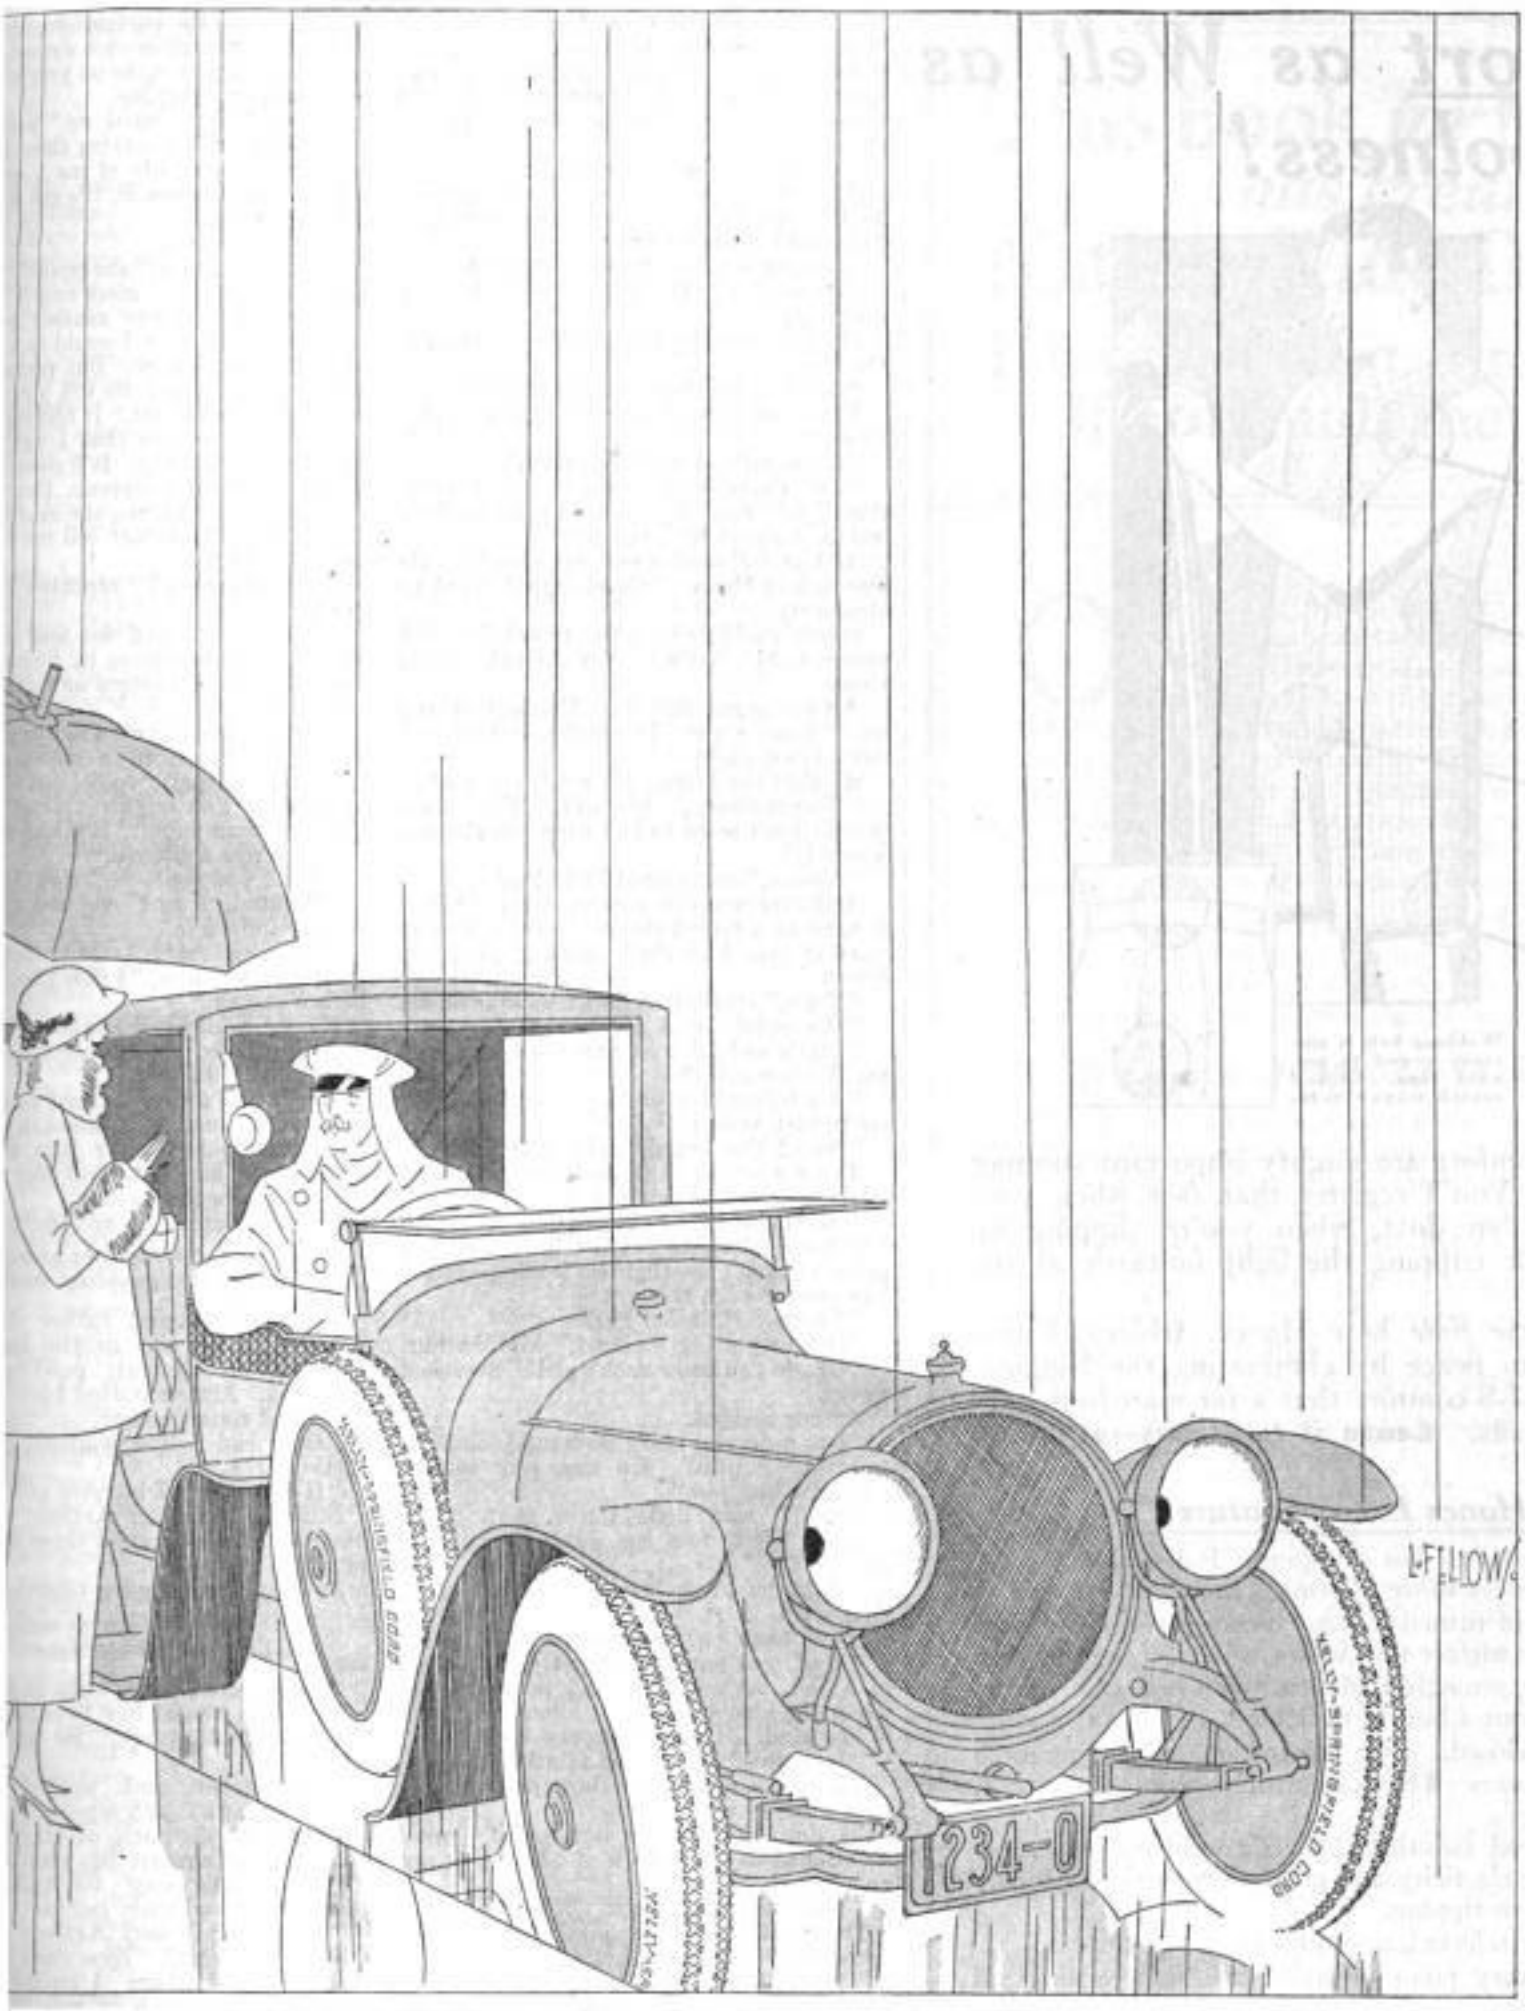
"You've got a grateful little Emily," said the cook, remaining [illegible] her preoccupation, between Steers and door. "I'd like a dress like it." She [illegible] ined the frock. "Turn round, dear, round. I'd like a dress like it. It's [illegible] wider, and say a vest to fill in the V, say more of the pannier effect. And [illegible] a Turkish 'em, and a little pearl [illegible] ing in front, and if it was white, [illegible] a train and veil"—here she and looked ecstatically at each other—"[illegible] just do for an occasion."

"The very thing, dear," Parks [illegible]

"What occasion?" gulped Steers.

"Oh, Mr. Steers!" murmured [illegible]

Arthur had had about as much delay as he meant to stand. He butted in:



"I say, old Steers, you really must up to the scratch, don't you see? take her home. Take—her—home! her—home!"

"Take her home!" gritted Steers.

"With my best wishes. Miss," said Steers, pulling himself together commendable dignity now that he saw all was over, and realized that drink of the cup, and that was [illegible] my best wishes I will tender you a

Get Comfort as Well as Coolness!

COOLNESS and comfort are mighty important summer underwear partners! You'll register that fact when your hoe's raising the garden dust, when you're slipping up the pike at 55 per, or tripping the light fantastic at the countryside inn!

You'll realize *all the time* how Hanes Athletic Union Suits pave the way to peace by eliminating the bagging, sagging, puckering D-I-S-comfort that a fat man frets over and a thin man dreads. ***Leave it to Hanes*—at $1.00 per garment.**

Get These "Hanes Extra-Features"

FULL CUT on generous pattern. No skimping. Full standard sizes give perfect freedom to every move of arms, legs and body.

ARMHOLES taped instead of turned under. Never a chance for curl or rip—but a friction-free surface that wears as long as the garment.

NECK "V" or circular style, strongly reinforced with nainsook. Stays up on the shoulders without a hint of chokiness.

CLOSED CROTCH stays closed. (See illustration above.) Crotch lap buttons sewed on the seam—**4** thicknesses of material instead of **2.** No patch used.

WEBBING BELT guaranteed two-thread elastic webbing instead of single thread, gives more elasticity and greater strength. Specially sewed to prevent tearing or ripping.

PEARL BUTTONS specially selected, sewed on to stay put.

REINFORCEMENTS at every point of strain safeguard against all chance of seam-rips.

Sign up now for summer comfort—your dealer will accept your initiation fee of $1.00 and enroll you for a season membership. If he hasn't Hanes Athletic Union Suits write us and we'll see that you are supplied.

The youngsters can also have Hanes comfort and wear. Hanes Athletic Union Suits for Boys—sizes 20 to 34; ages 2 to 16

There are none so hard and pitiless and selfish and crool as some people when they wants their place to theirselves. They'd turn out a dog to starve or a little child into the snow."

"Snow, Mr. Steers!" said the cook meltingly. "Why, the evening's fairly tropical. And"—she began to smile engagingly—"there'll be a full moon."

"Beautiful night, Steers," cried Arthur.

"Come along, Mr. Steers," said the cook meltingly.

She led Steers by the coat sleeve towards the door.

"Good night, dear," said little Parks.

The cook looked round. "Good night, lovey."

"Good luck, dear," cooed Parks.

"Oh, thank you," said the cook emotionally. "You've got a kind grateful little 'eart. A sweet little 'eart."

Arthur followed them up closely. He was sick of them. "Good night!" said he stridently.

Steers vacillated on the threshold. "A moment, Mr. Arthur. For the sake of old times ——"

Arthur urged him on. He pushed him on. "Good night. The bull may help you out. Good night."

He shot the bolts. He made a job of it.

"'Straordinary," he said, "how some people don't seem to feel when they're not wanted."

"No-o-o," murmured little Parks.

Arthur returned to gaze upon her. "Still, it must be a horrid thing to have a woman chasing you like she's chasing poor old Steers."

"Yes-s," murmured Parks, looking down.

"It's awful," said Arthur.

"Oh, 's awful," murmured she in a very small voice indeed.

"A-a fellow likes to do his own chasing," continued Arthur.

"So-o I-I've heard," said little Parks.

There was one of those pauses. Arthur swallowed two or three times.

"All the same," hazarded he, "it's difficult for a fellow to begin telling a girl—a girl who hasn't the slightest inkling—has—has—never even thought ——"

"Thought?" asked Parks.

"Of—of getting married," said Arthur.

"Oh, do you know such a girl?" breathed Parks.

Arthur nodded.

"Oh, d-do you know such a f-f-fellow?"

Arthur nodded. He was very husky. "I know him too."

"Well," said little Parks in a brave voice, "what does he want to tell the girl?"

"That he loves her," said Arthur despairingly.

"And can't he?" whispered little Parks.

"Well, you see," said Arthur, "it's a bit of a job, isn't it? Telling her, I mean, when she's never thought about anything of the kind. It might surprise her so."

"It might," she agreed faintly.

There was another of those pauses. Arthur leaned over her.

"I don't know," he began, "if I ever mentioned to you that I—I—break all my own horses."

"No?" she murmured. "Do you?"

He nodded. "Yes. And—I told you about the house I built, didn't I?"

"Yes," she murmured. "But why ——"

"Why do I tell you?" said Arthur. "Because I want you to know that I can do something. I'm a pretty useful chap in many ways; it's just this—er—certain job that stumps me."

Parks murmured, "A certain job?"

"I've been thinking about it for a good hour now," said Arthur, kneading the sofa cushion with both hands, having really to do something safe with them. "That's the kind of chap I am. When I do think at all I think quick; and I think hard!"

Little Parks glanced from the corner of her eye at Arthur and the sofa cushion. She knew precisely why he was manhandling it. Oh, it seemed to her such a silly waste, when there she sat, and the door was shut and the curtains were drawn, and the parlor was all in such a sweet red glow.

"And did you make up your mind about it?" said she, sighing.

"I made my mind up," said Arthur, "but I-I'm still worrying about how to tell it; and for the life of me I can't think. Only thing I know is, it's got to be done. Don't you see?"

She saw exactly.

"I-I don't know," she replied. "I don't like you to explain more clearly."

Arthur wiped the anxious sweat from his brow. "I wish I could explain everything here and now. But perhaps it'll be easier after supper to tell you what I've been worrying about. It fills my mind, every bit of me so that I can't think another single thing. It'll come as a great big shock to you, I suppose. But there it is."

After a tiny silence she said faintly, firmly, "You'd better tell me before supper, Mr. Arthur."

"Before supper?" repeated Arthur. "I can't."

In his own mind he was catching straws of wisdom flung by Steers regarding the qualities of oysters and champagne in these crises.

"Before supper you'd better get it off," continued Parks in a little, low, quiet, sympathetic voice, but inflexible all that. "You oughtn't to eat with something on your mind. It's bad for you."

There was a silence.

"Well, you see ——" said Arthur.

"What do I see?" replied Parks, blindly inflexible.

"You see," said Arthur, feeling a cold creeping upon him, "I don't believe I can before supper."

"Try," whispered Parks.

Arthur dried up completely.

"I can't," he said.

He turned away, walked to the mantelpiece and leaned on it, head in hand. Little Parks looked after him slowly. She could have laughed, and she could have cried. She began to sing.

She sang in a soft and desperate voice:

"Dearest, the night is passing,
Waneth the trembling moon ——"

She looked round rather desperately. Arthur, for all was in the balance, hummed on through pouting lips. She trembled. Arthur pulled himself together, he looked round at her.

"How can I live without you?" said Little Parks.

"H-h-how can I let you go-o-o!"

Still she looked at Arthur. He missed his cue. He swallowed once or twice and plunged.

So they were singing together:

"You that I love so well, dear,
You that I worship so."

Arthur reached the sofa in a stride and little Parks caught her breath.

"Take off that hat," he uttered tenderlessly.

Parks sighed and pulled it off and threw it away anywhere. Arthur was leaning over the back of the sofa, and she put her head against his shoulder.

"That's the way to talk," he said rapturously and with perfect accent.

"You touch," said Arthur in a shaking voice of discovery, "like that girl I used to forget—in the arbor. I could tell you a million by the touch of you."

"The worst's over," murmured Parks tremulously. "You've said it now, and I don't mind hearing it again."

"It was you, dearest?" said Arthur. "You?"

"'M," she said. And they kissed and kissed again. Steers was quite right in it all coming naturally. "And now you only got to talk to me like you talked to the gun."

"You darling!" raved Arthur. "You peach! You beautiful peach!"

"You see?" murmured little Parks, head on his shoulder. "'S easy, isn't it? 'S very easy."

against it. He was shabby; he was, even as Mrs. Staley had said, harsh and moody of temper; but there was something gallant and clear and quixotic about him. Ashby had come home wounded and exhausted from stirring campaigning with Jeb Stuart, to a ruined farm—his slaves, his stock, his implements, all gone. As soon as he could hobble about he harnessed his cavalry horse to the plow and went at the ungrateful business of earning a livelihood and crawling from under a mountain of debt with the same determination with which he had followed his dashing leader. But it had turned out to be a long and galling business, and his spirit had warped under it. Still, he clung to his determination that until the mortgage was paid and he could see his way clear to obtain a decent livelihood he would not ask Laura Belle to marry him.

Her steadfast constancy, her willingness to share his threadbare poverty were at once his banner of hope and his torment. It made him harsh with her. To see her, after these long visits North, drove him frantic with longing for her, but he would not tell her so.

He tried to steady his voice to the commonplace of compliment. "You're just as blooming as ever, Laura Belle. Did you have a good time up among the Yankees?"

"Only fair. I'm getting too old for gayety. I ought to marry and settle down." She was mockingly plaintive. "Here's your toddy, father."

The aroma of old bourbon and lemon, iced and sugared, reached the major's nostrils gratefully. The two men took their glasses and bowed to the girl in yellow. "Your very good health, my dear," said her father, and dipped his white mustache in the goblet. Ashby said nothing, and drank abstemiously, his eyes intent on Laura Belle.

"You've been at my private closet again," complained the major, setting down the empty glass. "But the result condones

Now She Was Home Again, and Lovelier Than Ever

This Book *for* Motorists *has created* Nation-Wide Discussion

Have you sent for your copy? If not, mail the coupon

ONLY a few weeks ago we offered American motorists a treatise entitled "Modern Transportation Costs." We send it gratis, as our contribution to a better day in motoring. We have been deluged by requests—the public seems tremendously interested in lowering maintenance costs. "Standardized Service," the new, flat-rate system of service offered by Marmon dealers, is apparently uppermost in the minds of motorists.

This widespread interest shows that *first* cost is commencing to be secondary to *ultimate* cost. And everyone wants to know how Marmon has accomplished the inevitable.

The secret of this attainment

Marmons of the present model are a nine-year development. In design and construction it has anticipated the requirements of today. Records of thousands of Marmons prove its dependability, its minimum upkeep and its constant service.

For years it has been admitted a wonderful performer. For years it has been conceded supreme in roadability. And now it takes first place in economy among fine cars.

It typifies the American conception and execution of those international standards adopted by leading automotive engineers.

Marmon of the U. S. A., like Rolls-Royce of England, Renault of France, Mercedes of Germany, Fiat of Italy and Hispano-Suiza of Spain, has adopted those principles which insure the finest form of transportation at the lowest cost per mile. All, for instance, have a simplified six-cylinder motor.

How to end extravagance

Do you want to end all guess-work in upkeep? Do you want to know *beforehand* precisely what each service operation costs? And how much time it will take?

Do you want to know how extravagant it is to consider *only* first cost, and then blindly pay the price of upkeep? Such questions, and many others, are discussed in "Modern Transportation Costs." Mail the coupon for a copy. The facts will surprise you.

Visit, also, a Marmon dealer. Become acquainted with "The Foremost Fine Car." Learn the reasons for its inherent superiority. Then, after comparison, ask yourself if you can really afford to own an extravagant, wasteful car.

Prices Reduced

Marmon prices, recently revised downward, are:

Touring Cars $3185

Coupés $3985

Sedans $4385

Prices f. o. b. Indianapolis, excise tax to be added.

Mail this coupon now for the most interesting booklet you have ever read on the subject of automobile maintenance economies. It shows why we are able to make this revolutionary announcement and why the Marmon is first to adopt Standardized Service. The booklet is sent free to all who ask. Simply fill out coupon and mail it.

"Controlled Heat" -at a touch of your finger

THINK of the cozy comfort of being able to regulate easily and accurately the heat in each room.

In the nursery—Baby's bath—touch the handle of the radiator valve and it becomes warm as toast. Seventy-two-three-four degrees—any heat you want.

Living room too warm? A touch of your finger. Heat's reduced as much or as little as you wish. No throwing open windows. No heat wasted. No chilly drafts.

Each radiator may be a quarter, a half, three-quarters, or entirely hot—as you choose. That's "Controlled Heat." That's *real* comfort.

And economy! There's never a bit of "Controlled Heat" wasted. The *exact* amount of heat you want, *where* you want it, *when* you want it. Reliable, safe, economical—so simple in operation a child can understand it.

Before going a step further in planning your new home investigate "Controlled Heat." Ask your Heating Contractor about it. The more thoroughly you investigate, the more firmly you'll be convinced that Hoffman "Controlled Heat" is the most efficient, economical, and comfort-giving system made.

HOFFMAN SPECIALTY CO., Inc.
Main Office and Factory, Waterbury, Conn.

the theft. You can mix a toddy, my dear, better than anyone in the world. Is supper ready?"

"Yes. Ashby, will you give me your arm?" She laid her fingers caressingly on his worn coat sleeve, and had the satisfaction of feeling a tremor of the stark muscles beneath. "You're looking thin," she told him as they went in to the dining room. "You're working too hard. Now I'm back you'll have to stop it. I've got to have somebody to beau me round."

Ashby did not answer. The major took up the tale that had been interrupted by the toddy: "And I really think the young fellow quite the gentleman, although he is a Methodist and a parson. His aunt, Mrs. Hallett, is a genteel-looking lady—but the name Baines—Baines—there's nothing to indicate any pedigree in that. It sounds like a tradesman's name. His given name, too—Aaron—hopeless! My contention is that a male child should be named from the classics—or the family."

"That's a very convenient belief for you and Ashby," said Laura Belle. "But honestly, I think Leonidas is as bad as Aaron. Who was Leonidas anyway, father?"

"That's the impertinent way she talks to me, Ashby," scolded the major dotingly. "The younger generation has no respect at all for the older. Laura Belle comes back from the North a graceless chit."

"She always was a graceless chit, and you made her so," affirmed Ashby, smiling.

"Even you turn on me. Take the mock terrapin around to Mr. Ashby, Toothpick, and let the offering be as coals of fire on his head. Well has Rochefoucauld said: 'Most young people think they are natural when they are only boorish and rude.'"

Laura Belle and Ashby groaned together. "Now you've started him on Rochefoucauld," she accused him. "Father, I shan't sing for you to-night if I hear another word of that old bore."

Toothpick at this moment created a diversion. He had gone to answer a knock at the front door. "Mista Baines heah," he announced.

"Ah! Now we'll have a little truly sensible conversation," promised the major, and left the table to meet his guest.

"Ashby," commanded Laura Belle softly, "look at me. Are you glad that I'm back?"

"Don't, Laura Belle."

"I must—because you won't."

His hand wavered out toward her, then was drawn decisively back.

"I have no right."

"You have every right. You know it."

The major reappeared, bringing Aaron Baines triumphantly with him. The young minister was ruffled and embarrassed.

"Major Walker—really—I've had my supper. I had no idea ——"

"A place for Mr. Baines, Toothpick," quoth the major. "You will at least join us in the dessert and coffee."

"Oh, but you must," added Laura Belle cordially. "Do you know Mr. Walker—Ashby Walker—Mr. Baines?"

The two young men shook hands and the unhappy Baines subsided into a chair placed for him by Toothpick.

"You complete the square, sir," declared the major, rubbing his hands. "We are now a *partie carrée*, as the French say. The vacant side of the table was waiting for you. A little of this mock terrapin—I presume your cloth prohibits you from tasting a drop of some very excellent toddy—quite so—I appreciate your scruples, though I have known many clergymen who partook."

"Old Doctor Henderson got tiddled once on communion wine," supplied Laura Belle with a naughty giggle.

"How shocking—how outrageous!" burst involuntarily from Aaron Baines.

"And what about Noah?" pursued Laura Belle.

"Don't mind her—she's a confirmed tease," interposed Ashby.

But young Baines could not hear a word against his idol. "Oh—I'm sure Miss Laura Belle didn't quite—didn't quite—understand—or imply ——" he floundered.

"But I did," said Laura Belle. "And I've no doubt it was because Noah loved his toddy that he had the vision to build the ark, and the animals went in two by two—but he wasn't seeing double."

"Laura Belle!" roared the major. "I positively will not have you talking in this abandoned way. My daughter has moods, sir, in which 'incorrigible' is the mildest word I can truthfully apply to her."

"I like frankness in ladies," declared Baines, turning toward Laura Belle.

Her golden dress, her golden beauty, her smile—all dazzled him. He felt light-headed, daring. Ashby, watching him from across the table, divined his state of mind and smiled wryly. So Laura Belle had acquired another victim. And what an unlikely one!

"I disagree with you, sir," said the major. "The wit of most women only strengthens their folly than their reason."

"Rochefoucauld!" exclaimed Ashby and Laura Belle in unison.

The major swept them with a mild glance. "A cup of coffee, Mr. Baines, some of this peach shortcake. Delicious fruit, the peach. I'm often constrained to think of the four seasons in terms of food. Spring, for instance—asparagus, strawberries. Summer—peaches, corn, young fryers, melting in the mouth ——"

"You're forgetting watermelon," reminded Ashby.

"A common, too exuberant fruit, not for the epicure."

"But what about soft-shell crabs?" asked Laura Belle demurely.

"I wish you two would not interrupt me. Where was I? Autumn—yes, winesaps, purple grapes ——"

"Pork tenderloins, sweet potatoes," chanted Laura Belle.

"And in winter—let me see—roast, hominy, mince pies ——"

"Father, you are positively glutting. Shall we go into the parlor?"

She led the way, followed by the three diverse men, diverse but all of them attentive on her, and she quite aware of it.

"I'll play you the very latest polka," she said. "It's called The Aureola. And it's a charming new Strauss waltz—Lanner and Fritschen. Are you fond of music, Mr. Baines?"

He hung over the piano, far more fascinated than if he had taken the floor. "I'm fond of music if I may turn the leaves," he said, only stammering a little.

"Too bad that Laura Belle plays by memory," said Ashby.

Young Baines subsided. He realized that he had been bold. He wondered wistfully if he had annoyed Miss Laura Belle by his remark. But no, she seemed in very good humor.

And now she began to play. From her position he could see the swift action of her fingers, the entrancing lift and fall of her wrists, the graceful way in which she bent her head over the keys or arched as she took the runs. Her eyelashes—he had never before realized what delicate shadows they made for her soft eyes, the slim penciling of her brows against the dusky deeps of her hair. "Thy hair is a flock of goats, that from Mount Gilead," he indignantly rejected the simile. The idea of comparing Miss Laura Belle to a flock of goats! It occurred to him that Solomon had said some very odd things. How much better was "As a piece of pomegranate are thy temples within thy locks." And—and—"Thy neck is a tower of ivory." With a violent effort he wrenched himself away from further mental quotation. Miss Laura Belle was truly a lady to be thought of in the terms of Solomon.

He lapsed into gentle ecstasy. [illegible] she sang, completing his delight. Was I Looking Out?—one of the new songs, Laura Belle told them—was followed by We Met and Talked of Other Things.

"And now your favorite, Mr. [illegible]," said Laura Belle; and he had the satisfaction of hearing Darling, Kiss Me Down. It affected him powerfully.

"Your voice is b-beautiful," he murmured when she had finished.

"Did you like it, Ashby?" she questioned, disregarding him.

"It seems a little high for you, not quite true on those top notes."

"What a horrid speech! But [illegible] your favorite." She struck up [illegible] Want to Have a Good Time in the Cavalry.

Ashby roared out the words with "Lord, how that takes me back," when the duet was over. "[illegible] with his sash and his golden [illegible] his voice—I'd have died for [illegible] I could have died in his place."

There was a sudden deep silence in the room. The young minister could hear the ticking of the clock, and it reminded him that he was staying too late. "I must go," he said. He told them good night and the major accompanied him to the [illegible]

gripped, held, devoured. It was there for all to see who cared to look. And everyone cared to look and, having looked, to talk. It was the town's drama.

"He's simply crazy about her."

"But she won't have anything to do with him."

"I heard the major had asked him not to come any more."

"Oh, well, she must have led him on; Laura Belle's always been a flirt."

"But she's always declared openly that she and Ashby ——"

"She wouldn't have been so open about it if she'd really wanted Ashby."

"That's so; there's no reason in the world why she and Ashby shouldn't have married long before this if they'd wanted to. They're not really cousins—except in a distant way."

"They say the deacons in the church have talked to Mr. Baines."

"Yes—the ones with daughters."

"He looks stricken; he's really a sight."

"It's shameless; he ought to be reported to the conference."

"The conference can't prevent a man from falling in love."

So the wave of talk washed back and forth, a tide of surmise, of criticism, of amusement, of sympathy. Gentle and kind-hearted, the townspeople could not help but sympathize with the young man's evident distress. Yet they were not blind to its droll implications and facets of comedy.

Laura Belle felt these last acutely. She had seen the young man's agitation, marked his growing feeling. At last she spoke to him frankly:

"You know that my father and I"—she dragged in the major's name to share her stand—"dislike to seem inhospitable to anyone. But we feel that it would be better if you did not call here quite so often. It will deprive us of the pleasure of your society, but it will—it will give the critics of your congregation no further ground. It is for your own sake I say this."

He misunderstood, twisted it to her praise. "You are so kind, so compassionate!" he had exclaimed adoringly. "I—perhaps I should not say so, but there are few in my flock who are congenial to me. Here I am happy—happier than I dare tell you."

Laura Belle listened, was startled by the revelation of his words. She had prepared her little speech carefully; she did not want to wound his feelings. But she saw that she had to be more blunt.

"Even so—I think I must ask you not to come so often," she said. "It can lead to nothing, as you know, and makes people talk unpleasantly. The mere fact that I'm of another church than you"—she cast away the pretense of the major—"makes them talk."

He was so inexperienced, so bewildered by emotion, he did not see the obvious. "How often may I come?" he demanded.

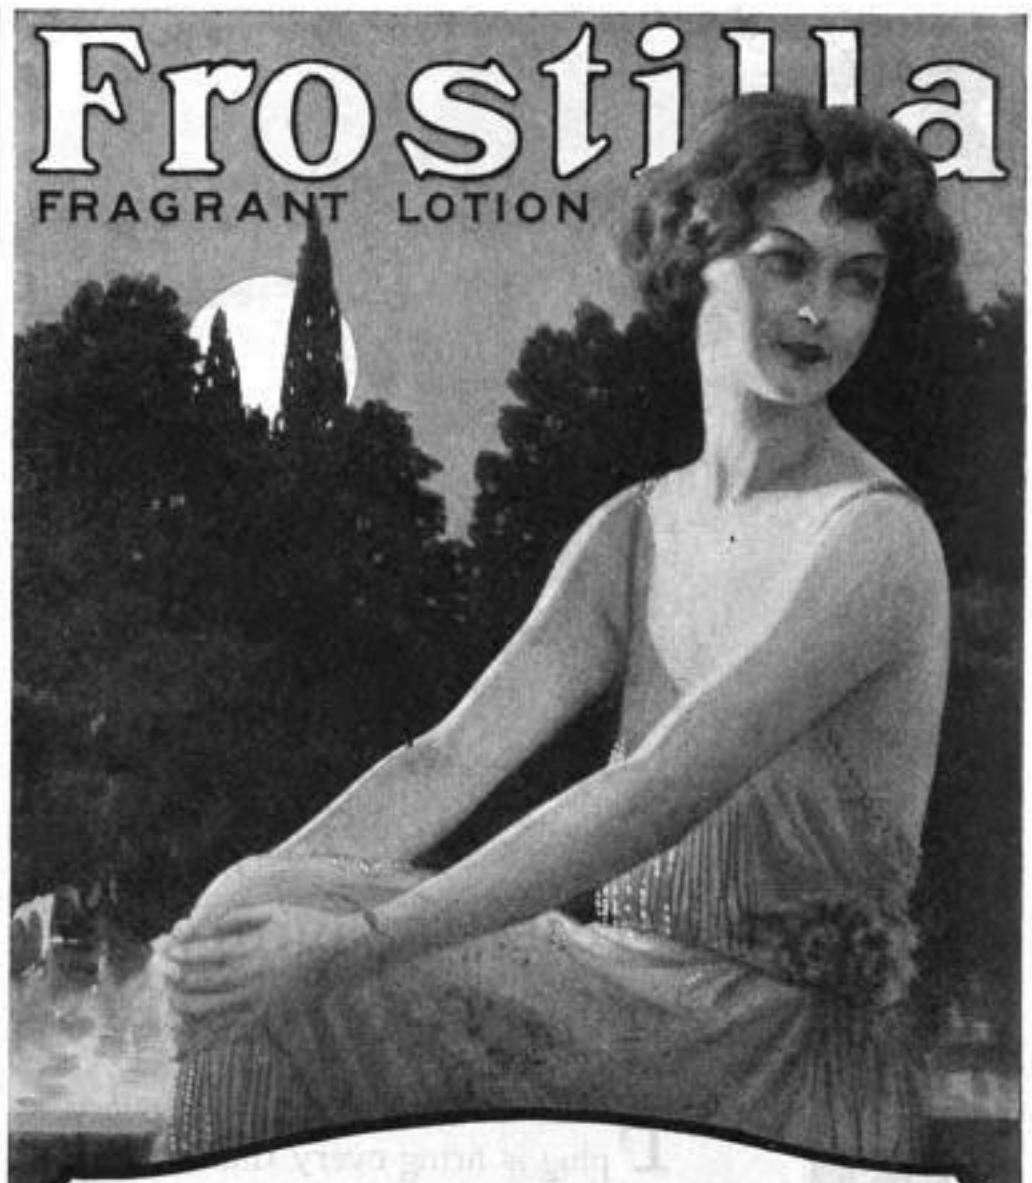
Laura Belle felt her patience slip. The man was simply a fatuous idiot; he made himself and her grotesque.

"I would greatly prefer that you did not come at all," she said. Then, relenting a little at his look: "Please don't look as if I'd slapped you. I'm only doing what is best for you."

"You're not—you're not telling me I'm never to see you? I couldn't bear that."

She thought he was going to cry, and her impatience increased. She was used to men, not lovesick adolescents.

"I mean exactly that," she exclaimed. "You make us both absurd. Don't you see it? Please go and don't come back." She made a little gesture, which she instantly checked. "I won't be Zenobia, the tragedy queen," she told herself.



Aaron Baines said nothing, only looked at her as if he would fill his eyes and his heart with her forever. At last, without a word, a waking sleepwalker, stunned, mechanical, he left the room. Laura Belle ran out to her father.

"You were a coward," she scolded, "to leave it all to me. It was just like striking a child. I was so sorry for him, and yet so provoked."

"But he was not—insistent?" queried the major, passing by the slur on his courage.

"No, but I was."

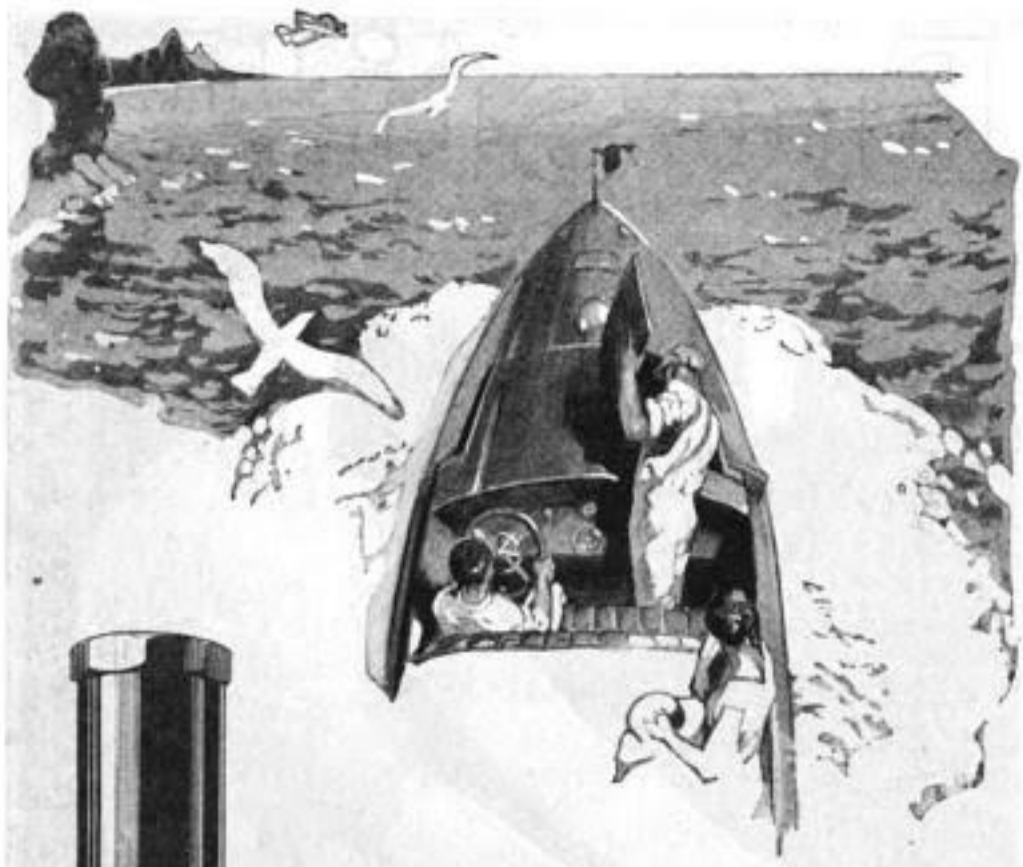
The major shook his head in sorrow over the unhappiness in the world caused by misplaced affection. "'A gentleman may love like a lunatic, but not like a beast,'" he quoted sententiously.

For Those Who Take Pride In Their Complexion

It's fun to get out into the sun and wind, but if you are not careful too much of it will bring roughness and coarseness. To keep your skin soft and smooth, to keep the pores clear of dust which brings to the skin a dull unattractive appearance, use Frostilla Fragrant Lotion.

Frostilla Fragrant Lotion gives the skin the necessary moisture which the wind whips out and the sun dries up. It is not the least bit sticky and after it has been rubbed on, it quickly disappears leaving a cooling, soothing sensation and a delightful fragrance which is the rare combination of many flowers.

Before you powder, rub in a little Frostilla Fragrant Lotion; for it leaves a more natural appearance, holds the powder perfectly and makes it stay on much longer. Frostilla Fragrant Lotion is a remarkable skin cleanser. After strenuous household duties and outdoor activities the use of Frostilla Fragrant Lotion will keep the hands soft and white. It is used by many women in manicuring to soften the cuticle.



For Men Too

Frostilla Fragrant Lotion used after shaving prevents smarting and leaves the face cool and smooth. Pour a few drops in the wet, soapy brush and see how it foams up the lather and helps to soften the beard.

There is just one Frostilla Fragrant Lotion. Introduced in 1873. It is sold in one size bottle only, regular price—35 cents. The Frostilla Co., Elmira, N.Y.

Test the ignition system regularly

FIND out whether or not every plug is firing every time.

You can do this almost instantly with a Westinghouse Ignition Tester —Spark-C.

All you do is touch the point of Spark-C to the plugs or along the wiring to the coil or distributor, and read the result in the "window" of the Tester. Anyone can use it. It is clean, safe, dependable, and will last indefinitely.

Get every ounce of power you can from the engine. Unfired charges mean wasted gas and lost power.

Any good automotive dealer or garageman has the Westinghouse Ignition Tester Spark-C or can get them from our nearest branch.

"According to Rochefoucauld, then," said Laura Belle acidly, "Mr. Baines is a perfect gentleman."

She switched her figured muslin with the sulphur ribbons indignantly upstairs, chose a white chip hat with yellow poppies and went to the Staleys'.

"Let's go up to your room," she said to Eve. "I must talk to you."

As soon as the door was shut the two girls faced each other. In Eve's face was reflected Aaron Baines' suffering.

"I don't see what use there is in talk," she said sullenly.

"Now don't be peevish. It's not my fault."

"No, but"—Eve buried a despairing face in her hands—"it kills me to see him suffer so."

"It probably kills you because he's suffering about another woman than you. Eve, this isn't the moment to be sentimental and missish. The question is—do you want him?"

Behind her fingers Eve made muffled reply: "What good does it do for me to want him or not? He's run after you until he's town's talk. You let him do it. Oh, it was shameful of you, Laura Belle! I suppose you learned such things up North."

"Don't blame the North for everything. Remember your dear Mr. Baines is a Northerner." She laughed. "Oh, I do think this is the richest! Take down your hands and act like a grown woman. I've told him he mustn't come up to the house any more. And now, on the rebound, is your chance—yours or some other girl's. Don't you be a ninny and cry and mope. He's not in love with me, and never was; he's just in love with the idea of being in love. If you'll be sensible—and artful—you can turn him toward you. He needs sympathy."

Eve's blue eyes, tear-drenched, appeared wide and wonderful. "If I only thought what you say might be true ——"

"Of course it's true!" She swept Eve along on the torrent of her will. "If you love him as you say you do you won't sit down and let him drift into anybody's arms now. He'll get over his slight infatuation for me. It's nothing but puppy love."

"You shan't talk him down!" Eve was indignant.

"It's good if you can get mad about him—I'm glad. Spunk up, Eve. What you want with him I can't for the life of me imagine ——"

"Well, I don't see why you should want Ashby Walker."

"Oh, law, you are spirited enough with me. We're both in the same case, my dear—I want Ashby and you want the Reverend Aaron. Can't you make an opportunity to see him—often? When does Bethel Camp Meeting open? Aren't you going? Get your mother to invite him and his aunt to stay in your tent. Then you'll have him right there, particularly at mealtimes, when any man is malleable. Even Ashby nearly owns he loves me after a good supper."

"Do you really think it would do any good?"

"Not if you go at it in that frame of mind. Well, I've said my say. I'm going. Don't hate me, Eve. It's not my fault that the man hankers after something new, someone who isn't like all the other girls in the town, someone who'll tease him a little, and laugh at him, and play a schottish to him. I suppose you lure him on with Rock of Ages—a very nice tune, but one he's sick of. Oh, why can't you treat him like any other beau?"

"Treat the minister—like a beau?" Unheard-of daring!

"Gracious mercy, what is he but a man, and a young man? And a very green young man, too, let me tell you. He has possibilities; every man has when the right woman gets hold of him. You could do wonders with him. Oh, how he needs a wife and a manager!"

"I think your tongue runs away with you," said Eve after a pause. "All this—is just words."

Laura Belle's white chip quivered with mirth. "If you can make up any better plan than getting him out in your tent, right under foot every minute when he isn't on the preacher's stand, please let me know. The more I think of it the better I like it. Get him there, and then—grab him!" She bent her pretty wrists to a quick, pouncing gesture.

Eve listened while the figured muslin rustled down the stairs, heard the shutting of the front door. Something as definitely determined as old Elihu Staley's [illegible] cheek and jaw became apparent [illegible] her childlike facial contour. She [illegible] find her mother.

Laura Belle did not raise her eyes [illegible] went past the parsonage on the way [illegible] She had a feeling that she might see a miserable man, and she did not [illegible] know anything more of Aaron [illegible] his unhappiness. She resented it. [illegible] made her seem absurd to herself and [illegible] eyes of the town. "Silly boy," she murmured, giving a small scowl at the [illegible] age front gate.

Aaron Baines was not in sight; [illegible] not have averted her eyes. In his study he was kneeling, his arms [illegible] upon his desk, praying a prayer that [illegible] not sure might not be sin, but which stronger than he, to his lips:

"Let her love me. . . . Give me. . . . She is so beautiful, so good. . . . Lord, hear me. . . . not do without her. . . . Turn her to me, O All Merciful ——"

Chaotic phrases like these made petition. His head, bowed upon his papers, disordered them, tears he could restrain blotted them. He did not know what he was saying. Where were the words of consolation, of comfort, he had uttered so many times to others? There forced itself into his mind a realization that he had been a vain fool who had offered platitudes of sympathy to those in trouble. He had descended to the depths of solitude of the soul which comes only to sorrow alone opens. He felt that no one ever suffered as he was doing. He felt profoundly that he had received a mortal blow. He was, in short, making a tragic business about his first rebuff in love.

Still he had presence of mind enough to scramble to his feet and bend his head over his desk when he heard Laura Belle's light footsteps outside.

"Aaron, Deacon Staley and Deacon Richardson are downstairs, also the overseer of the camp ground. They have come to make some final arrangements." She came closer and whispered. "Mrs. Staley has just run over to ask us to stay with them in their tent during camp. I told her I would ask you. What shall I say?"

"I don't care; do what you please," he replied, hardly hearing her.

"And, Aaron"—she paused, [illegible] still whispering lest the two [illegible] should overhear—"comb your hair before you come down. It looks like a bird's nest."

Presently, somehow, he managed to comb his hair and follow her down the stairs. The three men awaited him in the parlor. Somehow he listened to what they had to say and made answer. They had written to Brother Waddell, and he was coming. Yes, the presiding elder would be there to preach on the Sunday night. Yes—yes—and yes. Despite his abstraction, his impatience, his heart sickness, and were gentle with him. It was impossible not to be. But when they retreated and were a little way down the street Henry Williams, the [illegible] twitched a thumb back at the [illegible]

"I suppose the minister feels [illegible] any other young feller. I mind when I was going with Virgie, she took a [illegible] fancy weskit I bought, and we had a [illegible] touse about it. Upshot was I [illegible] ner sleep for ten days till we [illegible] I give the weskit to a nigger [illegible] round the hotel; cost me eight [illegible] Women can prey on a man [illegible]

Deacon Staley's long beard [illegible] approval. "A man of God should [illegible] such light-mindedness."

And Deacon Richardson nodded [illegible] cence. But they did not count [illegible] secular Henry Williams.

"All very well to say, but I [illegible] you Miss Laura Belle Walker [illegible] taking young lady. Everybody [illegible] When she looks out of them [illegible] eyes of hers she's calculated to [illegible] man's head to spinning, preacher [illegible] not. He ain't in the proper [illegible] to carry on a big camp meeting [illegible] We got to look out for him."

On this the others were agreed. [illegible] Camp Meeting, in the grove [illegible] from town, was the great [illegible] church's year, rivaling in [illegible] winter series of revivals. For [illegible] drew larger crowds, its harvest [illegible] souls was larger, and it brought [illegible] the leading ministers of the [illegible] ing for a common cause.

om the North find their h very trying," replied y. But, eye to eye, the ently agreed that per- rom the wiles of Laura l be as beneficial as the fresh air. And Mrs. Hallett was affectionately familiar to Eve.

Of this Eve herself was quite aware, and she met Mrs. Hallett a good halfway; but she had a devastating consciousness that Aunt Lucretia might smile at her forever and she not be advanced one pace thereby in Aaron Baines' heart. She was very forlorn, was Eve. At times she almost regretted the precipitancy of Laura Belle's will that had made her run to her mother with the demand that they ask the minister and his aunt for the camp. All the same, she reflected a little less mournfully, it was some comfort to know that he wasn't going to stay at the Richardsons'.

With a courage fostered by her desperation she forced herself on Aaron Baines' open attention. She sat beside him at table, she helped him to choice titbits, she asked his opinion of the various discourses and tried to open discussion with him about them. All the time she was conscious of a rising anger against Laura Belle—not personally of course, but that she should be such a witch, such a charmer, as to have blinded Aaron Baines to every other girl.

And she was conscious, too, of a growing devotion and tenderness for him. He was so unhappy and he was so painfully thin! His eyes were tortured eyes. If he had become a man under the pain of Laura Belle's dismissal, so Eve became a woman in longing to console and comfort him. Her love for him, at first no more than a romantic fancy, grew into a consuming, yearning worship, half lover and half mother.

Yet no matter what she felt, no matter what she did, she was honest enough with herself to see that she made no headway. He looked through or past her, never really at her, save with the same unnoticing wistfulness that he gave to everyone now.

For all she was angry and resentful against Laura Belle, Eve would have liked to talk to her. She wanted to ask so many things in which Laura Belle, of all Arborville, had wisdom. Might it perhaps be that there was a subconscious antipathy between a man and a woman who were both blonds? Did Laura Belle's dusky creaminess make a real complement of the Reverend Aaron's blondness, which Eve's own fair color could never hope to do? Might that not explain? But no—Laura Belle herself inclined to Ashby, dark as a crow. It was very puzzling.

And didn't people with broken hearts sometimes die of them? At this thought Eve felt such a pang in her own heart that she had to lay her hand upon it to hush it. Oh, if he should die! She would not want to live herself. Or—perhaps she would die too. She sincerely thought she might. She hoped so. Eve found that it was not hard to go to every service and appear devoutly attentive, she had so many engrossing things to think about. And she could always look at Aaron, on the stand among the other preachers, feasting her eyes on him, hoping, despairing, reveling in unusual emotions, desires and fears, such as never before had invaded her quiet maidenhood.

"I just know," said Laura Belle to Ashby, on the occasion of his regular Friday-night supper at their house, "that Eve's going the wrong way with susceptible young Aaron. Ashby, you must hitch up your buggy and take me out to camp on Sunday night. I'd like to see what's going on."

"I suppose you meddled with Eve—gave her the benefit of your worldly wisdom. I can see the pricking of your conscience."

"It wasn't my worldly wisdom at all; it was my plain common sense. She wants him; I said to her to grab him. Are you going to take me out there Sunday night?"

"I suppose so. Will you go with us, major, or does Rochefoucauld ban camp meetings?"

"My dear boy, I believe he would have enjoyed them—as a spectator, not as a participant. But I think I won't go. I'd crush Laura Belle's furbelows, and the roads are dusty."

"I can take the surrey instead of the buggy. There'll be plenty of room for Laura Belle and you too."

"Even so—I'm better at home. I do not care very much for long drives at night. I shall be interested to know, however, whether my young friend has recovered from the influence so disastrously wielded upon him by my charming daughter." He bowed to Laura Belle. "I don't want to flatter you, my dear, but I don't blame the young man."

"I find it all very silly," said Laura Belle.

ALEMITE
lubricant
PURE SOLIDIFIED OIL

YOU cannot keep your car properly lubricated unless you frequently use pure, fresh lubricant, free from all harmful grit and acids. Alemite Lubricant is pure, solidified oil, positively the finest lubricant we know of for automobile chassis and industrial machinery. We recommend it fully. It is the result of years of laboratory experiment in our search for a lubricant good enough to bear the name Alemite. It comes in patented, self-loading containers which enable you to fill the Alemite Compressor in a jiffy. It is also sold in bulk. If your dealer cannot supply you, mail the coupon at the foot of this page with 25c in stamps for a full half-pound of genuine Alemite Lubricant. It may start a good habit that will save you many dollars in repairs.

TRUE SHAPE No. 152

TRUE SHAPE Hosiery is made for men, women and children. If your dealer cannot supply you, write us direct.

TRUE SHAPE HOSIERY CO., PHILADELPHIA

"Ah, well," said the major, as a passing shot, "I fear he is too young to know the truth of the saying of the immortal Frenchman: 'We are never so happy or so unhappy as we suppose.'"

"I'm sorry for him," said Ashby. "I know what he feels."

Laura Belle snapped her fingers at him. "You! Ashby, how do you have the face to say such a thing?"

"It is quite true. But I've learned to conceal my feeling. He's not so fortunate. Miss Walker, I'll have the honor to call for you on Sunday evening at half past six, with my buggy newly washed, and a brand-new lap robe. Please be ready on time."

"Come in earlier and have supper here."

"No; two suppers a week here would make me fat. Don't wear your yellow dress; it's far too dashing for a camp meeting."

"Then you like it, and I'll certainly wear it."

She was as good as her word. It was in the yellow organdie that she stepped into Ashby's buggy, newly washed, as he had promised, but an old ramshackle affair even so. The lap robe he had vaunted was the cheapest of thin gray linen.

"The vehicle is not worthy of your splendor, but it is the best I can offer."

"So long as I am with you," she replied, "I don't mind if we ride in an oxcart."

"Laura Belle, you are shameless. When I look back at the wreckage you've caused! There was Haley Pritchett. And that fellow from Church Hill—what was his name? And your Centerville beau, Ned Brown. And Billy Hackett. And the doctor from Philadelphia ——"

"Wait a minute. Please note that they're all happily married now, so you can't call them wreckage. And that's what's going to happen to the young minister."

"You think Eve will—grab him—as you so inelegantly advised?"

"What is elegance when you want something? Women should be more primitive, Ashby. We're too restrained, too hemmed in, too bound down."

Ashby's frowning seriousness relaxed in genuine laughter. "You, restrained! You, bound down! I love the picture."

Laura Belle disregarded his mirth, produced a little fan and waved it. "Whew, it is dusty—and very hot! Father was sensible not to come. And look, Ashby—look at the crowd. The whole county's here! Where will you hitch?"

"As near out on the edge as I can, so we won't have any trouble getting away when it's over. You don't mind walking in?"

"I mind—but what's that to you? Oh, Ashby, I hope that Eve ——"

"I don't believe you really care. Your vanity would be immensely flattered if he'd be constant."

"Ah—does it flatter your vanity that I'm so constant to you?"

He would not answer, busied himself selecting a convenient hitching place. At last he helped her out, and they strolled slowly through the press up toward the center of the camp. It was all confused, crowded, jumbled. Carriages were coming in in droves. Here and there a big farm wagon drawn by mules brought a load of young people taking the occasion as one for gayety rather than piety. The girls were helped down with little squeals of laughter, and after they'd shaken out their light frocks to the fullest circumference and collected wraps and fans and such trifling impedimenta, linked arms with their special swains and made what haste they could to the promenade. They were viewed with indulgence or with reprobation by their elders, according to their benevolence.

Laura Belle, on Ashby's arm, watched it all curiously. The two were marked figures among the simpler folk; distinctly observers, not participants. Ashby's shabby coat could not make him naïve or rustic, and the suave finish of the girl matched his look of experience. They did not pause at the circling walk.

"We'll go on and get good seats, beside an aisle," she said. "It's a real mêlée."

The air of the whole camp was filled with dust, which under the waning of twilight took on soft blue shadows, belying its promises of grime. From the lightwood flares just kindled rose thin spirals of smoke, mounting straight, for there was no wind.

Heat like a smothering blanket lay close over everything, enervating, relaxing the mind and the will.

"Give me your fan," said Ashby as they sat down.

In his strong hand it made a little coolness for her face and looked about her. People were for the service, but there was Eve or any of the Staleys. ville people she saw and nodded to. the choir appeared on the grouped themselves importantly little organ. ;end for ur Book: *Printing Gets Things Done*

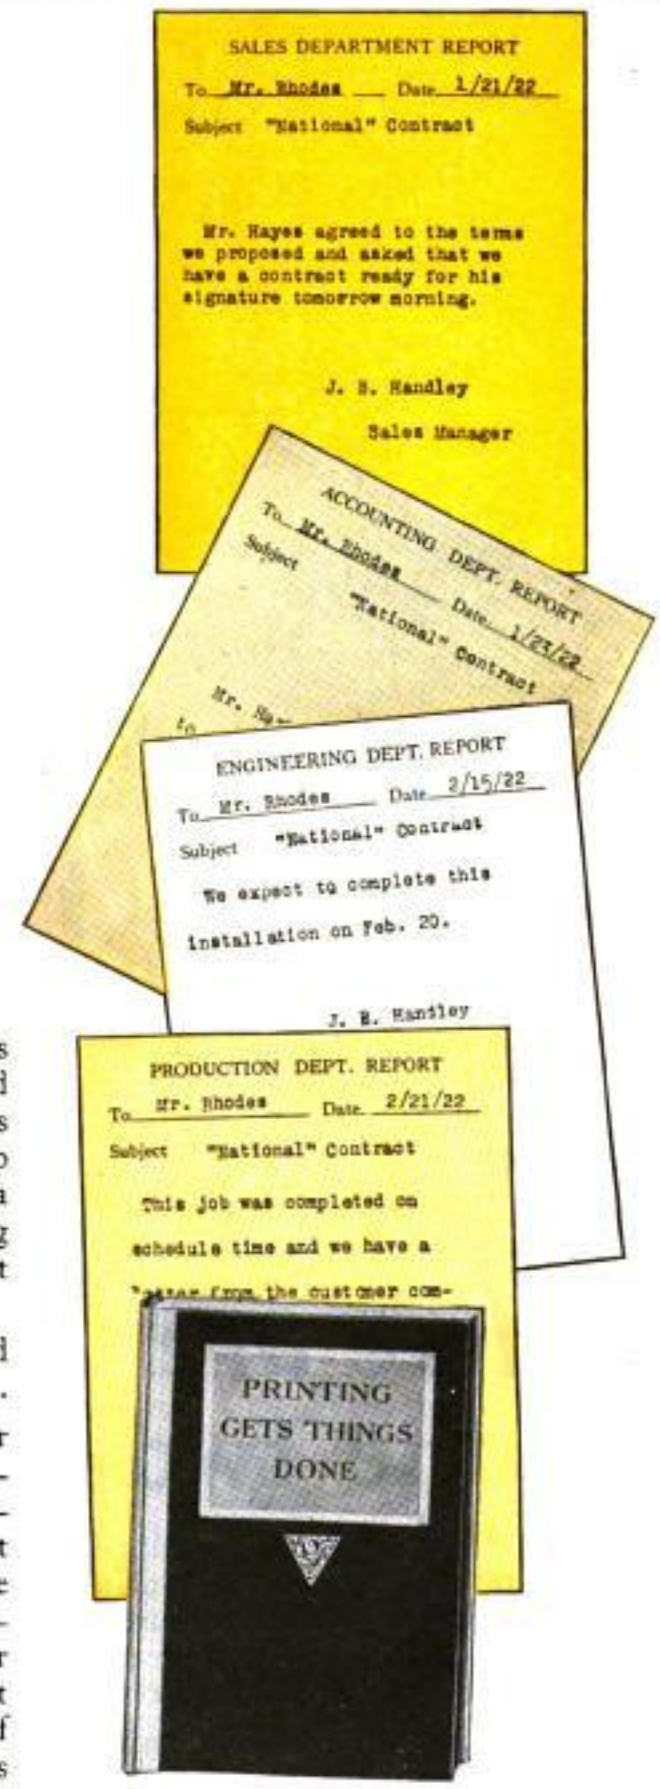
Getting the Answer Quickly

ur records tell you everything you › know?

: records answer all questions; others t writing on pieces of paper—too nformation about one matter, no in- on at all about another.

refully worked out record form is an application of the old rule:



"A place for everything and everything in its place"

l good forms there is a place for ng from a date to a signature. ssary instructions, information, or ıre lacking; nothing is forgotten. on a properly drawn bank check ank is filled, so on a form there is l line that says "answer me here dotted line." Such forms mean records, readily available.

ve prepared a book on forms and wing use in modern business. The title of the book is "Printing Gets Things Done." In this book we have attempted not just to prove the fact that printing gets things done—that is easy. A laundry slip almost proves that. We have included a variety of forms that show how printing gets things done—the sort of forms that may save you money and worry.

Send for this book, if you are interested in the more efficient use of printed forms.

When you buy printed forms your printer will probably suggest the use of Hammermill Bond. Hammermill Bond is always dependable and uniform. It is so low in cost that it can be used economically for office forms, yet it has the fine quality for a lithographed or engraved letterhead. Your printer can get it anywhere in any quantity, and it is carried in stock by agents in all parts of this country and Canada. Business concerns have found that it pays to standardize on Hammermill Bond and use it for all of their requirements.

HERE is the book, "Printing Gets Things Done," which we send you free. Also here is a typical form shown in the book. Note how this form insures accurate and complete reports of the progress of a sale.

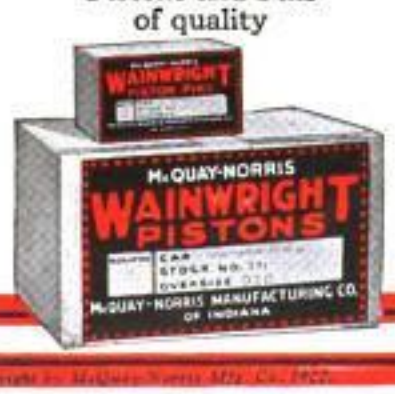
McQUAY-NORRIS

PISTON RINGS
PISTONS
PINS

Here are the two new McQuay-Norris products

The three most vital units in motor performance are the piston rings, the pistons and the piston pins. Wear, improper design or inaccurate fit in these units results in loss of power—gasoline waste—oil troubles—noise and unsatisfactory operation.



Now you can secure complete McQuay-Norris made equipment when you replace any or all of these three vital units which control your power and economy.

When new piston rings alone are needed there is a McQuay-Norris ring for every price and purpose—all made from Electric Iron. When new pistons and pins also are required, the same Dealers, Service Stocks and Jobbers who supply your piston ring needs can give you McQuay-Norris *Wainwright* Pistons and Pins—properly designed and made for the replacement trade.

McQuay-Norris Manufacturing Co., St. Louis, U. S. A.
Canadian Factory—McQuay-Norris Mfg. Co. of Canada, Ltd., Toronto

McQuay-Norris Wainwright Pistons and Pins — gray iron pistons as light in weight as safety permits—specially designed for replacements, available in standard sizes and over-sizes—also in semi-finished form 75-thousandths oversize—pins of special hardened steel, ground to exceptional accuracy.

Pistons and Pins of quality

Leak-Proof — an exclusive two-piece design, preventing loss of gas and compression. Gives equal pressure at all points on cylinder walls. For all piston grooves except top, which should have **Superoyl**. Each ring packed in a parchment container. Price per ring—

$1.25
In Canada, $1.50

Superoyl — keeps lubricating oil out of combustion chamber. Collects excess oil on each down stroke of piston and empties on each up stroke, which ordinary grooved rings cannot do. Each ring packed in a parchment container. Price per ring—

$1.00
In Canada, $1.25

JIFFY-GRIP — a one-piece ring. Non-butting joint, which can be fitted closer than ordinary step cut—velvet finish—quick seating. "Seats in a jiffy." To keep them clean and free from rust, each ring is packed in an individual glassine envelope. Price per ring—

50c
In Canada, 50c

Snap Rings — of the [illegible] grade. Raised above the [illegible] by McQuay-Norris [illegible] ing methods. There [illegible] the satisfaction possible [illegible] get from a plain snap ring [illegible] are packed twelve rings to [illegible] ton and rolled in waxed [illegible]

ed him to the Staley tent, ot. A doctor was called. nto unconsciousness. But held tight to Eve Staley's new that he would never

It was of no use to try to gather up the fragments of the revival. They had scattered and vanished in the greater sensation. The congregation dissolved into groups of passionate comment and description, and at last, moved only by the extreme lateness of the hour, sought out their several vehicles, and took their ways home, replete with drama. Nothing like this had ever happened at Bethel Camp before; nothing like it would ever happen again. It was the event of a century. They felt themselves magnificently fortunate to have been present. It would make a tale for their children and their children's children.

Laura Belle and Ashby had not lingered for a moment. In a strange, rather flat restraint they made their way out of the press to the buggy, and thence to the starlit road. At last Laura Belle spoke.

"Perhaps it was dreadful of me," she said, "but with all that going-on I did feel that it needed a word of plain common sense. I hate scenes."

"I suppose," said Ashby thoughtfully, "I should have got up and demanded satisfaction of him for making a show of you before everybody, but I was so knocked over by the thing. I sat there waving your fan, open-mouthed like a zany, and let you do the talking. He was out of his mind."

"Oh, well, he's all right. You saw Eve?"

"Yes, I saw." Ashby fell again into that curious restrained silence. And then he burst into vehement speech. "But he was right, Laura Belle—he was right—to love you like that, I mean. What I saw in his face and heard in his voice I've felt—how often! And he made me see—that I must have you."

"Ashby!" She turned to him in incredulous rapture. They flung their arms about each other and kissed like children. "Ashby! Ashby!" She said his name over and over, sobbing against his shoulder.

"I've been hard on you—but it was a million times harder on me. All the other fellows that have dangled after you! I've been so near committing murder! Laura Belle—how will you stand it, with me? I'm so poor. No more visits up North. No more pretty frocks. My lovely girl, it isn't right. But now—I can't help it. I'm just like your little preacher. I can't help it."

She mopped her eyes, straightened her hat. "Keep your arm tight around me, and I'll tell you a secret. I haven't been going up North to pay luxurious visits—not since the first time, that is. I go twice a year—and—and I design millinery in a big establishment in New York. I'm very clever at it, really, Ashby. And that's what keeps father and me going. Cousin Perry—dear mamma's cousin, you know—would give father an allowance, but I wouldn't let him take it. He can take it now. I don't care, I won't have to share it. But all my hats—and frocks—and pretty things—I make them, Ashby—they don't cost much. And I'm so s-sick of being a drudging old designer—and I was so afraid I'd have to keep on forever and ever and ever. You must never tell, for no one here has the least suspicion, and father would be so disturbed if people knew I worked. Oh, how I've been tempted to tell you!"

It was his turn to be incoherent. "Laura Belle! I am ashamed. I'm in the dust."

"Yes, you are. There's so much of it to-night."

They drove along serenely through the night. Even as Eve Staley's hand clasped Aaron Baines' so did Laura Belle's soft fingers cling to Ashby's work-hardened palm. They were tremendously at peace, happy in visions.

Laura Belle spoke dreamily: "I'm going to give Eve her wedding hat, and he'll love her ever after when he sees her in it. I tell you, Ashby, it's just a trifle mortifying that I—must take you as a gift of the little preacher's hysterics. Was it only that? Wouldn't you have told me soon—anyway? I want to think so."

Ashby, released from his pride, from his fears, was generous, offering the accepted lover's commonplace without a qualm. "You shall think whatever you want, and I'll swear it's true," he answered, "always and always."

Laura Belle laughed a little, accepting the tribute at its true worth, undeceived but uncaring. "You had to say so. Oh, Ashby—what a life—what a life I'm going to lead you!"

HONK! SERVE! FORE!

BY Natalie Norris

FASHION, thank our lucky stars, has come to her senses at last. A mere wisp of a girl may now be comfortable and stylish at the same time. Those of us who prefer to ride lazily at anchor with the rocking-chair fleet, in the shade of the country club porch, can wear our Sport stockings as well as our sisters who swing the brassie and niblick beneath the broiling sun. One no longer has to be a Kellermann to wear a dainty bathing suit. Some of the most stunning ones I have seen were never meant to leave the beach. Sport clothes are the thing this summer and sport clothes are both good-looking and easy to wear.

So while you are busily planning your wardrobe for this summer's conquests, don't overlook that important item, stockings.

BURSON HEATHER is a good name to remember when you are doing the stores. For golf, motoring, tennis, hiking or ordinary, every day street wear, these new Burson stockings are the best looking, most thoroughly comfortable stockings I have seen in all my shopping excursions.

Colors? Just see what you have to choose from: oxford, cordovan, tweeds, russet, camel's hair, pastel, fawn. How's that for a good selection? These stockings come with or without clocks, just as you prefer. Made of the very best materials; they fit perfectly; they are kind to the feet and they wear extremely well. The prices are so low they will surprise you. Ask to see the lighter weight BURSON HEATHERS; they are very good right now.

THE REMINISCENCES OF A STOCK OPERATOR

(Continued from Page 4)

"I don't believe the man who told you knew what he was talking about."

"He didn't keep Mr. Rockefeller's books any more than you keep Mr. Livingston's. But my guess is that your guess about Livingston is wrong. If you wish I'll make his acquaintance exclusively to ask him."

"And he'd tell you!" he jeered.

"Why not?"

"He doesn't talk," he said.

"Then how does he tell the waiter what to bring him? What you mean is that he doesn't blab. That fact and the report that he has put a million or two in trust against the possibility of the game getting him some day, as it does every one of your customers in the end, make me quite anxious to meet him. I understand that he never gives tips on stocks, but never hesitates to say whether he is bullish or bearish and why, and also that he never talks one way and acts another—a luxury that no man can permit himself unless he has an intelligent conception of the big swings. My own opinion is that Livingston will agree with me that stock speculation, considered as a continuous performance, is an unbeatable game."

"Sure! He'll agree all right. He's made millions playing it."

"You don't know that he plays the game as a speculator. Moreover, he has made and lost several fortunes and he evidently thinks he may go broke again or he would not have soaked away that million so that the same ticker that gave shall not take away. I know there is always a good reason for his operations; and that reason will prove my theory."

"He may talk about the market, but he won't talk about himself," insisted my friend.

"He can't talk about the market without talking about his methods of operating. His market philosophy is himself," I said.

Brokers do not listen to abstractions. If they did some of their customers might make money. My friend said earnestly, "He has always played a lone hand and I know he is a very heavy trader. He has friends, but not a personal following such as all operators had in the old days of which you are so fond of speaking."

The Livingston Personality

"Then he is really able and also honest, and therefore exceptional. My dear chap, on the bear side all the following an operator needs is to be right. But you are, as usual, wrong. In the old days the only operator I recall who really had a following was Governor Flower, and he was not, strictly speaking, an operator, but a pool manager and promoter of syndicates operating in an unusual period. There never was and never will be another such man. His type, his place in the popular regard and the conditions that made possible his leadership will not recur. Keene, who is the nearest approach to a predecessor of Livingston, played a lone hand. But he did not disdain to accept company when there was need. And it was his pools that hurt him most, and it was a pool that made his last Wall Street chapter so inglorious. But I have to thank you for one thing, and I am very grateful."

"For what?" he asked suspiciously.

"For my present intention to see Livingston, that he may prove how sound my theories are."

"Your theories!" smiled my friend.

"I never heard you say that they were yours," I remarked quite mildly.

A mutual friend told Livingston that I wished to meet him. I do not know what else he said, but he once upon a time was a newspaper man. At all events, Livingston sent word that he would have more time to give me if I took luncheon with him at his home on Sunday. We could then spend the entire afternoon together.

I was there at the appointed hour. It was a sumptuous home. Its owner, who had never done anything else in his life than speculate, obviously lived in the height of luxury—liveried flunkies in the hall, Old Masters on the walls, and all that. It was not the blatant assertiveness of new millions that obtruded itself, but the inescapable evidence of guessing correctly on the stock market. If the unbeatable [illegible] of stock speculation had not been [illegible] by this man it at least had [illegible] severe jolt at his hands. He had made [illegible] lost several fortunes in a few years, [illegible] ing to the gossip of the Street. It was [illegible] that he had not lost the last one—[illegible] But I was forced to admit that the [illegible] making of one of the magnitude [illegible] his home hinted was a solar-plexus [illegible] my cherished theory.

He was tall and well built, [illegible] as a West Pointer. He was clearly a [illegible] the pink of condition—that is, [illegible] gent human being. He did not [illegible] years or his business. He showed [illegible] kles, no traces of the worries and [illegible] that bring premature old age or [illegible] Wall Street professionals, no vanity [illegible] dence that he had ever lived unwisely [illegible] the chief impression I received was [illegible] mind that worked both habitually [illegible] when cold.

His greeting was neither distant [illegible] dial, but his neutrality was not [illegible] ascribable to a habit of caution [illegible] than the mere shadow of a corrugation [illegible] his brow came from the pervasive [illegible] of a man perennially on his guard [illegible] of his business. And, quite definitely, [illegible] was about him nothing to make me [illegible] the lightning decisions he was [illegible] making on big market days—decisions [illegible] volving millions of dollars.

A Pointed Question

We shook hands, still neutral. [illegible] proceeded to tell him why I had [illegible]

As I talked I kept my eyes on [illegible] judge the effect of my words on [illegible] could not tell what his thoughts [illegible] indeed, whether he was thinking [illegible] eyes were full of that baffling [illegible] that you see in the eyes of [illegible] They were of a clean, clear, blue [illegible] so steady that they impressed me [illegible] more than merely organs of vision. [illegible] greatly helped him in his listening [illegible]

Livingston did not baffle [illegible] Henry M. Flagler, nor remind you [illegible] refrigerator like the late James [illegible] It was rather that the sending and [illegible] his psychic wireless was not working [illegible] face had the quality that goes with [illegible] imperturbability rather than the [illegible] immobility of exercised self-control [illegible] it not been for the listening eyes [illegible] even have called it placidity.

I told him that I had certain [illegible] about the game of speculation, as [illegible] the psychology of speculators. "[illegible]

"I've read some of your articles [illegible]

He spoke so noncommittally that [illegible]

"Well?"

"Well, you are one writer who [illegible] to tell the truth, even though it [illegible] the brokers' business to tell it.

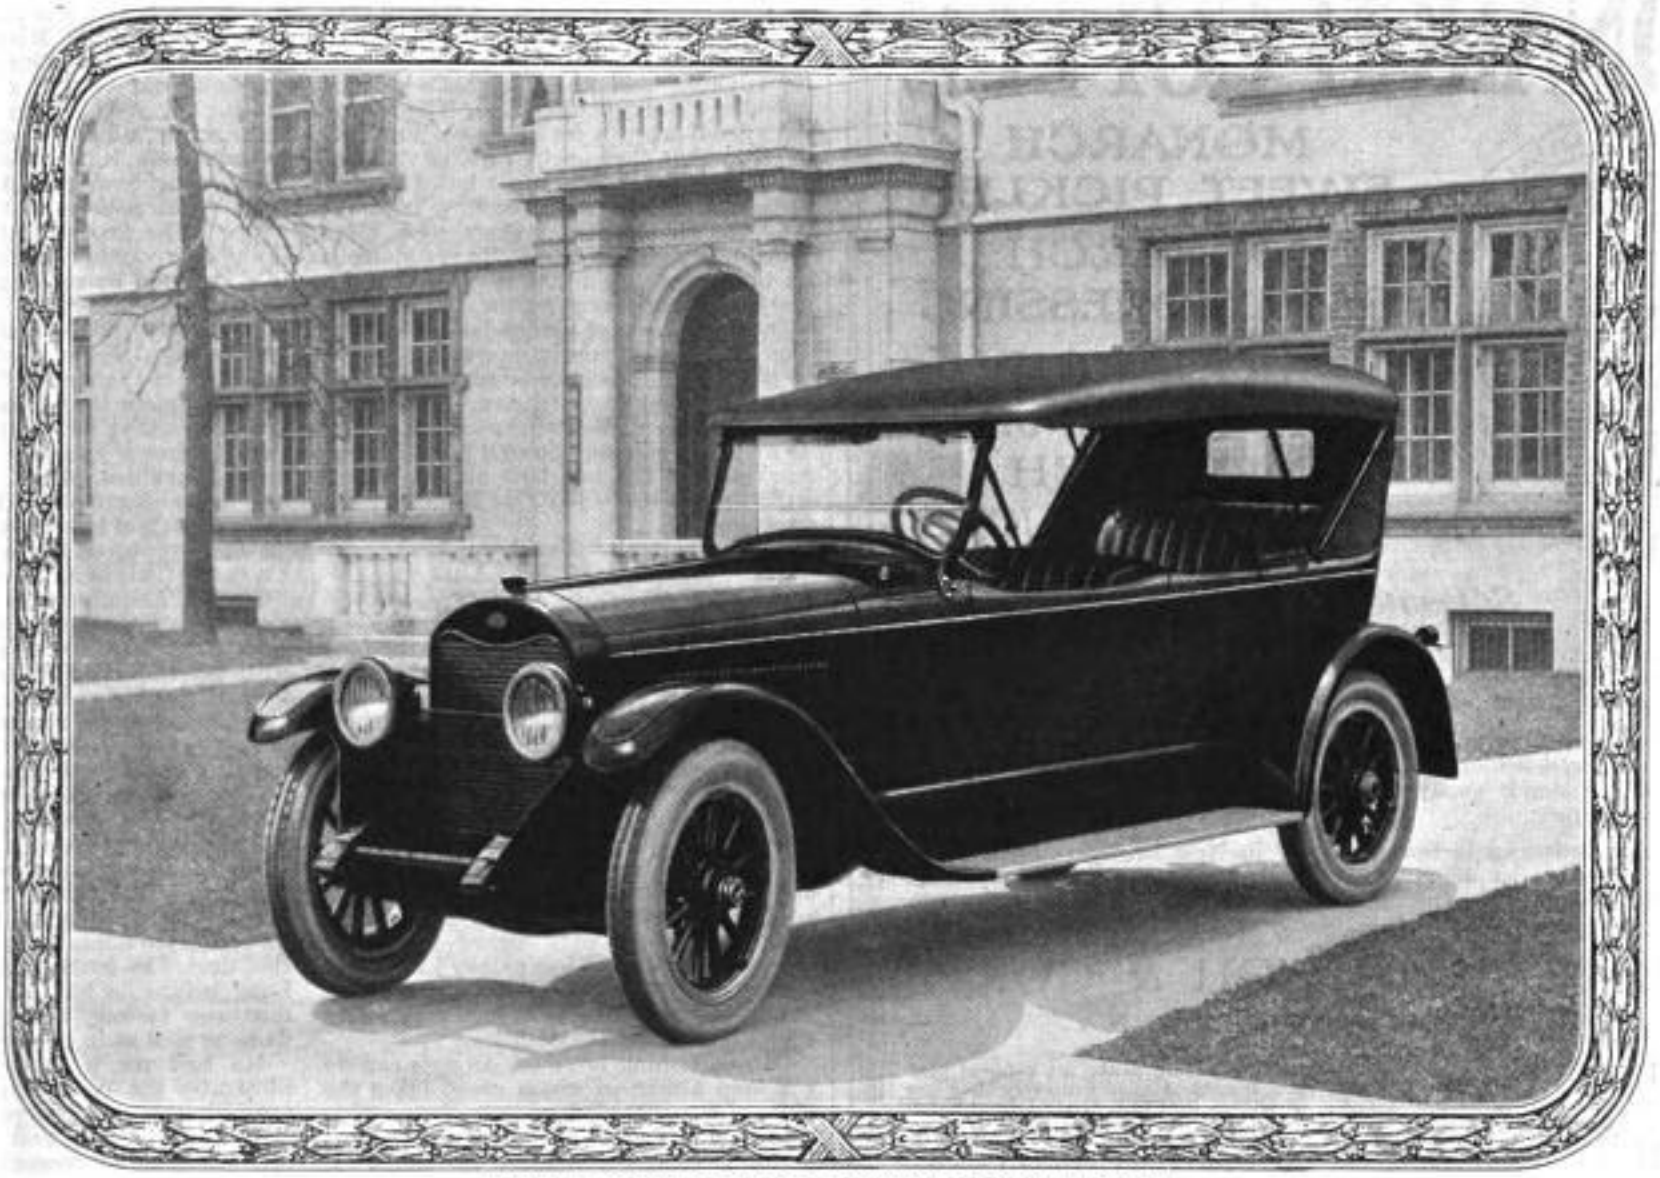
"But the truth does not [illegible] brokers' business," I said.

He merely nodded.

"I'd like to ask you some [illegible] I said.

"I'll answer any question you [illegible] he said confidently.

"About yourself?" I asked.



There flitted across his face [illegible] of reluctance. It was plain that [illegible] in the properly loquacious mood [illegible] comes only when a man knows [illegible] not only completely but instantly [illegible] stood, when talking ceases to [illegible] and becomes thinking aloud.

I had heard from the newspapers [illegible] of course nothing had been published [illegible] it—that Livingston had received [illegible] ing letters from cranks who had [illegible] his alleged bear raids on the market [illegible] had been some bad breaks in the [illegible] end of harrowing stories of terrible [illegible] the public. I argued that as for [illegible] his family in this house the threat [illegible] throwing could not be ignored, [illegible] however courageous he personally [illegible] be. The problem was to give him [illegible] of talking unrestrainedly about [illegible] by first inducing him to talk [illegible] about one thing.

So I said, "The principal [illegible] wanted to see you was that every [illegible] the weakness of the market last [illegible] due to a bear raid by you. I [illegible]

THE LINCOLN FOUR PASSENGER PHAETON

Ten strikingly elegant open and closed body types having seating accommodations for from two to seven persons afford an unusually wide range to meet individual preferences

Picture a motor car in which you may sweep through the open country at most any pace that suits your fancy—forty, sixty, seventy or more miles per hour—yet so restfully and softly that the landscape seems silently to unroll in a ceaseless panorama.

Picture a car of seemingly limitless vim and power, yet so mild and facile in its action that you are scarcely conscious of its control.

Picture a mode of motoring so void of notes of harshness that you lapse into forgetfulness that you are borne along by means of mechanism.

The picture may not seem easy to conceive, yet those who know the car will tell you that the LINCOLN makes that picture a reality; and they will tell you of the never-ending delights and revelations to be experienced in its matchless way of going.

You ride in cradled comfort

No matter how rough and uneven the road, how long and tiresome the trip, the baby, cradled in his mother's arms, knows neither shock nor fatigue. This is because the mother automatically absorbs the shocks and cushions the child against them with the springy resiliency of her spine and arms.

This same ease and freedom from uncomfortable motor trouble will be yours if you equip your car with Hoo-Dyes. This hydraulic device compels your car to ride on liquid cushions and so eliminates the jounces and shocks due to uneven roads with the attendant wear and tear on your nervous system.

Hoo-Dye is endorsed by leading physicians and osteopaths as a true health device because it is a protection and comfort to every motorist.

If motoring wearies you or makes you conscious of your tired nerves, send for our book "How Motoring Shocks Affect the Nervous System" by R. Kendrick Smith, M. D., D. O., one of America's foremost physicians and osteopaths. For your own health's sake you should have a copy—send for it today and learn the health way of motoring. Ride easy with Hoo-Dye Hydraulic Shock Absorbers.

THE HOUDAILLE COMPANY, 1416 West Avenue, Buffalo, New York

Manufactured by the Houde Engineering Corp.
Canadian Distributors: Canadian Fairbanks Morse Co., Ltd., Montreal

Hoo-Dye is regular equipment on the majority of the finest foreign cars, and in this country it is standard equipment on Cunninghams, while many thousands have been applied to Packards, Pierce-Arrows, Cadillacs, Studebakers, Mercers, Hudsons, Buicks and other of America's best cars

that you often spread your selling orders among a hundred brokers to give the impression of liquidation by the general public. How about it?"

Sure enough, his face flushed.

"I never raid the market," he said quickly. "It would be useless. The market raids itself when a lot of people suddenly discover that they ought to have sold out ten points higher, or when a lot of insiders dispose of stocks they couldn't land the public with, or when brokers have loans called on them. But they always blame it on the bears. As a matter of fact a bear market is 100 per cent legitimate. It begins without the need of manipulation or thimblerigging, and it continues without having to be nursed. No man or set of men can smash a market day after day. I might raid the market once. But what good would that do me? It won't stay down if it isn't a bear market; and if it is a bear market I don't have to raid it, do I?" He looked at me, frowning.

"No, you don't," I said.

Merchants in Wall Street

"Personally I'd rather play on the long side. It is constructive, and it is much nicer to share your prosperity with others. The public does not take kindly to short selling. For one thing, it is easier to be optimistic, to believe what it pleases a man to believe. And then, as I said, everybody boosts a bull market, bankers and suckers alike. Nobody speaks about the misdeeds of the bulls or the misstatements of insiders about their companies. Bull tips are mostly anonymous. I have an idea that if the papers published only signed bull dope there would be much less money lost by the public. Fix the responsibility. But don't talk about bear raids as though they really were the cause of the declines."

"I don't think anything anyone can do will help a man in whom greed takes the place of gumption," I said.

He nodded—the kind of perfunctory nod a man gives when he has only half heard but isn't interested enough to ask for a repetition. His next word proved it.

"I am tired," he said, "of hearing the public and the papers blame Wall Street for parting fools from their money. Take the biggest losers. They are not the piker suckers, who only lose what they risk—pennies. It's the successful business man, the shrewd merchant, who is the biggest sucker of the lot. He has made a fortune in his own line? How? By being on the job for years; by learning all there was to know about it; by taking reasonable chances; by utilizing his knowledge and experience to anticipate probabilities. He wants to increase that fortune at a faster rate and with less effort. He decides to make his money work for him—at high wages. He assures himself that as he is taking the risk of losing every cent he puts up it is only fair to make more than his usual profit. Why, that man doesn't lose his money in Wall Street. He loses it in his own office. It isn't the game that beats him; he beats himself. Am I right?"

He looked as if he really wished to hear my opinion, so I said, "Absolutely!" It was one of my own favorite points.

"That man expects to make money in Wall Street by using methods he wouldn't dream of using in his own business. That is why legislation can't help much, because it can't keep a man from wanting to get something for nothing. If all the so-called abuses were suppressed and the public protected against crooks and against its own greed and ignorance, so that nobody could lose money, who in blazes could make money? If everybody bought at the bottom, from whom would he buy? Who would sell?"

"Precisely. That's one point all the investigating committees overlook," I said.

He went on earnestly:

"The sucker play is always the same: To make easy money. That is why speculation never changes. The appeal is the same: Greed, vanity and laziness. The merchant who would not dream of buying and selling stockings or percales on the advice of fools goes to Wall Street and cheerfully risks his money on the say-so of men whose interest is not his interest, or tipsters who have not grown rich at the game they want him to play. He thinks his margin will take the place of brains, vision, knowledge, experience and of intelligent self-surgery. Whether the stock market goes his way or against him, his hope is always fighting his judgment—to keep gaining more that keeps him from taking his profits when he should; to keep losing less that keeps him from taking a relatively small loss. It is a human fault.

"Yes," I said. "Even old Daniel Drew couldn't bear to take a loss. He began trading in several stocks and one day showed him a loss he would put it in some account that showed him a profit. That way he would tell himself he hadn't lost money, that he hadn't been wrong! The foxiest of all stock sharks in his day couldn't bear the mere thought of a loss, and he wasn't a miser. He was the average sucker!"

"Yes. He is the kind of investor who believes the reason stocks decline because I raid the market," said I.

It was plain that so far it had not grievances that had been lodged against that he himself had been listening to—the same grievances. But I was less anxious to hear business aphorisms than I was to hear the plain tale of his own successes. I was in the midst of this sumptuous house and the owner of his market wisdom.

I asked him about his methods. I would ask him about himself—and it became clear that he was far more interested with determining the direction and duration of the big swings than with the moves in specific stocks. There was no trouble about making big money when the operator's position was correct. All stocks, for instance, go down in a bear market. As bear conditions become more clearly defined the operator must pick out those stocks in accordance with the changes which the hard times develop and which appear in the various industries. Every group has its turn. He himself studies certain stocks all the time. It is part of his day's work. Long before he has his breakfast he has read the various market reports in the daily as well as in the trade papers.

He told me a story that perfectly illustrates the Wall Street point of view—how apt are the wiseacres in the brokers' offices to be wrong and how and why a man earns his successes.

An Undeserved Reputation

The United States World Trade Corporation, with a capital stock of $100,000,000, was formed to operate in various foreign countries. It owned steamship lines that went everywhere, trolleys in Europe, rubber plantations in Guatemala, hydroelectric plants in Bolivia, banks in Peru. In addition conducted a huge export business. When, after the armistice, the bottom of the world over fell off, the U. S. W. T. stock remained firm. Other stocks declined, but the public remained sure that the company's business was sound all over the world and so could divide profits. Moreover the directors were the shrewdest financiers in the country. The company continued to pay its regular quarterly dividends.

The bear market developed. There were severe declines in security prices. One pool after another was forced to liquidate. U. S. W. T. stock descended in an orderly and leisurely manner as befitted the aristocratic directorate. One day when the whole of the market displayed an inspiring tone U. S. W. T. stock suddenly dropped five points and was more active than for months.

There was the usual demand for explanations, and one of the financial editors was delegated by his fellows to interview the president of the company.

"There is a rumor that you are going to pass the dividend at the next meeting," said the newspaper man, "as there was no disgrace; other companies are doing so on account of the hard times."

"It's news to me," said the president.

That didn't mean anything to the experienced financial editor, who asked:

"Has there been any formal or informal discussion about passing the dividend?"

"No!"

"Or about reducing it?"

"I might answer that it is not the business what our directors do formally or informally. But may I assure you that there has been no talk about it, and no desire or intention of reducing or passing the next dividend? I hope we may never have to do so."

"I hope the same thing," said the editor.

All the papers published the denying on the highest authority the president's—that the company

dn't have talked to report- n.

"I shall not after this," he promised heartfully.

"Don't worry about the next time," I assured him. "They will never again ask you any questions. And if they do they won't print the answers. Not after this."

It all happened several weeks before I called on Livingston. The story he told me was that he had been keeping an eye on the export trade and on conditions in South America and the Orient. The future was gloomy. Things were bound to grow worse. He looked, in accordance with his usual practice, for the stock that would corroborate and justify his opinion of basic conditions. There was United States World Trade Corporation, selling way up. He got the annual reports of the company for three years, and then, when he knew all about the company finances as well as the underlying conditions in every one of the company's divers lines of business, he sold short ten thousand shares of the stock. He began at 110. The next morning he read the president's statement. It had the effect on him of making him sell another ten thousand shares short, and the price broke so badly that he was encouraged to put out an additional short line of ten thousand shares on the third day. By the time he was short thirty thousand shares the price was in the 80's. There was no inside support to speak of, and the room-traders on the floor saw it and sold it so recklessly that the stock had a good rally on their covering. Then came the last grand drive, at the opening, on the day after the directors' meeting. Livingston took advantage of the big collapse to take in his shorts at a trifle above 60.

"I made a killing on that stock. I didn't need any inside tip," he finished.

"And the beauty of it is," I said, "that Wall Street accused the directors of speculating in their own shares. Do you remember the shriek the newspapers let out when the stock broke after the president came out with a statement that they were not going to pass the dividend? They did not know that it was your selling. I happen to know that the decision to pass the dividend was not reached by the directors until two minutes before they took a vote on it."

"Wasn't it? Well," he said grimly. "I reached it for them two weeks before they voted. I read the president's statement. I didn't hope that they might never have to pass the dividend. I knew they must; if not this time, three months later. If they had paid the regular dividend I would have sold short twenty thousand shares more, because their action would have been proof that they didn't know their business or that their stock-market commitments obliged them to do the wrong thing; and with the help of the vanishing export business I would have made them let go their holdings before I got through with them. I knew the directors were the richest bankers in the country, but I also knew that no man or set of men could fight conditions."

Studying the Wheel

That is the inside history of a typical Wall Street episode. I told my friend, the president, what Livingston told me. His remark was, "That's very interesting; but I don't expect ever to live down my reputation as a conscienceless stock gambler."

Livingston and I discussed other market topics. He told me many illuminating stories about buying and selling stocks at other than the exactly right time. Also he discoursed at length on tape reading and on numbers and their meaning, which enabled him to base operations on what one might call behavior. Time and behavior! He was very keen about these.

"And it isn't only in stocks. It holds true in nearly everything in the world. I was at a Southern resort, and some friends took me to Gridley's. I had never played roulette. So after a while I did."

"And you beat it?" I asked.

"Yes," he answered in a matter-of-fact voice.

My heart sank so that I almost heard it. I had developed a very fair degree of admiration for this stock operator, who in the palace he had bought with his winnings had been corroborating my contentions about the fate of all stock-market players. I had seen in him the honest-to-goodness hero of no end of exciting Wall Street yarns. And now he had to go and spoil everything!

"Do you mean," I asked in a casual tone of voice, "that you have a system for beating the roulette?"

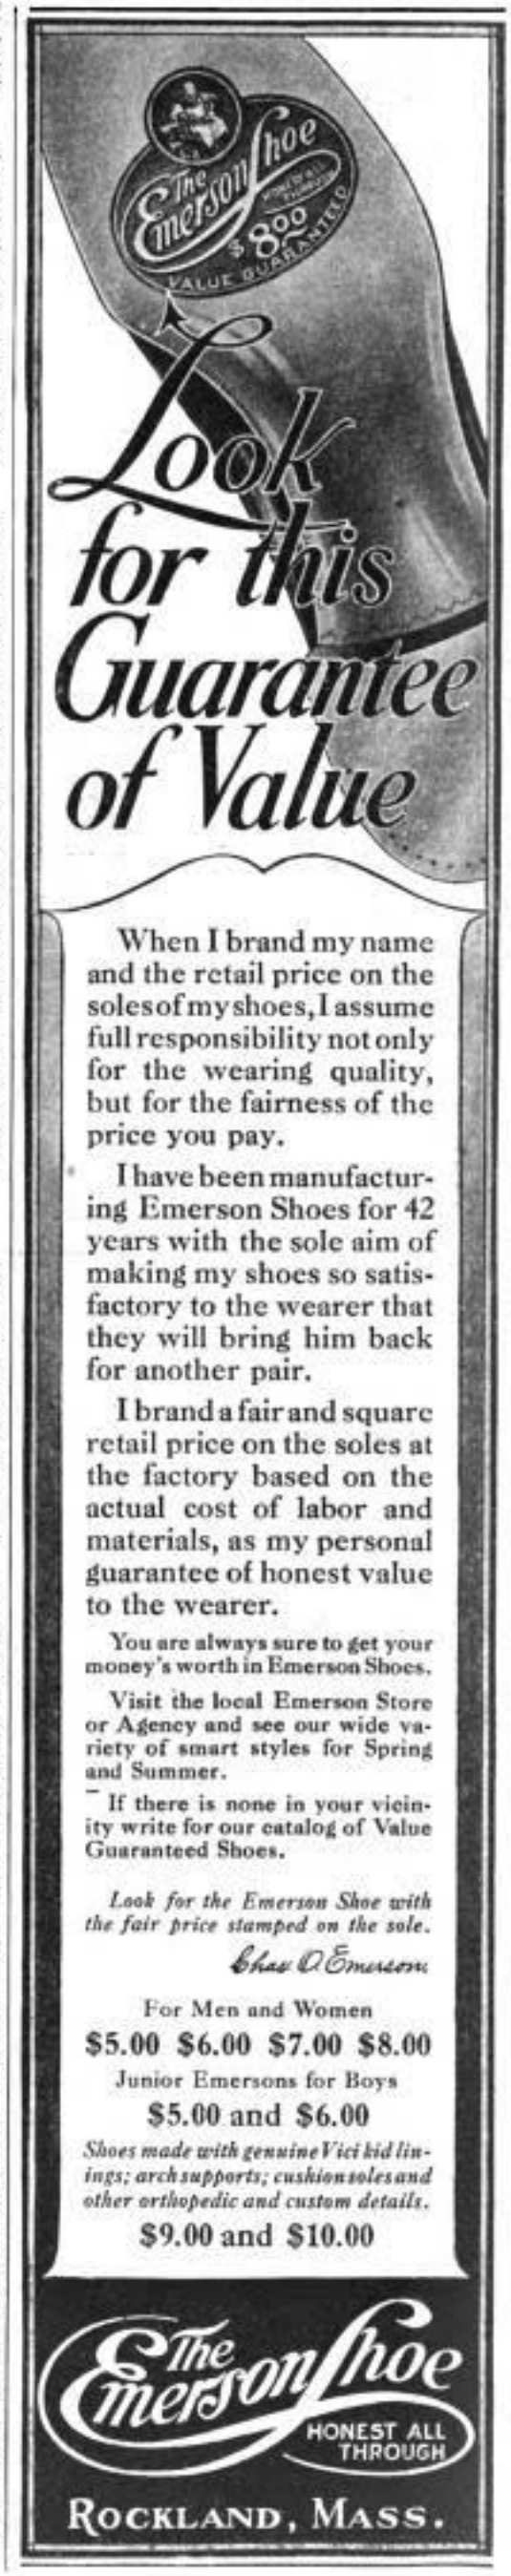
It was too bad, after promising so much!

"No," he answered slowly, "I haven't a system for beating roulette. I have a method that I follow in playing the game at certain wheels at certain times."

"Meaning?"

"I'll tell you what I mean. I stood at one of the tables and watched the wheel. I jotted down in a notebook every number that came out. I can't tell you how long I was at it. But I kept the tally of hundreds of plays. I studied these and saw that certain numbers appeared much oftener than others and that certain numbers also were very apt to come after certain other numbers. To make the story short, I found certain sequences. I waited for the right time and then I played according to the result of my observations at that one table! I figured that the odds were in my favor; and sure enough, I won."

"Did you always win?"



"Oh, no! Whenever things didn't come out as they should, I'd quit. There was no sense in arguing. Something had gone wrong. I might find out the reason later; but the pressing need when one is wrong is to quit quick. I went to Gridley's a good many times and studied his tables. I learned that the runs of numbers varied not only with the wheels but with the dealers. There were times when the same wheel and the same dealer would not run true to form. Probably they had oiled the mechanism that afternoon or had done something or other to alter conditions. The whole thing was simply one of the mechanical behavior of individual wheels, and the physical peculiarities of each dealer. I watched for the repetitions. As I told you, I always cut short my losses. No wheel could take more than two hundred dollars out of me. By the time I'd lost that sum I was sure something or other had changed, which rendered valueless all my previous observations. But often I won quite a little. At the end of the season I quit a small winner; say, three or four thousand. But that wasn't the thing. The reason I played was to learn whether my observations were accurate."

The Technic of Interviewing

The English-speaking man suffers from a purely conventional reticence. He seldom talks frankly about himself or humanly about his hopes, and the chief problem of the interviewer is to make him cease to think of his auditor as an auditor. A man who does not wish to be quoted must be persuaded that he will not be misquoted; and the best way to achieve that is to convince him that you know him better than he can possibly know himself, because it is your business to know men—as it is his to be an unusual personality.

A talker as a rule does not crave action; but a doer often loves to talk. When a man of deeds is convinced that you will not confound the certainty of knowledge with the dogma of egotism or that you are intelligent enough to be deeply interested in his pet hobby—his achievements—he regards you as his other self. Talk about the *femme incomprise!* It is the super successful man who is most vulnerable on his nonunderstood side. Of course, before he can be sure of the value of your appreciation—he does not crave d. f. praise—he studies you, tries to see the real you, even as you are after the real him. All you have to do to win out is really to understand him. You will best make this patent by listening accurately rather than sympathetically, for if he is a big man he doesn't need sympathy. You prove your understanding by occasionally not waiting for him to finish a remark, but finishing it yourself. If you put his own thought more epigrammatically than he himself would have done, you will find that he invariably repeats after you, as though he understood you! He will not talk down to you after that, but up! You may even interrupt, urging him to go faster. He will forgive your impoliteness because it proves that your interest makes you impatient to hear everything he has to say and hear it quickly; a thrilling story.

A quick-gaited mind finds its greatest torture in having to moderate its stride to allow you to keep up with it. With men like Theodore Roosevelt, James J. Hill or Nelson W. Aldrich it was no trick to get an answer to any sort of question after you once proved your ability to keep pace with their extremely rapid-working minds. To be understood, no matter what words he uses or how quickly the thoughts succeed

WEBSTER
LAMINATED VALVES

The Secret of a Silent Motor

NOISELESS, power-tight valves! This is the most important factor of quiet, full-powered motor performance. And in Webster Laminated Valves you find the secret, for these valves muffle the harsh, metallic "ring" that always characterizes the operation of solid-head valves.

The laminated construction of Webster Laminated Valves permits a flexing action that eliminates the usual valve clicking. In addition, it insures perfect sealing of ports, with consequent increased compression and power. This flexing action constantly "wipes" the seat clean, preventing pitting and carbonization. Valve grinding at periodical intervals becomes unnecessary; warping is improbable; silent, full-power motor operation is assured.

All this is accomplished by our exclusive patented process of swaging together seven laminations, which is fully explained and illustrated in our special folder. Write for a copy.

Make your motor silent. Bring out its full power capabilities. Insist upon your garage-man installing Webster Laminated Valves instead of re-grinding your present valves.

each other or how far the leap is from subject to subject, makes a man cease to talk to you. Instead he proceeds to talk to himself in your hearing; for even the most self-repressed captain of industry or banker or poet finds pleasure in your listening when it compels him to justify your rare appreciation of him. Often he finds himself for the first time crystallizing his own opinion of his own acts. The man who does big things is less afraid of being blamed than of being misunderstood. He doesn't ask applause from you. His one prayer is that you should understand him as he understands himself; because then you will realize that it is natural for him to be what he is. And he knows what he is!

This digression was intended to make plain why men who seldom talk about themselves will at times talk freely. A politician need or need not talk about himself. He can be a Roosevelt or a Quay. But a stock operator should talk only about the market, and at that only when the talk helps him. Livingston had no axes to grind on the stone of publicity. He needed no following—no votes. He had no vanity to gratify by speaking about his successes, when the detailed story if published might mean merely more threatening letters or even bombs or midnight visits. It was less his philosophy of trading that I wished to hear than the story of his life—the reason for the Old Masters on the walls and the exquisite pearls about his wife's exquisite throat—the man himself, self-painted by his autobiography. A life habit of playing a lone hand was not conducive to garrulity. All during luncheon I was thinking of this man's stock-market life and how to induce him to tell it to me.

I have told how I received no definite impression of Livingston's personality except that it was bafflingly unvibrating. He was psychically inert, as it were. But soon I perceived that he was testing me—as all men who have many opponents do when they are interviewed. It is always better for the interviewer to reveal himself at once instead of waiting to be sized up by the sitter, who is less apt to be an expert character analyst.

Livingston's secretary brought in a certain document. I was about to move away, when he said, "No; it is nothing private."

After the secretary left, remembering that Livingston did not know me, I said, "It is very interesting to see how your mind works."

"How do you mean, see?" he asked sharply.

"That!" I said. "See! I could tell by looking at you."

The Business of Being Right

I described how he looked when he turned his mind from our discussions to the new matter, how he concentrated, how he forgot everything except the point he was studying. I then told him how I read back from his actions to his thoughts, and why in my opinion he had decided to do what he told the secretary he would do.

He listened intently—as all men of affairs do when you talk to them about themselves frankly—and nodded. But after that the change of attitude was noticeable. He was now quite as much interested in his own talking as in my listening. We had become acquainted. Those ten seconds of understanding were the equivalent with him of a year's acquaintance.

After Livingston begins to talk because it is you who are listening to him, it is impossible not to realize that he has the kind of mind that makes him the best tape reader and consequently the best technical trader of all the big stock operators of his generation. It is a decidedly arithmetical mind—not indeed of the type of the lightning calculator who is nothing but a lightning calculator, but of a man who reads numbers on the tape as an astronomer reads the stars in the sky; and remembers—both the numbers and their meaning according to the time and place. So marked was this, so obviously was his uptown life drab as compared with his daily five hours downtown, that one wondered a trifle dubiously about his grasp of human nature and human emotions in general. For it was as clear as day that he took no interest in men who were merely human beings, whether butchers or poets. It was the people who played the same game that he did who alone mattered. Plungers or pikers, they were all a part of his problem. For their human weaknesses he had neither sympathy nor condemnation. They were stock speculators who might help or hinder his plans. [illegible] accurately, who might retard or hasten hour of his winning.

Later, when he told me about [illegible] experiences, I was not surprised to [illegible] once did he volunteer any impression the people with whom he dealt. He [illegible] describe the physical or mental characteristics of men who had played a part career. He either never had observed not think it worth while remembering was always what he did or was said—that is, what made him do [illegible] did at the time. But he recalled with lishing detail the facts of his own exact number of shares and the [illegible] stocks bought and sold twenty years fore—that is, all about his business of being right in the stock

I am giving impressions derived words in the course of a talk of hours grew more personal as it proceeded cumulative effect of scores of [illegible] revelatory flashes. For instance, gathered that he had the unusual mind that a great chess player has born with it. That is the reason what to do by instinct. He has [illegible] normal degree, the ticker sense—as sey has the fighting instinct reporters the news sense. He was his game as Mozart was born for music Cobb for baseball. He came into the with it and he has developed it Morphy developed his chess play has both studied and practiced. own success, his very millions, you shall later see, that not even beat the unbeatable game. For does is not to gamble or speculate sense in which I use "speculation" is, the continuous practice of buying selling stocks in expectation of a change in value. He does what successful merchants and manufacturers road men and prize-fight promoters pioneers do: He anticipates profits And that is not a mere euphemism gambling. It connotes a vital difference

Traders of Various Types

It was most interesting to hear own lips that with all his natural vated equipment as an operator, he tried to get something for nothing the stock market, or followed tips tured in other markets on another he invariably fared as doth the unjust has lost millions by making wrong He admits it painlessly. If it were mistakes he would be one of the rich in the world—like many others!

He has the marvelous memory of that type of mind. He remembers bers and fluctuations indefinitely tell what a stock sold at when bullish or bearish on it fifteen Professional chess players will every move of a complicated game years before. Only the other day player who may or may not be champion as these words are prescribed exactly how the balls in missed a certain shot that ended run at a certain tournament before That sort of memory is of value trader who remembers the lesson by miles upon miles of ticker tape

Relatively few of the big men Street have been good traders Jay Gould, who was a great genius, saw in the market a means end. He made and lost millions speculations. In his manipulations tain control of companies he was cessful. But that was quite another One of his chief brokers told made $100,000 in commissions Gould in one year, and that tain Mr. Gould's net winnings year did not amount to suspected Mr. Gould the year of the famous

Commodore Vanderbilt that he believed in, and vested, not traded. He in his two Harlem contests was mainly to punish speculators edness. Moreover, he had cial resources and believed the road, as well he might. Drew ran rings around him market more than once.

Keene, of course, traded in
nd he also had, very highly developed, what I have called ticker sense; that curious instinct that saved him more than once. He was a brilliant manipulator and a daring plunger. He did not care to direct a company's affairs, but he could analyze an annual report as accurately as an expert accountant; and ten times faster.

It was a wonderful equipment that Livingston had been born with, and I could not help comparing him with the average man who goes to Wall Street after easy money. I recapitulated the sources of loss by the public.

Speculators' Weaknesses

MOTIVE. The sucker wishes to get something for nothing. He is prompted by blind greed or by the excitement of gambling. But Livingston cared only for winning, for being right. Money was merely the proof of it. He sees. Then he seeks to verify his sight by actual operations. It was the hot passion of a chess master for chess, however cold-bloodedly he may play the game itself; the irresistible urge to find solutions to problems. And his were all stock-market problems.

TRADING IN AND OUT OF SEASON. Livingston had lost too many millions and had learned to wait for the right time. Too soon is as bad as too late.

HOPE. The average sucker does little more than hope, whatever official reason he may give to others or to himself. But Livingston doesn't hope; he thinks. He makes mistakes, but never the same mistake twice, for he has toward the game the curiously personal as well as utterly impersonal attitude of the artist toward his work. One of his aphorisms is "I never argue with the tape." He is right or he is wrong; hope has nothing to do with it. And even when accidents make him lose money they don't prove he's wrong. So his attitude is unchanged, his confidence in himself unshaken. And that makes the millions!

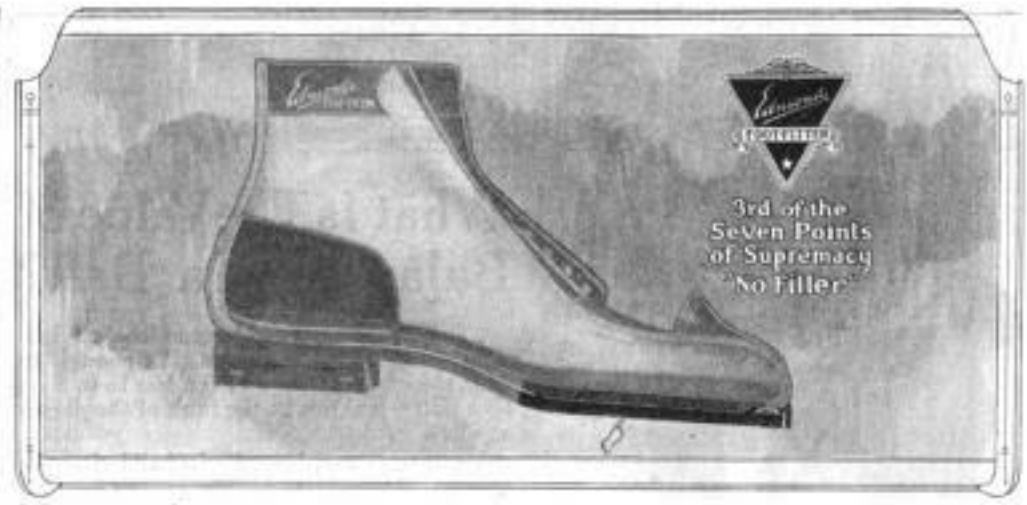
LACK OF KNOWLEDGE OF THE GAME. Lack of knowledge of market movements, of general trade conditions, of specific conditions affecting specific stocks, of values, of money conditions, contributes to make the public lose. But Livingston knows and studies all the time. He reads trade papers, and hires experts, and gets reports, and is forever on his own job.

INEXPERIENCE IN THE STOCK MARKET. It is the one business Livingston knows. He has been in it since he was fourteen.

TEMPERAMENTAL UNFITNESS. That is back of many failures. But Livingston has experience, a remarkable memory, coördinates accurately and quickly, has ticker sense—the instinct for the game that a man must have to be a master. At times it proves to be a trustier guide than his reasoning, for that may be vitiated by ill health, nerves or special circumstances. But the instinct is never dormant.

And yet Livingston loses. He was a discharged bankrupt for millions, as late as 1915. In two years he had paid all his debts with interest; and two years later was a multimillionaire.

How did he do it all?



How did he make his first million in 1907?

How did he lose all his millions in 1915?

How did he get back?

And even more interesting and valuable—how did he make his first dollar?

Editor's Note—This is the first of a series of articles by Mr. Lefèvre. The next will appear in an early issue.

"Foot-Fitters" *Have No Cork Filler Between the Soles*

You are not receiving full dollar value if the shoes you buy have a cork bottom filler between the soles. Such shoes quickly lose their shape, wrinkle over the vamp and form hard lumps on the inside as the cork is squeezed out of place by your weight.

The staunch shoulder-channel insoles used in Edmonds "Foot-Fitter" Shoes are 40 per cent heavier than generally found in other makes of shoes. They fit tightly against the outsoles. There is no room nor need for a cork bottom filler.

This is one mighty good reason why your dollars buy more shoe value in Edmonds "Foot-Fitter" Shoes than in many brands. There are six other strong reasons. Any "Foot-Fitter" dealer will be glad to show you these shoes in either black or rich mahogany calf. If you have any difficulty in locating the "Foot-Fitter" dealer in your town, write for his name and address.

MACGREGOR

"That wasn't your fault—the ball didn't run true. Try this Master Balanced Ball—it's bound to hold its line."

What Is The Value of Balance in a Ball?

A ball only ten one-thousandths off balance may twist to one side enough to miss the cup entirely on even less than a six foot putt—and not be the fault of the player at all!

Until this year about 80% of all balls were enough off center to be the cause of multitudes of missed putts. But that dread need no longer bother those who play the Master Balanced Ball—it must putt true. It can't help it if the putter strikes it squarely.

That's what the balanced feature does—Master Balls are always the same—always accurate. The process that guarantees this accuracy is patented. Master Balanced Balls are $1 each. Ask your Pro or Dealer. (MACGREGOR 1.62 Dimple and Mesh Marking now only 75c.)

Any one or all of the following booklets will be gladly sent upon request:

1. "Golf, the Game of Games" (An introduction to golf.)

2. "Stepping Stones to a Golf Course" (Helpful suggestions for laying out a new course.)

3. Complete General Catalog.

The Crawford, McGregor and Canby Co. Dayton, Ohio.
Established 1829

You can always tell the Master Balanced Ball by its Meridian Marking.

Make Records With MACGREGORS

NO PORTRAIT IS SO completely satisfying as one made by a professional photographer.

"And it's the baby's first photograph!"

THE OLD FOLKS AT HOME await a picture of your baby. In the chubby features of their grandchild they will see *you*. Give them this pleasure; it is due them. Have the baby's picture made by a professional photographer—one who can produce photographs that make you say "How natural!" Have yourself photographed at the same time. You may not want your picture, but your friends do.

Nearly all professional photographers encase their photographs in Collins Oak Leaf Mountings for the same reason that beautiful jewels are mounted in appropriate settings.

COLLINS

You can identify Collins mountings by the Oak Leaf trade-mark on the back. Mention "Oak Leaf" to your photographer and he will know that you desire the best he can give.

J. POINDEXTER, COLORED

(Continued from Page 13)

and if I don't believe it is I can just ask any New Yorker after I gets there and he'll tell me the same.

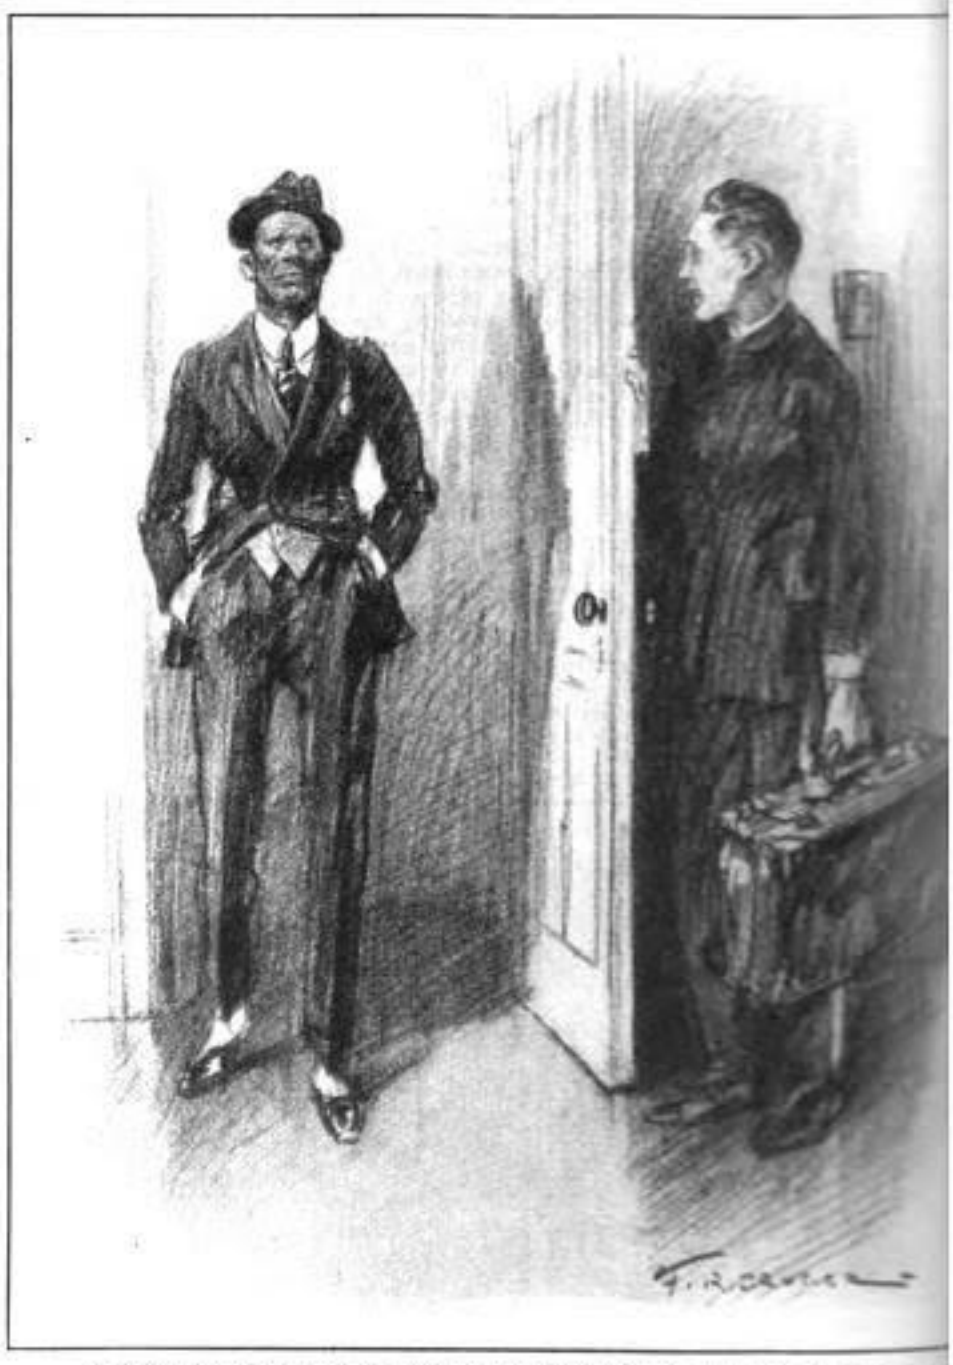
So, taking one thing with another, I'm mighty much pleased when the word comes along in about a week from then that the old judge says I can go and sends me his best wishes and a twenty-dollar bill as a parting gift and friendship offering. He says in the letter, which Mr. Dallas reads to me, to tell me to be sort of careful about sampling the stock of liquor and cigars on the sideboard of any New York family when I'm in their house, and also not to start in wearing a strange Yankee gentleman's clothes without telling him about it first. He says people up there probably don't understand local customs as they have ever prevailed down our way, and if I ain't careful first thing I know there'll be a skinny black nigger named Jeff locked up in the county jail hollowing for help and not no help handy.

But that's just the old boss man's joke. He always is been the beatenest one for twitting me about little things around the house! Mr. Dallas he knows how to take what the judge says, and so does I, and we has quite a laugh together over the letter.

And lessen twenty-four hours from that time we is both all packed up and on our way, New York bound, me wearing one of Mr. Dallas' suits of clothes, which I figures he ain't had it on his back more than five or six times before altogether. It's a suit of a most pleasing pattern, too, and cut very stylish.

II

NEXT morning after we gets across into Ohio Mr. Dallas he fetches me into the Pullman car where he's riding. I finds myself more comfortable there than I has been riding up front in the colored compartment, but lesser easy in my mind. I enjoys the feel of them soft seats, and yet I gets sort of uneasy setting up amongst so many strange white folks. Still, there ain't nobody telling me to roust myself out from there, and after a while I gets more used being where I now is. Also I gets quainted with two of the porters, the on our car and the one on the car which hitched on next to us. When they busy we all three gets out in the porches betwixt the cars and confabs gether. Course I don't let on to them all the time I studies them two.



The one on our car, which his name is Gabe, is short and chunky and of fatted out; he's black as the pots powerful nappy headed besides. looks like somebody has done dipped a kettle of grease and then threw handful of buckshot at it and they stuck. But he's smart. He knows service. I sees that plain.

With Gabe it's this way: A lady on board the car. No sooner do down and begin to fumble with the than Gabe is standing right along her holding a big paper bag in his opened out for her to put her hat in keep it out of the dust. A gentleman ting in the smoking room reaches pocket and gets a cigar out. Before rightly can bite the end of it off Gabe at his elbow with a match This here Gabe, he ain't hanging waiting for folks to ask him for and then have them getting all whilst he's running to find whatever they wants. No, sir; not him. He with the materials almost before made up their minds what it is they next. He just naturally beats 'em which I'll tell the world that's

He's powerful crafty about his tips When he does something for a and the passenger reaches in his get a little piece of chicken feed hand over to Gabe, he smiles and his hand.

"No, suh," he says to him, "keep funds whar they now is, please. There ain't no hurry—we're goin'

Insert shows the actual thickness of Sheetrock

YOU do not have to put up with makeshift walls and ceilings. You can have rigid, ***fireproof, non-warping*** walls and ceilings made of highest grade gypsum plaster. All you have to do is use Sheetrock, the fireproof wallboard. It is plaster, cast in sheets, and all ready for use. Any good carpenter can erect it easily and quickly, simply nailing it to the joists or studding. It is smooth-surfaced, tight-jointed, with the USG Patented Edge, and much thicker than the ordinary wall. Also, its cost is low. Call on your dealer in lumber or builders' supplies for prices of Sheetrock and other wallboards. You will be surprised how little you need pay to have Sheetrock walls and ceilings. Then ask him to tell you all the advantages of Sheetrock — including the ease with which it takes paper, paint or panels, and the way ***it lasts as long as the building stands.*** You will want Sheetrock in your new construction, alterations and repairs. Write for a copy of "Walls of Worth."

Stop sidesway, upthrow and vibration with Hasslers

THE lively, quick-acting Hassler springs cushion the downward movement of your car's body, and then instantly the same springs check the upthrow.

Hasslers lessen the vibration that ceaselessly pounds your car to pieces, and the angular position of the coil springs stops sidesway.

When you use Hasslers your car stays tight longer. You minimize rattles. Breakage and wear are greatly reduced. Upkeep costs are cut.

Hasslers permit you to drive faster on rough roads, save hundreds of dollars' worth of time, prevent accidents and avoid delays.

Only Hassler Shock Absorbers have the famous Hassler action; they alone can give you that full protection and comfort. Test them ten days at our risk on your Ford or Dodge Brothers car. Ask your dealer.

ece together. When we gits to gits off, ef you is puffec'ly satis- ll whut is been done in yore n you kin slip me a li'l' reward mind to."

me in confidences that working y he gets dollars where he would nes. He calls it his deferred- lan. He says some months his ree times what his wages is. I'll ! tar baby is certainly got some- s head besides sockets for his in.

porter, the one which is on the hind, is as different from Gabe from night. He calls himself it I knows just from looking at e's too old for such a fancy as that. 'Cause Harold is a ame amongst us colored, and y must be rising of forty years a day. This Harold is yellow- and yet he ain't the pure high her; he's more the shade of a orched sponge cake. He's lity. And I furthermore takes the farther North the train re uppidity he gets. He quits , ma'am" and "Yas, suh," e we leaves Cincinnati. He "Thanky, suh" and he starts ank you" in such a way it he was actually doing you a ept your two bits. He starts to passengers which com- something. He acts more grudgeful until it looks like it y hurt him to step along and which somebody on the train Along about Pittsburgh he's hat I keeps watching for some rise up and knock that boy's round from the middle of his like his side entrance. But that don't happen, and I is urprised and marvels greatly. elf, I says:

I says, "I aims to git yore fixed in my mind, because I erment 'at you ain't goin' be o very much longer, an' I able to remember how you ou is gone frum us. Some of ou is goin' git yore system t bein' biggotty on yore way you is due to wake up at e run all organized to attend 'l. Yas, suh, man, w'en you ewerleans you'll 'a' been daid urs. I kin jest shut my eyes see the cemetery sexton the face wid a spade."

im about the way he acts. not come right out and ask I leads him up to it gentle it. He tells me he don't aim run over him. He tells me imself just as good as they . He says he lives in a place ity, where the colored race den rights and if they don't and contends for 'em until

, I says: "Harold," I says, been about nowhars much trip, an' I ain't never seen just excuse of my ign'ence; looks to me, I'd ruther be it niggers than miser'ble olks."

e ain't I got no respect for ys to him I is got so much hat I ain't aiming to jam ces where I ain't desired. n't the point; he says the is got to stand up for the nd privileges of the colored ere I comes from I also has keeping from getting my He says to me I'll find s been long up North that of difference betwixt Ken- Jersey. I says to him that he is right. And then he o be careful about speaking r." He says the word ain't ore amongst colored folks hemselves.

, I says: "Huh!" I says. hut does you call a boy in' along wid him friendly

lifferent when I is strictly a color, but that I mustn't word "nigger" in front of ever allow no white man nd get away with it.

even ef you is wu'kin' fur call it to you to hurt yore feelin's nor to demean you, but jest sez it sociable an' so-and-so?"

He says, "Not under no circumstances whutsomever."

I says, "How is I goin' to stop him?"

He says, "With yore fists, or half of a loose brick, or something."

I says to Harold, "Harold," I says, "you shore wuz right jest now w'en you norrated 'at they wuz a difference betwixt Kintucky an' up North. Well, live an' learn," I says—"live an' learn. Only ef I aims to learn frum you I has doubts whether I'll live so ver' much longer."

We talks some about making money too. It seems like the closer you gets to New York City the more you thinks about money. I noticed it then, and I notices it since—frequent. He says to me that some of the boys in the sleeping-car portering business don't depend just on their wages and their tips alone. He says they has another way for to pick up loose change. He says he don't follow after it himself; he says he has got one or two other boys in mind which he has talked with 'em and knows how they does it.

I says to him, I says, "Specify."

He says: "The way these yere boys gits they money is 'at they gits it late at night after ever'body has done went to baid. Most gin'elly a man 'at's travelin', he don't keep track of his loose change. Anyhow, he don't keep near ez close track of it ez he do w'en he's home. He's buyin' hisse'f a cigar yere an' a paper-back book there an' a apple in this place an' a sandwitch in 'at place, an' he jest stick the change in his pants pocket an' goes on about his bus'ness. Well, come baidtime, he turns in. We'll say you is a porter on 'at train. You goes th'ough the car till you comes to his berth. You parts the curtains jest ez easy ez you kin an' you peeps in th'ough the crack an' sees ef he's sleepin' good. Ef his pants is all folded up smooth you better ramble along an' leave 'at man be. Folded pants is most gine'lly a sign of a careful man w'ich the chances is he knows how much he's got to a cent. But ef his pants is kind of wadded up in the li'l' hammock or flung to one side sort of keerless lak, you reaches in an' you lifts 'em out. But fust you wants to be shore he's sleepin' sound. Them w'ich sleeps on the back wid the mouth open is the safetest."

I says to him, I says, "Yes, but s'posen' he do wake up an' ketch you fumblin' round insides of his berth. Whut then?"

"Oh," he says, "tha's all purvided fur in the ritual. You sez to him: ''Scuse me, mister, I med a mistake. I thought you wus the gen'l'man 'at lef' a early call to git off at Harrisburg.' But most in gine'l he don't wake up. So you gits his pants out into the aisle an' goes th'ough 'em. Ef he's got somewhars round five dollars in loose change in his pockets you teks fifty cents, no mo' an' no less, an' 'en you slips his pants back whar you found 'em an' go 'long. Ef he's got somewhars round ten dollars in chicken feed an' in ones an' twos you assesses him jest one dollar even. Ef you plays yore system right an' don't git greedy they ain't one chancet in a thousand 'at he'll miss the money w'en he wakes up. But," he says, "they's one fatal exception to the rule. W'en you come to him don't touch a cent of his money, no matter how much he's carryin' on him, 'cause ef you do he's shore to mek a hollow the very fust thing in the mornin', an' next thing you know you's in trouble an' they's beckonin' you up on the cyarpet."

I says to him, I says, "Wait a minute," I says. "Lemme see ef I can't name you the exception my own se'f. The exception," I says, "is the w'ite man w'ich he carries all his small change in one of these yere li'l' screwed-up leather purses. Ain't it?"

And he says yes, for a fact, that's so. But he says how come I is knowing so much when I ain't never done no portering my own self. And I says to him a man don't need to be wearing railroading clothes to know that any white man which totes around one of them little tight, patent purses knows at all times, sleeping or waking, just exactly how much money he's got.

Well, when we gets to New York City it's morning again, and when we comes out of the depot onto the street I takes one look round and I allows to myself that these here New York folks certainly is got powerfully behind someway with their hauling. Excusing the time we had the cyclone down home, I ain't never in my whole life

ROOTBEER
is the finest summer drink when made from

One 25c package makes 80 glasses

You can make this pure, refreshing drink in almost no time. Just get a package of the extract from your grocer and follow the simple directions for mixing enclosed in the package. When you bottle the rootbeer use tight corks or get Hires Patent Bottle Stoppers. Your friends will be glad to know how delicious and economical it is.

Ask for

HIRES HOUSEHOLD EXTRACT

If your dealer cannot supply you, send 25 cents and we will send, postpaid, package direct. Or send $2.80 for carton of one dozen.

THE CHARLES E. HIRES COMPANY
207 S. Twenty-fourth Street PHILADELPHIA

Ask for Hires at the fountain, or buy it carbonated in bottles ready to drink, from your dealer

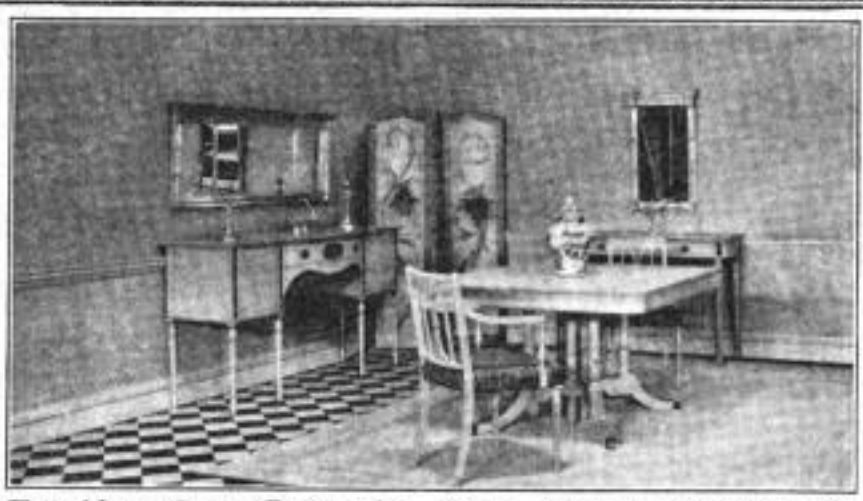
Deliciously different—

Orange-CRUSH

Reg. U.S. Pat. Off.



ice cream, ices and sherbets

Frozen products, in bricks or bulk, deliciously flavored with Ward's Orange-Crush, can now be obtained throughout the United States and Canada. One leading ice cream firm in each principal city and town is exclusively licensed to use Orange-Crush and its companion flavors, Lemon-Crush and Lime-Crush.

Just as the "Crush" drinks are the most delightful of citrus-flavored beverages, so you will find ice creams, ices and sherbets flavored with the "Crushes" the most enjoyable of frozen dainties.

Be sure to get the genuine flavors—made by compounding fruit oils and juices obtained from the actual fruit, with U. S. certified food color and cane sugar. Ask any retail ice cream dealer. Send for free booklet, "How Orange-Crush Is Made."

Prepared by Orange-Crush Co., Chicago, U. S. A. In Canada: Orange-Crush Co., Limited, Winnipeg

Ask your merchant to show you the woven BURLAP back

seen so much truck and stuff and things moving in all different directions at the same time. And people—who-ee! Every which-a-way I looks all I can see is a multitude of strangers. And I says to myself there certainly must be a big convention in town for the streets to be so full of visiting delegates, and it's a mighty good thing for us Mr. Dallas is done sent a telegram on ahead for rooms at the hotel, else we'd have to camp out with some private family same as they does down home in county-fair week or when the district Methodist conference meets.

The white gentleman that's going to fix up what I writes, he told me that I should set down my first impressions of New York before I begins to forget 'em. He says they'll make good local color, whatever that is. Which I will now do so:

The thing which impresses me first and foremost is a steamboat I sees on the river which runs alongside New York City on the side nearest to Paducah. She is not no side-wheeler, nor yet she ain't a stern-wheeler, which all the steamboats I has ever seen before is naturally bound to be one or the other. As near as I can tell, she had not got no wheel at all, side or stern. It would seem that what runs her is a kind of a big humpback timber which sticks up out of the middle of her hurricane deck and works up and down, and which Mr. Dallas tells me is known as a walking beam. But it seems like to me that's certainly a mighty curiousome way to run a steamboat, and I says to myself that wonders will never cease.

And the thing which impresses me next most is a snack stand on a sidewalk where they is selling watermelon by the slice—and it the middle of August!

And next to that the most impressiveness is when I sees a gang of black fellows working on a levee down by this same river, only it's mighty flat looking for a levee. These boys is working there, roustabouting freight, and there ain't a single one of 'em which is singing as he goes back and forth. When a river nigger down our way don't sing whilst he's loading it's a sign something is wrong with him, and next thing he knows he don't know nothing by reason of the mate having lammed him across the head with a hickory club. But this here gang is going along just as dumb as if they was white. I wonders to myself if thereby they is hoping to fool somebody into believing they is white.

I will therefore state that these three things is the things which impresses me the most highly on my first arrival in New York. I also takes notice of the high buildings. They strikes me as being quite high; but of course when you starts in to build a high building highness is naturally what you aims for, ain't it?

III

THE day we gets to New York is the day before yesterday, and we has been on the go so constant ever since and I has seen so much it seems like my ideas is all mixed up together same as a mess of scrambled eggs. The way it looks to me, the mainest difficulty with an author, especially if he's kind of new at the authorizing business, is not so much to find something to write up as 'tis to pick out the special things which should be wrote up and just leave the rest be. So it is now my aim to set forth the main points which sticks out in my mind.

Well, first off, soon as we gets in we goes to the hotel. Beforehand Mr. Dallas he says to me it's a quiet hotel uptown; but when we arrives at it I takes a look around and I says to myself that if this here is a quiet hotel they shore must have to wear ear mufflers at one of the noisy ones if they hopes to hear themselves think. To begin with, she don't look like no hotel I've ever been used to. She rears herself away up in the air, same as a church steeple, only with windows all the way up; and although the weather is pleasant, there is not no white folks setting in chairs under the front gallery. In the first place, there is not nothing which looks like a gallery, excusing it's a little glass to-do which sticks out over the pavement at the main entrance, and if anybody was to try setting there the only way he could save his feet from being mashed off by people trampling on 'em would be for him to have both his legs sawed off at the ankles. You'd think that being uptown the neighborhood would be kind of quiet, with shade trees and maybe some vacant lots here and there; but no, sir; it's all built up solid and the crowds is mighty near as thick as what they was down around the depot, and in ju much of a hurry to get to wherever they is bound for.

Even with all the jamming a excitement going on they must expecting us. The way they Mr. Dallas is proof to my mind body must 'a' told 'em in advance belongs to the real quality down comes from, and I certainly with pride to be along with him if he had been the King of Ire could not have showed him honors than what they does.

No sooner does we pull up at stone in front than a huge big man dressed up something like a Templar is opening the tailboard us to get out; and two or three in militia suits comes a-running and snatches the baggage away and another member of the gra full uniform, is standing just front door to give us the low bow come as we walks into a place done up with marble posts and wall paper on the walls, and gl coops on every side until it mind of a country nigger's notion. Over at the clerk's inclosure gentlemen is waiting very eager us, which each and every one wearing his dress-up clothes with ing collar and long-tailed coat though he was fixing to be best wedding or pallbearer at a funeral thing else extra special and fancy it's summertime, there is not no ing round there in his shirt sleeves you there ain't!

One of the pallbearing gentlemen the book round for Mr. Dallas to name in it, and the second one to for the keys, and the third one to see if there is not some mail or for him. It takes no less a number three of them white boys in the clothes to escort Mr. Dallas upstairs fourth one he grabs up my valise me on an elevator to the servants' He don't have to run the elevator neither. There's another bell-boy that alone, and all my white folks do is wrestle my baggage. It's the time in my life ever I has had a white son toting my belongings for me makes me feel kind of aboveish and tant. Also, I takes notice that gets to my room he keeps hanging fussing with the window shade and thing and then another, same as one of the bell boys at the hotel has He's lingering round until he gets For quite a spell I lets him linger suffer. I lets on like I don't notice he's hanging about that-a-way. I slips him two bits, and I give it to him neither, account of I gets such a satisfactory feeling to be toning a white boy.

I says to myself that if the annex where they boards the help, what must the main part of where the regular guests stays at. Because my room certainly is stylish looking and full of general But I ain't got no time then to there and enjoying the furniture. I knows Mr. Dallas will be needed to come and wait on him. So I goes out to find him, and it seems as half a mile through them halls I does so. He's got a big setting himself, and a fashionable bath special bath and a little special I says to him, I says:

"Mr. Dallas, they shore must strous set up over havin' yore hotel fur to stop at. Look at the tion committee turned out for stairs in full regalia! Look mouty nigh broke they necks you in in due state! An' now done gone an 'sign you to the ber an' give you the upstairs yore own use! It p'intedly 'at they sets a heap of store by

He sort of laughs at that.

"Why, Jeff," he says, "this is a fine layout you should see other suites they have here."

I says, "I ain't cravin' to see seen sweetness 'nuff ez 'tis is usin' us noble."

He says they should [illegible] noble, seeing what the price

Good Business

The instructions I got on shaving cream

By V. K. Cassady, B. S., M. S., Chief Chemist

The makers of Palmolive decided to use their soothing oils in a shaving cream. And they gave me these instructions:

"The men we go to are all using other shaving soaps. Most of them are satisfied — some are wedded to them.

"You must create a superlative soap, conspicuously supreme. Otherwise we shall never tell men anything about it."

We asked 1,000 men

Our first step was to ask 1,000 men what they most desired in a shaving soap.

Then we set out to meet their requirements better than others had done.

We are soap experts — that is our business. We have studied soap for decades.

We have won millions of women — won the topmost place in toilet soaps — by creation of Palmolive.

Now with those same oils — palm and olive — it was for us to make a shaving cream as popular with men.

Tried 130 times

We worked 18 months on the problem. We made up 130 formulas, and we tried them out on every sort of beard.

We knew soap chemistry. We had the oils which had held supreme place for 3,000 years. We had made the finest facial soap that women ever knew.

But we fell down 130 times before we satisfied ourselves on a shaving soap for you. You are one we tried to please. Now we ask you, as a fair return, to give this soap a test.

Go back to what you now use if we have nothing better. But find out what we've done. If you have something you want tested, we'll do the same for you.

Copyright 1922—The Palmolive Co. 1449

Enjoy Ten Shaves FREE

Just send the coupon and we will send a trial tube. See our conception of what a shaving soap should be. See if it is not better than any soap you know.

The Four Things Most Desired

Men wanted ample lather. We made a soap which multiplies itself in lather 250 times. A tiny bit — only one-half inch — suffices for a shave.

Men wanted quick results. Within one minute, with this soap, the beard absorbs 15% of water. And that makes the toughest beard cut like wax.

Men wanted lasting lather. The lather of Palmolive Cream maintains its creamy fullness for ten minutes on the face.

Men wanted nice after effects. Here the palm and olive blend soothes all irritation. No lotion is required. The skin is left in soft and velvety condition.

Those are the results that you want. Let us prove that we've attained them. Send this coupon for our ten-shave tube.

KOVERFLOR

Floor Covering You Lay with a Brush

KOVERFLOR—the floor covering in liquid form—resists the weather and the wear.

It protects floors of wood or cement, inside or outside, from wear, water, and the elements of decay. Because it is proof against oil, alkalis and lime, it is used on the floors of garages, factories, hospitals, dairies, bathrooms, kitchens, cellars, stores, theatres, restaurants, porches, etc.

KOVERFLOR comes in attractive colors. Its cost per square foot applied is small. Ask your paint or hardware dealer for KOVERFLOR—or send us his name and address and receive the KOVERFLOR Sample Book.

us. He says, "Do you know what I'm paying here for the accommodations for the two of us? I'm paying twenty-seven dollars and a half."

I says to him if that's the case he better let me clear out of there right brisk and skirmish round and find me a respectable colored boarding house somewheres handy by so's to cut down the expenses, because, I don't care what anybody say, twenty-seven dollars and a half is a sight of money to be paying out every week.

He says, "Twenty-seven and a half a week—huh! Remember, Jeff, we are in New York now, where everything runs high. This stands me twenty-seven and a half a day."

I says to him, I says, "Whoo-ee!" I says. "No wonder they kin purvide fancy garments fur all the hands an' buy solid gold bars fur the cage whar they keeps them clerks penned up. Mr. Dallas," I says, "it shore is behoovin' on us to eat hearty th'ee times a day in awder fur to git our money's worth whilst we's boardin' yere."

He says, though, for me not to overtax my appetite just on that account, because the eating is besides; he says we pays twenty-seven dollars and a half a day just for our rooms.

I says to him, I says, "Mr. Dallas, let's git out of yere befo' they begins chargin' us up fur the air we breathes!"

He says, "You're too late with your suggestion; they do charge us for the air. The air is all cleaned and cooled before it comes into these rooms."

Then I knows for sure he is burlesquing me. Who's going to hold the air whilst they cleans it? And the good Lord himself can't chill the air to order in the middle of a August hot spell, let alone a lot of folks running a hotel, can he? I asks Mr. Dallas them questions.

But he just laughs and says to me that there's not no need to worry, because he won't be staying there only just a day or so. He says Mr. H. G. Raynor, which is his principalest friend in New York and the one which he's thinking about maybe going into business with, has done devised for us to hire some ready-furnished quarters still higher uptown. He says something about 'em being Sublette quarters in a department house; leastwise that's what I makes out of what he says. Which it is news to me in more ways than one, because in the first place I didn't know any of the Sublettes, which is a very plentiful white connection in our county, had done moved up here to live; and in the second place it seemed like to me there just naturally couldn't be no more uptown to New York City than what I already had done observed from the taxihack coming from the train. He goes on to say he is expecting to hear from the gentleman almost any minute now, and then he'll know better what the program is.

Almost before he gets the words out of his mouth the telephone bell rings, and sure enough it is this here Mr. Raynor which is on the wire, and it turns out that the place where we're going is ready for us now on account of the folks which owns it having gone away sooner than what they expected, and the further tidings is that we can move up there that same day, which we does—along about an hour before supper time. I notices they don't make near as much fuss over us going thence from there as they did whilst ushering of us in. I judges the man what owns the hotel must be feeling kind of put out about losing of all that there money which we'd be paying him had we 'a' stayed on.

We gets into a taxihack and we rides for what seems like to me it's several miles, and still are not nowheres near the outskirts as far as I can judge, and when finally we gets to the new location I has another astonishment. For here all day I've been expecting we'd land at a private residence, but this place to which we've come at don't look like no private residence to me. It's more like the hotel we just left, only more bigger and mighty near as tall. In all other respects additional it certainly is a grand establishment.

It's got a kind of a private road so's carriages can drive in under shelter off the sidewalk, and 'way back inside is a round piece of ground all fixed up with solid marble benches and little cedar trees and flower beds, like a cemetery. I thinks to myself that maybe this here is the private burying plot for the owner's family; but still there ain't no tombstones in sight, excepting one over the front door with words cut on it, and since I figures I has done showed ignorance enough for one day, I don't ask no fool questions about it.

The help here also wears fancy clothes, but is my own color. I'm glad of that, because I counts now on having some black folks to get acquainted with and talk to; but just as soon as one of 'em opens his mouth and speaks I knows they is not my kind even if they is my complexion. Because he don't talk like no white folks ever I knowed, and yet he don't talk like none of the black folks does at home. Still, just from his conversation I can place him. There was two just like him which was brought South once by a Northern family staying in our town, but they didn't linger long amongst us. They didn't like the place, and no more the place didn't like them. They claimed they was genuine West Indians, whatever that is, and they made their brags constant that they also was British subjects. But Aunt Dilsey Turner, she always said they looked more like objects to her. Aunt Dilsey, which she was Judge Priest's cook for going on twenty years, is mighty plain spoken about folks and things which she don't fancy, and she did not fancy these two none whatsomever.

When we gets upstairs to our section I'm sort of disappointed in it. The furniture ain't new and shiny like what I naturally expected 'twould be. Most of it is kind of old and dingy and hacked-up-looking. The curtains at the setting-room windows is all frayed-like, and mighty near wore through in spots. And the Sublette family must 'a' run out of money before they got round to buying the carpets, because they is not no carpets at all, but only a passel of old faded rugs scattered about the floor here and there. Some of the chairs—the best company chairs too—is so old they is actually decrepit. I'd say that by rights they belonged in a secondhand store, or leastways up in the attic. Moreover, they ain't no upstairs to our department, nor yet there is not no downstairs nor no cellar; but instead, everything, kitchen and pantry and the rooms for the help and all, runs on one floor. But Mr. Dallas he deports himself like he is satisfied, and it ain't for me to be finding fault if he sees fitten not to find any.

Anyway, I is so busy for a little while flying round and getting things unpacked that I has no time to utter complaints. Pretty soon, though, I has to knock off hanging up Mr. Dallas' suits to mix a batch of cocktails from the private stock he has brought along with him in one of his trunks, because this here Mr. Raynor he telephones he's bringing some of his friends for a round of drinks with Mr. Dallas, and then Mr. Raynor says they'll ride out in his motor car to a road house to get 'em some dinner. I takes his message off the telephone and I knows that's what he says, surprising though it do sound.

That's shore a couple of new ones on me—eating dinner when it's already mighty near past suppertime, and eating it at a road house too! I says to myself that New York City is getting to act more curiouser to me every minute I stays in it. Because the only road house ever I knowed of by that name used to stand alongside the tollgate just outside the corporation limits on the Mayfield road, and the old white man which collected the tolls lived in it, his name being Mr. Gip Bayless. But the gate is done torn down since the public government taken over the gravel roads, and anyhow, even in its most palmiest days, none of the quality wouldn't never think of stopping there at that little old rusty house for their vittles. No, sir; they'd mighty near as soon think of having a picnic out at the pesthouse.

Still and notwithstanding, Mr. Dallas ain't indicating no surprise when I conveys to him what Mr. Raynor says, so I reflects to myself that if tollgate houses up here is in proportion to everything else this one which they're a-aiming to go to must probably be about the size of a county courthouse, with a slate roof on it and doubtless a cupola. So I just gets busy and mingles up a batch of powerful tasty cocktails in the shaker. I knows they is tasty from a couple of private samples which I pours off for myself out in the pantry. My experience is been that the only way you can tell is a cocktail just right is to taste it from time to time as you goes along.

Immediately soon here come Mr. Raynor with his friends, which there is four of them, besides himself—one other gentleman named Bellows and three ladies. One of the ladies is older than the other two, but decorated more younger, if anything,

than what they is. Introducing her to Mr. Dallas, Mr. Raynor says her name is Mrs. Gaylord, but they all calls her Jerry. She's pretty near entirely out of eyebrows, but she has got more than a bushel of hair which is all kind of frozen looking and curled up tight on her head. It don't look natural to me, and I knows it ain't natural a little bit later when Mr. Raynor sets down on the arm of her chair and throws his arm around her sort of offhand and sociable like, and she up and tells him for heaven's sake to be careful and not muss her up, because she says she's only just that day spent forty dollars and four hours getting a permanent wave put in. At that I says to myself, I says:

"Well, betwixt w'ites an' blacks we suttinly is mekin' the world safe fur them beauty doctors. Niggers down South spendin' all the money they kin rake an' scrape togither gittin' the kinkiness tuck out of they haids, an' fashionable ladies up yere spendin' theirn gittin' it put in! It's a compliment to one race or the other, but jest w'ich I ain't purpared to say."

The other ladies is named Miss O'Brien and Miss DeWitt, but it's kind of hard for me at the first to remember which from which, seeing that the rest of the party scarcely ever calls 'em anything except Pat and Bill-lee. They is both mighty nice and friendly, but they is exclusively different one from the other. Miss Pat, she's got her hair chopped off short like a little boy's, and she acts kind of like a boy does too—free and easy and laughing a lot and smoking a cigarette so natural that it's like as if she must 'a' been born with one in her mouth and it lighted. And yet for all that I seems to get the impression that way down underneath she's kind of tired of herself and everything around her.

But this here Miss DeWitt, she is tall and slender and kind of quiet. She must 'a' been feeling poorly lately, because her face is just dead white and her lips is still bright red from the fever, and when she sets down in a chair she just seems to kind of fall back into it, all limp like. She ain't saying much with her mouth, but she does a sight of talking with her eyes, which is big and black and sort of lazylike most of the time. She sure is decked up with jewelry like the Queen of Sheba too. She's got big heavy necklaces round her neck and great long earrings in her ears and many bracelets on both her arms. She's even got two big bracelets clamped round one of her ankles, which I judges she didn't have room for 'em nowheres else and so put 'em there to keep from losing 'em; and when she moves the jewelry all jingles freely and advertises her. She walks with a kind of a limber, swimming gait, soft and glideful. Of course it ain't exactly like swimming, and yet that's the only way I can designate what her walking puts me in mind of. She wears dead-black clothes that makes her paleness all the more so. It comes out pretty soon that she's a moving-picture actress lady, off and on, and so is Miss O'Brien.

Right from the first jump I can see that Mr. Dallas is drawed to her powerful, and I thinks to myself that if he's fixing to favor this here languid lady with his attentions it proves he's got a changeable taste, because she ain't nothing at all similar to Miss Henrietta Farrell, which she is the one that he's been courting these past few months down in Kentucky. In fact, she's most teetotally unsimilar.

This Mr. Bellows which came with Mr. Raynor, he don't detain my attention much. If he wasn't there you wouldn't scarcely miss him; and when he is there you don't scarcely observe him. He makes me think of a neat haircut and nothing else. You just appreciate him being present and that's all. But I studies Mr. Raynor every chance I gets, the more especially because he's the one which is more or less responsible for us having come North. He's very cheering in his ways, laughing and whooping out loud at everything and poking fun and telling Mr. Dallas that he must be good friends with Mr. Bellows and the three ladies, because they is all four of 'em his friends. But I takes note that when he laughs he don't laugh with his eyes, but only with his mouth, and when he sort of smiles to himself quietlike, it puts me in mind of a man drawing a knife. I can't keep from having a kind of a feeling when I looks at him.

Well, they imbibes up all the cocktails that I has waiting for them and a batch more which I makes by request, and then they packs up a couple of bottles—one Scotch and one bourbon—to take along with 'em for to refresh themselves with at the road house and off they puts. And the last thing I hears as they goes down the hall is Mr. Raynor still laughing from off the top of his palates, and the sickly one, Miss DeWitt's, necklaces and things all jingling like a road gang. Mr. Dallas he calls back to me from the elevator that I needn't wait up for him because it is liable to be pretty late when he gets in.

But it's a good thing I does wait up, dozing off and on between times, because when he arrives back along about half past three in the morning he certainly does need my assistance getting his clothes off of him.

Not since dryness come in has I seen a young white gentleman more thoroughly overtaken than what he is. And we got aplenty vigorous drinkers down our way too! And always did have!

So then I goes to bed myself, and so that's the end of our first day. And the following day, which it was yesterday, is the day I gets lost, which I will tell about that next.

Black Cubs Caught by a Naval Radio Man at Eyak, Alaska

Every Shaft Is First Quality

THIS cannot be said of hickory, for hickory varies. Two golfers playing with hickory shafted clubs have not the same opportunity, for one may have first quality hickory and the other fifth quality. But when two golfers play with Bristol Steel Shafted clubs, they have the same opportunity, for Bristol Steel Shafted clubs are all of the same quality—equal to first quality hickory.

Notice: Basic and Supplementary Patents covering Steel Golf Shafts are controlled exclusively by us.

The Bristol Steel Golf Shaft is lighter than hickory. This brings the weight lower, thus making a better balanced club. It is unquestionably stronger and more durable. It cannot rust and the "whip" always stays the same.

Get one new Bristol Steel Shafted club from your "Pro" or have him attach a Bristol Steel Golf Shaft to one of your old heads. If your "Pro" is unable to supply you, send your order direct to us. Wooden Clubs, $8.00. Iron Clubs, $7.00. State length desired.

Write for descriptive circular, giving us the name of your club and professional.

Professionals: Write for Directions for Fitting Bristol Steel Golf Shafts to Old Heads.

Golf Shops and Sporting Goods Dealers: It will pay you to investigate immediately this new development in golf.

Golf Clubs fitted with Bristol Steel Golf Shafts can now be supplied by The Crawford, McGregor & Canby Co., Dayton, Ohio, and The Hillerich & Bradsby Co., Louisville, Ky.

THE HORTON MFG. CO.
464 Horton St. Bristol, Conn.

Kingfisher Silk Fishing Lines

One symptom they don't discuss

NO matter how well you know a person—maybe even your very closest friend—there is one subject you instinctively avoid.

You may discuss the most intimate things about your family, your business and your most personal affairs, but this one topic you dodge. There is something about halitosis (the scientific term meaning unpleasant breath) that seems to forbid honest conversation about it.

Yet the insidious thing about halitosis is the unfortunate fact that any one may suffer from it and in nine cases out of ten you are not conscious of it yourself. So unless you use some sensible scientific precaution you may go through your day or evening uncomfortable and concerned, wondering whether or not you are offending people about you.

Unless halitosis is a symptom of some serious organic disorder which a physician or dentist should correct, you may easily put yourself upon the safe and polite side by using Listerine, the well-known liquid antiseptic. In most cases it is merely local and temporary.

Meet halitosis in a scientific way—with Listerine. It is the ideally effective mouth deodorant.

Fastidious people everywhere make Listerine a regular part of their daily toilet routine. Simply use it as a mouth wash and gargle. It acts quickly and pleasantly. It halts food fermentation in the mouth and leaves the breath sweet, fresh and clean.

Your druggist has handled Listerine for years and regards it as a safe, effective antiseptic of great merit. It has now been on the market for half a century.

Start using Listerine today. Put your mind at ease. Don't be in doubt another day about your breath.—*Lambert Pharmacal Company, Saint Louis, Mo.*

For HALITOSIS *use* LISTERINE

FROM McKINLEY TO HARDING

(Continued from Page 17)

with a twenty-five-thousand-dollar salary to accept one at eight thousand dollars and spend three times my salary to live in Washington?" Next morning we walked again. I noticed signs of weakening. Mrs. Gage had evidently been at work!

As we parted I said, "When you get to your office send me a note by messenger and tell me just what you will do."

An hour later I received the note, which read: "After thinking of the matter I cannot *at present* give you the answer you want."

The underlining of "at present" convinced me that he did not want to say that he would accept a position that had not been offered to him. So I rang up Governor McKinley at Canton, and said, "I have a Secretary of the Treasury for you."

"Who is it?"

"Lyman J. Gage, president of the First National Bank. A gold Democrat. He will represent the gold Democrats in your cabinet. His appointment will show appreciation for their votes, as you would have been defeated without them."

"Have I ever met him?"

"Yes, you met him at a reception given by Ferdinand W. Peck on Ohio Day, at the World's Fair in 1893."

"Did he have white whiskers?"

"Yes."

"Oh, I remember him. Hold the wire a moment. That is an inspiration. Let me think."

After two or three minutes McKinley said, "I will send Charlie Dawes to see him Thursday. Prepare him for the visit."

The next morning the papers announced that great pressure was being brought to bear on Governor McKinley to appoint Lyman J. Gage, of Chicago, Secretary of the Treasury. Mark Hanna came from Cleveland to Canton and said, "Where in hell is the great pressure? I never heard him mentioned for the place!"

McKinley told me afterwards he received more telegrams and letters of commendation on Gage's appointment than on all the other cabinet places combined.

Col. John J. McCook had been slated for Attorney-General, and Judge Joseph McKenna, of California, for Secretary of the Interior.

McKinley had a way of throwing out names for cabinet places and watching the reaction. If the man met with approval he sent for him; if the suggestion stirred up opposition he was dropped.

When Judge McKenna, now Justice McKenna of the United States Supreme Court, was suggested, the California papers were unstinted in their praise of him both as a judge and as a congressman. McKinley sent for McKenna to come to Canton. On his arrival he lunched in the McKinley cottage. McKinley told me the following story of the McKenna appointment:

"'Well, judge, they have been pretty busy with your name lately for a cabinet post.'

"McKenna replied, 'Yes, governor, but I don't believe you realize what you are doing. I am a Roman Catholic and the Protestants will never permit a Catholic to have charge of the Indian Missions.'"

McKinley continued, "Without taking my eyes from his I said, 'The place I want you for, judge, has nothing to do with the Indian Missions. I want you for Attorney-General.'

"'Oh, I was misinformed,' said McKenna. 'If you see fit to tender me that honor I accept with pleasure.'"

Later McKinley laughingly said, "I don't believe the judge suspected that I switched him! We were in Congress together several years, and it never occurred to me that he was a Catholic!"

Next day the papers announced McKenna was to be Attorney-General. That brought Colonel McCook hotfoot from West Virginia to Canton.

He said, "I understood I was to be Attorney-General!" McKinley said, "Oh, no, colonel! You are to be Secretary of the Interior."

"I don't believe that place would suit me," replied McCook.

"Well," said McKinley, "we will try to find something equally as good later on."

McKinley thereby killed two birds with one stone; he avoided the religious issue and pleased Mark Hanna, who greatly disliked McCook.

McKinley tried to get Mark Hanna to accept the Postmaster-General's office, but he refused. He kept the place open for him until thirty-six hours before his inauguration. Urging Hanna to accept he said: "Mark, you will feel pretty bad to see the ship of state sail away on the fourth of March and not be on board as first mate!"

At the last moment Mr. Gary, of Baltimore, was made Postmaster-General.

Two days after it was decided that Mr. Gage was to be the treasury chief Frank A. Vanderlip came to see me. He was a reporter on The Economist, a Chicago financial weekly of a high order. I think he owned 20 per cent of the stock, and received a salary of forty dollars a week. He had been financial editor of the Chicago Tribune.

He asked me what I thought of his going to Washington with Mr. Gage as his private secretary.

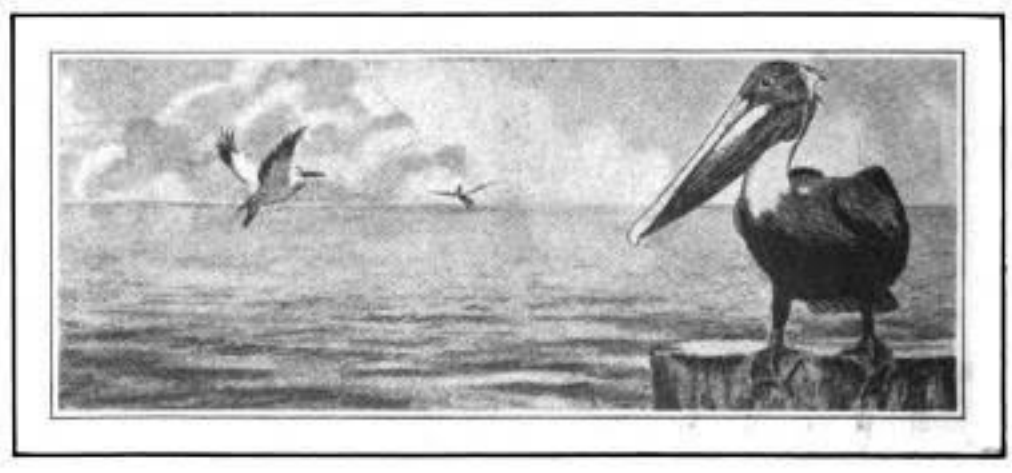
I answered, "Frank, you are too big a man to be anybody's private secretary!"

"The experience will benefit me greatly in my work on The Economist."

"Well," I answered, "you would be a good choice for Mr. Gage, as you can be of great service in handling the politicians and newspaper men."

Next morning Mr. Gage telephoned me to stop for him.

He asked what I thought of his taking Vanderlip. I told him what I had told Vanderlip the day before.



Three months after going to Washington, Vanderlip was made an Assistant Secretary of the Treasury, at a salary of forty-five hundred dollars, more money than he ever received before in his life. He was of great assistance to Mr. Gage. They became intimate friends and the friendship has lasted to this day.

When the National City Bank of New York purchased the old United States Custom House in Wall Street, Mr. Gage turned over to Vanderlip all the negotiations for the Treasury Department, which brought him in contact with the elder James Stillman frequently. Mr. Stillman said to Mr. Gage, "When you are through with that young man I want him."

Vanderlip finally went to the National City Bank, and Mr. Stillman told me afterward he showed him his desk, gave him the key to it and said, "Now find something to do. Your salary will be fifteen thousand dollars a year."

I have watched many notable careers in my time, but I think Frank Vanderlip's rise from a forty-dollar-a-week reporter in 1897 to the presidency of the greatest bank in the country in 1909 is the most remarkable of forty years' experience.

Ripolin-finished Hallway in Home of Abner G. Webb, Cleveland, O.; *Architects:* F. B. Meade and J. M. Hamilton; *Decorators:* Lang & Sarstedt, Cleveland.

"You see it in Homes Everywhere It's the Famous Ripolin Enamel"

The interiors and exteriors of thousands of homes today are Ripolin-finished. Living rooms, dining rooms, bed rooms and bath rooms have been beautifully and durably decorated with Ripolin at less cost than is possible with ordinary enamels.

The superior excellence of Ripolin Enamel Paint has won recognition throughout the civilized world. Not only in residences, but in hospitals, hotels, clubs and other prominent buildings, Ripolin has given service for ten, fifteen and even twenty years. There's nothing like it for *long service.*

For a really fine, yet economical and lasting result, use Ripolin Enamel Paint. Ripolin Dealers are in nearly every locality. If you cannot locate one conveniently, illustrated literature and full information will be sent you by any of the distributors listed opposite.

Tutt, and his hatred of
rmed his anger against
Mooney to poisonous serpents. To be in any way foiled made him a madman.

"Come here!" he growled at Delaney as he dragged him into the corridor. "Give me the goods on this fellow! I'll teach that sanctimonious old he-devil a lesson he won't forget in a hurry!"

The heart of Delaney leaped within him. That was the bally boy! He would have another conviction to add to his scroll of honor, and maybe the D. A. would write the commissioner a letter of commendation, praising his services in sending up Mooney for another bit! Anyhow, Micky Morrison wouldn't forget it! Promotion dazzled him! He could have kissed O'Brien or licked his boots—which latter alternative most of us would have preferred.

"Listen here!" he said, fawning upon the prosecutor. "It's a cinch. I caught this guy and another gun—Mulligan—wit' a bag of goods. I give ye the cannon I took off him already. Mulligan'll turn state's evidence for a suspended sentence. Everybody's here! You'll eat him alive!"

"All right! Tell Mulligan I'll use him; and take him up into one of the jury rooms and go over his story with him. I don't want any slip-up now! I'm doing you a favor by trying this case myself."

"I know you are, Mr. O'Brien! I know you are!" declared Delaney in those tones of unctuous adoration that were as parmacety to the inward bruises of the Bloodhound's soul. "'Tis the next district attorney you're going to be!"

"Then get busy! Get busy!" ordered O'Brien, stalking back towards the court room.

The reader might well be pardoned were he incredulous of what O'Brien and Delaney purposed to do. Fortunately such prosecutors are rare; but once in a generation—perhaps even more often—they arise; and against their villainy judges and lawyers are generally powerless, for their assassinations are hidden beneath the cloak of law and the pretense of public service. Little did the judge upon the bench wot of the proposed tragedy; had he done so he would have arisen and rent his official garments. But Mr. Tutt knew, and his heart turned faint within his old frock coat. O Justice, what crimes are sometimes committed in thy name!

V

THE last disconsolate in the file of prisoners had pleaded not guilty and clumped back to the prison pen; the judge had listened to the manifold ingenious excuses urged upon him by talesmen reluctant to serve; the crowd in the court room had thinned; it was twelve o'clock; the holocaust was about to begin.

The Bloodhound arose and strolled to the district attorney's table in front of the jury box.

"Have you any case to move, Mister District Attorney?" asked His Honor, and at O'Brien's nod added to the clerk, "Fill the box, Mr. Dougherty."

"Take your places, gentlemen," called the latter, drawing twelve names rapidly from the box. "People against Mooney! Patrick Mooney, you are indicted for burglary in the third degree, grand larceny in the first degree, assault in the first degree, receiving stolen goods and carrying concealed weapons. If you desire to challenge any talesman you may do so now!" One almost expected to hear him continue "Or forever after hold your peace!"

But Mr. Tutt did not wish to challenge anybody, and smiled so genially at the double row of miscellaneous citizens, and with such an air of gratification declared "The jury is more than satisfactory," that every man of them expanded his chest and lifted his chin a fraction of an inch, convinced that Mr. Tutt was a man of parts, and became his friend for life.

Then the Bloodhound summoned them to their duty of sending men to prison. The defendant, he told them, had been caught in possession of the proceeds of a burglary committed but a few moments before his arrest. He had a loaded pistol in his pocket, which he had sought to draw upon the officer, who luckily had reduced him to a timely submission. His fellow criminal would take the stand and testify against him. It was a cut-and-dried case, a routine affair; and they would have nothing to do but to convict. He called Delaney, whose immense blue bulk overflowed

Makes Every Car Ride Like a Limousine

"It's the ones you don't see that you notice the most"—says Happy Van

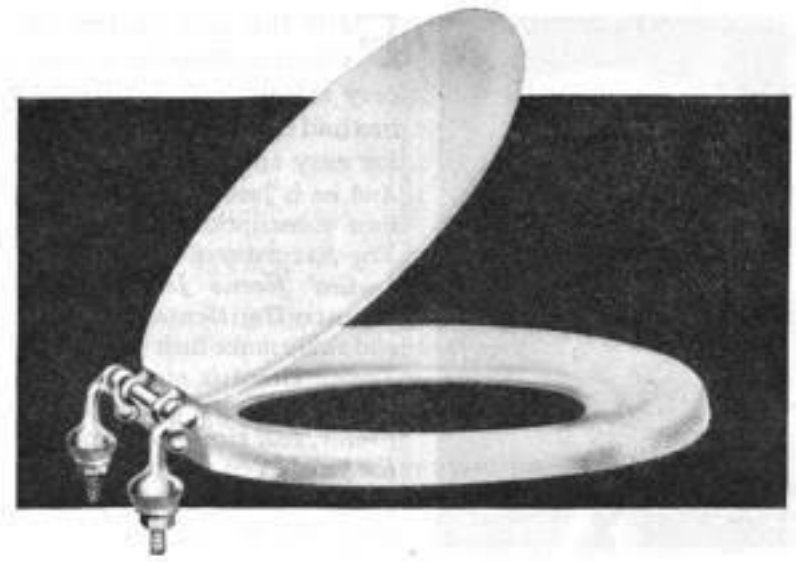
—"as the man said when he fell in the coal hole. It isn't the *big* bumps in the road that show up a shock absorber, but the little ones. Any good shock absorber will take care of a gulley. But when it comes to a cobbled street or a stony road, only a *quick-acting* absorber will smooth 'em out."

And that's where the Gilmer Bull Dog Bounce Absorber shines. It's *quick*. Quick as a cat. The slightest fault in the road sets Gilmer's simple "direct action" mechanism to work.

And that simplicity of construction makes Gilmer not only the most effective for any make of car, but the most economical, the most durable, the most easily installed and adjusted absorber on the market. Ask your dealer to explain the Gilmer principle to you or write us direct.

L. H. Gilmer Co., Philadelphia, Pa.

Standard Prices:



For Ford Cars

the witness chair; and the cop made good the prosecutor's opening in every particular. He described Mooney's attempted flight, his effort to pull his gun and how he had frustrated it by felling him with his night stick. He then identified the gun which O'Brien produced from his pocket.

Cross-examine!

Mr. Tutt asked but two questions:

"Do you know Micky Morrison?"

"I do."

"Do you belong to the same club?"

"I do!" defiantly.

"That is all!" And the old lawyer waved him from the stand.

Then Mulligan was brought up from the pen and put in the chair, and swore that everything that Delaney had said was gospel. He admitted that he was a professional burglar, but allowed that on occasions a burglar could tell the truth, and that this was one of them; and he supplemented the cop's story by describing in the most graphic detail how Mooney and he had planned and perpetrated the burglary of the cigar store; but, his imagination being limited and his general intelligence even more so, he made a sorry exhibition of himself under Mr. Tutt's good-natured yet searching cross-examination. Indeed, he soon became so involved in contradictions as to Mooney's part in the affair that no man in his senses would have convicted a dog of the larceny of a bone upon his testimony. One piece of evidence, however, remained unshaken—Delaney's testimony that he had taken a loaded pistol from Mooney's pocket; and Delaney had not been in any way discredited under cross-examination. Quickly O'Brien shifted his position. As a strategist he had no equal.

"If Your Honor please," he said, "I do not feel that the jury should be permitted to convict the defendant of burglary or larceny on this character of testimony. The co-defendant Mulligan is an ex-convict, besides being confessedly guilty in this case, and his statements should not be received without stronger corroboration. I shall therefore ask Your Honor to withdraw from the consideration of the jury all the counts in the indictment except that for carrying concealed weapons."

He spoke as if with an earnest hope for salvation—and the jury viewed him with approbation. The fox! He knew that Mooney could not meet the charge without taking the stand and admitting that he had been in prison, although had all the counts been left in the indictment the jury might well have been led to render a general verdict of acquittal, owing to the obvious unreliability of Mulligan's testimony.

"The People rest," said O'Brien.

The jury turned to the defense.

"Take the stand, Mr. Mooney," directed Mr. Tutt, while the Bloodhound licked his lips.

Paddy Mooney felt his way round behind the jury box and to the witness chair. He knew that he was innocent, but he knew that he was going to be pilloried on cross-examination and utterly discredited. He was an ex-convict. That would be enough to send him up again. But unless he took the stand and denied that the weapon was his the jury would have no choice—would have to convict him. It was a slim chance to make his denial, but it was worth taking. No use giving up without a fight!

Doggedly under Mr. Tutt's lead he denied everything that had been testified to against him, including that he had or ever had had a revolver. Mulligan had joined him, he swore, unsolicited, and when Delaney had appeared he had made no attempt whatever to escape. Why should he have? He had done nothing.

"Your witness!" said Mr. Tutt with a bow towards the jury box.

The Bloodhound crept towards the witness chair with the stealth of a panther about to spring. At three feet he sprang!

"Mister Mooney, have you ever been convicted of a crime?"

"Yes," answered the defendant in a husky voice.

"Of what crime?"

"Assault."

"Ah! And you say you are a peaceable sort of person?"

"Yes."

"When did you get out of jail?"

"Last week."

The jury looked at one another. The poison had begun to work. But the dose might be too small. O'Brien intended to take no chances. As he would have expressed it, he was going to give him the gaff. He beckoned Delaney to the rail.

"What have you got on him?" he [illegible]
"Give it to me quick."

"He's an old-timer," stammered [illegible]
"Gas House Gang. Cracked safes [illegible]
done most everything."

O'Brien knew he was lying, but he [illegible]
right to take an officer's word for [illegible]
like that.

"Go up to my office," he ordered [illegible]
laney, "and bring me down Jones' [illegible]
sional Criminals of America."

The cop hesitated.

"He ain't in it!" he ventured.

"Did you hear what I said?" [illegible]
O'Brien. "Go get it!"

While Delaney is waiting for the [illegible]
to do his master's bidding let us [illegible]
plained that when a criminal, or [illegible]
else, for that matter, goes upon the [illegible]
stand to testify, he may be subject [illegible]
cross-examination by the opposing [illegible]
any fact as to himself or his past [illegible]
may tend to discredit him, for if [illegible]
rascal and unworthy of credence [illegible]
are entitled to know it so as to be [illegible]
by that knowledge in the performance [illegible]
their holy office. Now there are [illegible]
limitations upon this sacred right [illegible]
examination as to credit—the discretion [illegible]
the presiding judge and the fact that [illegible]
matter inquired about is not directly [illegible]
nected with the issue involved the [illegible]
asking the question is bound by [illegible]
ness' answer and is not permitted [illegible]
in rebuttal that it is false. Yet [illegible]
these limitations amounts to anything [illegible]
the latter instead of being a handicap [illegible]
a prosecutor really is an advantage [illegible]
often a lawyer asks a question [illegible]
the jury infers something which [illegible]
and which the lawyer could not prove [illegible]
he were allowed to try to do so in [illegible]
For example: If a reputable prosecuting [illegible]
attorney should ask a colored witness [illegible]
charged with stealing A's chickens [illegible]
day, if it were not a fact that he had [illegible]
B's chickens on Saturday and the [illegible]
defendant denied it, the jury would [illegible]
less accept the interrogation of the [illegible]
cutor as based on fact and assume that [illegible]
luckless negro had stolen chickens [illegible]
both A and B. Yet if the prosecutor [illegible]
at liberty to prove that the negro [illegible]
lying when the latter denied that he had [illegible]
stolen B's poultry, he might find [illegible]
ceedingly hard to do so. That is the [illegible]
restriction, which is apparently a [illegible]
tage to the witness, particularly [illegible]
defendant accused of a crime, [illegible]
works against him; just as the [illegible]
take the stand in fact compels the [illegible]
fendant to do so or suffer the [illegible]
refusal in the form of the jury's [illegible]
assumption that he is afraid to [illegible]
he is guilty. Of this great [illegible]
Bloodhound now proposed to [illegible]
to the utter annihilation of Paddy [illegible]
and Mr. Tutt, both of whom he [illegible]
should plunge down into the [illegible]
creditability.

For he knew that because he [illegible]
lic office of large responsibility [illegible]
put by him to Mooney would [illegible]
jury's eyes tantamount to an [illegible]
particularly after he had [illegible]
apparent fair-mindedness by [illegible]
judge to quash the burglary [illegible]
counts in the indictment.

The issue now hung in the [illegible]
police officer had sworn to finding [illegible]
pistol on the prisoner, and a [illegible]
crook had corroborated him; [illegible]
had vehemently denied it, [illegible]
force of his denial had been [illegible]
pered by his admission of having [illegible]
viously convicted of assault. [illegible]
the judge's admonition that the [illegible]
proof would be on the prosecution [illegible]
its case beyond a reasonable doubt [illegible]
jury might acquit. Something [illegible]
done. O'Brien did not hesitate [illegible]
"smear" Mooney so that no one [illegible]
the slightest attention to his [illegible]
ever convincing under other [illegible]
they might have been. It would [illegible]
cult. Any hint or suggestion [illegible]
was a professional gun—the [illegible]
nuendo to that effect, probably [illegible]
enough; even if he didn't [illegible]
he certainly did not, as he [illegible]
on the witness chair—more [illegible]
than a man, his chalky face [illegible]
row shoulders foursquare to the [illegible]
impotent yet defiant creature [illegible]
animal driven into a hole or [illegible]
stake. Only when his eyes met [illegible]
shoulders met those of Annie [illegible]
his stubborn expression soften [illegible]
caught the looks that passed [illegible]

ıu Can Now Buy this Burroughs *for* $15 DOWN Balance on Easy Terms

he Burroughs easy payment plan makes it possible put the machine at work immediately, stopping oney losses in your business—and let it pay for itself.

It totals cash sales on the counter, checks and totals arge sales in the office and catches errors that ɔuld run up into many dollars in a year.

With its help a merchant can keep records that lp him watch his purchases, sales, expenses and tstanding accounts.

Everything it does means a saving or a profit. nd the coupon for complete information or get in ıch with the local Burroughs office today.

"Mine saved $4.30 in four days"

"I have been in the Mercantile Business 4628 work days. Now you can readily see that at the above rate, my loss without a Burroughs would amount to $4975.10 in this length of time."

M. P. Pool,
Hopson, Ky.

"In seven years ours paid for itself several times"

"—and has not cost us a cent in upkeep.

"The machine is kept on the counter and used to check all our figure work. Not a sales slip, whether cash or credit, leaves this store without being checked on the machine. This not only saves us money but helps to hold our trade. All invoices are checked before they are paid and many errors that would in the aggregate mean a big loss, have been detected and rectified."

W. Durance,
Hamilton, Ont.

On the Counter It Protects Profits

"I figure that having the Burroughs on the counter saves me at least $3 a day.

"I also get a daily inventory of my business and can tell at any time just how much stock I have on hand and exactly what I owe."

Kester Market, Inc.
Worcester, Mass.

The Facts It Gives, Help You Make More Money

"For a thorough, business-like analysis of my business each day my Burroughs is absolutely indispensable. I know at all times where I am, what I am doing, how much profit I am making. I verify everything with it. It's a real investment, not an expense."

W. P. Pipkin,
Pipkin's Drug Store, Waco, Tex.

Pays a Profit As You Pay for It

You too, will find the Burroughs saving money faster than you pay for it. Let us send you a booklet "Stopping Store Leaks" which shows how retailers in many different lines have made more money with the machine than without. Send the coupon for this booklet today.

A Burroughs for Every Class of Figure Work

There are Burroughs machines for every possible requirement of Adding, Bookkeeping, Calculating and Billing—all sold on small down payments and easy terms.

(Continued from Page 134)

and scowled. That sort of thing always had a bad effect on the jury. He must "can" it somehow. He strolled back to his place and faced Mooney again.

"You come from the Gas House District, don't you?" he asked.

"No," replied Mooney.

"Ever hear of the Gas House Gang?"

"Yes, but I'm not one of them."

"Oh, you're not, eh? I didn't ask you that. Why did you hurry so to slip that in?"

"I object!" interposed Mr. Tutt. "Such a suggestion is improper and prejudicial."

Judge Watkins, who despised technicalities, waved him aside.

"I will permit the question. The witness volunteered a statement. He may be examined upon it."

Mr. Tutt subsided.

"Because," retorted Mooney, "you were trying to make the jury think I was."

"Maybe you're right!" countered the Bloodhound with a grin at the jury box. "Now, how many times have you been convicted of crime in other states?"

"Never!" cried Mooney. "And you can't prove it either."

"Well, maybe I can't prove it," admitted O'Brien easily, "but," he added insinuatingly, "I can inquire how many times you have committed burglaries—say, in New Jersey?"

Mooney's jaw trembled and he grasped the arms of his chair so tight that his hands went white. He turned indignantly to the judge.

"Your Honor," he protested, "has this man got the right ——"

"Answer the question!" admonished His Honor. "This is proper cross-examination."

"Well?" sneered O'Brien.

"I never committed any burglary!"

"No burglaries! What kind of crimes, then, have you committed?"

"I never committed any crimes!"

Mooney thrust forward in his seat towards his torturer and clenched his jaws. It was all nuts for O'Brien.

"Oh!" he laughed. "You didn't, eh? I thought you were just out of Sing Sing!"

"But I hadn't committed any crime."

"So you were innocent that time? Just as you claim to be now!"

"Delaney railroaded me for Micky Morrison!"

The Bloodhound reddened with anger.

"Strike that out!" ordered Judge Watkins. "Don't volunteer. Answer only the questions put to you. Were you innocent that time?"

"Yes—I was!" declared Mooney with such obvious sincerity that O'Brien wished he had not asked the question. So far he had not scored heavily, although his adversary was getting groggy. At that instant Delaney reëntered the room and approached the rail with a large book in his hand.

"S-st!" he whispered to O'Brien, handing over the book. "Ast him if last December he didn't smash Sugar Grady's nose down on Hudson Street with a blackjack; an', say, ast him if he wasn't one o' the bunch 'at beat up Inspector Boyle with brass knuckles over behind the engine house."

The Bloodhound's eyes gleamed. Real stuff! He put the questions to Mooney, receiving with an indulgent grimace the latter's emphatic denials, and the jury, who had seen his conference with the police officer, made sure that a desperate thug was seated before them, while Mr. Tutt, a satiric smile playing about his withered lips, vowed vengeance deep and dire upon the unscrupulous O'Brien.

But the Bloodhound, frenzied at the scent of human gore, was now resolved to rend Mooney limb from limb. With all the gleeful malice of a Spanish inquisitor about to tear out his victim's beating heart with a pair of incandescent pincers, this charming understudy of Satan sauntered nonchalantly up to the witness and, holding the Professional Criminals of America so that the jury could plainly read the title, opened the book and running his finger down the page as if to mark the place—and looking up from time to time as he apparently read what he there had found—put to the hapless being in the moral death chair before him, as if solemnly declaring the accompanying accusation to be true, the following question:

"Did you not, on September sixth, nineteen hundred and seventeen, in company with Red Burke, alias the Roach; Tony Savelli, otherwise known as Tony the Greaser; and Dynamite Tom Meeghan, crack the safe of the American Railway Express at Rahway, New Jersey, and get away with six thousand dollars?"

There was no doubt about O'Brien's having caught the jury now. Just as John Hancock signed his name to the Declaration of Independence so large that no one need use spectacles to read it, so Paddy Mooney screamed his outraged denial so loud that even the dead might well have heard him.

"It's a lie!" he yelled, jumping up and shaking his fist at O'Brien. "I never knew any such people. And I never was in Rahway."

"So you say!" the Bloodhound taunted him. "But don't you know that both the Roach and the Greaser testified at their trials that you were there?"

"Wait a moment!" interpolated Judge Watkins. "Do not answer until your counsel has time to object. Mr. Tutt, do you object to the question? If you do I will exclude it."

But Mr. Tutt gravely shook his head.

"I prefer to have him answer it," he said.

"I know nothing about it at all!" protested Mooney. Once more he turned to the bench. "Your Honor," he cried, "he's framin' me! I ——"

Judge Watkins banged his gavel.

"You will have your chance to explain on the redirect," he remarked coldly, for he, too, was now convinced that the witness was a desperate criminal.

"That is all!" declared O'Brien, as with an air of triumph he threw the book ostentatiously on the table in front of the jury box. The defendant was cooked. That question about Red Burke had done the trick, driven the last nail into the lid of his coffin. He sank gloatingly into his chair. He had 'em on the run. The jury could convict without leaving the box. There was nothing left for old Tutt to do but try to extract additional denials from his already discredited client.

But the old lawyer made no such move. Instead he remarked:

"Mr. Mooney, you were asked whether you had not been previously convicted of assault, and you replied in the affirmative. I now ask you whom you were charged with assaulting?"

"Micky Morrison."

"Who arrested you for the alleged offense?"

"Officer Delaney."

"What! You mean this same officer who has just sworn that he found a pistol in your pocket?"

"Yes, sir."

Mr. Tutt drew in his lips.

"That is all!" said he, without further attempt to rehabilitate his client. Then as Mooney left the stand Mr. Tutt addressed Judge Watkins:

"If Your Honor please, I had intended calling a character witness—a former employer—in behalf of the defendant, but what has transpired would seem to make any such testimony immaterial." He hesitated for an instant, and to O'Brien came the sudden thought that the old lawyer might be going to throw up the sponge and plead his client guilty after all. But to his astonishment he heard Mr. Tutt say: "There is one thing, however, to which I invite the court's attention. The prosecutor has produced a loaded pistol here which he claims was found in my client's possession. It is the basis of the charge against him. Yet the district attorney for some reason best known to himself has not offered it in evidence. Unless this is done, in view of the fact that the pistol has been exhibited to the jury, I shall ask for a dismissal."

O'Brien rose languidly to his feet.

"The merest oversight, Your Honor. Here is the pistol. I offer it in evidence."

"I object," said Mr. Tutt—"unless it appears on the record from whose custody it is produced, how it got there, and that it is in the same condition as when received."

"Mr. Tutt is technically correct," nodded His Honor.

The Bloodhound's lips curled.

"I got it from Officer Delaney this morning, and have had it in my pocket all the time. It is exactly as I received it. Does that satisfy you?"

"Not unless you so testify upon the stand," answered the old lawyer, looking fixedly at O'Brien, who experienced a sickening sensation.

"If Mr. Tutt insists you will have to be sworn," ruled His Honor. "But it is a rather unusual demand for any lawyer to make under the circumstances."

In summer wear the
BELT CHAI

On days when a man is glad to leave his vest behind, the Simmons Belt Chain is the right thing to carry his watch. It is always safe and practical. The swivel clasp locks securely around the belt. Touch a tiny spring—it unlocks and slips off. Nothing could be free from fuss and annoyance, nothing more sure protection.

The Belt Chain maintains the Simmons standard of beauty and economy. Made in a variety of hand-wrought link styles, it offers the choice of superb finishes in Simmons Chains—polished gold-filled, PLATINUMGOLD, green gold-filled and harmonizing combinations.

See these Belt Chains at your jeweler's. You will be impressed with their beauty and harmony, surprised at their reasonable prices.

*Black, Chicago, Dept. 20,
Correct Care of the Feet."*

"This is a rather unusual case," retorted Mr. Tutt, unperturbed.

O'Brien shifted his feet uneasily. He did not like the idea of facing Mr. Tutt from the witness chair—not in the least! Still—there was no help for it. With the pistol in his hand he ascended the stand, took the oath and without sitting down repeated in a rather shaky voice what he had just said.

"Have you any cross-examination?" asked Judge Watkins.

"I have," replied Mr. Tutt amid a curious silence. What could the old codger be up to?

"You are one of the public prosecutors of this county?" he asked quietly.

"I am," shot back the Bloodhound.

"And you are sworn to uphold the law?"

"Yes."

"To prosecute those of whose guilt you are satisfied through the introduction of legal evidence in a legal manner?"

"Of course." O'Brien's uneasiness was growing. But Mr. Tutt's next question momentarily allayed his anxiety while arousing his irritation.

"Where were you born?"

"New York City."

Judge Watkins frowned at the questioner. This procedure was not at all according to Hoyle.

"Gas House Section?"

One of the jury sniggered. His Honor raised his hand in gentle admonition.

"Is this relevant, Mr. Tutt? I do not wish to criticize, but your question seems rather trivial."

Mr. Tutt bowed.

"This is cross-examination," he replied. "However, I will withdraw it. Do you know one Micky Morrison, Mr. O'Brien?"

"Yes," scowled the Bloodhound.

"How much did you pay for your appointment as assistant district attorney?"

O'Brien turned first red, then white. Judge Watkins brought down his gavel.

"That will do!" he remarked. "The jury will disregard the question!"

"If Your Honor please," replied the lawyer quietly, "I have as much right to attack this witness' credibility as he had to attack that of my client. I press the question in another form:

"Did you not pay six thousand dollars to Michael McGurk to be delivered to Micky Morrison in consideration for his securing your appointment as assistant district attorney?"

"I did not!" shouted O'Brien. "And you know it! Your Honor, are you going to permit me to be insulted in this way?"

But a puzzled if not actually bewildered look had settled upon the learned justice's countenance. To coin a distinctly new phrase there was a far-away look in his gray eyes.

"Do you know Red Burke, alias the Roach; Tony Savelli, otherwise known as the Greaser; and Dynamite Tom Meeghan?"

"Mr. Tutt," expostulated Judge Watkins, "you may have a technical right to test the witness' credibility, but the matter is within my discretion and ——"

"That is the precise question he asked my client," replied Mr. Tutt coolly. "What is sauce for the goose should be sauce for the gander."

"He may answer your question if you press it," acquiesced His Honor. "But there must be a limit to this sort of thing."

"Only a few more questions, Your Honor. Mr. O'Brien, have you ever been convicted of crime?"

"No!" valiantly answered the prosecutor, now gray as a ghost, for he saw his doom advancing upon him.

"Have you ever committed one?"

O'Brien choked.

"I won't force you to answer that!" threw in Mr. Tutt gallantly.

"Have you any basis for that question?" demanded His Honor sharply.

Mr. Tutt smiled first at the jury and then at Judge Watkins.

"Your Honor," he replied in his most engaging manner, "you and I perhaps belong to a generation which has old-fashioned ideas of honor. I admit that I have had no basis for any of the questions which I have just asked this witness. Honor demands that I should do so; yet, in a sense, honor demanded that I should ask them, although I might later have to disown their sincerity. But, sir"—and his old voice rose high and vibrant—"but, sir, I do not abandon my attack upon this witness' credibility. I have but one more question to ask of him, and upon his answer I stake my client's liberty. Let this witness but answer anyway he may see fit—yes or no, I care not which—give any reply at all that may be officially recorded here, and not hereafter be disputed or denied by him—and these twelve men may return a verdict against my client."

Something in the old lawyer's tone drew the jury as one man toward the front of the box. Judge Watkins was gazing intently at Mr. Tutt. The faces in the court room surged up and down like ocean waves beneath O'Brien's smarting eyes. He was gaffed himself.

"Sir!" thundered Mr. Tutt, pointing an accusing finger at the miserable apology for a man now cowering upon the stand. "Sir! When you took this book in your hand"—he lifted Jones' Professional Criminals from where it lay upon the table—"and purported to read from its pages, were you actually reading what was printed there or not? Yes or no?"

In the silence all could distinctly hear the ticking of the clock upon the rear wall of the court room.

"Tick-tock! Tick-tock! Tick-tock! Yes—no! Yes—no! Yes—no!" it went.

O'Brien squirmed, looked down at the rocking floor and turned faint.

"Tick-tock! Tick-tock!" alternated the clock.

"Yes—no! Yes—no!" answered O'Brien's pulse.

Everything was going black and white, and great pulpy gray spiders seemed grabbing at him from the circumambient air. If he put the thing through and answered "Yes," insisted that he had been reading from the book, that old gray wolf down there would put the book in evidence and prove him a perjurer, send him up! A band of sweat oozed from beneath his red skullcap of hair. Yet if he answered "No," admitted that he had made the whole thing up—that there was not a word in the book about Mooney at all—it would be nearly as bad!

In his agony he almost clutched the flimsy legal straw of refusing to answer on the ground that his reply might tend to degrade or incriminate him! But this would leave him in an even worse position. No, he must answer!

"Tick—tock! Yes—no! Tick—tock! Yes—no! Which—what!"

He moistened his parched lips and swallowed twice. He coughed—for time; and fumbled for his handkerchief. After all, he had done nothing that was not strictly legal. He had not charged that Mooney was a professional crook; he had only asked him the question. That didn't commit him to anything! You could ask what you chose and you were bound by the witness' answer. A gleam like sunrise flashed across his seething brain. Ah, that would save him, perhaps! Old Tutt would be bound by his answer. And then he saw himself tricked again! Yes, Tutt might be bound in the case at bar—although his muddy mind wasn't quite sure whether he would be or not—but he himself would be forever bound by the written record. He could never get rid of the millstone that his yes or no—no matter which he uttered—would hang about his neck! Old Tutt, like the Old Man of the Sea, would forever be upon his back!

"No," he muttered at last in a woolly voice, so low and thick as to be hardly audible. "I was not—reading from the book."

He bowed his head as if awaiting the headsman's stroke. A hiss—a score of hisses—writhed through the air towards him from the benches. "Snake! Snake!" Captain Phelan made no attempt to stop them.

"You mean ——" began Judge Watkins incredulously. Then with a look of disgust he turned his back upon O'Brien.

"Ye snake!" This time the tense sibilant was that of a woman.

Mr. Tutt gazed at the jury. The Lord had delivered his enemy into his hands.

"Now, gentlemen," he said with a deprecating smile, "you may convict my client if you wish."

There was a moment's puzzled silence, broken by the foreman.

"The hell we will!" he suddenly exploded. "The fellow we want to convict is O'Brien!"

And in the flurry of involuntary applause which followed, the ancient Dougherty was heard to murmur:

"Hearken unto your verdict as it stands recorded. You say the defendant is not guilty—and so say ye all!"

KARDEX
Your Records
Use Your Present Cards

Make them more useful and more used. Put every record card in its own transparent-tipped pocket where it is readily accessible—where your eye instantly locates it and one finger exposes it fully. Once Kardexed, your record cards need never be removed, as you can make entry to either side of card in place. Use your present cards or new Kardex forms.

60,000 up-to-date users in over 300 lines of business have Kardexed their stock, sales, collections, advertising, production, payroll, ledger, credit or other records, making them fool-proof and saving 50% to 75% of their clerks' and executives' time.

Cards or pockets added or removed, singly or in groups.

Each steel unit Kardexes 500 to 3,000 of any size record cards or ledger sheets. By using backs of card holders this capacity is doubled. Units stack together to handle any card capacity, hundreds or millions.
